

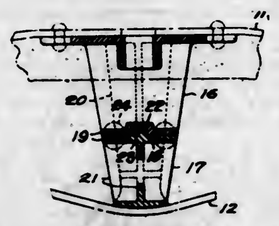
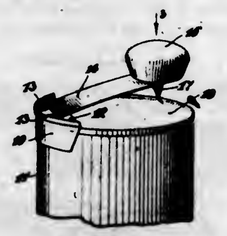
and to impart to said sucker structure vertical positions differing as to their distance laterally from the pivot of said armature.

1,425,701. PROCESS OF FREEING METALS FROM COPPER. MATHIAS OVROM SEM, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Christiania, Norway, a Business Entity of Christiania, Norway. Filed Apr. 4, 1919. Serial No. 287,589. 9 Claims. (Cl. 75—17.)



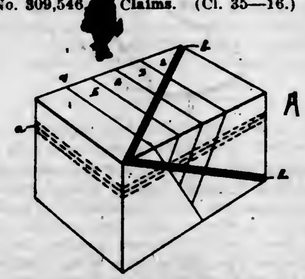
1. The process of freeing metals from copper which comprises heating a metal containing copper to above its melting point and subjecting it to the action of sulphur in the form of a sulphide of the said metal whereby copper sulphide is formed, and separating said sulphide from the metal.

1,425,702. COOKING STOVE. JAMES SHANNON, Canonbury, London, England. Filed Feb. 16, 1922. Serial No. 537,070. 8 Claims. (Cl. 126—36.)



1. The combination with a cooking stove having a grate adapted to burn coal, of an oil vapour burner adapted to be placed in the space in the stove under the grate usually occupied by the dust pan, a perforated heat retaining plate adapted to fit in the bottom of the grate, a hollow cone-shaped grid located above the opening in the heat retaining plate, and a plurality of heat retaining balls located around and over said grid.

1,425,703. REPAIR KING POST FOR BOLSTERS. ROSS O. SHAW, Montreal, Quebec, Canada, assignor to Canadian Car & Foundry Company, Limited, Montreal, Canada. Filed Nov. 23, 1920. Serial No. 426,030. 17 Claims. (Cl. 105—229.)

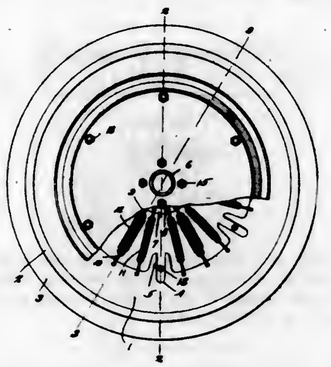


1. A king post comprising a body divided transversely into a pair of superimposed parts meeting along a line inclined with respect to the axis of the post and extending entirely across the post.

1,425,704. CAN OPENER. FRANK P. SHEK, Brooklyn, N. Y. Filed May 17, 1921. Serial No. 470,351. 3 Claims. (Cl. 30—3.)

1. In a can opener, in combination, a segmental guide capable of placement around a portion of the edge of a can, a resilient arm fixedly attached to the guide, a downwardly extended punch carried by the arm and a knob carried by the arm above the punch.

1,425,705. GEOLOGICAL-FAULT GUIDE. WILLIAM H. SHEPPARD, San Ffaucisco, Calif. Filed July 9, 1919. Serial No. 309,546. [illegible] Claims. (Cl. 35—16.)



1. A device of the character described, comprising a block adapted to represent fault planes in geological formations, said block being divided into a plurality of oblique-angled sub-members.

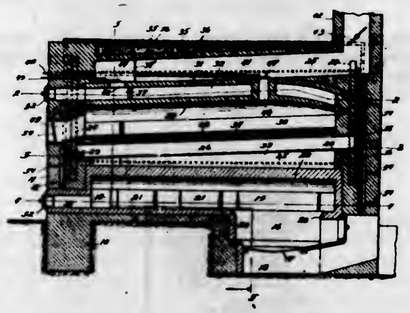
1,425,706. SPRING WHEEL. LEON WM. SIMMONS, Forest Lake, Minn. Filed Aug. 13, 1921. Serial No. 491,992. 2 Claims. (Cl. 152—52.)

1. In a spring wheel, a hub; a wheel body; means for guiding the wheel body for sliding movement trans-

versely of the hub; and first and second springs connecting the wheel body with the hub, the first springs being

normally active, the second springs being normally slack, the second springs being elongated after the first springs have been stretched beyond a predetermined point.

1,425,707. HOLDER FOR CONTAINERS. HARRY M. SMITH, Seattle, Wash. Filed July 7, 1921. Serial No. 483,036. 2 Claims. (Cl. 65—61.)

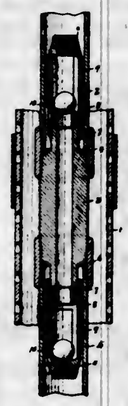


1. A holder for milk cans and the like comprising a body including a back member, spring clips projected horizontally from the said back member, a handle on the back member, a bottom plate that extends horizontally from the lower end of the back member, the said clips, the handle and the bottom plate being relatively fixedly joined to the back member, a top member hinged to normally swing to its closed position, the said top member being adapted to fit closely down onto the container sustained by the holder and having a pair of diametrically oppositely disposed container top penetrating prongs, the said prongs being transversely disposed with respect to the holder clip members whereby to form a pair of diametrically oppositely disposed apertures in the can top adjacent its outer or rim edge, the said prongs each having a straight surface facing the rim of the top member and a tapering semi-circular surface the latter surface and the straight surface terminating in a point.

1,425,708. VALVE. RICHARD SPRINGBORN, Cleveland, Ohio. Filed Nov. 6, 1919. Serial No. 336,004. 8 Claims. (Cl. 251—47.)

3. Valve operating mechanism, comprising a bonnet adapted for attachment to a valve body, a valve and valve stem, rotatable valve stem driving means in sealing relation with the bonnet and having a portion extending to the outside thereof, two seat members surrounding the valve stem, a compression spring between and seated on said members, one of said members being arranged to yieldingly hold the driving means in sealing relation with the bonnet, interlocking connections between said valve stem and seat members whereby they are held against relative rotation when assembled, and interlocking connections between one of said seat members and the bonnet to prevent relative rotation therebetween.

1,425,709. BAKE OVEN. HENRY FREDRICK SOMMER, Kansas City, Mo. Filed Mar. 22, 1920. Serial No. 367,619. 10 Claims. (Cl. 107—55.)



1. In a bake oven, a wall structure comprising successive layers of material in superposed relation, and layers of reinforcing material interposed at intervals between said first layers of material, said reinforcing material comprising metal fabric having the lines of the fabric extending directly transversely and longitudinally, respectively, of the wall.

1,425,710. STANDING VALVE FOR PUMPS. ROY M. STAFFORD, Sour Lake, Tex., assignor to Lake Tool Company, Hardin County, Tex. Filed June 28, 1921. Serial No. 481,133. 3 Claims. (Cl. 251—156.)

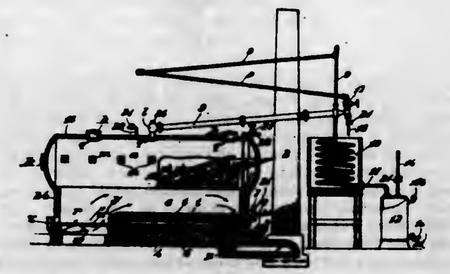
1. A standing valve including a tubular nipple whose ends are reduced forming necks, a reversible valve seat

carried by either neck, a valve crown screwed onto either neck and securing the seat in position, and a movable

ball valve confined by said crown and co-operating with said seat.

1,425,711. BUTTER-PRINT-FORMING MACHINE. RICHARD F. STEWART, Briarcliff Manor, N. Y. Filed Sept. 25, 1918. Serial No. 255,608. 28 Claims. (Cl. 31—65.)

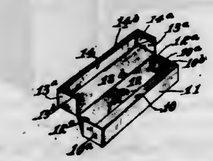
1. In a machine of the class described, the combination of a block-forming box having an inlet, a block-severing device movable past said inlet, a block advancing instrumentality movable past said inlet means to effect a simultaneous retraction of said severing and advancing means, means for giving an independent forward thrust to said severing means, means for forming the blocks into a bar as they are advanced, a cut-off device to sever a print from the bar, means for limiting the forward movement of said bar, a carrier to which the print is delivered and a clutch device operable on movement of said cut-off to stop and start said carrier.



3. In a machine of the class described, the combination of a block-forming box having an inlet, a block-severing device movable past said inlet, a block-advancing instrumentality movable past said inlet, means for actuating said block-advancing instrumentality, means for giving a forward thrust to said severing device prior to each operative movement of said advancing instrumentality, a connection between said advancing instrumentality and said severing device to retract the latter on rearward movement of said advancing instrumentality, and means for releasing said severing device at a pre-determined point in the rearward travel of said advancing instrumentality.

9. In a machine of the class described, the combination of a block-forming box having an inlet, a block-severing device movable past said inlet, a block-advancing instrumentality movable past said inlet, spring means for giving a forward thrust to said severing device, a reciprocating cross-head to actuate said advancing instrumentality, a spring latch on said severing device to engage said cross-head for simultaneous retraction of said severing device and advancing instrumentalities, and means to trip said spring latch and release said spring-operated severing device at a predetermined point in its retraction.

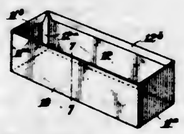
17. A print cut-off for machines of the class described, comprising a swinging and longitudinally movable frame, a cutter depending from said frame, a stop device having an inclined face pivotally mounted on said frame, and a removable print block on said frame between said cut-off and said stop device.



24. A mold-box for machines of the class described, having a throat of different shape in cross-section from that of the mold-box, and means to uniformly displace the material as it passes from said box to said throat and feed it properly to said throat.

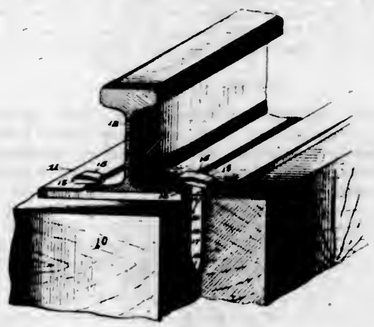
1,425,712. DISTILLING PETROLEUM UNDER HIGH PRESSURE. CHARLES E. STOCKFORD, Brooklyn, N. Y., assignor to Standard Oil Company of New York, New York, N. Y., a Corporation of New York. Filed May 8, 1915. Serial No. 26,801. 10 Claims. (Cl. 196—25.)

1. A high pressure petroleum still of horizontal cylindrical form provided with heating means in the form of an open topped fire chamber and an open topped heating flue communicating with said fire chamber by an open topped passage over the bridge wall of the latter, so that the still bottom above said bridge wall and elsewhere over substantially its entire area between the side walls of the furnace is directly exposed to the fire gases flowing from said chamber over said bridge wall through said flue, said still being so disposed as to leave between the bottom thereof and the top of the bridge wall a distance of upwards of a third of the diameter of the still, substantially as described.



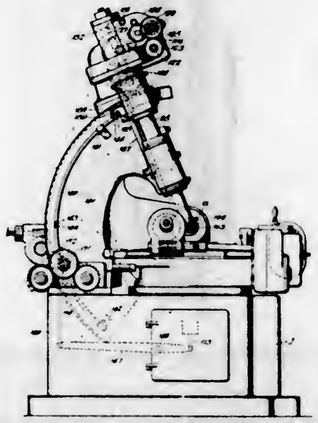
1,425,713. CONTAINER STRUCTURE. JOHN STOGDELL STOKES, Moorestown, N. J., assignor to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 9, 1918. Serial No. 249,086. 7 Claims. (Cl. 229—16.)

1. A container formed from a single blank of foldable material, said blank being folded to provide two similar compartments, each including bottom, side and end walls permanently maintained in a set-up condition by inte-



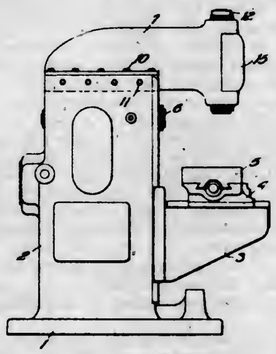
gral portions of the blank which are attached to walls of the compartments, one of the said compartments serving to receive a commodity and the other constituting a telescopic cover therefor; the said compartments being united by an intermediate portion of the blank which operates to permit the set-up compartments to be opened out each with its bottom wall in the plane of the said intermediate portion, whereby a tray-like structure is provided, the said intermediate portion serving to form one of the side walls of the commodity receiving portion when the two compartments are in telescoping relation; the intermediate portion being disconnected from the end walls of the telescoping cover so as to permit the telescoping cover to be rotated entirely out of telescoping position with the intermediate portion retaining its position as the side wall of the commodity compartment.

1,425,714. CONTAINER STRUCTURE. JOHN STOGDELL STOKES, Moorestown, N. J., assignor to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1918. Serial No. 226,429. 1 Claim. (Cl. 229—30.)



A container or box part consisting of a single sheet of relatively thin and flexible paper having in itself insufficient stability for the designated service, said sheet being cut into a blank having a bottom section and integral front and rear wall sections and end wing sections, narrow margin-reinforcing flaps extending from free edges of the end wing and wall sections and narrow corner-reinforcing flaps extending from other free edges of said sections, the blank being folded into box form with said corner-reinforcing flaps adhesively secured to marginal portions of adjacent sections and with said margin-reinforcing flaps turned down and adhesively secured to marginal portions of the respective sections providing integral corner and margin-reinforcements imparting sufficient stability for container use.

1,425,715. RAILROAD SPIKE. WALTER W. STRYKES, deceased, late of Dayton, Ohio, by Edward T. Jones, administrator, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,349. 3 Claims. (Cl. 238—295.)

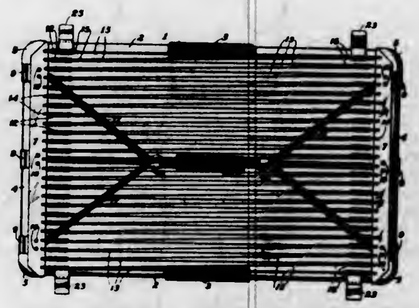


1. A railroad spike having opposite flat sides and formed on such sides with projecting cam lugs situated in position to engage against the under side of the rail supporting plate when the spike is in its final position, the cam faces of said lugs being adapted to cause a turning movement of the spike on its longitudinal axis as it is driven into place.

1,425,716. INDEX MECHANISM. GUSTAF D. SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Original application filed Dec. 1, 1916, Serial No. 134,280. Divided and this application filed June 29, 1917. Serial No. 177,782. 15 Claims. (Cl. 90—56.)

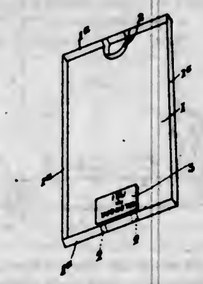
1. An indexing device having, in combination, a drum member operatively connected to an indexable member; a dog member pivotally carried by said drum, an actuating shaft; a ratchet member operatively connected to said actuating shaft; and means for operatively associating said dog and ratchet members comprising a spring-pressed finger secured to said dog member, a spring-pressed pivotally-mounted hook member secured to said finger and withholding said dog member from the ratchet, rocking means for releasing said hook member, and means for withholding said hook member comprising a plurality of disk members operatively connected to said drum and rotatable thereby, said disk members having a plurality of registering notches, and a pin member carried by said hook member seatable in said registering notches for restoring said engageable hook member.

1,425,717. MILLING MACHINE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed May 3, 1919. Serial No. 294,512. 12 Claims. (Cl. 90—19.)



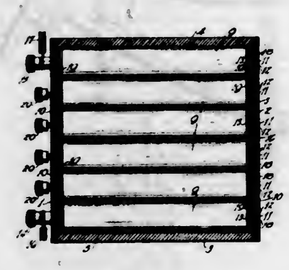
1. A milling machine having, in combination, a column, an adjustable support for the work, a live spindle in said column, an arm projecting from the end of said column, a second live spindle in said arm, and means including readily replaceable change speed gears for driving said second spindle from said first mentioned spindle.

1,425,718. TUBULAR STRUCTURE. JULIUS L. SUASSMAN, New York, N. Y. Filed May 21, 1921. Serial No. 471,354. 7 Claims. (Cl. 5—4.)



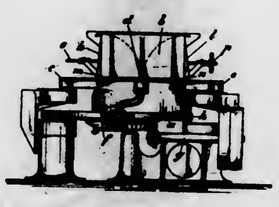
1. The combination of a main member provided with a lengthwise extending groove, a plurality of auxiliary members having the ends extending into said groove and means fitted into said groove whereby said auxiliary members are spaced apart.

1,425,719. BEDSPRING APPARATUS. JOHN B. SWAN, JOHN A. ROGERS, and GLENN W. JACKSON, Gladstone, Mich. Filed May 28, 1921. Serial No. 473,282. 5 Claims. (Cl. 5—69.)



1. In an apparatus of the class described, the combination of a main frame, end frames positioned around portions of the main frame, each end frame comprising transversely extending top and bottom plates, yokes connected to said top and bottom plates and extending around portions of the main frame, and mattress-supporting and tightening devices connected to said plates of the end frames.

1,425,720. BOX, FOLDER, AND LIKE CONTAINER. GEORGE BRASSFIELD TAYLOR, Belfast, Ireland. Filed June 20, 1921. Serial No. 478,967. 5 Claims. (Cl. 206—46.)

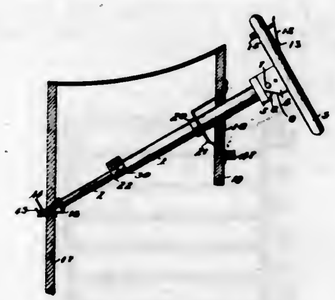


1. A new article of manufacture comprising, in combination, a top for a container adapted to hold handkerchiefs, gloves and like articles, a calendar flexibly attached to one end thereof, and a flexible means at the other end for suspending the top and calendar.

1,425,721. BATTERY CONTAINER. ROY WILLIAM TAYLOR, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,365. 3 Claims. (Cl. 204—53.)

1. A battery container comprising a casing, a plurality of batteries disposed in said casing, fixed contact screws disposed along one side of said casing and engaging the ends of said batteries adjacent thereto, a plurality of manually adjustable contact screws disposed along the other side of said casing and being adapted to engage the other ends of said batteries whereby said batteries are positively secured in place, terminals carried by said container, and electrical conducting plates carried by said first and second named contact screws for connecting said batteries in series with said terminals.

1,425,722. TEA-LEAF-ROLLING MACHINE. HENDRIK ARIE TEMPELAAR, Tandjong-Karang, Sumatra. Filed Mar. 30, 1921. Serial No. 457,134. 3 Claims. (Cl. 99—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



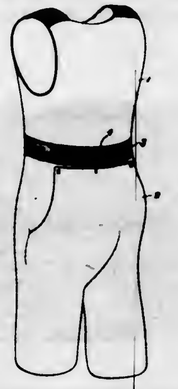
1. In a tea leaf rolling machine, the combination with a movable table and an open bottomed receptacle cooperating with the same, of pivotally mounted plates arranged at opposite sides of the receptacle, and means for moving the free ends of said plates towards and away from one another.

1,425,723. STEERING DEVICE FOR MOTOR VEHICLES. WILLIAM BAILEY THOMAS, Jacksonville, Fla. Filed Mar. 30, 1920. Serial No. 369,916. 5 Claims. (Cl. 74—89.)

3. A steering device for motor vehicles, comprising a steering shaft consisting of telescoping sections, a split sleeve carried by one of said sections and slidable over the other of said sections, said sleeve having lateral extensions adjacent said split, a brake pivoted to the ex-

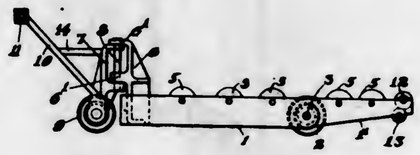
tensions of said sleeve and operable through the split of said sleeve to engage the other of said sections and having yoke arms, and operating means including links pivotally connected to said yoke arms.

1,425,724. SAFETY LOCK JOINT. ELVIN TILTON, Encampment, Wyo., assignor, by mesne assignments, to Pennsylvania-Kentucky Oil and Gasoline Refining Company, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 11, 1921. Serial No. 460,335. 8 Claims. (Cl. 279—100.)



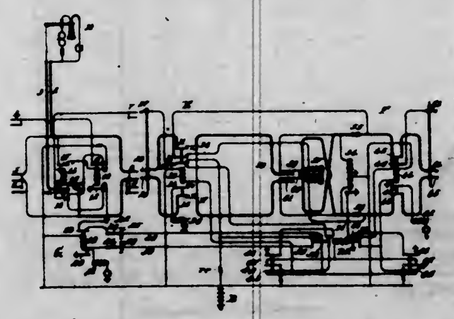
1. A safety joint for mutually screw threaded members comprising an integral locking rod having a screw threaded connection in one of said members the threads of which are opposite to those of the members themselves, said locking rod being provided with a slot arranged to register with an orifice in the second screw threaded member during matching of the joint, means passing through said slot and orifice whereby the locking rod may be held to rotate with said second member and moved longitudinally to maintain said slot and orifice in register upon matching of the joint, and means for securing the locking rod to said second member arranged to prevent longitudinal movement of the rod under any tendency toward unscrewing of the joint.

1,425,725. LOCKING WASHER. PAUL AIMÉ TREFIER, Paris, France. Filed Mar. 31, 1920. Serial No. 370,311. 1 Claim. (Cl. 151—38.)



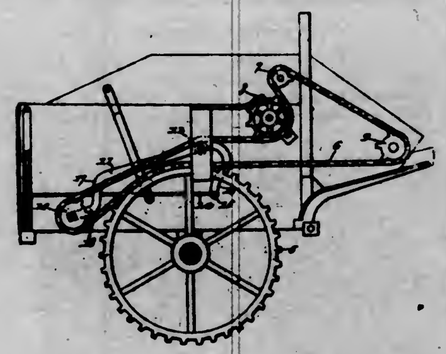
A locking washer comprising a series of conical elastic plates destined to be placed under a nut to prevent the unscrewing the same, said plates being engaged one in the other and centered on a sleeve having flanges engaging the beveled faces of the outermost plates.

1,425,726. UNDERWEAR GARMENT. CYRUS M. WALKER, Kansas City, Mo. Filed Aug. 5, 1921. Serial No. 489,950. 2 Claims. (Cl. 2—144.)



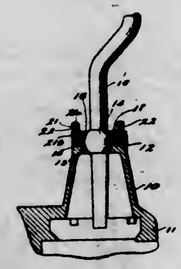
1. In combination with a garment comprising upper and lower members and a connecting waist band, an elastic insert having its wales extending across the waist band and having its end edges secured to the garment at the upper and lower edges of the band and having a fullness between its ends, the end edges of the insert being held secured in a condition of expansion at approximately the elastic limit of said insert.

1,425,727. TRUCK. GEORGE PETER WALLSTROM, Montpelier, Vt., assignor to Lane Manufacturing Company, Montpelier, Vt., a Corporation of Vermont. Filed June 27, 1921. Serial No. 480,522. 8 Claims. (Cl. 214—65.)



1. In a tilting truck of the class described, a wheeled support between its ends, a rotatable delivery device at the rear of the truck and exposed above the upper surface of the same, and a rotatable driver in frictional contact with said delivery device and exposed below said truck in normal elevation above the floor, said truck being tiltable on its said wheel support to bring said driver into contact with the floor.

1,425,728. TELEPHONE-EXCHANGE SYSTEM. HARRY G. WEBSTER, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Mar. 9, 1908. Serial No. 419,981. 142 Claims. (Cl. 179—27.)



1. A telephone system comprising telephone lines terminating in a plurality of exchanges, a switchboard having operators' positions, two-wire trunks, each having a maximum of two conductors at one point at least in its length, automatic means at said plurality of exchanges for extending calling lines over such two-wire trunks to said switchboard and displaying signals thereat, operators' impulse controlling means at said switchboard, and selective switches operable responsive to said means in completing connections from calling lines to called lines, said connections including two-wire trunks for interconnecting telephone lines of the different exchanges.

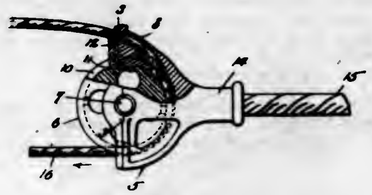
1,425,729. MANURE SPREADER. CHARLES WILLIAM WRIGHTMAN, Carlisle, Pa., assignor of one-half to John Alloway McClain, Carlisle, Pa. Filed Dec. 19, 1921. Serial No. 523,509. 1 Claim. (Cl. 74—21.)

In a drive mechanism for manure spreaders, a drive wheel, a drive chain adapted to engage the periphery of the drive wheel for operating the distributor or spreader, an arm oscillatively mounted above the drive wheel, means connected to the arm on one side of the pivot for oscillating the arm, the said arm having a depending portion and an extension on the other side of the pivot, the said depending portion having a spring action with relation to the drive wheel, and a wheel rotatably mounted on the extension of the arm engaged by the drive chain and adapted to move the drive chain toward and away from the drive wheel as the said arm is oscillated.

1,425,730. BALL AND SOCKET DEVICE. HOWARD FERRIS WHITTED, Santa Paula, Calif. Filed Feb. 21, 1921. Serial No. 446,748. 3 Claims. (Cl. 287—88.)

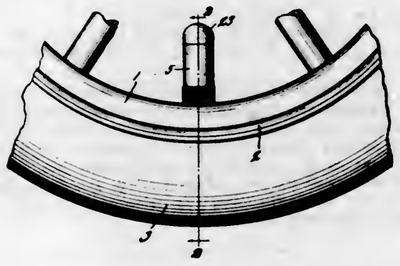
3. In a device of the character described, a socket, a ball operating in said socket, a cap for securing the ball in position in the socket, cooperating guide means between the cap and the socket for preventing lateral displacement of the cap and for constraining the cap to axial movement toward and away from the socket, and means for resiliently resisting movement of the cap axially away from said socket.

1,425,731. HEELLESS OVERSHOE. MARIE VAUGHAN WILDS, New York, N. Y. Filed June 4, 1921. Serial No. 474,932. 1 Claim. (Cl. 36—6.)



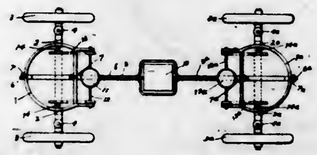
An overshoe consisting of a sole portion and a dished-out top portion, and provided with an attachment for holding it in place, the said attachment presenting two straps secured to and extending from the rear upper corners of the top portion and adapted to be passed over the heel and around the ankle and detachably secured together in that condition.

1,425,732. CABLE LOCK. JAMES C. WILLIAMSON, Cordele, Ga. Filed Mar. 7, 1921, Serial No. 450,198. Renewed Jan. 3, 1922. Serial No. 526,811. 1 Claim. (Cl. 24—126.)



In combination with a pulley, pulley housing and cable operating over the pulley, said pulley having a peripheral groove and having openings extending therethrough, a wedge-shaped locking member having a lug,

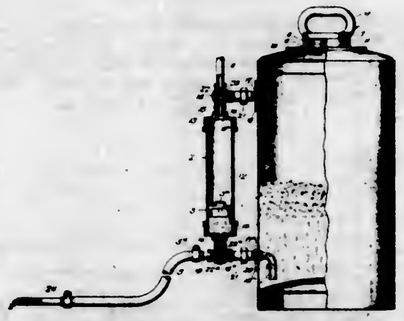
said lug adapted to be positioned in one of the openings to restrict movement of the wedge with respect to the



pulley, and said wedge-shaped members adapted to force the cable into engagement with the inner wall of the housing.

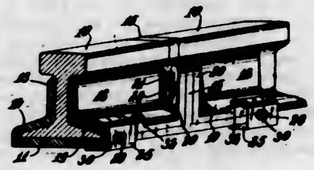
1,425,733. DEFLATED-TIRE SIGNAL. HUGH A. WILSON, Mankato, Minn. Filed May 13, 1921. Serial No. 469,290. 1 Claim. (Cl. 116—34.)

In a deflated tire signal, a guide; an abutment disk in the guide; a resonant diaphragm in the guide; means for securing the diaphragm and the disk to the guide; a plunger slidable in the guide and passing through the abutment disk and the diaphragm, the plunger having teeth engaging the diaphragm; an abutment on the plunger; and a compression spring interposed between the abutment and the abutment disk.



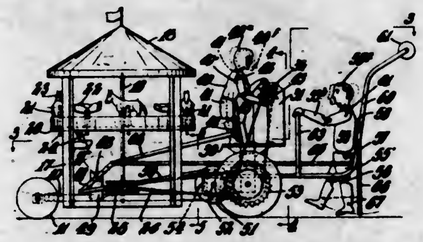
1,425,734. RUNNING GEAR. CHARLES O. WYMAN, Anoka, Minn. Filed Mar. 23, 1921. Serial No. 454,965. 3 Claims. (Cl. 180—43.)

1. In a vehicle running gear of the automobile type, a carrying axle bent down in its center with a framed platform mounted on its respective ends, in combination with a reach crooked down under said platform and pivotally mounted on the same.



1,425,735. MEASURING AND DISCHARGING APPARATUS. LUCIEN I. YEOMANS, Chicago, Ill., assignor to Mann Corporation, Kankakee, Ill., a Corporation of Illinois. Filed Aug. 11. 1917. Serial No. 185,638. 1 Claim. (Cl. 221—110.)

An apparatus for measuring and discharging grease or the like including a closed container, a measuring receptacle having a piston therein, an air inlet pipe, a grease outlet, a valve casing connected with one end of the measuring receptacle, the air-supply pipe and one end of the container, and a valve casing connected with the



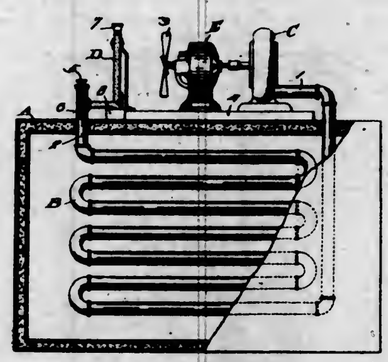
other end of the measuring receptacle, the grease outlet and the opposite end of the container, each of said valve casings having a valve member therein operable to establish communication between any two of its connections.

1,425,736. RAIL JOINT. JOHN ZELINSKY, Portsmouth, Va. Filed Feb. 1, 1922. Serial No. 533,170. 4 Claims. (Cl. 238—225.)

1. In combination with a pair of rail ends, a chair-plate element presenting between its ends a transverse ear fitting between the rail ends, and a pair of fish-plate elements abutting against said ear, said fish-plate elements having at their adjacent ends transverse webs engaging said ear on opposite sides thereof.

1,425,737. MOUNTED COMBINATION TOY AND CAROUSEL. BÉLA ZSARNAY, Belleville, N. J., assignor of one-half to Abraham Lewis, Newark, N. J. Filed May 26, 1921. Serial No. 472,686. 3 Claims. (Cl. 46—45.)

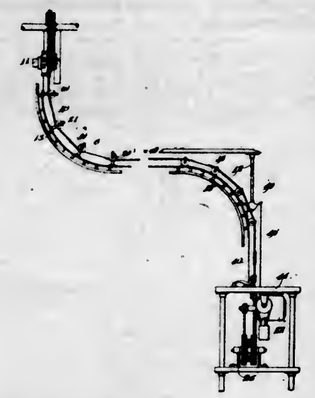
1. A toy comprising a frame, wheels on which said frame is mounted, a music box device supported on said frame, a pair of mannikins supported on said frame, one of said mannikins having an arm formed with a hinge-joint at the elbow and pivotally attached to the body of



the mannikin, the other mannikin having its legs pivotally attached to its body, and means whereby the free end of the said arm is moved in a circular path in similitude of operating said music box device, and the said legs are oscillated in a similitude of walking.

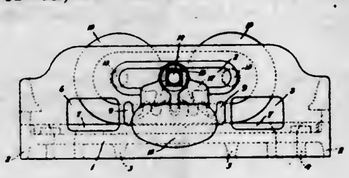
1,425,738. FOLDING DRAWING PEN. LUDWIG ZWENG, Pfronten-Steinach, Germany. Filed May 28, 1920. Serial No. 385,009. 1 Claim. (Cl. 120—109.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A drawing pen having a fixed blade provided at its inner end, on its outer side with a spring tongue, and a pivoted blade the inner end of which has edges arranged at an angle to each other and also arranged to bear on said spring tongue to hold said pivoted blade in either open or closed position.



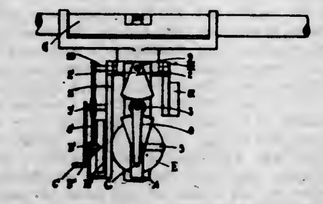
1,425,739. COOLING APPARATUS. WARREN STANLEY ADAMS, Buffalo, N. Y. Filed Oct. 17, 1919. Serial No. 331,445. 1 Claim. (Cl. 62—97.)

The combination with a refrigerator box, of a cooling coil within the box, a radiator arranged outside of the box and connected to one end of said coil, said radiator having absorbent material thereon, means for supplying moisture to said material, a pump adapted to draw air through said radiator and coil successively, means for restricting the flow of air into said coil, a motor for operating said pump, and a fan operated by the motor and adapted to create an air draft past the radiator.



1,425,740. OVERHEAD CARRIER SYSTEM. JAMES L. BALDWIN, Chicago, Ill. Filed Jan. 24, 1922. Serial No. 531,471. 5 Claims. (Cl. 186—14.)

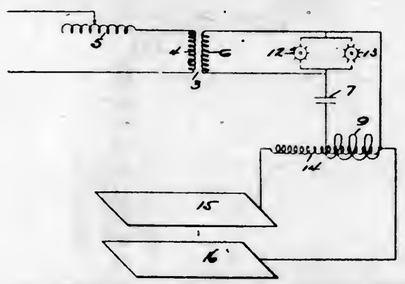
1. An overhead carrier system comprising a sending station, a receiving station, a wire track between the stations, an endless belt having its runs along the course of the track, power means for operating the belt, a carrier propelled by the belt along the track, a manually-



operated starting control for the power means, and an automatic stopping control for the latter operative when the carrier reaches the station of its destination.

1,425,741. ROLLER SIDE BEARING. FRANKLIN L. BARNUM, Chicago, Ill., assignor to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,661. 9 Claims. (Cl. 64—64.)

9. A side bearing for railway cars comprising a housing, a plurality of bearing rollers supported for movement therein, means connecting said rollers and a counterweight mounted for bodily and swinging movements upon movement of said rollers to return said rollers to their normal position.

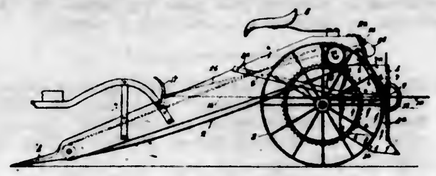


1,425,742. RANGE FINDER AND LIKE INSTRUMENT FOR USE ON SHIPBOARD. ARCHIBALD BARR and WILLIAM STROUD, Anniesland, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Anniesland, Glasgow, Scotland. Filed Oct. 13, 1921. Serial No. 507,473. 12 Claims. (Cl. 33—46.)

1. A support comprising a stand, a carrier on the stand capable of angular adjustment about a horizontal axis, a horizontality indicator for indicating the hori-

sontal appertaining to the said horizontal axis, and hand actuated mechanism for imparting counter-motions to the carrier about the horizontal axis so as to bring the carrier into conformity with the horizontality indicator, for the purposes set forth.

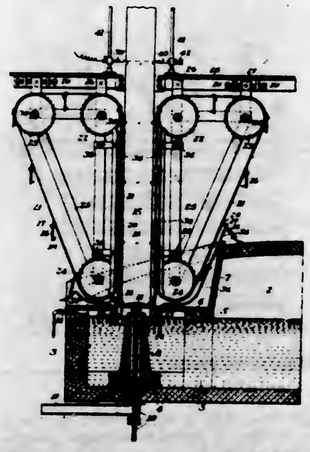
1,425,743. APPARATUS FOR PRODUCING THERAPEUTICAL EFFECTS. SYDNEY NORTON BARUCH, San Francisco, Calif. Filed May 14, 1919. Serial No. 297,102. 11 Claims. (Cl. 174—177.)



1. A therapeutic apparatus of the character described comprising a pair of condenser plates, a secondary induction coil connected at its opposite ends to said plates, a primary induction coil inductively connected to said secondary coil and means for producing a plurality of high frequency currents out of phase with each other in said coils.

1,425,744. PRUNING SHEARS. AMIEL BRATSCHIE, New Castle, Pa. Filed Feb. 26, 1919. Serial No. 279,261. 3 Claims. (Cl. 30—11.)

1. A pruning shears comprising a pole or handle, a shank at the outer end of the handle, an oscillating cutting blade, pivoted at one end to the shank, a relatively stationary cutting member provided at its outer end with an inwardly and laterally extending hook, disposed in a direction toward the shank, a link connecting the inner end of the relatively stationary cutting member with the shank of the handle, an operating lever, pivoted to the inner end of the handle and a connecting rod between the last mentioned cutting member and said operating lever, the outer end of the oscillating blade being pivoted to the shank of the relatively stationary cutting member and the cutting members and associated parts being in folded position at the initial stage of the cutting operation, the cutting edge of the blade being located between the pivot points of the blade.



1,425,745. POTATO CARRIER FOR POTATO DIGGERS. WILLIAM BROECKER, Minneapolis, Minn. Filed Feb. 28, 1921. Serial No. 448,660. 9 Claims. (Cl. 214—6.)

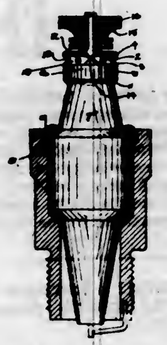
1. In a power potato digger comprising an elevating means, a carrier for the potatoes comprising a hopper structure positioned to receive the potatoes from the elevating means, a revoluble grate bottom in said hopper and means adapted to be actuated by the operator for moving said bottom to discharge the potatoes from said hopper at suitable intervals.

9. A carrier for a potato digger comprising a hopper structure supported on said digger in position to receive potatoes discharged thereby, angularly arranged frames radiating from and rotating about a shaft located at one side of the hopper, means in said hopper for successively supporting said frames in substantially horizontal position, and a pair of leaf springs supported in said hopper positioned to contact with said frames when the same are rotated, one of said springs being of light structure and acting to prevent reverse rotation of said frames and the other spring being of heavy structure and adapted to momentarily support said frame until they are moved into position against the stop.

1,425,746. METHOD OF AND APPARATUS FOR DRAWING GLASS. CLARENCE P. BYRNES, Sewickley, Pa. Filed Jan. 28, 1918. Serial No. 214,065. 25 Claims. (Cl. 49—17.1)

6. In the drawing of hollow glass articles from a tank or forehearth, the steps consisting in feeding air upwardly through the bath, baffling the air to retain distending pressure for the hollow glass body while allowing baffled air to pass upwardly through the hollow body, and drawing the glass body upwardly from within a floating ring by engaging its sides to continuously lift it.

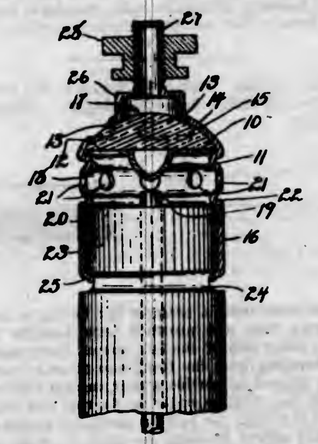
22. In apparatus for drawing hollow glass bodies upwardly from a bath of molten glass, deforming means, and an upper section-removing device arranged to engage the deformed portions, the latter device having connections arranged to lift the severed section from the upwardly moving hollow glass body.



25. In apparatus for drawing a continuous glass cylinder, a set of traveling mechanisms having means for

indenting and gripping the cylinder and continuously moving it upwardly, at least one of said mechanisms being adjustable toward and from the cylinder.

1,425,747. PHOSPHATIC FERTILIZER MATERIAL AND PROCESS OF MAKING THE SAME. LEONARD R. COATES, Laurel, Md. Filed Sept. 1, 1921. Serial No. 497,660. 7 Claims. (Cl. 71—7.)

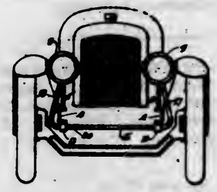


1. A process which comprises mixing material containing superphosphate with a material containing an alkaline calcium compound, wetting the mixture and producing in such product, a physical condition adapted for being strewn as fertilizer.

1,425,748. VISIBLE-SPARK PLUG. ARTHUR T. CRANE, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed June 24, 1920. Serial No. 391,294. 3 Claims. (Cl. 123—169.)

1. A visible spark-plug having a shell, an insulating core, an electrode therein, a terminal-cap positioned upon the core to produce a spark-chamber which is pierced by lateral sight-openings, and a sparking-disk mounted by its edge in the said cap at a point above the said sight-openings and furnishing a sparking-point in line with the said electrode.

1,425,749. VISIBLE SPARK PLUG. ARTHUR T. CRANE, Waterbury, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Mar. 5, 1921. Serial No. 449,780. 5 Claims. (Cl. 123—169.)

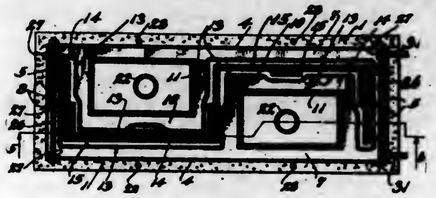


1. A visible spark-plug having its cap provided with a lens-chamber and with observation-openings leading thereinto, a lens in the said chamber, and a sparking-disk formed with observation-openings aligned with those in the cap, the said observation-openings of the lens-chamber and sparking-disk being located at one side of the longitudinal axis of the plug, in which direction the sparking takes place.

1,425,750. COMBINED KNIFE AND FORK. JAMES H. CRAWFORD, Deadwood, S. Dak. Filed Dec. 20, 1920. Serial No. 431,991. 9 Claims. (Cl. 30—9.)

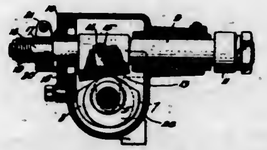
1. A device of the class described including articles of utility of equal length each having one end thereof provided with means adapted to engage the opposite end of an adjacent article for holding the articles in assembled position.

1,425,751. DIRIGIBLE HEADLIGHT. WILLIS WILLARD DART, Ogleaby, Okla. Filed Oct. 1, 1921. Serial No. 504,668. 2 Claims. (Cl. 240—62.)



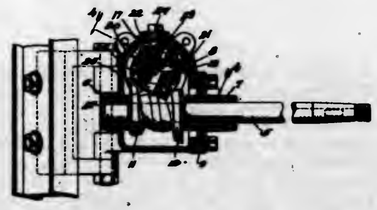
1. A dirigible headlight mechanism embodying a pair of headlights, each headlight having an arm projecting from the rear portion thereof, said arm being pivotally mounted substantially at its central portion on a support for movement in a horizontal plane, the end of said arm being provided with an opening, a substantially U-shaped actuating member mounted on the chassis of an automobile, the ends of said member being bifurcated, fastening means extending through said bifurcations and the openings in the ends of said arms, and means for connecting the actuating member to the steering mechanism of the automobile.

1,425,752. ELECTROLYTIC CELL. ALFRED VICTOR DAVIS, Elkton, Md. Filed June 7, 1921. Serial No. 475,675. 18 Claims. (Cl. 204—58.)



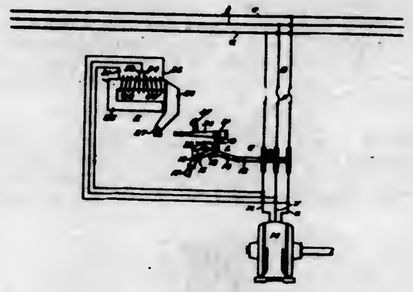
1. An electrolytic cell comprising an anode and a cathode arranged in spaced relation to provide an anode chamber therebetween, said chamber opening freely into the cell at its upper and lower ends, and means for supplying

an electrolyte solution to said cell and automatically maintaining the level thereof above the upper end of said chamber as the electrolytic action takes place in said chamber



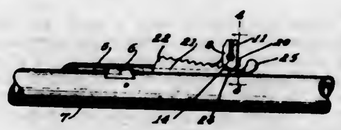
whereby to produce a thermo-siphonic circulation of the electrolyte upwardly in the chamber and downwardly in the cell.

1,425,753. STEERING MECHANISM FOR AUTOMOBILES. HARRY M. DENYES, Saginaw, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 17, 1921. Serial No. 508,343. 6 Claims. (Cl. 74—79.)



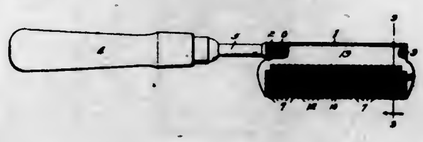
1. In steering mechanism of the class described, a rotatable steering shaft; two oppositely arranged cam members carried by said shaft and located adjacent the lower end thereof; an oscillating shaft located adjacent said cams and extending transverse to said steering shaft, and which shaft is provided with a bearing surface which is inclined relative to the axis thereof and against which surface both the cams aforesaid bear; and means for moving said oscillating shaft along its axis to thereby adjust said bearing surface relative to said cams.

1,425,754. STEERING MECHANISM FOR MOTOR VEHICLES. HARRY M. DENYES, Saginaw, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 17, 1921. Serial No. 508,344. 5 Claims. (Cl. 74—79.)



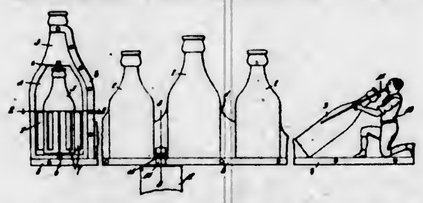
1. In a steering mechanism of the class described, a rotatable steering shaft; two oppositely arranged cam members carried by said shaft and located adjacent the lower end thereof; an oscillating shaft located adjacent said cams and extending transverse to said steering shaft; a bearing member carried by said oscillating shaft and with which both the cam members aforesaid engage, and which bearing member is located between the axes of said steering shaft and said oscillating shaft; and means for moving said bearing member transverse to said oscillating shaft and toward and from said cam members.

1,425,755. POLYPHASE CONTROLLING DEVICE. EDWARD I. DEUTSCH, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 9, 1917. Serial No. 167,827. Renewed Apr. 7, 1921. Serial No. 459,811. 20 Claims. (Cl. 175—294.)



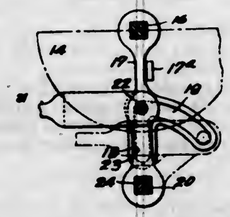
1. In a controlling device for polyphase electric circuits, a controlling element, and means for causing actuation of said controlling element when the phase relations are different than a predetermined relation, said means including an energizing means whereby an appreciable effective normal flux is produced having windings for producing a vectorial addition in substantially a single direction of polyphase effects proportional to the line voltages of said polyphase circuit.

1,425,756. RIFLE SIGHT. ALEXANDER DICKEY, Honeyville, Utah. Filed Feb. 13, 1922. Serial No. 536,174. 3 Claims. (Cl. 33—53.)



1. In a sight for fire arms, a body portion having a head formed at one end thereof, said head having a cut out portion and having a groove formed transversely thereof, laterally adjustable sight members disposed within the groove, a vertically adjustable sight member associated with the laterally adjustable sight members, and an adjustable member disposed under the body portion.

1,425,757. COMB. DAVID K. ECHOLS, St. Louis, Mo. Filed Dec. 30, 1920. Serial No. 434,110. 1 Claim. (Cl. 132—14.)



A comb comprising a pressing bar having a transverse convex rear face, and provided with a screw threaded socket at either end of the bar, spaced teeth having side faces converging from the front face of each tooth to the rear face thereof to provide a hair passage between adjacent teeth that will be wider at its rear end than at its front end to permit the hairs to gradually spread apart in leaving the spaces between the teeth, a screw threaded shank receivable in either socket of the bar and a non-heat conducting handle for the shank.

1,425,758. ADVERTISING DEVICE. ROBERT M. FINGER and DEXTER W. LILES, Badin, N. C. Filed Mar. 21, 1922. Serial No. 545,604. 4 Claims. (Cl. 40—126.)

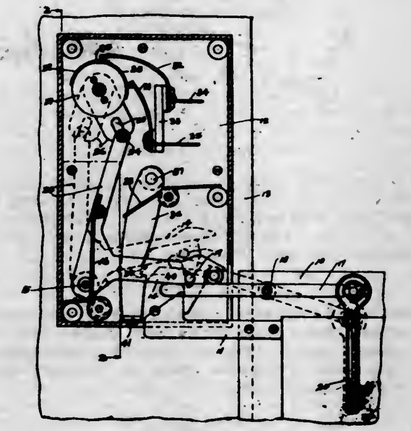
1. An advertising sign comprising a representation of a plurality of containers, one of which is made larger than the others and has an attention attracting element movably mounted therein.

1,425,759. DIRIGIBLE-HEADLIGHT MECHANISM. JOHN GARNAR FLOOD, Quebec, Quebec, Canada. Filed Apr. 23, 1921. Serial No. 464,015. 8 Claims. (Cl. 240—62.)

1. A dirigible headlight mechanism, comprising a pair of rotatable headlight supports, laterally slotted operating levers connected thereto, a connection between said levers engaging normally in corresponding ends of the lever slots and movable in said slots in coacting relation therewith to turn one of the headlights without affecting the other, rockers supporting the connection and an actuating member associated with said connection to move said connection in either of two directions dependent upon which headlight is to be turned.

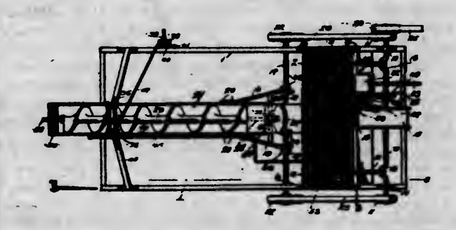
1,425,760. BUTTONHOOK. NACLE F. FORELY, New York, N. Y. Filed May 15, 1922. Serial No. 561,124. 5 Claims. (Cl. 24—40.)

1. A button-hook comprising a channeled shank having three transversely spaced inturned prongs at the end thereof, the center one of said prongs being removable from operative relation with respect to the other two.



1,425,761. SELF-OPENING UMBRELLA. SAMUEL S. FRETS, Sr., Philadelphia, Pa. Filed Sept. 12, 1921. Serial No. 500,239. 3 Claims. (Cl. 135—44.)

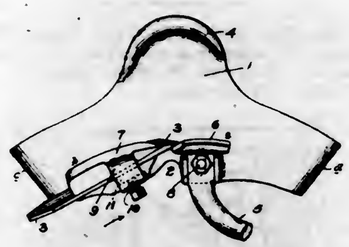
3. In a self opening umbrella, a runner, a movable tip cup, a sleeve connected with the latter and slidable on the runner, said sleeve having on its outer end an inturned flange, a tubular member connected with said runner and having on its outer end an inturned flange, a catch on the stick, said catch having in its side a recess, the walls of which form opposite side shoulders, said recess being adapted to receive both of said inturned flanges, one of which latter is engageable with one of



said shoulders, and the other flange is engageable with the opposite shoulder, a head on said runner within said tip cup, and a resilient device interposed between said head and said sleeve of the tip cup.

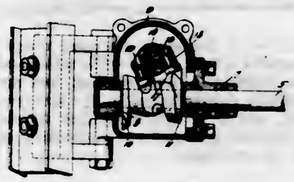
1,425,762. ELEVATOR-DOOR LOCK. JAMES F. GIBTEN, Chicago, Ill., assignor of one-half to Henry Snow, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,466. 9 Claims. (Cl. 187—81.)

5. A device of the class described comprising a pivotally mounted latch; means with which said latch engages for holding a door against movement; and a rotary electric switch having a pin and groove engagement with said latch for oscillation thereby when the latch is revolved into and out of latching position, substantially as described.



1,425,763. SAND-CLEANING MACHINE. WILLIS A. GOODWIN, Kirksville, Mo. Filed Apr. 2, 1921. Serial No. 458,142. 5 Claims. (Cl. 83—81.)

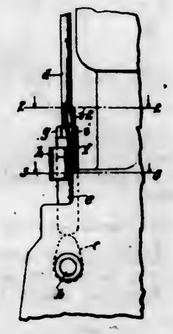
1. In a machine for the purpose indicated, a frame, a driven shaft mounted therein, a chute mounted on the shaft pivotally for tilting movements radially from the shaft, a screw conveyor mounted for operation axially in said chute and being operatively connected to the shaft, whereby material discharged in the chute may be con-



veyed upwardly and discharged at the upper end of the chute, means for supplying water to the chute accessively throughout its length, whereby the sand is propelled upwardly against the water, and the water, dirt, and trash are carried downwardly and discharged at its lower end on the ground, and a separating means including a chute overlying the first chute in alignment therewith for feeding the material into the first chute.

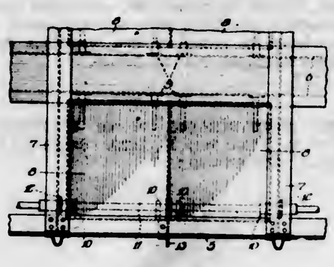
1,425,764. CHAMFERING PLANE. CHARLES H. GROTH, Rochester, Pa. Filed Jan. 14, 1922. Serial No. 529,181. 1 Claim. (Cl. 147—24.)

A chamfering plane comprising a guiding plate to engage the edge of the stave, a transversely convex bottomed sole block projecting from the nether surface of the plate, and a straight edged chamfering blade with an edge in contact with the guiding plate.



1,425,765. STEERING MECHANISM FOR MOTOR VEHICLES. GEORGE H. HANNUM, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 17, 1921. Serial No. 508,282. 5 Claims. (Cl. 74—79.)

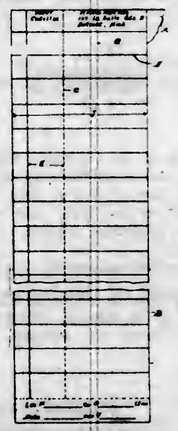
1. In steering mechanism of the class described, a rotatable steering shaft; two oppositely arranged cam members carried by said shaft and located adjacent the lower end thereof; an oscillating shaft located adjacent said cams and extending transverse to said steering shaft; a steering arm carried by said oscillating shaft; a supporting member carried by said oscillating shaft; and two bearing members carried by said supporting member and having flat surfaces adapted to contact one with each of the cam members aforesaid and which surfaces lie in a plane which is fixed relative to the axis of said oscillating shaft.



1,425,766. VALVE-TAPPET-SILENCING MECHANISM. VERNON J. HARRIS, Adrian, Mich. Continuation of application Serial No. 439,159, filed Jan. 22, 1921. This application filed July 12, 1922. Serial No. 574,350. 9 Claims. (Cl. 123—90.)

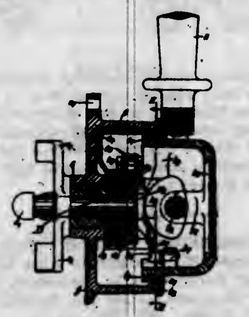
1. In a device of the class described, in combination, a valve push rod, the co-operating cam actuated plunger, a guide lock connecting said plunger and push rod together, a spring guide member shaped so as to partially encircle the push rod resiliently gripping the same so as to be carried thereby, such spring guide member provided with a pair of downwardly extending prongs po-

sitioned one on each side of the plunger, interposed between the guide lock member and the engine casing, said prongs so shaped as to exert yielding pressure on said guide lock to prevent its striking against the engine casing.



1,425,767. DUMP CAR. HARRY S. HART, Chicago, Ill., assignor to National Dump Car Co., Chicago, Ill., a Corporation of Maine. Filed Aug. 4, 1921. Serial No. 489,701. 7 Claims. (Cl. 105—309.)

7. A car having an underframe comprising cross bearers, a plurality of doors between adjacent cross bearers and means of supporting the adjacent edges of the doors directly from the car frame.



1,425,768. COMBINED ADDRESSING AND LISTING DEVICE. MILTON HARTMAN, Detroit, Mich. Filed Nov. 6, 1920. Serial No. 422,354. 4 Claims. (Cl. 288—1.)

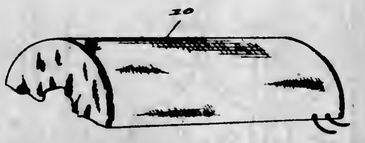
1. In a combined listing and addressing device, a chart having a longitudinally extending separable line portion, selective data located on one side of said separable line portion and the mailing address of the party to whom the selective data applies located on the opposite side of said separable line portion, and in operative relation to the corresponding selective data, said addresses being

arranged in blocks suitable for individual mailing purposes when separated from the adjacent address blocks.

1,425,769. SWITCH. JOHN ARTHUR HIRST and PERCY SMITH BROOK, Chester, England. Filed Sept. 14, 1920. Serial No. 410,275. 9 Claims. (Cl. 94—54.)

1. An electric switch operating mechanism comprising a handle member mounted to be capable of movement in two directions, switch operating connections whereby a step by step movement of said handle in one of said directions operates a switch member from off to on positions and vice versa, switch operating connections whereby movement of said handle in the other of said directions operates another switch member, automatic switch locking means arranged to be brought into action when said handle has completed its full on movement in said first named direction, and means operated by the movement of the handle in said second direction for unlocking said switch locking means.

1,425,770. FUSELAGE PARACHUTE. EDWARD L. HOFFMAN, Fort Slocum, N. Y. Filed May 5, 1921. Serial No. 467,095. 15 Claims. (Cl. 244—21.)

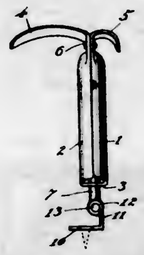


1. In combination, in an aircraft body of a plurality of sections, means operably connecting said sections together, and means operable at the will of the pilot and operated by the resistance of the air to release said connecting means for the purpose described.

1,425,771. PHONOGRAPHIC-DISK-RECORD EJECTOR. EMMETT M. HOWARD, Baltimore, Md., assignor, by mesne assignments, to Frank F. Slocomb, Philadelphia, Pa. Filed Mar. 1, 1918. Serial No. 219,750. Renewed Jan. 27, 1921. Serial No. 440,526. 7 Claims. (Cl. 211—16.)

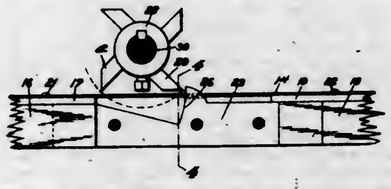
2. In a phonographic disk record cabinet, a box having its top and bottom provided on their inner surfaces with parallel aligning cuts, partitions of non-abrasive material having their upper and lower ends seated in said cuts, thereby forming closely related parallel, non-abrasive, record holding compartments adapted for the reception of different sized records, a series of oscillatory record supporting ejector levers consisting of straight bars having upper rectilinear faces located at and forming the bottoms of said compartments, a fulcrum rod passing transversely through said levers at the rear of their center of gravity, whereby the forward ends of said levers when a compartment is empty incline downwardly and outwardly to form a tell-tale to indicate an empty compartment, the front underside of each lever then contacting with the bottom of said box, while the rear terminals of said levers when a record is in its rearmost position also contact with the bottom of said box, and a bumper located above said levers in the lower rear portion of said box at the point where the lower inner peripheries of different sized records coincide in a rectilinear line when at rest, said levers having a finger at their rear portions for coaction with the juxtaposed periphery of a record.

1,425,772. BATH-CABINET-SUPPORTING FRAME. FRANK HNILO and JOHN SCHULTS, Cicero, Ill. Filed Mar. 17, 1922. Serial No. 544,618. 3 Claims. (Cl. 4—13.)



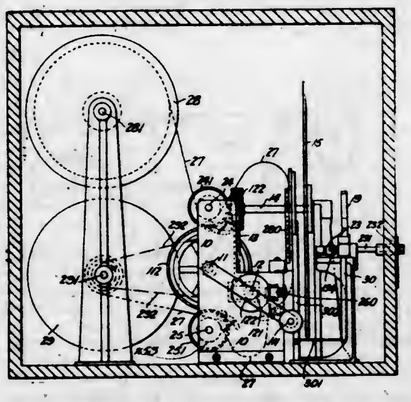
1. A supporting frame for a bath cabinet, comprising arched end and intermediate bars, each of said bars being composed of a pair of hinged sections to permit folding transversely of the frame, a rigid connection between the intermediate bar and one of the end bars, and a slidable connection between said bars and the other end bar.

1,425,773. AUTOMOBILE HOOD CLAMP. JOHN A. HUTH, Cincinnati, Ohio, assignor to Stanley M. Lawson, Cincinnati, Ohio. Filed Nov. 1, 1920. Serial No. 421,002. 7 Claims. (Cl. 292—63.)



1. A hood clamp for motor vehicles and the like which has a body portion formed of a single strip of metal

bent into a half round shape, with a flat central portion and flat end portions, said strip being bent together to

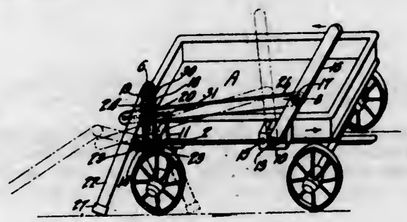


bring the edges of the half round together to form a tubular body and secured in permanent form by the lapping flat ends.

1,425,774. BOX-MAKING MACHINE. RICHARD G. INWOOD, deceased, late of South Bend, Ind., by Mary Cain Inwood, administratrix, South Bend, Ind., assignor to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Jan. 10, 1918, Serial No. 211,264. Renewed Feb. 4, 1922. Serial No. 534,259. 57 Claims. (Cl. 1—8.2)

49. A machine for use in making boxes comprising, in combination, work-feeding means, mechanism for applying binding wire to box parts, and wire-severing means operable by movement with the work.

1,425,775. PRODUCTION AND PROJECTION OF PHOTOGRAPHIC RECORDS. BRENDA BEATRICE ANNE JOHNSON, London, England. Filed Nov. 12, 1919. Serial No. 337,515. 6 Claims. (Cl. 88—16.4.)



1. In a camera, three lenses comprising a fixed central lens, movable arms at each side of the fixed lens and upon which the other lenses are mounted, a block, a worm for actuating it, and links connecting the arms to the block.

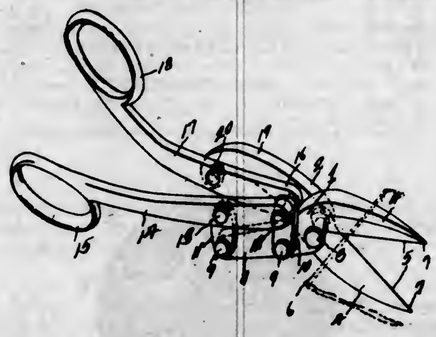
1,425,776. TOILET INSTRUMENT. WILLIAM E. KELLY, Cleveland, Ohio. Filed Dec. 8, 1919. Serial No. 343,320. 4 Claims. (Cl. 128—269.)

1. An apparatus of the character described comprising a case provided with a chamber to hold a lubricant, a tube within said case, a wick in said tube and one end thereof in communication with said lubricant and the other end thereof projecting outside of said case, and a cap on said case.

1,425,777. PROPELLER ATTACHMENT FOR VEHICLES. WILLIAM E. KELLY, Cleveland, Ohio. Filed Aug. 6, 1921. Serial No. 490,399. 3 Claims. (Cl. 208—38.)

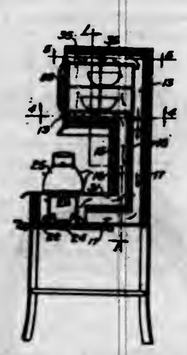
1. An apparatus of the character described, comprising a fulcrum block adapted to be secured to a vehicle, an operating lever fulcrumed to said fulcrum block, a push bar operatively connected to said operating lever and the lower end thereof adapted to engage the ground, and a spring operatively connected to said push bar to hold the lower end thereof to the ground.

1,425,778. SUSPENDER BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Jan. 5, 1922. Serial No. 527,091. 2 Claims. (Cl. 24—4.)



1. A buckle comprising a base plate, and a pair of clamping levers opposite one and the same face of the plate, and having jaws movable toward and from said face, one of the levers overlapping the other lever, and the base plate having an aperture through which the free end of the last-mentioned lever is exposed.

1,425,779. SHEARS. GEORGE W. KILLIN, West Huntington, W. Va. Filed July 29, 1921. Serial No. 488,317. 2 Claims. (Cl. 30—13.)

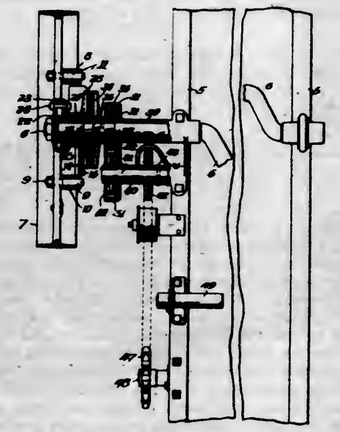


1. A pair of shears comprising crossed members, one end of said crossed members forming shearing blades, the other ends of said crossed members extending rearwardly and away from each other, one of said rearwardly extend-

ing ends having pivoted thereto at spaced points upwardly extending links, a handle member pivoted to said links, thereby forming a parallel movement, a second handle member, said second handle member having its forward end pivotally connected to the first mentioned handle mem-

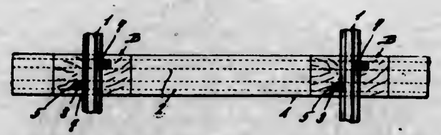
ber and the forward link at its upper end, said second handle member being pivotally connected to the upwardly and rearwardly extending end of the crossed member at a point spaced from the front end of the upper handle member.

1,425,780. STOVE. IVAN KING, Los Angeles, Calif. Filed Apr. 6, 1921. Serial No. 458,967. 7 Claims. (Cl. 126—39.)



1. In combination; walls forming an oven; walls forming a combustion space open at the top; walls forming an enclosed chamber about said oven; walls forming an enclosed chamber about said combustion space; and walls forming passages through which heated air may be transferred from said space about said combustion space to the space about said oven.

1,425,781. CONDUIT-COUPLING DEVICE. HOMER G. KNOOHUIZEN, Englewood, N. J., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1920. Serial No. 419,979. 6 Claims. (Cl. 247—25.)

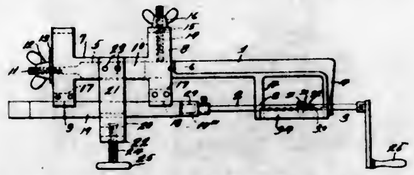


1. The combination of an outlet box of the class described having an opening in a wall thereof, means for making a conduit connection to said box comprising a screw-threaded outlet member projecting through said opening and rotatable therein, said outlet member being provided with locking means rotatable therewith, the wall of the box being provided with an offset portion adjacent the opening therein adapted to engage said locking means to prevent rotation of the outlet member when the outlet member approaches its final position to complete the connection.

1,425,782. SPEED GOVERNOR FOR SELF-FEEDERS. NORMAN R. KRAUSE, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed June 21, 1920. Serial No. 390,524. 8 Claims. (Cl. 192—105.)

3. The combination, in a speed governor, of a shaft, a wheel thereon, a cam secured to said wheel, a cam disk engaging said cam, a driven disk, and arms on said wheel connected to said cam disk actuated by centrifugal force to move said cam disk into contact with said driven disk.

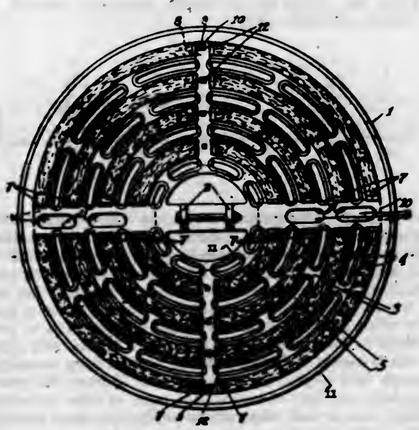
1,425,783. RAILROAD TIE. THOMAS D. MCCARTY, Hawk Point, Mo. Filed Oct. 27, 1920. Serial No. 419,800. 1 Claim. (Cl. 238—91.)



A railroad tie comprising a concrete body provided with recesses in its top face, resilient blocks in said recesses, said recesses and resilient blocks being equal in width to said concrete body, a pair of longitudinal reinforcing bars located in said concrete body and extending from one end of said body to the other end thereof, the top faces of said reinforcing bars being flush with the bottom walls of said recesses to form seats for said resilient blocks, and pairs of rail fasteners including pairs of vertical bolts extending through said reinforcing bars and also through the resilient blocks, one bolt of each of said pairs of bolts extending through one of said longitudinal reinforcing bars, and the other bolt of each pair of bolts extending through the other of said reinforcing bars, each of said vertical bolts having a head anchored in the concrete directly below the

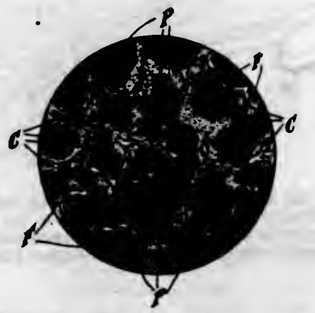
reinforcing bar and a threaded uppper end projecting from the top of one of said resilient blocks, and threaded nuts screwed onto the threaded upper ends of said bolts.

1,425,784. PLASTIC COMPOSITION AND ARTICLES FORMED THEREFROM. JAMES P. A. MCCOY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 30, 1920. Serial No. 406,777. 19 Claims. (Cl. 106—13.)



1. An insulating composition, comprising bakelite mixed with a polymerizable resin.

1,425,785. SPOKE-FORMING DEVICE. WILLIAM MCCULLOUGH, Howe, Nebr. Filed Sept. 24, 1921. Serial No. 502,873. 2 Claims. (Cl. 144—206.)



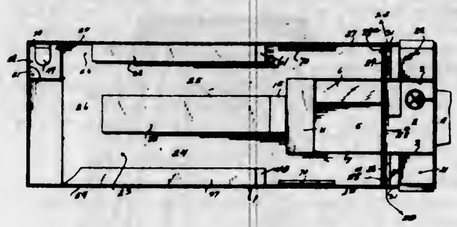
1. The combination with a horizontally disposed member having a spoke cutter shaft rotatably and slidably mounted in bearings thereof, of a spoke supporting member therefor, said supporting member being mounted on a reduced portion of the horizontally disposed member and vertically slidable thereon in engagement with shoulders formed by the reduced portion, the outer end of the reduced portion being threaded, a nut threaded on said reduced portion and adapted to force the spoke supporting member in engagement with the shoulders formed by the reduced portion, a threaded member extending upwardly through the spoke supporting member and provided with a nut for feeding the spoke supporting member downwardly for accurately gaging the position of a spoke in relation to the cutter shaft, a handle member carried by said cutter shaft and means for feeding said cutter shaft in the direction of the spoke during a spoke cutting operation.

1,425,786. BUFFING WHEEL. DANIEL F. MCGOVERN, Montpelier, Vt. Filed Dec. 15, 1920. Serial No. 430,834. 3 Claims. (Cl. 51—195.)

1. A buffing wheel comprising a disc having a series of spaced concentric rings and a series of spaced concentric segmental buffing elements clamped between said rings, said rings having each an annular slot series providing a plurality of feed openings for the introduction of polishing material to the individual buffing elements.

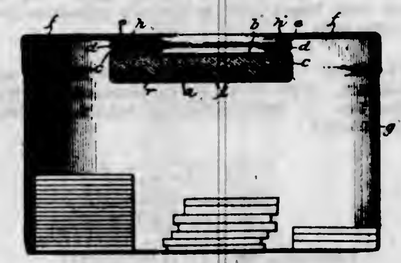
1,425,787. PROCESS OF DETERMINING THE SUITABILITY OF STEEL FOR CASEHARDENING. HARRY W. MCQUAID, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 1, 1921. Serial No. 488,885. 8 Claims. (Cl. 148—1.)

1. The process for determining the suitability of steel for hardening which consists in carburizing a sample thereof and microscopically examining a section of said sample through its carburized case.



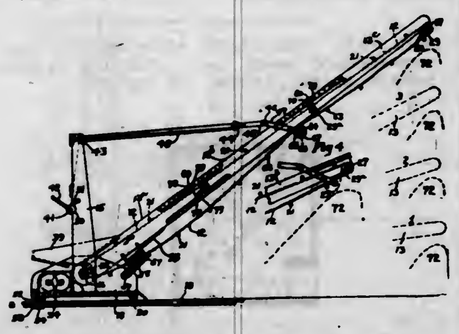
1,425,788. TIRE CONSTRUCTION. FRANC D. MAYER, Chicago, Ill. Filed Aug. 14, 1919. Serial No. 317,529. 3 Claims. (Cl. 152—13.)

3. In a tire, an inner carcass, a fabric partially covering said inner carcass, a tread, a fabric partially covering the inner surface of said tread and overlapping the lateral edges of the fabric on said carcass, and a resilient cushioning element between said fabrics and corrugated to provide air containing recesses.



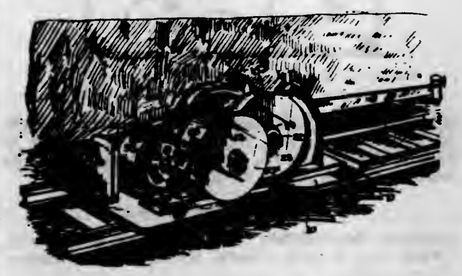
1,425,789. PORTABLE AUTOMOBILE GROCERY STORE. ANNIE L. MOSELEY, San Antonio, Tex. Filed Dec. 31, 1920. Serial No. 434,858. 3 Claims. (Cl. 296—24.)

1. In a portable grocery store, a housing having a salesman's aisle forwardly and centrally of the housing, a customer's aisle on one side of the salesman's aisle and having a gravity closed sliding entrance door to be opened from the exterior and unopenable from the interior, a customer's exit aisle on the opposite side of the salesman's aisle and having a gravity closed sliding



exit door forwardly of the housing openable from the interior, and unopenable from the exterior, and a passage connecting the rear ends of the aisles.

1,425,790. RECRISPING MEANS. PAUL S. MOYER, Chicago, Ill., assignor to The Aridor Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1919. Serial No. 306,803. 7 Claims. (Cl. 34—1.)



1. In combination, a container for food products and the like; a removable cover therefor; and moisture absorbing means carried by the interior of the cover comprising a holder or receptacle open to circulation of air in the container, and a moisture-absorbing medium, housed in said holder, and comprising the solid product of a mixture of infusorial earth and hygroscopic material intimately bound together and capable of attracting and absorbing moisture and of being readily dehydrated by heat.

1,425,791. GRADING AND STORING MACHINE FOR POTATOES, ETC. NOAH JOHNSON OAK, Lynn, Mass. Filed Oct. 20, 1921. Serial No. 508,915. 5 Claims. (Cl. 130—32.)

1. A potato-grading and storing machine, comprising, in combination, a portable holding structure adapted to rest on a floor, a boom pivoted at one end to said structure to swing in a vertical plane, and provided with belt-supporting pulleys at its opposite ends, adjustable means connecting the boom with the supporting structure to support the boom in an inclined position and vary its inclination and the height of its outer end, a reticulated endless conveyor belt engaged with said pulleys, mechanism carried by the holding structure and the boom, for driving the belt to move its upper stretch outward from the holding structure, a hopper mounted on the holding structure in position to deliver potatoes to the inner end of the upper stretch of the belt, the belt being adapted to convey firsts on its upper stretch to the outer end of the boom, and to drop seconds and culls, means between the stretches of the belt for collecting seconds and culls and laterally discharging the same at one side of the boom, and anchoring means for detachably securing the holding structure to a floor supporting the same.

1,425,792. HOIST. LAWRENCE PIGNANI and FRANK PIGNANI, Blairsville, Pa. Filed July 23, 1921. Serial No. 486,992. 5 Claims. (Cl. 254—187.)

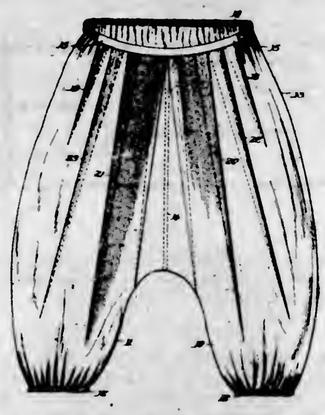
1. In a hoist, a bed plate, spaced bearings on the bed plate, each including an elongated base and a circular bearing plate having an inwardly and laterally extending marginal flange, a hollow axle journaled in the bearing plates, a winding drum including a hub having bearings rotatably mounted on the hollow axle, and cheek plates rotatably mounted within the flanges, said cheek plates, said bearing plate and said flanges defining chambers, an electric motor including an armature, a pedestal having a bearing rotatably supporting said armature, a gear casing between said bearing and one of said spaced plates, gearing arranged in said gear casing for transmitting the motion from said electric motor to said winding drum and including a pinion fixed to the armature, a shaft journaled in the gear casing, a large gear fixed to said shaft and constantly meshing with said pinion, a small gear loosely mounted on said shaft, means for clutching said small gear to said large gear, and a ring gear fixed to the adjacent cheek plate of the winding drum operating in the adjacent chamber and constantly meshed with the small gear, a brake drum carried by the other cheek plate and operating in its adjacent chamber, a brake band cooperable with said brake drum, an operating lever for said brake band extending rearwardly from the winding drum, and guides for the cable carried by the spaced bearings.

1,425,793. GAME OR PUZZLE. HAROLD LORENZO POST, Appleton, Wis. Filed June 29, 1920. Serial No. 392,669. 1 Claim. (Cl. 46—41.)

A device of the character described comprising a game board having a bottom, a false bottom spaced therefrom, a series of flat arbitrarily curved strips disposed with their side edges resting on said false bottom and having tongues formed thereon and projecting through the false bottom and clinched thereto, said strips coop-

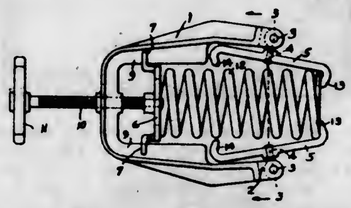
erating to form a tortuous pathway, the end of one strip being extended into the concavity of another strip substantially centrally thereof to form the inner wall

of a return bend in said pathway, and a series of holes in the false bottom within the walls of said pathway to make it difficult to move a ball there along without its dropping through one of the holes.



1,425,794. BLOOMERS. HERMAN SACKS, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,514. 3 Claims. (Cl. 2—122.)

1. A garment comprising a pair of gores and a crotch piece, each gore providing a front body portion and an integral front leg portion, the gore having a straight front inner edge continuing throughout said portions, and each gore further providing a rear body portion and an integral rear leg portion and having a straight rear inner edge continuing throughout said portions, said crotch piece providing upwardly tapering front and rear gussets, the inner edges of the front and rear portions of the respective legs being stitched together as far as said gussets and there-beyond stitched respectively to edges of said gussets, and inner edges of the body portions being stitched together above the crotch piece to complete the body.



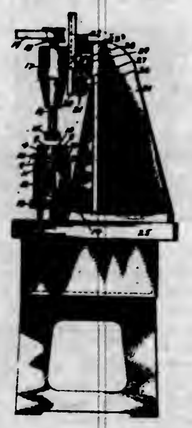
1,425,795. BLOOMERS. HERMAN SACKS, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,515. 1 Claim. (Cl. 2—122.)

As a new article of manufacture bloomers comprising leg portions, and a trunk portion having vertically extending plaits at the front thereof and waist band composed of an inelastic portion at the front and an elastic portion at the rear of the garment, the said plaits being permanently and inexpansively secured to the inelastic

portions of the waist band at their upper ends, and having their lapped portions free and expansible below the waist band.

1,425,796. VALVE-SPRING COMPRESSOR AND HOLDER. CLYDE M. SALSGIVER, Highland Park, Mich. Filed Feb. 14, 1921. Serial No. 444,629. 6 Claims. (Cl. 29—86.3.)

1. A valve spring compressor and holder, comprising a frame, a terminally hooked arm intermediately pivoted upon said frame, a spring abutment mounted upon said frame and slidable to and from said arm, a spring abutment paired with the slidable abutment being formed by one of the terminal hooks of said arm, and the other hook of the arm being engageable with the spring when the latter is under a predetermined compression, and means carried by the frame for actuating said slidable abutment toward said arm.



1,425,797. FIRE-ALARM ATTACHMENT. JOHN SCHNEIDERMAN, George, Iowa. Filed May 5, 1919. Serial No. 294,816. 1 Claim. (Cl. 177—379.)

The combination of a casing having an opening therein an alarm mechanism projecting in the casing, a retaining

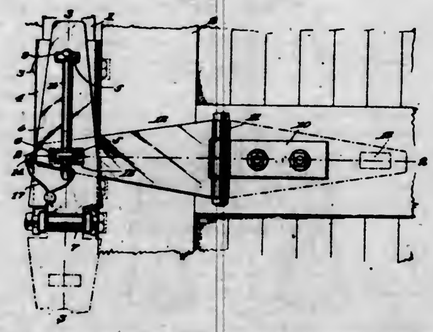


plate pivoted at its upper edge above the opening in said casing and adapted to swing vertically, an arm extending laterally from said retaining plate, a weight carried by the end of the arm, a latch lever pivotally mounted within the casing and engaging the weight for holding the retaining plate in a raised position, a connection between said lever and said alarm mechanism whereby the lever is operated when the alarm mechanism is actuated, and means for retaining the retaining plate in a lowered closed position.

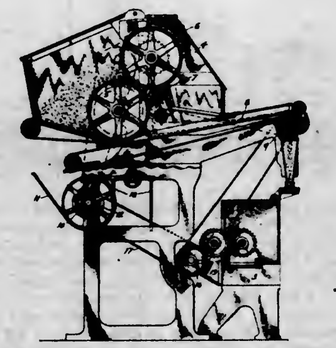
1,425,798. APPARATUS FOR MAKING HOLLOW-GROUND RAZOR BLADES. THOMAS C. SHEEHAN, Upper Montclair, N. J., assignor to Durham Duplex Razor Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1921. Serial No. 443,516. 8 Claims. (Cl. 51—53.)

1. In an apparatus for hollow-grinding razor blades, the combination with means for positioning a blade with the surface to be ground slightly within a constant circle the radius of which is equal to the radius of said surface when ground, of grinding means operative within said circle, and means for producing a relative rotating movement of said positioning means and said grinding means.

1,425,799. CAR-DOOR LOCK. WASHINGTON S. SIKES, Edgar, Fla. Filed Oct. 21, 1921. Serial No. 509,316. 3 Claims. (Cl. 292—284.)

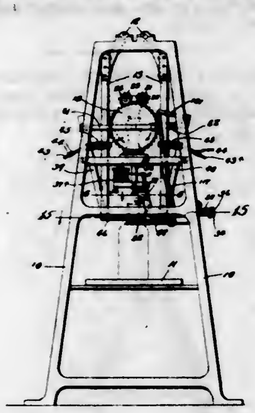


1. A lock for sliding doors including a channel member secured to the door jamb, a hasp pivoted to the channel member, a second hasp pivoted to the door, said hasps being provided with registering openings, and a pin adapted to extend through said keeper and hold the hasps in locking position.

1,425,800. MEASURING DEVICE. FRANK E. SMALL, Jamaica, Long Island, N. Y. Filed Sept. 25, 1920. Serial No. 412,854. 11 Claims. (Cl. 73—62.)

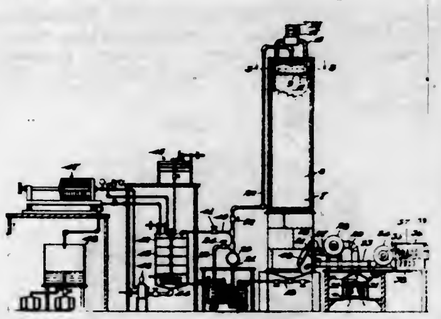
1. An implement for measuring granular material comprising a handle and a vessel mounted thereon, said vessel having its lower end open and providing a chamber whose inner wall flares outwardly toward the open end thereof, and means for opposing free discharge of material from the lower open end of said vessel.

1,425,801. DRIVING MECHANISM FOR CIGARETTE MACHINES. ELBERON D. SMITH, Brooklyn, N. Y., assignor to American Machine & Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 15, 1919. Serial No. 330,706. 3 Claims. (Cl. 131—39.)



3. The combination with a cigarette forming mechanism, of a tobacco feed mechanism therefor, means for operating said feed mechanism at constant speed, and a variable speed device connecting said feed mechanism and said cigarette forming mechanism and driving the latter, said device including a connecting belt, a belt shifter, and a pair of reversely disposed conical pulleys one carried by each mechanism.

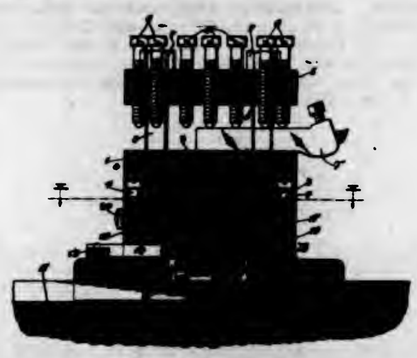
1,425,802. BAG CLOSING AND TYING MACHINE. CHARLES F. SPARKS, Alton, Ill. Filed Jan. 12, 1920. Serial No. 350,916. 16 Claims. (Cl. 226—57.)



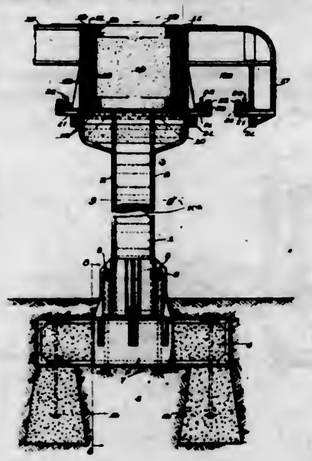
1. In a bag closing and tying machine, a pair of horizontally disposed plates arranged to move toward each

other so that one plate overlaps the other, the front end of one of said plates being notched, and a pair of closing

fingers carried by the other plate and adapted to move toward each other.



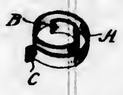
1,425,803. APPARATUS FOR TREATING FISH OIL AND THE LIKE. JOHN C. W. STANLEY, Long Beach, Calif., assignor to The Title Guarantee and Trust Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 21, 1921. Serial No. 454,217. 4 Claims. (Cl. 87—12.)



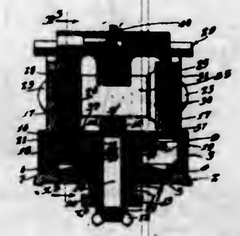
1. An apparatus for treating fish oil with ozone, comprising a chamber, an oil receptacle in the upper portion of said chamber having a perforated bottom wall for directing a rain of oil downwardly through said chamber, a reservoir for receiving the oil discharged from the chamber, a pipe leading from said reservoir to said receptacle, a pump for discharging the oil from said reservoir through said pipe to effect a circulation of oil through said chamber, an ozonator, means for passing air through said ozonator and through said chamber whereby the oil in the chamber will be subjected to the action of ozone carried by the air, and means for passing heated air through said chamber.

1,425,804. ROTATABLE TOOL HOLDER FOR LATHES. JOSEPH C. STEINER, St. Louis, Mo. Filed Jan. 20, 1919. Serial No. 272,017. 2 Claims. (Cl. 29—48.)

1. In a rotatable tool holder for lathes, a horizontal tool-receiving table, a screw holder mounted above said table and separated therefrom to provide a large open tool-receiving space, tension members extending across said space and connecting said screw holder to said table, vertical clamping screws mounted in said screw holder and extending into said open space to clamp the tools onto said table, a vertical pivot located at the center of said table and extending downwardly from the bottom of said table, one of said clamping screws being located in said open tool-receiving space at a point directly above said pivot, and the other clamping screws being located at various points around the axis of said pivot, the large open tool-receiving space being formed directly above said pivot and entirely around said axis so as to allow the tools to extend directly across said axis and in various directions from the different sides of the table, said pivot lying entirely below said tool-receiving space and having its periphery cylindrical for a portion of its length, said periphery being beveled to provide a circular cam face concentric with the axis of the pivot, a stationary seat for the table located around the axis of said pivot, said seat having plane bottom and top faces and a circular inner face closely fitted to the cylindrical portion of the pivot so as to form a bearing therefor, and a contractible split cam ring co-operating with said beveled cam face on the pivot and also with the plane bottom face of said seat to force said table into firm engagement with the plane top face of said seat, said seat being interposed between said cam ring and table.



1,425,805. ELEVATED RAILWAY. JOSEPH B. STRAUSS, Chicago, Ill. Filed Nov. 4, 1921. Serial No. 512,721. 18 Claims. (Cl. 104—94.)



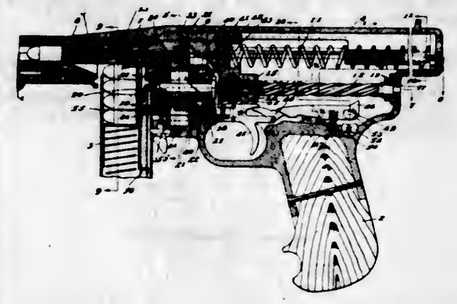
1. An elevated structure comprising a series of central posts in substantial alignment, two separated substantially parallel girders mounted on said posts, and track supporting parts extending laterally and outwardly from each girder for supporting tracks for cars, the ends of said track supporting parts being free.

1,425,806. BAND FOR ENGAGING AND HOLDING THE ENDS OF THE RIBS OF UMBRELLAS WHEN CLOSED. JAY H. SWIFT, Philadelphia, Pa. Filed Aug. 3, 1921. Serial No. 489,629. 1 Claim. (Cl. 24—256.)

As an article of manufacture, a band adapted to hold the ribs of an umbrella when closed, comprising a narrow elongated band of resilient material formed in a coil, the turns of the coil being spaced apart, and lying in the same plane, the outer terminal of the coil being flared outwardly.

1,425,807. SUPPORT FOR CAMERAS. KARL W. THALHAMMER, Los Angeles, Calif. Filed Aug. 19, 1919. Serial No. 318,615. 16 Claims. (Cl. 248—47.)

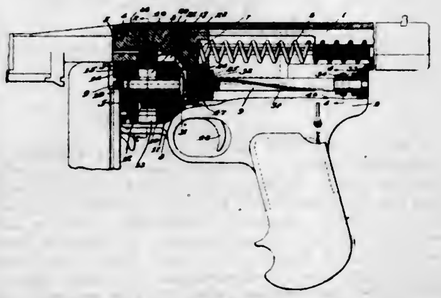
1. In a support for a camera, a table for supporting a camera, a single operating member adjustable to different positions, and means operative by the operating member when said member is in one position of adjustment to effect tilting of the table forwardly and downwardly and operative when said member is in another position of adjustment to effect tilting of the table forwardly and upwardly.



6. In a support for a camera, a base, a table having a depending hub rotatably mounted on the base, a gear connected with the hub, a second gear engaging the first gear, a disk, means to hold the disk against rotation, and a spring pressing the disk against the hub, the tension of the spring being insufficient to hold the hub from turning when the second gear is operated.

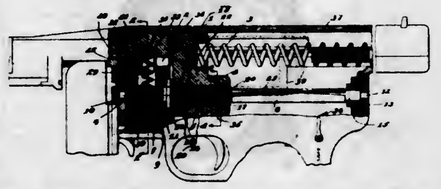
8. In a support for a camera, a base, a shaft supported by the base, a table having depending hubs mounted on the shaft, a gear connected to one of the hubs, means to produce braking action on the other hub, and means to turn the gear.

9. In a support for a camera, a stationary member, a table, mechanism between the table and stationary member to turn the table including means to hold a portion of the mechanism against rotation, the mechanism-holding means being releasable to allow the table to be turned without direct operation of the table-turning mechanism.



1,425,808. BREECH MECHANISM FOR GUNS. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor, by direct and mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,891. 36 Claims. (Cl. 42—3.)

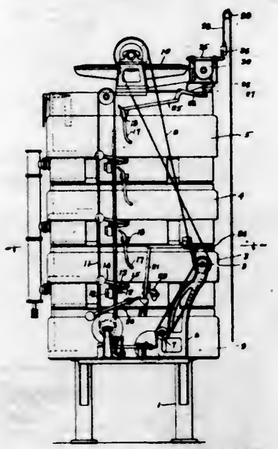
1. A gun having in combination: a firing chamber, a breech closure movable into and out of position for closing the firing chamber, a member for restraining the closure, and means actuated by said breech closure for



moving the member in a continuing path first into restraining position and then out of restraining position.

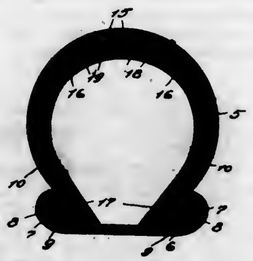
1,425,809. BREECH-CLOSURE MECHANISM. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor, by direct and mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,892. 21 Claims. (Cl. 42—3.)

1. A gun comprising a firing chamber and an automatic breech closure movable relative to the firing chamber into and out of position to close the chamber, an automatic lock movable into and out of position to restrain the breech closure in said position, and means actuated by the movement of said breech closure for moving said lock substantially continuously when the gun is in full automatic operation, in a continuing path, synchronously with the breech closure, into and out of position momentarily to restrain the breech closure in said position.



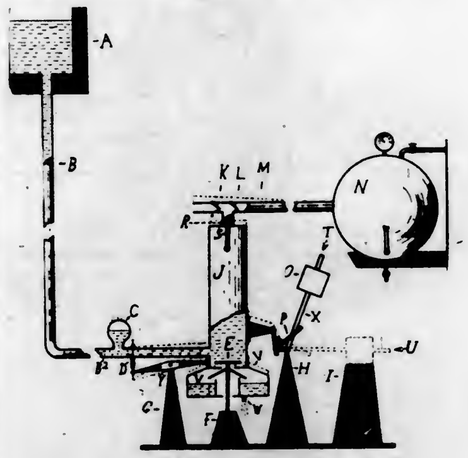
1,425,810. AUTOMATIC GUN. JOHN TALIAFERRO THOMPSON, Newport, Ky., assignor, by direct and mesne assignments, to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,893. 14 Claims. (Cl. 42—3.)

1. A gun comprising a breech closure movable into and out of firing position, means separate from the clo-



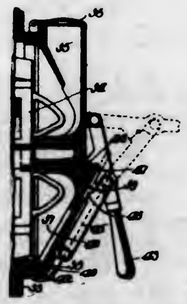
sure for restraining the closure in firing position, and mechanism positively connecting said means with said closure and actuated kinematically by said closure to move said means into and out of restraining position synchronously with the movement of the closure.

1,425,811. COOKER FOR OIL-BEARING MATERIAL. RUSSELL A. TRACE, Dayton, Ohio, assignor to Buckeye Iron and Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 28, 1920. Serial No. 420,112. 9 Claims. (Cl. 87—6.)



3. In a cooker, the combination, with a plurality of receptacles adapted to discharge material in succession from the first to the last receptacle, and devices for stopping the discharge of said material, of means for operating said devices, means for connecting power to said operating means and disconnecting it therefrom, said connecting and disconnecting means being so arranged that the power will be disconnected from said operating means after the discharge from the first receptacle has been stopped and being arranged to connect the power to said operating means if the material in the last receptacle has not reached a predetermined height, means operable by said operating means for discharging material into said topmost cooker after it has been emptied, a conveyor to convey material to said discharging means, and means of stopping said discharging means at the will of the operator.

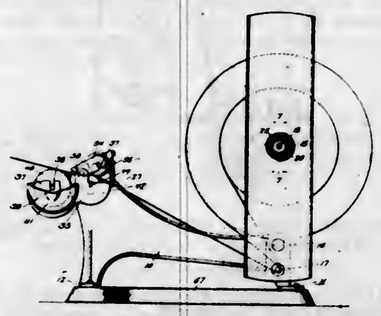
1,425,812. PNEUMATIC TIRE. EDWARD J. TUREK, St. Louis, Mo. Filed Oct. 11, 1919. Serial No. 330,050. 1 Claim. (Cl. 152—18.)



A puncture and blow-out preventing means for pneumatic tires comprising a plurality of flexible, circumferentially continuous bonds, a strip comprising a plurality of metalliform plates, each of which is provided with integral eyes, forming hinges, through which certain of said continuous, flexible bonds are extended and which plates have their contiguous margins abutted to form an imperforate envelope for a portion of the tire sectionally and a strip of metalliform mesh fabric carried by said bonds at each side of the said plates.

1,425,813. HYDRAULIC AIR COMPRESSOR. GEORGE T. UNDERWOOD, Maxwell, Calif. Filed Mar. 5, 1921. Serial No. 449,640. 1 Claim. (Cl. 230—23.)

An air compressor comprising in combination a compression tank adapted for vertical reciprocation, a counterbalancing arm pivoted to said tank, a valve for admitting liquid under pressure to said tank, operative connection between said tank and said valve, a valve in the lower part of said tank adapted to open when tank is lowered, a second tank attached to and beneath said first named tank and in communication therewith when the second mentioned valve is open having a smaller outlet whereby said tank serves to hold down said first named tank until same is emptied, substantially as described.



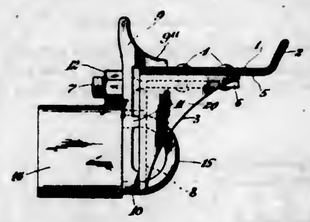
1,425,814. ICE-CREAM FREEZER. THEODORE L. VALERIUS and OLAF LARSEN, Fort Atkinson, Wis., assignors to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1919. Serial No. 307,822. 9 Claims. (Cl. 220—24.)

9. An ice cream freezer having, in combination, a horizontal freezing cylinder, a head closing the forward end

of said cylinder, said head having an inclined portion adjacent its lower edge, said inclined portion having a discharge opening and a flat face surrounding said opening, said flat face extending to the periphery of the head, and a sliding gate adapted to cover and uncover said opening, said gate when closed extending to the periphery of the head, the lower portion of the periphery of said discharge opening being so located that cream may fall vertically downward therefrom without touching any other part of the freezer.

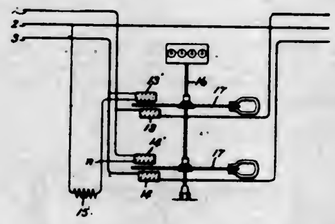
1,425,815. GUM-TAPE-HOLDING DEVICE. VANDIVER J. VAN HORN, Chicago, Ill. Filed Apr. 4, 1919. Serial No. 287,596. 20 Claims. (Cl. 91—14.5.)

1. A device of the character described, including in combination, a body member having provision for rotatably supporting a reel, a unitary construction mounted on said body member, including a moistening means, feeding and tension means and cutting means, said unitary construction being adjustable relative to said body member so that it may be held in proper position regardless of the position of the body member as a whole.



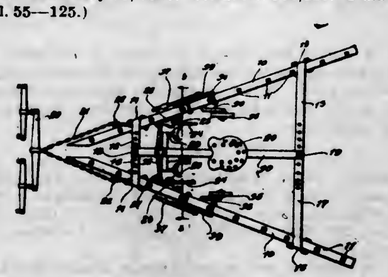
1,425,816. WRENCH. VANDIVER J. VAN HORN, Chicago, Ill. Filed Jan. 6, 1921. Serial No. 435,368. 2 Claims. (Cl. 81—60.)

1. A wrench having a one-piece housing provided with flat, perforated, folded housing members, each having bounding walls angularly related to the flat members and placed edge to edge; a ratchet wheel having lateral shoulders, smaller in diameter than the teeth of the wheel, one on each side thereof journaled in the respective openings; a handle, pivoted in said housing, having a toe engaging said teeth and a notch in its edge, near the toe and an open coiled spring in said notch, having one end in contact with the handle and the other in contact with the side wall of the housing.



1,425,817. TIRE-RIM LOCK. CHARLES F. WASSERFALLEN, Detroit, Mich., assignor to Detroit Tire Carrier Co., Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1917. Serial No. 199,151. 7 Claims. (Cl. 224—29.)

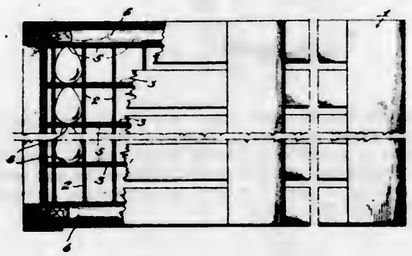
1. As a means for retaining a spare tire rim in position on a spare tire carrier structure, and wherein the rim is supported on a rim holder, a unit comprising an element permanently secured to the holder, a member removably supported by said element and having a face adapted to engage the rim to clamp it in position, and removable means whereby the member will be retained in position, said means including a member carried by and adjustable relatively to the element and operative in



producing the clamping action, said element and member having alined openings to permit of the passage of an element of a removable locking device with the openings so arranged that the positioned locking device will retain the member in position regardless of releasing movement of the removable means.

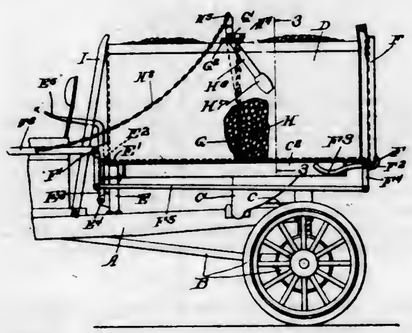
1,425,818. REACTIVE VOLT-AMPERE METER. JOHN W. WEST, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,301. 4 Claims. (Cl. 171—264.)

3. A meter for measuring the reactive volt amperes in a three phase system, said meter comprising two current coils, two potential coils cooperating one with each current coil, a reactor connected between said potential coils and the line having no current coil for altering the normal phase relations between the magneto-motive forces of each current coil and its associated potential coil, and means for utilizing the torques produced by the current and potential coils for performing an indicating function.



1,425,819. HARROW. JOSEPH N. WILKIN, Hillsboro, Ohio. Filed May 14, 1920. Serial No. 381,415. 3 Claims. (Cl. 55—125.)

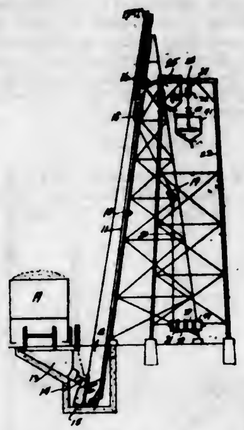
1. A harrow comprising a pair of rearwardly diverging beams carrying teeth and provided with draft means, a



pair of transverse arch members secured to and connecting said means and extending upwardly thereabove, said arch members being independently adjustable whereby to vary the angular inclination of the teeth with respect to each other, a longitudinally extending bar connecting said arch members, and a seat mounted on the bar.

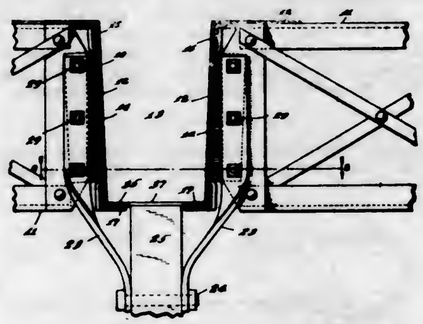
1,425,820. FLAT FOR EGG AND OTHER CASES. GEORGE H. WILLIAMS, Burnside, Ky. Filed Dec. 5, 1921. Serial No. 520,008. 5 Claims. (Cl. 217—26.)

1. A flat for cell cases including a relatively thin rectangular member of cardboard or the like having oppositely disposed circular depressions in its upper and lower surfaces.



1,425,821. BODY SUBDIVISION. WILLIAM C. ANTHONY, Streator, Ill., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Apr. 17, 1920. Serial No. 374,557. 6 Claims. (Cl. 298—10.)

1. A vehicle body having two stops on its inner sides and a door adapted to rest against one of them and having a hole to permit it to pass over the other and a movable lock on the door adapted to pass between the door and such second stop.



1,425,822. COAL-HANDLING SYSTEM. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Mar. 26, 1921. Serial No. 455,901. 8 Claims. (Cl. 214—86.)

1. A handling system including in combination a material carrying bucket movable in an approximately horizontal plane toward or from a charge receiving position, manually controlled means for raising or lowering the bucket, means for discharging the contents of the same, a hoisting bucket, and manually controlled means for raising or lowering the hoisting bucket from and to its receiving

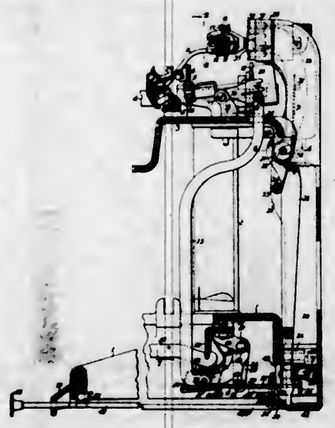
position and causing it to discharge into the carrying bucket when the latter is in its receiving position.

1,425,823. COLLAPSIBLE FALSEWORK FOR CONCRETE FLOORS. HUGH J. BAKER, Indianapolis, Ind. Filed Jan. 21, 1921. Serial No. 438,814. 4 Claims. (Cl. 25—131.5.)

1. A falsework for concrete floors, comprising side members, cross members separably attachable to said side members to constitute therewith a framework, and a sheet-metal sheath detachably resting upon said framework, said cross members and side members being provided with bolt holes for receiving attaching bolts, and the bolt holes being arranged to make the side members which are joined by said cross members tilt with respect to each other.

2. A falsework for concrete floors, comprising side members, cross members separably attachable to said side members to constitute therewith a framework, and a sheet-metal sheath detachably resting upon said framework, said cross members and said side members being provided with cooperating rows of holes for receiving attaching bolts, the rows of holes in the cross members being parallel to each other.

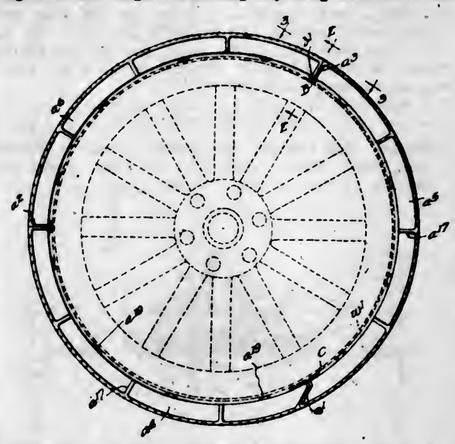
1,425,824. WHEEL. SAUL P. BARBER, Pasadena, Calif. Filed Sept. 23, 1920. Serial No. 412,119. 4 Claims. (Cl. 152—8.)



4. A wheel having leaf springs fixed at one of their ends against the periphery of said wheel, each of said springs being offset and curved longitudinally and forming

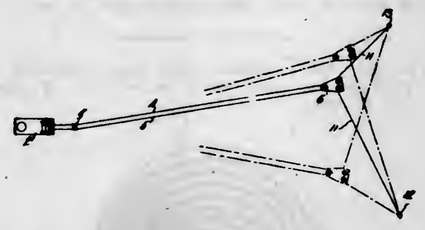
a circumferential continuation of the flat fixed end thereof, said continuation of the spring having its free end disposed over a pair of next preceding springs, the free end

of each spring bearing upon the medial portion of the next preceding spring, and a roller carried by the free end of each spring and disposed between and bearing upon the springs of the next preceding pair.



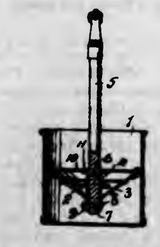
1,425,825. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Oct. 7, 1921. Serial No. 506,014. 23 Claims. (Cl. 197—178.)

1. In a tabulator, the combination of a series of horizontally arranged key controlled actuating members each formed with two parallel arms and an upstanding contacting portion, and a series of stop actuating levers registering with said upstanding contacting portions and adapted to be moved thereby.



1,425,826. RIM FOR VEHICLE TIRES. GERALD G. BARRY, Chicago, Ill. Filed Jan. 8, 1921. Serial No. 434,521. 4 Claims. (Cl. 301—39.)

1. As a new article of manufacture, a demountable rim for vehicle tires comprising an annular band provided with a flange on each side thereof for embracing the tire seats and securing the same, and integrally connected to each of the said side flanges a further flange which is outwardly directed and recedes from normal surface contact with the tire wall, being so carried outwardly beyond the customary limit of the tire seat embracing flanges to substantially one-half the sectional depth of the tire, and then the said additional flange being turned and continuing substantially at right angles to the plane of the wheel, the said base band and side flanges being split transversely at a plurality of points of the circumference, at one of said parting splits suitable locking means for there detachably securing the adjoining sections of the rim, and at the remaining partings suitable hinges connecting adjoining sections of the



rim and adapted to permit inward movement thereof, substantially as set forth.

1,425,827. OVERHEAD TRACK LINE. WILLIAM LIONEL BARTON, Vancouver, British Columbia, Canada, assignor of forty-five per cent to John L. Kerr, Vancouver, British Columbia, Canada. Filed Oct. 24, 1921. Serial No. 510,166. 7 Claims. (Cl. 104—112.)

1. An overhead wire rope track line, the inner end of which is connected to a spar pole adjacent the hauling engine, a transverse anchoring line to which the outer end of the track line is connected, said transverse anchoring line having its ends anchored whereby said transverse anchoring line becomes relatively stationary, and means for moving the track line connection along the transverse line.

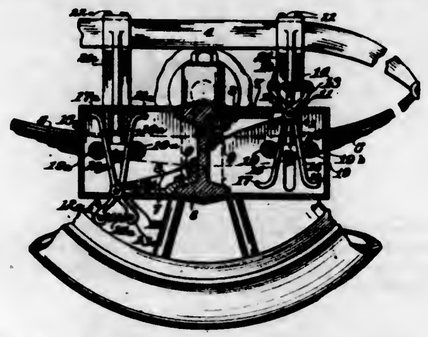
1,425,828. LAUNDRY DEVICE. EDWIN T. BASKIN, Kansas City, Mo. Filed Oct. 27, 1920. Serial No. 419,912. 1 Claim. (Cl. 68—5.)

In a laundry device, a clothes pounder having a perforate concavo-convex body, a socket member attached

at one end to said body, a guard attached to the body and extending across the concave side of the body and attached to and serving as a brace for the other end of the socket member, and a handle adapted to be inserted into either end of the socket member and having means for being releasably attached to the socket member, substantially as set forth.

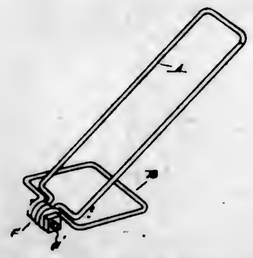
1,425,829. POLISHING MACHINE. CARL T. BEGGS, Long Beach, Calif. Filed June 21, 1921. Serial No. 479,182. 4 Claims. (Cl. 74—26.)

2. A mechanism for the purpose set forth comprising, a spindle, a friction disk thereon, a rotary shaft, a friction wheel slidable on said shaft and revolvable therewith; said wheel having a hub formed with a peripheral groove, a slidable sleeve, a yoke on said sleeve extending into the groove on the hub, a thumb operable regulating wheel, and a link connecting said wheel to said sleeve whereby rotation of the regulating wheel will move said sleeve to effect shifting of said friction wheel whereby it may be thrown in and out of engagement with said disk and moved diametrically across its face.



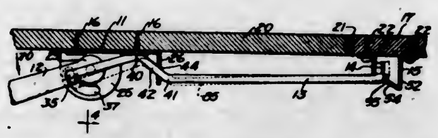
1,425,830. MAT. ROBERT JAMES BELL, Richmond, Va. Filed June 9, 1921. Serial No. 476,195. 3 Claims. (Cl. 15—239.)

2. In a mat, a base, and arranged upon the base a flexible rib of substantially triangular section, the said rib being formed of an elastic core and a woven fabric incorporated with an elastic substance and surrounding said elastic core.



1,425,831. SHOCK ABSORBER. CHARLES WILLIAM BISHOF, Los Angeles, Calif. Filed May 21, 1921. Serial No. 471,492. 1 Claim. (Cl. 267—20.)

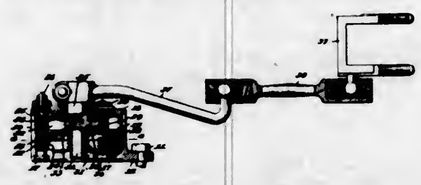
A shock absorbing mechanism adapted to be interposed between the axle of an automotive vehicle and the frame of said vehicle and to comprise substantially a plurality of cross levers fulcrumed at the crossing point having a spring under tension between the respective levers at one end of the device and a pair of rollers mounted upon pins extending from a bracket and embracing the free ends of said fulcrumed levers, one of said set of fulcrumed levers projecting downwardly, the other unit projecting upwardly, said embracing rollers adapted to reciprocate relative to said fulcrumed levers and to meet opposition in the way of resistance by reason of com-



pressing said levers and expanding a spring under tension, the resistance to compression of said levers being dependent on said spring, all substantially as set forth.

1,425,832. LEAF-SPRING COMPRESSOR. WILLIAM W. BLAKELY, Detroit, Mich. Filed Dec. 27, 1919. Serial No. 347,856. 11 Claims. (Cl. 267—1.)

1. A leaf spring compressor comprising a tie member and an anchorage member pivotally attached to said tie member, said members being respectively adapted for quick detachable engagement with a vehicle spring and a relatively fixed portion of a vehicle.

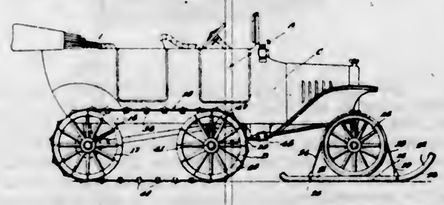


1,425,833. TABLE LOCK. CLAUDE E. BOWERS, Los Angeles, Calif. Filed May 23, 1921. Serial No. 471,680. 1 Claim. (Cl. 45—9.)

In a locking device, the combination of; a catch bar; a hook on the free end of said catch bar; a catch plate adapted to be engaged by said hook; said catch plate having a short forward leg and a long rear leg; a lever to actuate said catch bar; a plate; a tongue integrally formed on said plate to pivotally mount said actuating lever; said tongue being formed to provide an arcuated opening; a bent up portion upon the end of said catch bar opposite to said hook adapted to extend through an opening provided therefor in said lever and to actuate in said opening provided in said tongue; a washer riveted

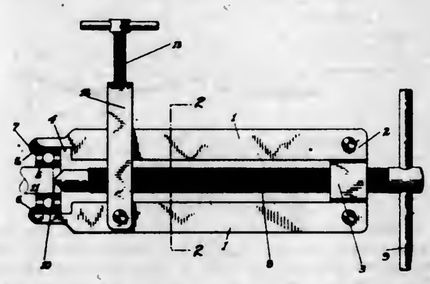
upon said bent up portion of said catch bar to retain said end in operating position; a toe formed upon said plate, having a hole formed therein; and a sliding cam formed by suitably bending said catch bar, said cam acting in said hole formed in said toe to lower the position of said free end of said catch bar as said hook is actuated against said longer leg of said catch plate when the locking device is being disengaged.

1,425,834. SHOCK ABSORBER. CHARLES H. BROWN, Indianapolis, Ind. Filed Oct. 24, 1921. Serial No. 509,799. 14 Claims. (Cl. 188—89.)



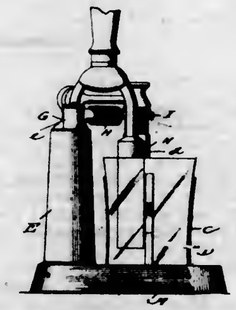
1. In a shock absorber of the class described, the combination of a fluid containing cylinder, a reciprocable piston in the cylinder; means in said cylinder for guiding said piston and preventing rotary movement of the same, a rotatable cam member for moving said piston, and a by-pass permitting displacement of the fluid from one side to the other of said piston.

7. In a shock absorber of the class described, the combination of a fluid containing cylinder, a rectilinearly movable piston in the cylinder adapted to displace the fluid therein, a cam disk in the cylinder for moving the piston, complementary cam means associated with said piston, the cams being effective upon relative rotation of the disk and piston in one direction to produce operation of the piston and fluid displacement only after the initial stages of the movement.



13. A shock absorber of the class described comprising a fluid containing cylinder, a piston in said cylinder, guide studs in the cylinder for said piston preventing rotation of the piston, one of said studs having a central bore serving as a fluid by-pass, a rotatable cam disk in the cylinder, complementary cams on said piston, said disk having a bearing stud extending through an end wall of the cylinder, and a second stud extending through said piston having a bearing in the opposite end wall of the cylinder, an adjustable valve for regulating said by-pass, said piston having a port therein to permit the return of fluid displaced by the piston, and a one-way valve controlling said port.

1,425,835. AUTOSLEIGH ATTACHMENT. OTTO BUFE, Grand Marais, Mich. Filed June 3, 1920. Serial No. 386,302. 4 Claims. (Cl. 180—5.)

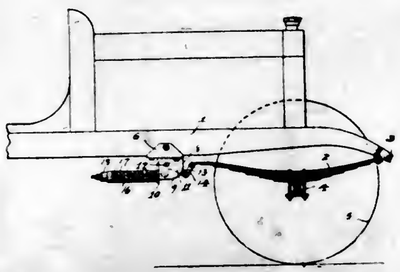


1. In a motor sleigh, the combination with a chassis including front and rear axles, and drive wheels carried by the rear axle, of a sleigh attachment including a dead axle arranged intermediate the rear axles, spreader arms carried by the forward ends of the chassis and connected to said dead axle, shock absorbing springs arranged intermediate the dead axle and the chassis, and slidably carried by the chassis, idler wheels carried by the terminals of the dead axle, traction bands trained around the rear drive wheels, and the idler wheels, and means for regulating the active strength of the spreader bars, for moving said dead axles and springs whereby the tension of the traction bands can be regulated.

1,425,836. ANNULAR-BEARING PULLER. ERNEST P. CAMPBELL, Stockton, Calif. Filed Feb. 7, 1921. Serial No. 442,919. 1 Claim. (Cl. 29—85.)

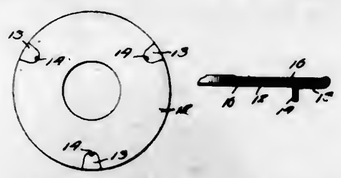
An annular bearing puller comprising a pair of arms extending in the same direction in a common plane, being flexibly connected together at one end, the other end of said arms being formed to engage the outer surface of a bearing, a yoke connected to one arm and through which the other arm extends with freedom of movement, and a turnable screw mounted in the yoke and adapted to engage the free arm to limit the spacing between said arms at the bearing engaging end thereof.

1,425,837. DISPENSING APPARATUS. DAVID H. CLARK, Orangeburg, N. Y. Filed July 2, 1921. Serial No. 482,119. 20 Claims. (Cl. 219—19.)



4. A dispensing apparatus having a stand provided with a horizontal, vertically journaled arm; a holder journaled in the arm and capable of being tilted about a horizontal axis; said holder adapted to suspend therefrom a container for the material to be dispensed; electrical contacts on the stand and a conductor connecting therewith; and an electric immersion heater interchangeably mounted on said stand.

1,425,838. PRODUCTION OF GLYCERIN BY FERMENTATION. ALLEN T. COCKING, Sutton Coldfield, and CECIL H. LILLY, Birmingham, England. Filed Aug. 23, 1920. Serial No. 405,300. 9 Claims. (Cl. 195—20.)



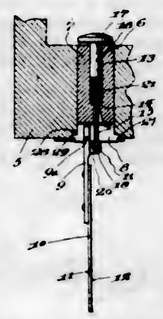
2. A process which consists in the fermentation by a yeast of a solution containing a fermentable sugar with such proportions of sodium sulphite and sodium bisulphite as will produce a mixture of mash and salts which is approximately neutral to litmus.

1,425,839. SPRING SUSPENSION. EDMUND A. CURTIS, Chicago, Ill., assignor, by direct and mesne assignments, to Curtis Engineering Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1919. Serial No. 284,395. 7 Claims. (Cl. 267—19.)

4. The combination with a vehicle having an axle and a body frame, and an elongated leaf spring resiliently supporting the frame on the axle; of a housing secured to the frame adjacent one end of the leaf spring and having a pair of parallel side-plates; a bell crank pivoted between and slidably engaging the side-plates of the housing and having a long arm and a short arm, a link connecting the long arm with the end of the leaf spring and a spring connected with the short arm of the bell crank to yieldingly resist pivotal movement of the bell crank.

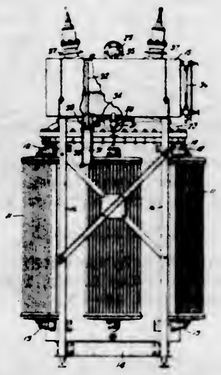
1,425,840. ATTACHABLE PLATE AND METHOD OF MAKING THE SAME. FRANK G. DAVISON, Boston, Mass. Filed May 29, 1920. Serial No. 385,248. 6 Claims. (Cl. 113—116.)

1. A plate having marginal portions bent inwardly therefrom and rigidly secured flatwise against the rear surface of the plate, said marginal portions having their tips extending at a right angle to the plate to provide attaching feet.



5. The method of making a sheet metal article having attaching feet, consisting in forming a blank comprising a plate having marginal extensions, then converting the outer portions of the extensions to substantially cylindrical form and bending said outer portions upwardly relatively to the face of the plate, and then bending the entire extension in the reverse direction to position to locate the cylindrical portions at the back of the plate.

1,425,841. ATTACHABLE PLATE AND METHOD OF MAKING THE SAME. FRANK G. DAVISON, Cambridge, Mass. Filed July 25, 1921. Serial No. 487,342. 7 Claims. (Cl. 113—116.)



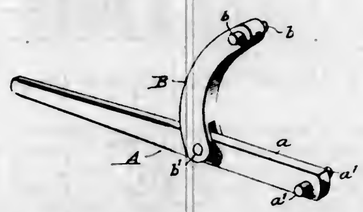
1. A plate having feet each of which is composed of a plurality of interlocked members integral with the plate at different portions of the latter.

1,425,842. VEHICLE SIGNAL. OSCAR L. DENNES, Ardmore, Okla. Filed Mar. 27, 1922. Serial No. 547,056. 5 Claims. (Cl. 116—52.)

1. In a vehicle signal, a casing having a transverse slot at one end thereof, a longitudinal bore therethrough and a circumferential shoulder within said bore adjacent said slot; a laterally swinging signal arm pivoted within said slot, said arm being movable to a position with its longitudinal edges flush with the end of said casing, a link formed with an abutment extending through said bore and pivoted to said arm, said abutment being intermediate the ends of said link, a coil spring encircling said link between said shoulder and said abutment for holding said link retracted to maintain said signal arm in position with its longitudinal edges flush with the outer edges of said slot.

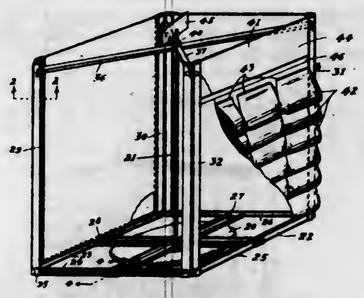
1,425,843. CASING FOR ELECTRICAL APPARATUS. WILLIAM O. DWYER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 22, 1920. Serial No. 418,842. 7 Claims. (Cl. 175—361.)

1. The combination with a main casing for electrical apparatus, of an auxiliary casing secured to the main casing and provided with a passage establishing communication with the main casing, and an insulating liquid within said main casing and extending through said passage into the auxiliary casing, said auxiliary casing being provided with a depending portion independent of said passage and located below the entrance of said passage thereinto.



1,425,844. DENTAL CLASP. LAURENT ENGBERG, Barcelona, Spain. Filed Oct. 31, 1919. Serial No. 334,814. 1 Claim. (Cl. 32—12.)

A dental plate having clamp wires arranged near its ends, and each provided at the outer end with an enlargement, said clamp wires being bent toward each other and being of such length and so arranged as to cause said enlargements to engage between the necks of natural



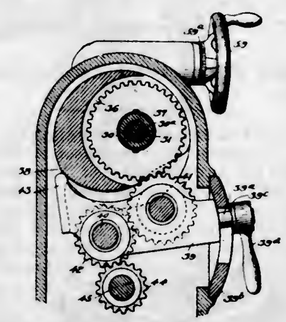
teeth, prevent other portions of said wires from coming in contact with said teeth, and cause said clamp wires to pull rearwardly on the retaining teeth and thereby hold said plate in place.

1,425,845. FLANGE WRENCH. ROBERT B. FOSTER, Wellsville, Ohio. Filed Feb. 23, 1922. Serial No. 538,607. 2 Claims. (Cl. 81—90.)

1. A flange wrench comprising a rigid bar having a swinging arm of crescent-shaped form pivoted thereto near one end so as to provide at one side of said pivotal connection a handle forming the long arm of a lever and at the other side a straight short arm, said short arm and said swinging arm each provided at its free end with laterally projecting pins, and said swinging arm having its concave surface facing said straight short arm.

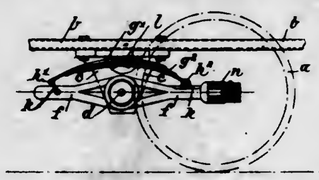
1,425,846. COLLAPSIBLE DISPLAY STAND. GEORGE M. FRANKS, St. Paul, Minn. Filed Jan. 26, 1921. Serial No. 440,030. 7 Claims. (Cl. 211—20.)

5. A display device comprising a lower rectangular frame member having grooves following the perimeter of the same, standards comprising a pair of metal strips folded over to form interior grooves and soldered together at their corners, legs formed on the ends of said members adapted to straddle the grooved portions of said frame at its corners and a seat formed at the end of said standards for engaging the upper surface of said frame member at its extreme corner.



1,425,847. FLOOR COVERING. WILLIAM H. FRAZIER, Chicago, and WILLIAM JOSEPH O'NEILL, Downers Grove, Ill. Filed Sept. 15, 1919. Serial No. 323,915. 4 Claims. (Cl. 72—18.)

1. The method of covering a floor which consists in applying a coat of a suitable bond material, laying thereon a plurality of correspondingly shaped units in approximate edge to edge relation and applying pressure

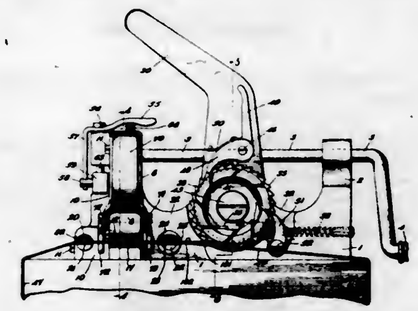


to the units to work them into a continuous monolithic covering.

1,425,848. ADJUSTABLE GEARING FOR MILLING MACHINES. CARL GABRIELSON, Syracuse, N. Y., assignor, by mesne assignments, to Meldrum-Gabrielson Corporation, Syracuse, N. Y., a Corporation of New York. Filed June 10, 1920. Serial No. 388,014. 14 Claims. (Cl. 74—4.)

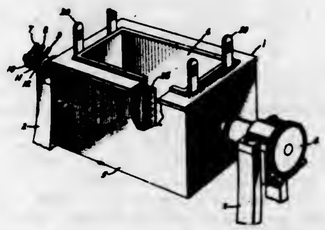
1. In a machine of the kind described, the combination of a frame, a sleeve rotatably supported thereon, a spindle journaled eccentrically in said sleeve, a gear wheel secured to said spindle, a rocker pivoted on said frame, a gear wheel rotatably supported on said rocker in mesh with said first named gear wheel, means for holding said gear wheels in mesh as the position of said sleeve is changed, and means for driving said rocker-supported gear wheel.

1,425,849. SPRING SUSPENSION FOR VEHICLES. EDMOND JEAN LEON GAUTHIER, Paris, France. Filed July 2, 1920. Serial No. 393,764. 12 Claims. (Cl. 267—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



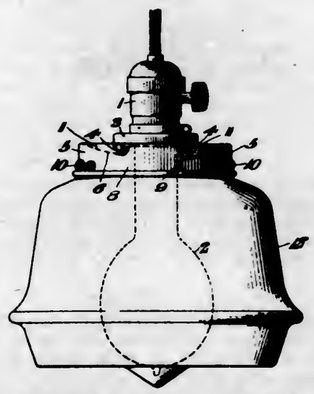
1. A spring suspension for vehicles, comprising a supporting member mounted below the vehicle frame, a lever pivoted on said member, a vehicle axle mounted on one end of the lever, and plate springs so disposed between the lever and the vehicle frame as to create a return torque.

1,425,850. WIRE TENSIONING AND TWISTING MACHINE. ALEC J. GERRARD and PARVIN WRIGHT, Chicago, Ill. Filed Oct. 22, 1920. Serial No. 418,634. 17 Claims. (Cl. 140—93.)



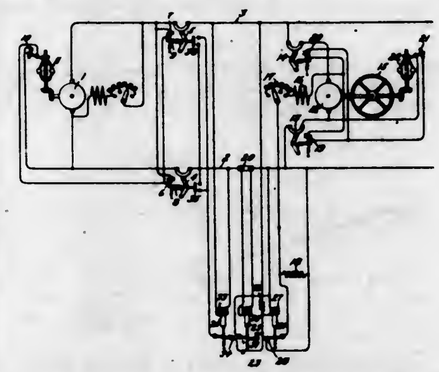
1. In a wire tying machine the combination of means comprising a rotating member for exerting a tension on the wire; means for twisting said wire while under

tension; and pivoted means adapted to positively disengage the twisted wire from said twisting means upon



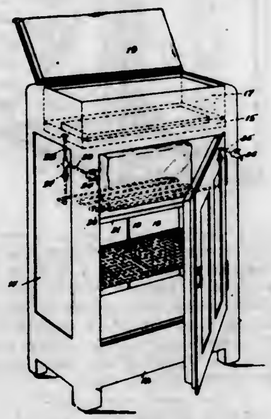
the completion of the twisting operation, substantially as described.

1,425,851. METAL-TREATING APPARATUS. JOHN F. GILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 2, 1920. Serial No. 414,195. 5 Claims. (Cl. 91—12.2.)



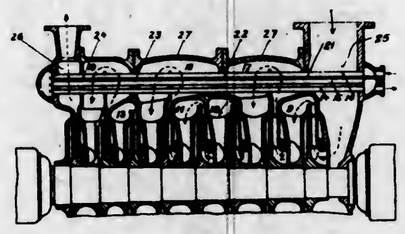
1. A metal treating apparatus comprising the combination of a rotatable container, a closure for the same, means for heating said container, a receptacle fitted within said container but removable therefrom.

1,425,852. INTERCHANGEABLE GLOBE HOLDER FOR AN ELECTRIC LIGHT. EDGAR A. GILLINDER, Philadelphia, Pa. Filed Dec. 13, 1921. Serial No. 522,083. 5 Claims. (Cl. 240—111.)



1. An interchangeable globe holder for an electric light consisting of a collar adapted to have a globe of large diameter held thereon, and means on said collar for connecting it with the collar on the fixture of the light with which a globe of less diameter is adapted to be held, the former named collar having in its top wall a channel in which the base of the light-fixture may be seated.

1,425,853. SYSTEM OF ELECTRICAL DISTRIBUTION. CARL H. GIROUX, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 2, 1920. Serial No. 414,193. 5 Claims. (Cl. 171—312.)

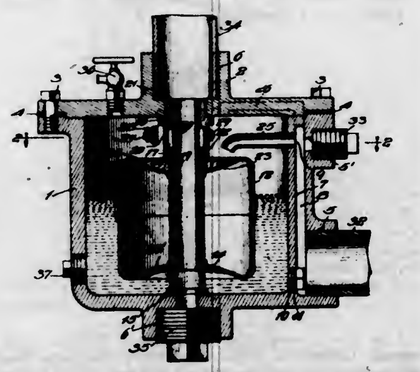


1. In combination, a source of electrical energy, a circuit supplied thereby, means for disconnecting said source from said circuit, a dynamo electric machine whose rotating member has large inertia electrically connected to said circuit, and a voltage regulator controlled by said disconnecting means and arranged to cause said dynamo electric machine to supply power to said circuit at a predetermined voltage when said source is disconnected from said circuit.

1,425,854. ICE BOX. MIGUEL GONZALEZ, New York, N. Y. Filed Aug. 27, 1921. Serial No. 496,004. 8 Claims. (Cl. 62—39.)

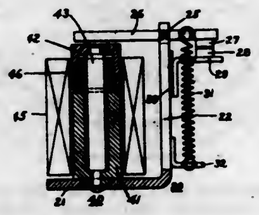
1. An ice box provided with a horizontally disposed partition forming the interior of the box into an upper water containing compartment and a lower ice containing compartment, said water containing compartment provided with a horizontal partition constituting a filter and forming an upper unfiltered water compartment and a lower filtered water compartment, a water conduit including a coil within the ice containing compartment, said conduit having its intake end opening from the filtered water compartment and having its discharge end below the water containing compartment.

1,425,855. COOLING DEVICE IN MULTISTAGE CENTRIFUGAL COMPRESSORS. BENJAMIN GRAEMIGER, Zurich, Switzerland. Filed Dec. 1, 1920. Serial No. 427,564. 5 Claims. (Cl. 230—6.)



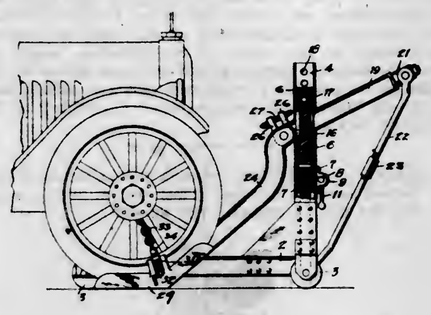
1. In a multistage centrifugal compressor, a cooling device comprising cooling channels arranged substantially parallel to the axis of the compressor and passing through some of the pressure-stages of the compressor, and the remaining pressure-stages so arranged that they are not intersected by said cooling channels.

1,425,856. PROCESS OF CUTTING METALS WITH GASEOUS FUEL. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Continuation of application Serial No. 62,442, filed Nov. 19, 1915. This application filed Aug. 16, 1920. Serial No. 403,839. 3 Claims. (Cl. 148—9.)



1. The process of cutting metal which consists in directing against the same one or more preheating jets consisting each of an ignited mixture of substantially pure oxygen with hydrogen charged with the vapor of a volatile liquid hydrocarbon or hydrocarbon derivative, and directing against the metal thus preheated a jet or stream of substantially pure oxygen.

1,425,857. WATER-SEALED VACUUM AND PRESSURE TRAP. AMOS HARRISON, Chicago, Ill., assignor to Jas. P. Marsh & Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1920. Serial No. 390,571. 12 Claims. (Cl. 137—103.)

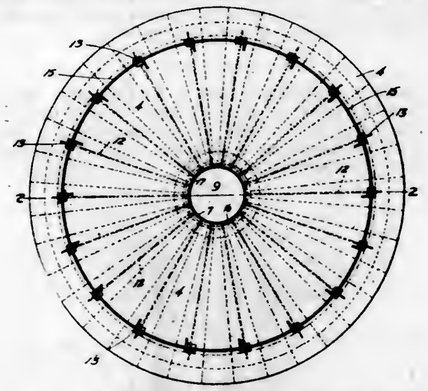


1. In a device of the kind described and in combination, a casing provided with an inlet and having a plurality of outlets, means for normally closing one of said outlets, a tubular valve arranged to control either outlet, a float mounted on said valve for controlling said valve, and means for discharging water about the valve above the float to maintain a water seal thereat.

1,425,858. TEMPERATURE-COMPENSATED REGULATOR. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 16, 1920. Serial No. 410,801. 5 Claims. (Cl. 175—336.)

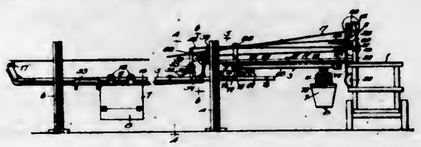
1. In a regulator, the combination with an armature for controlling a circuit; of a frame supporting said armature; an electromagnet including a controlling winding, and a magnet core member, and temperature responsive means for varying the position of the core with respect to the frame whereby to vary the air gap between the magnet core and armature.

1,425,859. AUTOMOBILE CRADLE. ALEXIS JAKOVLEFF, San Francisco, Calif., assignor to Herbert M. Shirek, San Francisco, Calif. Filed Oct. 25, 1920. Serial No. 419,409. 11 Claims. (Cl. 254—92.)



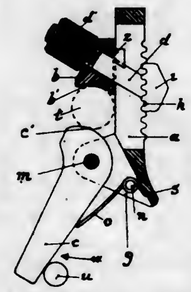
1. A vehicle cradle comprising a frame, an arm mounted on said frame, wheel seats arranged on said arm and normally resting on the floor whereby the wheels of the vehicle at one end may be rolled off of the floor upon the seats, means for moving said arm to raise said wheel seats, and means for turning said arm about a horizontal axis.

1,425,860. SILO ROOF. ALLEN D. W. JOHNSON, Anoka, Minn. Filed Oct. 2, 1919. Serial No. 327,916. 8 Claims. (Cl. 108—32.)



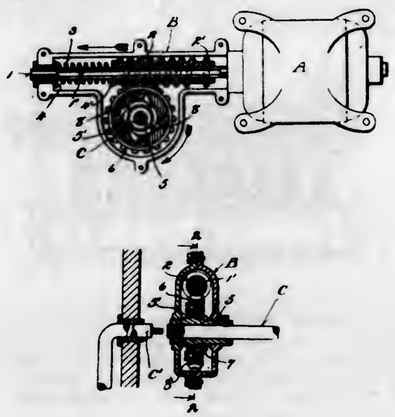
1. A building roof having a central ring and a flange radiating therefrom, slabs having their inner ends seated

on said flange, reinforcing rods provided longitudinally in said slabs and projecting therefrom into a space pro-



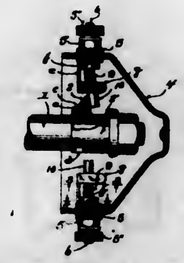
vided between said slabs and said ring, and a plastic material for closing the joint between said slabs and ring and said flange.

1,425,861. CONVEYING APPARATUS. WALTER L. JONES, Earlville, Ill. Filed July 10, 1920. Serial No. 395,193. 11 Claims. (Cl. 214—60.)



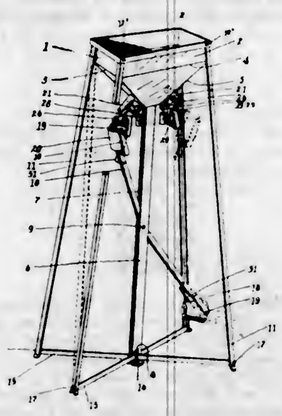
1. In a conveying system, an elevated track, a bucket adapted to hang from and to travel on said track, operating means for moving the bucket in both directions on the track, a movable stop on the track for stopping the travel of the bucket in one direction, means extending from the vicinty of the operating means for adjusting the position of said stop, and a relatively fixed stop for limiting the movement of the bucket in the opposite direction.

1,425,862. LATHE DOG. VICTOR TEODOR JULIN, Djursholms-Danderyd, Sweden. Filed Oct. 6, 1921. Serial No. 505,933. 3 Claims. (Cl. 82—41.)



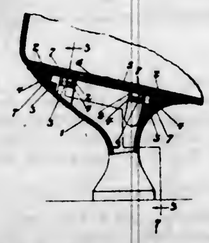
1. A lathe dog comprising, a main body having a longitudinal slot, a press member, means for adjusting said press member relatively to said main body, said means comprising a screw extending through said press member and through the aforesaid slot, a head carried by said screw and engaging said main body, and a lever mounted on said main body and provided with an eccentric surface.

1,425,863. AUTOMATIC REWIND MECHANISM FOR MOTORS. WILLIAM KABBEL, Milwaukee, Wis. Filed Feb. 10, 1921. Serial No. 443,937. 1 Claim. (Cl. 185—40.)



In a rewinding device for a prime motor having a winding shaft, provided with a coupling and a manually operated crank engageable with the coupling; the combination of a bushing secured to the winding shaft, a one-way ratchet wheel carried by the bushing, a worm wheel loosely mounted upon the bushing, pawls carried by the worm wheel engageable with the ratchet wheel, an electric motor having a keyed shaft extension, a worm mounted upon the shaft extension adapted to rotate with and to move longitudinally thereof a housing for the shaft extension provided with apertures constituting bearings for the bushing, a spring interposed between one end of the worm and housing to oppose movement of said worm in one direction, a tappet carried by the worm and an electric circuit make and break contact mechanism controlled by the tappet.

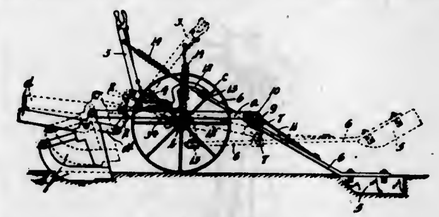
1,425,864. TIMER. ADAM W. KAUFMAN, Milwaukee, Wis. Filed July 26, 1921. Serial No. 487,653. 6 Claims. (Cl. 200—24.)



1. A timer comprising a relatively rotated cam and contact brush, the same including a normally straight coil sectional spring, capable of yielding in all directions, and a guide for directing movement of the coil spring brush in a single plane.

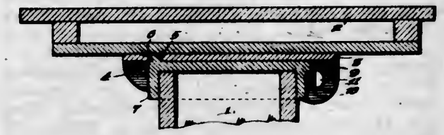
1,425,865. SAND TOY. GEORGE A. KEHL, St. Paul, Minn. Filed May 2, 1921. Serial No. 465,978. 4 Claims. (Cl. 46—37.)

1. In a sand toy, the combination, a frame, a hopper supported by the frame and having a pair of oppositely disposed downwardly directed discharge openings positioned symmetrically about a vertical axis, separate valve mechanism for each of said openings, said mechanism consisting of a lever formed with a valve, said lever being pivoted adjacent the discharge opening to swing upwardly against said hopper to thereby cover said opening and having an arm extending below its pivot, means constantly tending to swing said lever upwardly, a beam pivoted midway between its ends in said vertical axis below said valve mechanism and having a bucket, one at each end thereof, pivotally mounted, so as to swing in the vertical plane of said discharge openings and against said extending arm to move it, and means connected with said beam for restricting the swinging movement of said buckets.



1,425,866. METALLIC HEEL. RAYMOND R. KIRSCH, St. Louis, Mo. Filed Mar. 24, 1921. Serial No. 455,355. 5 Claims. (Cl. 36—40.)

1. In a metallic heel the combination with a hollow metallic heel body having recesses in the upper portion thereof opening inwardly, and shoulders extending inwardly below said recesses, of a metallic retaining plate adapted to be attached to the heel portion of the shoe, and tongues in connection with said heel plate adapted by pressing action against said shoulders to be bent into said recesses.

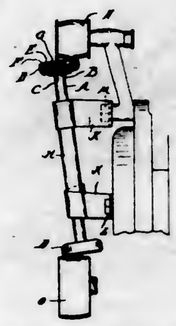


1,425,867. CORN-PLANTER ATTACHMENT. ANTON C. KUBICEK, Blooming Prairie, Minn. Filed Sept. 2, 1921. Serial No. 497,934. 2 Claims. (Cl. 111—61.)

2. The combination with a corn planter and the wheeled frame thereof, of a vertical blade disposed at some distance from the wheels and adapted to travel in the ground and disposed in a plane parallel to the direction of travel of the machine, a rod for supporting said shoe, means pivoted on the frame for supporting

said rod, a sleeve slidable on the end of said rod, and a lever rigidly connected to said sleeve whereby when the lever is swung the blade will be raised to an inoperative position.

1,425,868. TABLE CLAMP. FRED LA POINT, Wheeling, W. Va. Filed Mar. 25, 1922. Serial No. 546,703. 6 Claims. (Cl. 45—48.)

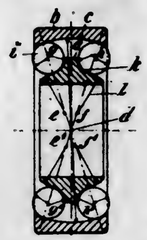


2. In a device of the class described, the combination of a supporting means, a shaft rotatably mounted upon said supporting means, said shaft having a cut-out portion, means for rotating said shaft, an engaging member having a spur and a lug, said supporting means having a slot, said spur being adapted to fit within said slot and said lug being adapted to be engaged by said shaft, as and for the purposes set forth.

1,425,869. TOY. HOWARD R. LARSEN, Milwaukee, Wis. Filed May 3, 1921. Serial No. 466,381. 5 Claims. (Cl. 46—40.)

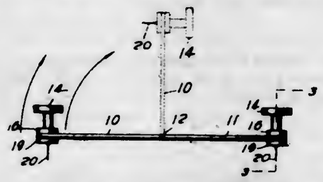
1. A toy comprising a tubular handle portion, a rod movable in the handle portion, a head portion having a fanciful configuration carried at one end of said rod, and means for imparting a reciprocatory movement to said rod.

1,425,870. FRICTION DRIVE FOR FANS. JOHN H. LEITCH, Detroit, Mich., assignor to Auto Accessories Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed Dec. 5, 1921. Serial No. 519,899. 7 Claims. (Cl. 74—26.)



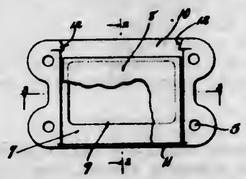
1. In an engine, the combination with a fan pulley, a drive pulley therefor, of a shaft arranged obliquely between said pulleys, friction wheels upon opposite ends of said shaft having marginal contact with respective pulleys, and a bearing for supporting said shaft secured to the engine casing.

1,425,871. MECHANICAL PENCIL. JOHN G. LIDDELL, Everett, Mass., assignor to Moore Pen Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1921. Serial No. 522,250. 1 Claim. (Cl. 120—18.)



In a mechanical pencil, a barrel, having a fixed hollow bearing, non-circular in cross section, at its forward inner end and a rotatable bearing projecting from its rear end; a hollow screw supported axially of the barrel, between the two bearings, for rotation; a nut, within the hollow screw; a lead-carrying tube, non-circular in cross-section, axially supported at its rear end by the nut within the hollow screw, and supported at its front end within the hollow fixed bearing at the front end of the barrel, the carrier tube being slotted on one side at its rear end and headed behind the nut; a collar fast on the lead-carrying tube; a spiral spring surrounding the carrier tube and interposed between the collar and the nut; an ejector wire within the carrier tube, engaging the nut through the slot in the carrier at its rear end; all combined and operating substantially as described.

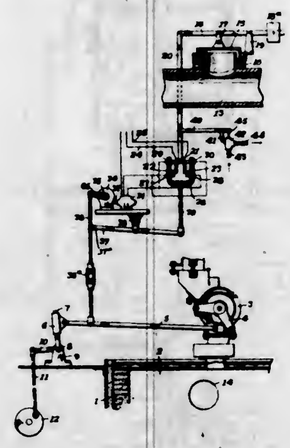
1,425,872. BALL BEARING. KONRAD WERNER LINDMAN, Stockholm, Sweden, assignor, by mesne assignments, to Nordiska Kullager Aktiebolaget, Stockholm, Sweden, a Limited Company of Sweden. Filed Apr. 10, 1918. Serial No. 227,616. 4 Claims. (Cl. 64—36.)



4. In a double row ball bearing, the combination of an outer ring having its inner face formed as a spherical ball path with its center at the center line of the bearing, an inner ring with its outer surface in the form of symmetrical ball paths on each side of a transverse medial plane, each ball path having in cross section the form of an S-shaped curve composed of a concave portion lying toward said medial plane and a convex portion extending toward the end of the ring, and a plurality of balls between the ball path of the outer ring and each ball path of the inner ring, the normal position of each of said balls being such that its center lies on a radius of curvature of the outer ball path passing between the said concave and convex portions of the inner ball path, the space between the edges of the inner ring and the outer ring at the outer sides of said rings being at least as great as the diameter of the balls.

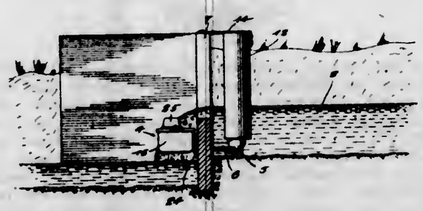
1,425,873. COPY FASTENER. WILLIAM C. LINEAWEAVER, Fort Sill, Okla., assignor of one-half to Worthington Swift, Lawton, Okla. Filed Apr. 12, 1921. Serial No. 460,760. 7 Claims. (Cl. 85—10.)

1. A copy holder comprising a pair of bars hinged together and provided upon opposite ends of the hinge with spaced perforations, penetrating points secured in the perforations, and means carried by the bars and the perforations for manual control of the device.



1,425,874. SHIPPING-CARD HOLDER. WILLIAM F. LUICK, Milwaukee, Wis. Filed Mar. 18, 1921. Serial No. 453,201. 3 Claims. (Cl. 40—16.)

1. A shipping card holder comprising a skeleton frame provided with means for attaching it to a receptacle, the



underside of said frame being offset to provide a shallow pocket having a throat through which the card may be inserted, opposed lugs extending from the opposite sides of the throat, the distance between the lugs being less than the width of the card to be inserted, said lugs operating on the mere insertion of a card to retain said card, and prevent the withdrawal thereof.

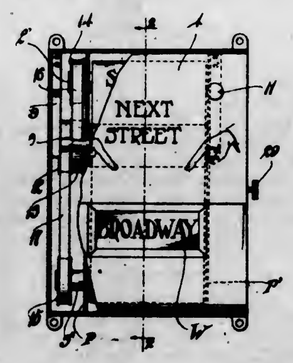
1,425,875. REGULATING MECHANISM FOR GAS PRODUCERS. CHARLES W. LUMMIS, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1918. Serial No. 248,477. 14 Claims. (Cl. 48—87.)

1. In a gas supply system, the combination with a member movable in response to fluctuations in the demand for gas, of means controlled by the movement of said member for increasing or decreasing the rate of supplying fuel for gasification to said system.

1,425,876. WATER METER. RAY JAY LYMAN, Berkeley, Calif. Filed July 18, 1919. Serial No. 311,701. 5 Claims. (Cl. 73—68.)

1. The combination with a water damming device extending across a stream, of a water meter at the down-stream side of said damming device, an upstanding passage in the body of water trapped by said damming device, said passage having a series of vertically spaced water inlet openings, the endmost of which are located approximately at high and low water levels respectively, and a connection extending laterally from the lower end of said passage to the down-stream side of said water damming device and discharging into said water meter.

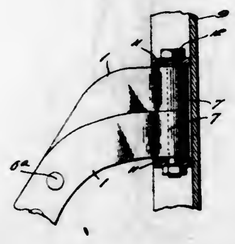
1,425,877. DRESS FORM. JAMES MCCARTHY, Long Island City, N. Y., assignor to Hall Borchert Dress Form Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 22, 1919. Serial No. 332,513. 4 Claims. (Cl. 211—13.)



1. A dress form having a hollow rigid, non-adjustable, one-piece body formed of papier mâché and provided with a low ridge integral with the wall and extending vertically along the medial line.

1,425,878. METHOD OF WATERPROOFING VULCANIZED FIBER. JAMES MCINTOSH, Norristown, Pa., assignor to Diamond State Fibre Company, Elsmere, Del., a Corporation of Delaware. Filed Mar. 27, 1920. Serial No. 369,291. 3 Claims. (Cl. 91—68.)

1. The method which consists in immersing wet vulcanized fiber in a water-proofing liquid until it has become impregnated therewith; and thereafter drying said fiber to free it of the water.



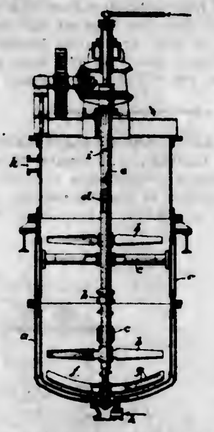
1,425,879. STATION INDICATOR. HIRAM MCNICHOLAS, Connell, Wash. Filed Jan. 15, 1920, Serial No. 351,553. Renewed Jan. 14, 1922. Serial No. 529,369. 3 Claims. (Cl. 40—86.)

1. The combination with an inclosing casing with a web and supporting rollers, of an intermediate driving shaft and a drive roller thereon and an idle friction roller, said casing having bearing slots and a shaft for the friction roller journaled in said slots, an adjustable spring bearing against said latter shaft to cause engagement of the web between the driving roller and

friction roller, pulleys fixed on the intermediate shaft and complementary pulleys on the supporting rollers and slip belts connecting said pulleys, for the purpose described.

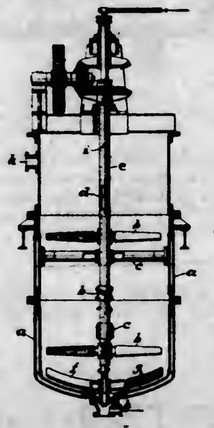
1,425,880. COASTER. RUDOLPH A. MACK, Gallipolis, Ohio. Original application filed June 26, 1919, Serial No. 306,941. Divided and this application filed Oct. 27, 1920. Serial No. 419,887. 3 Claims. (Cl. 280—87.5.)

2. In a steering connection for coasters, a post having an opening therein, spaced bearing members in said post, bars, knuckles carried by said bars and alined with each other, the combined lengths of said knuckles being substantially equal to the distance between said bearing members, and a pivot pin carried by said bearing members and passing through said knuckles.



1,425,881. PRIVY. HERBERT ROLAND MAGUIRE, Atherton, Queensland, Australia. Filed Jan. 12, 1920. Serial No. 351,008. 6 Claims. (Cl. 4—18.)

1. In a privy, in combination, a false seat hinged to the main seat, and a lid hinged to the false seat slightly forward of the false seat hinges, a fixed stop on the main seat immediately behind the rear edge of the lid against which the lid can come when open, a lower frontal recess in the stop and a knuckle thereon against which the lid impinges when the false seat rises after being used.

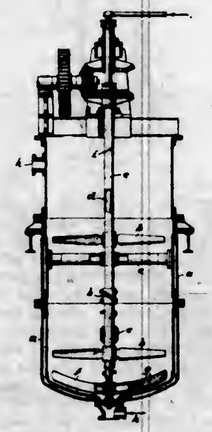


1,425,882. PROCESS OF TREATING HYDROCARBON OILS. HAROLD T. MAITLAND, Marcus Hook, Pa., assignor to Sun Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Apr. 15, 1919. Serial No. 290,227. 2 Claims. (Cl. 196—26.)

1. In the manufacture of a water-insoluble saponifiable product from mineral oil, the process which comprises distilling from the petroleum a relatively heavy distillate adapted for lubricating oil stock, treating the same with sulfuric acid and separating out the sludge with a large part of the acid, treating the remaining body of acid-containing oil with an alkali, separating out the soap and alkaline salt water, decomposing the soap with a relatively weak solution of a mineral acid, and eliminating

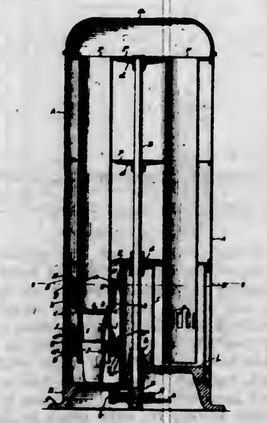
most of the salt water, leaving a derivative comprising principally a water-insoluble organic acid.

1,425,883. PROCESS OF TREATING HYDROCARBON OILS. HAROLD T. MAITLAND, Marcus Hook, Pa., assignor to Sun Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Apr. 15, 1919. Serial No. 290,228. 4 Claims. (Cl. 196—28.)



1. The process of making a water-insoluble saponifiable oil from the sludge produced in the treatment with mineral acid of mineral oil stock, which comprises subjecting the sludge to mechanical mastication and concurrently therewith causing water to impenetrate and wash the sludge and dissolve contained mineral acid, the water being heated to such a temperature as to render the sludge of the proper consistency for working, and during the process of washing and mastication supplying fresh water and carrying off the water that has been used for washing, and continuing the process until the mineral acid content is sufficiently reduced to leave the water-insoluble saponifiable oil specified.

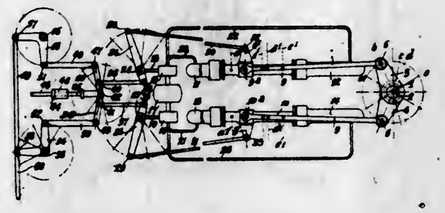
1,425,884. MINERAL-OIL DERIVATIVE. HAROLD T. MAITLAND, Marcus Hook, Pa., assignor to Sun Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Apr. 15, 1919. Serial No. 290,229. 2 Claims. (Cl. 87—5.)



1. As a new product, the herein described derivative from mineral oil, the same being a liquid, insoluble in water, practically odorless, which does not become rancid and containing a minute percentage of sulfur less than one per cent, the same also being readily saponifiable and when saponified being soluble in all proportions with water and mineral oil and adapted to undergo the character of hydrolytic decomposition that occurs with soaps derived from animal and vegetable oil.

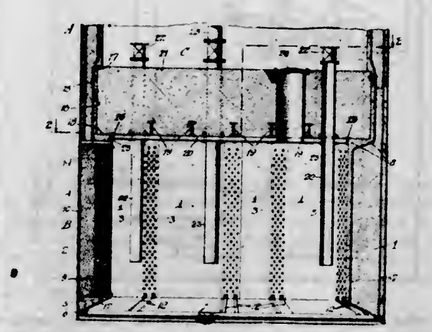
1,425,885. MINERAL OIL DERIVATIVES. HAROLD T. MAITLAND, Sharon Hill, Pa., assignor to Sun Company, Philadelphia, Pa., a Corporation of New Jersey. Filed January 26, 1921. Serial No. 439,948. 2 Claims. (Cl. 87—5.)

1. As a new product, the herein described derivative from mineral oil, the same being water-insoluble, solid at ordinary temperatures, practically odorless, which does not become rancid, and containing a relatively small percentage of sulfur less than about one per cent; the same also being readily saponifiable and when saponified being soluble in all proportions with water and partially soluble in mineral oil and adapted to undergo the character of hydrolytic decomposition that occurs with soaps derived from animal and vegetable oil.



1,425,886. DRINKING-CUP DISPENSER. PAUL MAIWURM, Mansfield, Ohio. Filed Feb. 21, 1921. Serial No. 446,982. 5 Claims. (Cl. 211—8.)

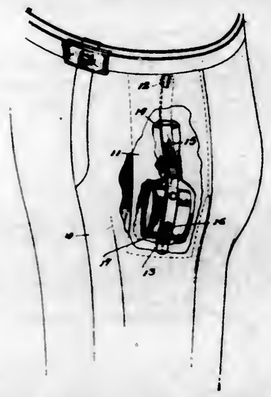
1. In a device of the character described, the combination with a cylindrical body and supporting base,



of a rotary standard mounted to rotate vertically therein; a plurality of disks mounted horizontally on said standard to rotate therewith having a plurality of apertures; a series of tubes suspended vertically in said apertures, respectively; a plurality of drinking-cups set together in said tubes, respectively, and means for segregating the lowest from the next lowest cup in each tube, progressively, and for delivering it singly in an open space of said body by the revolution of said tubes around said standard, step by step.

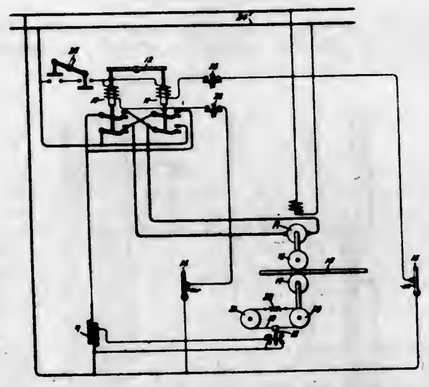
1,425,887. OPERATING MECHANISM OF KITCHEN REVERSING RUDDERS. FRANCIS LEIGH MARTINEAU, London, England. Filed Oct. 27, 1920. Serial No. 419,919. 2 Claims. (Cl. 114—145.)

1. Kitchen rudder operating mechanism provided with starboard and port tiller operating mechanism each consisting of a floating lever connected at one end by a connecting rod to a double ended ram or plunger working in cylinders and adapted to be operated by a variable throw or delivery pump having a controlling spindle connected to a slide carrying the fulcrum of the said floating lever, the other end of the floating lever being connected by a link to the fulcrum of a secondary floating lever of which one end is adapted to be moved by reversing and speed controlling mechanism adapted to be operated directly by the operator, the other end of the secondary floating lever being connected by a link to one arm of a bell crank lever of which the other arm is connected to mechanism operable by steering gear adapted to be operated directly by the operator.



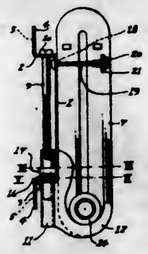
1,425,888. WELL. DABNEY H. MAURY, Evanston, Ill. Filed Oct. 22, 1921. Serial No. 509,539. 12 Claims. (Cl. 166—5.)

1. In a well of the type specified, the combination of an inlet terminal, and a superposed well casing, said inlet terminal comprising strainer plates, means for supporting said strainer plates in spaced relation, means for closing the bottom of the space between said strainer



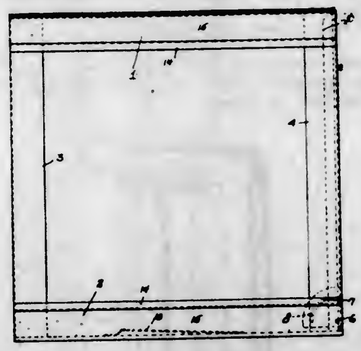
plates, and filtering material contained in said space, said inlet terminal forming a structure which may be built complete before sinking and sunk as a complete unit ready for use, substantially as described.

1,425,889. SAFETY PURSE. JOSEPH MEISNER, New York, N. Y. Filed May 2, 1921. Serial No. 466,138. 2 Claims. (Cl. 2—152.)



2. In a garment having a pocket provided with an interior opening and an exterior opening, a flexible member passing through the interior opening and having an eyelet on its exterior end, means attached to the interior of the garment for receiving the eyelet of the flexible member, a purse, means for attaching the purse to the flexible member within the pocket, and means for fixing the interior end of the flexible member to the interior of the pocket.

1,425,890. AUTOMATIC REVERSING CONTROL. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 14, 1921. Serial No. 507,732. 5 Claims. (Cl. 172—240.)

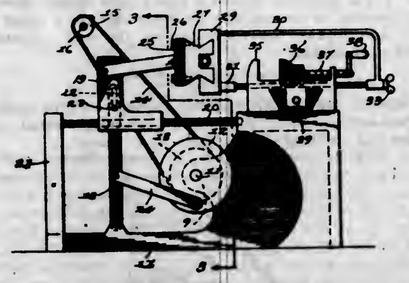


1. The combination with a reversible electric motor operable in each direction between predetermined limits, a pair of alternately closed normally energized electromagnetic reversing switches for controlling the direction of operation of said motor, means for preventing either of said switches from closing while the other is closed, and means whereby at each limit of operation of the motor the reversing switch which is closed is temporarily deenergised to permit the other reversing switch to close and thereby reverse the motor and then energised when the motor is reversed so as to close when the said other reversing switch is temporarily deenergised at the other limit of operation.

1,425,891. RADIATOR HANGER. JOHN W. MOORE, Detroit, Mich. Filed Oct. 3, 1921. Serial No. 505,026. 1 Claim. (Cl. 248—30.)

Means for supporting a radiator or the like, comprising a bracket having upper and lower horizontal walls, said bracket having a longitudinal slot meeting an opening in the lower horizontal wall of the bracket, a blade-like radiator support extending through the slot of said bracket and having a rolled edge forming a barrel behind said bracket, which barrel extends through the opening in the lower horizontal wall of said bracket, a suspension member carried by the upper horizontal bracket wall and extending into the barrel of said radiator support, the barrel of said radiator support having a slot therein, a nut in the slot of the barrel of said radiator support and engaging said suspension member to hold said radiator support relative thereto, and means carried by the upper end of said bracket to cooperate with said radiator support in holding a radiator.

1,425,892. UNIT CABINET CONSTRUCTION. CLIFFORD E. MOULTON, Ravenna, Ohio. Filed Aug. 19, 1921. Serial No. 493,534. 5 Claims. (Cl. 45—2.)

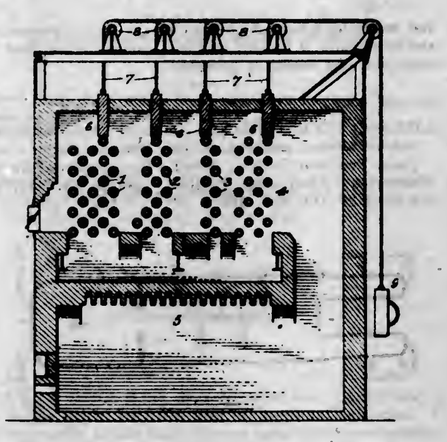


5. In unit cabinet construction, the combination of base members having a series of spaced folds in their tops, and a plurality of units comprising an open frame having its top and bottom formed of a single piece of metal having folds in its top and bottom, such folds being reversed as to position to allow the units to be interlocked with said base members and with similar units, one side of each top and bottom frame having its edge rebent to form a locking fold, the other side of each top and bottom frame having its edge offset to form a lip adapted to lock within such locking fold on adjacent similar units to form a cabinet.

1,425,893. MILLING CUTTER. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1920. Serial No. 418,143. 10 Claims. (Cl. 76—45.)

1. A milling cutter having the cutting faces of its teeth arranged both helically and in rings perpendicular to the axis of the cutter.

1,425,894. STEEL-CUTTING MACHINE. JÖZEPH PITRUS, Chicopee Falls, Mass. Filed Mar. 17, 1921. Serial No. 453,057. 2 Claims. (Cl. 20—73.)



2. In a steel cutter of the character described comprising a table, a plurality of hack saws mounted for reciprocatory movement on said table, means for imparting to said saws their reciprocatory movement, a plate below said saws, stationary upright jaws on said plate, a plurality of screws, sliding jaws at the inner end of said screws, crank handles for operating said screws to clamp a piece of steel to be cut by said saws between said stationary and said movable jaws, a rod provided with left and right hand thread, and a handle on said rod for operating the same to adjust the distance between the two outer pairs of jaws and the intermediate pair in accordance to the length of the pieces into which the steel piece is to be cut.

1,425,895. SPOOL. WILLIAM A. PRENTISS, Holyoke, Mass. Filed Mar. 16, 1921. Serial No. 452,731. 5 Claims. (Cl. 242—116.)

3. A spool, comprising a fixed and a removable head, a core portion, a thread formed thereon to receive the removable head, means separable from the head proper for locking the head to the threaded portion, said means comprising a threaded ring, and means for retaining the ring in place.

1,425,896. DAMPER CONTROL FOR OIL STILLS. JOHN PRIMROSE, New York, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1920. Serial No. 410,652. 2 Claims. (Cl. 196—9.)

1. In a fractional still, the combination with a chamber for the passage of the hot furnace gases, of a plurality of banks of tubes or heating surfaces supported but not occupying all of the sectional space therein, of a series of refractory baffles suspended in vertical line with the said banks in the spaces not occupied by the same and adjustable to vary the passage through such spaces, whereby more or less of said spaces may be closed or opened and the proportion of hot gases sweeping the banks thereby varied and controlled.

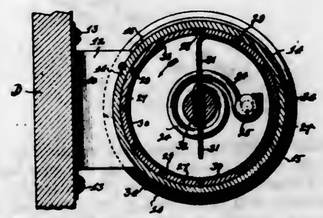
1,425,897. EYE FOR GARMENTS. LOUIS M. RABINOWITZ, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,340. 7 Claims. (Cl. 24—227.)

1. A device of the class described, comprising a strip of metal, the end portions of which are provided with integrally formed means adapted for attaching it to textile material, said strip having its intermediate portion outwardly bowed, and of gradually reduced width, the point of maximum reduction substantially coinciding with the point of extreme bowing.

1,425,898. INFANT'S BAND. HARRIET LYONS REDMOND, Boston, Mass., assignor to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed June 7, 1921. Serial No. 475,906. 5 Claims. (Cl. 128—169.)

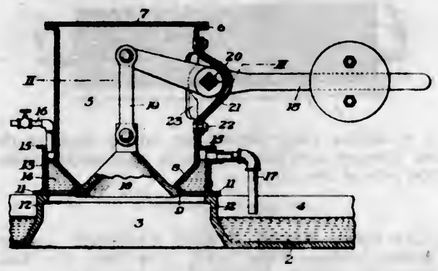
1. An infant's or like band having near one end only a transversely extending slit, the walls of which overlap

to provide extra reenforcing thickness and through which slit the opposite end of the band is adapted to be passed,



and fastening means extending through said opposite end and both walls of the slit whereby tearing of the band by said fastening means is prevented.

1,425,899. INFANT'S BAND. HARRIET LYONS REDMOND, Boston, Mass., assignor to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed June 7, 1921. Serial No. 475,809. 3 Claims. (Cl. 128—169.)



1. An infant's band having a pair of slits at the upper and lower edges thereof, in alignment but spaced apart, the material at the outer ends of said slits being secured in overlapping relation whereby said outer ends of the slits are reinforced, a pair of strips extending from one end only of the band at the upper and lower edges thereof, said strips being adapted to be passed through said slits, tapes or ribbons secured to the ends of said strips, and a corresponding number of double tapes or ribbons in looped form secured to the opposite end of the band and adapted to be tied together to secure the band in place.

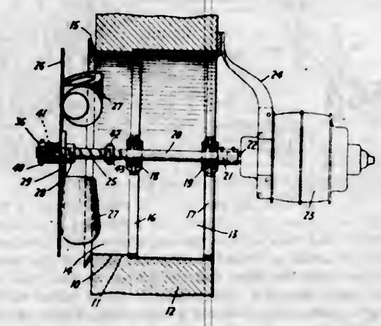
1,425,900. COMBINED CHECK AND CLOSER. RAYMOND R. RUNDELL, Elmira, N. Y., assignor of one-third to George C. Haesloop, Elmira, N. Y. Filed Oct. 18, 1921. Serial No. 508,489. 7 Claims. (Cl. 16—65.)

2. A combined closer and check device comprising a fixed cylindrical casing, a retarder sleeve fitted within and adapted to frictionally engage the inner surface of said casing, a rotatable shaft disposed within the cylindrical casing, a ratchet spring within the retarder sleeve having one end connected to the rotatable shaft and its other end adapted to engage and disengage the inner surface of said retarder sleeve, and a spring having one end fixed and its other end secured to the rotatable shaft.

1,425,901. FEED HOPPER FOR GAS PRODUCERS. GEORGE L. ROBINSON, Beechview, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,272. 4 Claims. (Cl. 48—86.)

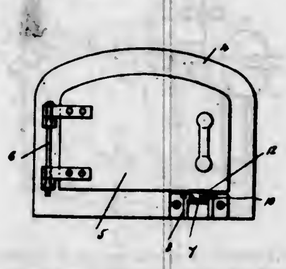
1. A gas producer having a top, a feed hopper removably secured to the top and having a seat for a valve or bell, and means for water-cooling the seat, substantially as described.

1,425,902. MECHANICAL MOVEMENT. LOUIS ROSEN, Edgewater, Colo. Filed Aug. 1, 1921. Serial No. 488,859. 2 Claims. (Cl. 208—37.)



1. A rolling chair comprising a supporting frame (6), a guide wheel (F) pivotally attached to said frame (6) means (12, 13, 14) for controlling said guide wheel, a pair of supporting wheels (R, R') rotatably attached to said frame, a chair (1) supported on pivots (3) spaced from but parallel with the pivots (7) upon which said supporting wheels rotate and adapted to be oscillated back and forth about its pivot, and means comprising a gear sector (28) attached to said chair and engaging with two gear wheels (19, 25) rotatably connected to two parallel spaced pivots (7, 23), cooperating gear wheels (17, 24) mounted on said last named pivots, and ratchet means between the gears on each pivot, whereby the oscillatory movement of said chair will be changed to a rotary movement in one direction and transmitted to one of said supporting wheels for the purpose of propelling said rolling chair in a forward direction.

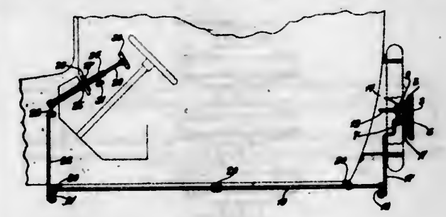
1,425,903. CLOSABLE VENTILATOR. ADOLPH F. ROTH, Newark, N. J. Filed Sept. 16, 1920, Serial No. 410,694. Renewed Jan. 20, 1922. Serial No. 530,727. 15 Claims. (Cl. 98—27.)



15. A ventilator, comprising a casing having an inlet and an outlet, a power driven spirally grooved shaft journaled in the casing so that one of its ends protrudes beyond the outlet of the casing, a rotatably slidable plate on the shaft at the outlet of the casing, and the plate being of a size to close and open the outlet of the casing, fan blades held on the face of the plate in opposition to the outlet of the casing, the fan blades being adapted to suctionally force atmospheric fluid through the casing for discharge from its outlet and the blades being of sizes and in

arrangement to pass interiorly of the casing, a ball carried by the plate, revoluble in the groove of the shaft for guiding the movement of the plate and fan blades to open positions from the outlet of the casing with the rotation of the shaft, a sleeve held on the shaft, locking means associated with the sleeve and plate to releasably lock the plate and shaft together when the plate is in open position from the outlet of the casing so that the plate and fan blades will revolve with the driving of the shaft, a

spring element associated with the sleeve, adapted to be tensioned by compression when the plate and clutch are in locked engagement and also adapted when the rotation of the shaft is stopped to release the plate from the clutch as well as causing the plate to reversely slide on the shaft to close the outlet of the casing with the fan blades positioned interiorly of the casing, and a stop on the shaft to limit the movements of the plate and fan blades inwardly of the casing.

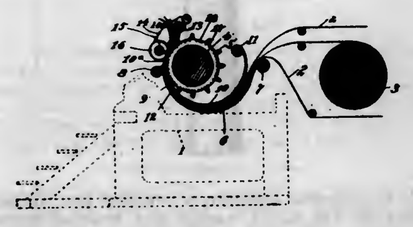


1,425,904. LATCH FOR FURNACE DOORS. WILLIAM SCHOCH, Bryn Mawr, Pa. Filed Oct. 25, 1921. Serial No. 510,301. 1 Claim. (Cl. 292—73.)

The combination, with a vertical door frame adapted to be secured to a boiler furnace, and a door hinged at one end to the frame, of a revoluble latch roller journaled in bearings which project forwardly from the vertical front face of the door frame below the bottom edge of the door and under its free end portion, said roller being adapted to engage with the door and retain it in its closed position.

1,425,905. VEHICLE SIGNAL. RALPH W. SHARTLE, St. Louis, Mo., assignor to Wayne Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 17, 1921. Serial No. 501,223. 3 Claims. (Cl. 116—51.)

1. A device of the character described, comprising a sleeve mounted for rocking movements, a case attached to one end of said sleeve, a glass plate closing the side of said case opposite said sleeve, a lamp socket extending through said sleeve into said case, a lamp supported by said socket within said case, an arm attached to said

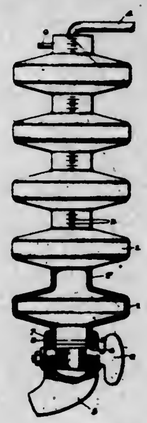


sleeve, and connections from said arm for actuating the same to turn said sleeve in either direction.

1,425,906. ROTARY BRUSH. WILLIAM EDWIN SHERBONDY, Cleveland, Ohio. Filed Nov. 11, 1920. Serial No. 423,284. 3 Claims. (Cl. 15—182.)

1. In a device of the class described the combination of a hollow body provided with a series of apertures, a wooden core, bristle tufts having looped portions adapted to be inserted into said apertures, and clinching means engaging said core and bristle for retaining said tufts in position.

1,425,907. MANIFOLDING TYPEWRITER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Nov. 26, 1919. Serial No. 340,922. 16 Claims. (Cl. 197—133.)



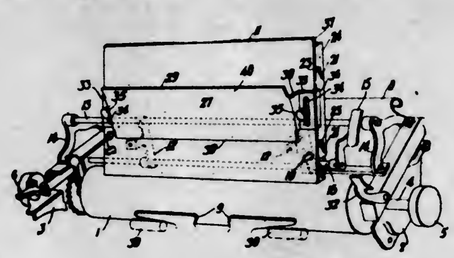
1. In a typewriting machine, the combination with a platen, of a toothed rotary feeding element mounted on an axis on substantially the horizontal plane of the printing point of the platen for engaging successive holes in a plurality of strips of paper and means for guiding said paper past the printing point, said means being adapted to retain the paper substantially loosely while in feeding engagement with the toothed element.

1,425,908. CONTAINER. JAMES J. SCHUMAKER, Cleveland, Ohio. Filed Oct. 29, 1920. Serial No. 420,543. 1 Claim. (Cl. 73—166.)

A liquid measuring device comprising a normally vertical and elongated transparent body formed with alternate bulb-shaped containers and short narrow tubular connecting portions of a diameter substantially less than the diameter of said bulb-shaped containers, said narrow tubular connecting portions having communication at their upper and lower ends with said bulb-shaped containers and each

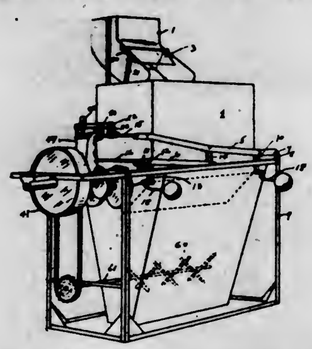
being provided with a series of graduations, each graduation of a series indicating the capacity of the device from

that graduation to the corresponding graduation of the series on the tubular portion depending from the container immediately below it.



1,425,909. POWDER CONTAINER. HENRY SLAIGHR, Attleboro, Mass., assignor to The D. F. Briggs Company, Attleboro, Mass. Filed Mar. 15, 1922. Serial No. 544,017. 6 Claims. (Cl. 132—821.)

1. In a powder container, a container body having a closed end and having opposed slots extending through its opposite end, a closure for the container body having an outer sleeve fitting within the container body and having a rim fitted over the outside of the body, a ferrule within the sleeve, a puff having a loop in the ferrule, and a pin having headed ends, the pin being receivable in the slots of the body and extending through the loop and through the ferrule and through the slots of the outer sleeve, whereby upon removal of the closure the pin may be moved through the slots of the outer sleeve to project the puff beyond the outer sleeve.

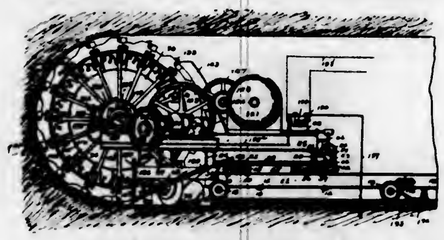


1,425,910. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1918. Serial No. 266,433. 22 Claims. (Cl. 197—127.)

3. In a typewriting machine, in combination, a revolubie platen, means for temporarily holding a work-sheet in position relatively to the platen, an introductory directrix to guide a second work-sheet downwardly between the first-mentioned work-sheet and the platen, said directrix comprising front and rear closely spaced plates, and said front plate having an edge to gauge the top edge of the second sheet, and means to adjust the position of the front plate with reference to the printing line to assist in gaging the second-mentioned work-sheet with reference to the printing line.

22. In a typewriting machine, in combination, a revolubie platen, means for temporarily holding a work-sheet in position relatively to the platen, and an introductory directrix to guide a second work-sheet back of the first and down between the same and the platen at the front of the latter, said directrix comprising a front plate having a straight upper edge forming a gage with which the upper edge of the second work-sheet may be brought into alignment by the fingers of the operator, to gauge the second sheet with reference to the printing line, and also comprising a rear plate closely spaced with reference to the front plate.

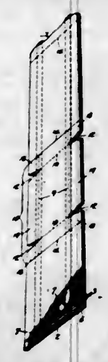
1,425,911. AUTOMATIC WEIGHING SCALE. HENRY R. STANDEFER, Melvin, Tex. Filed Aug. 30, 1920. Serial No. 407,067. 2 Claims. (Cl. 249—46.)



1. In an automatic weighing scales, a receiver, a chute leading downwardly into the receiver, a gate in said chute for control and admission of material into the receiver discharge doors arranged at the bottom of the receiver, arms connected with the lower corners of the receiver to support the same, knife edge bearings for each of said arms, a scale beam, a means for suspending the receiver through said arms from one end of said scale beam, and means controlled by the movement of the other end of said beam whereby when said receiver lowers under its measured load said chute gate is closed and the discharge doors of the receiver are opened.

1,425,912. CONDENSER AND THE METHOD OF MAKING SAME. ROBERT T. STAPLES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,254. 3 Claims. (Cl. 250—41.)

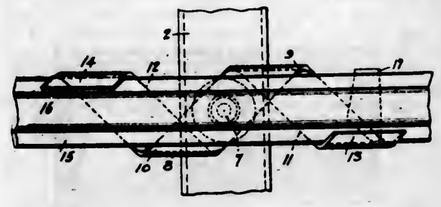
1. The method of treating a condenser comprising an impregnated unit which consists in heating said impregnated unit to a temperature slightly below the melting point of the impregnating compound and maintaining the unit at such temperature for a period of time sufficient to allow the unit to assume its natural shape.



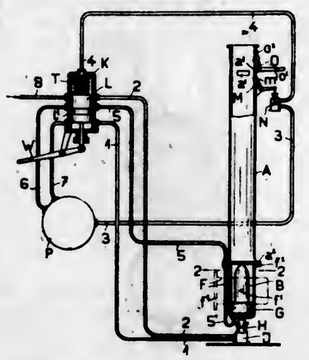
1,425,913. MINING MACHINE. HALVER R. STRAIGHT, Adel, Iowa. Filed Mar. 31, 1919. Serial No. 286,564. 46 Claims. (Cl. 262—7.)

2. In a device of the class described, a unitary excavator member designed to excavate, elevate and deliver material, means for supporting and rotating said excavator member in a vertical plane, a pivot truck, means independently operated for alternately moving said excavator member transversely in a semi-circular path about the center of said truck while said excavator is being operated and means for conveying the material to a predetermined point of discharge.

24. An excavator member having a cutter, means for moving said cutter through the material to be excavated, and electrical means for passing current through said cutters to the said material for the purpose stated.



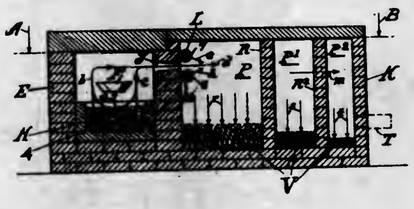
1,425,914. REENFORCED BLANK MATERIAL FOR THE MANUFACTURE OF PAPER BOXES OR CONTAINERS. GEORGE W. SWIFT, Jr., Bordentown, N. J. Filed May 19, 1920. Serial No. 382,560. 3 Claims. (Cl. 229—49.)



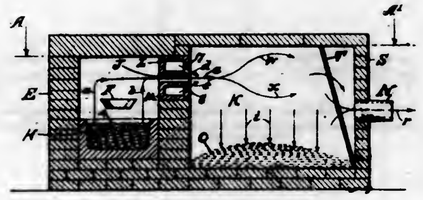
3. A composite multi-ply paper fabric for the manufacture of box blanks comprising outer surfacing webs and an inner filling web permanently fastened together and reenforcing strips arranged between the surfacing web and said filling web upon prospective lines of fold, said reenforcing strips being concealed within said surfacing webs and crease lines formed in said composite web in the zones of said reenforcing strips.

1,425,915. RAIL CLAMP. EUGENE B. TAGGART, Indiana, Pa. Filed Nov. 16, 1920. Serial No. 424,484. 4 Claims. (Cl. 238—305.)

1. The combination with a tie, of a spring-metal plate pivotally mounted thereon, oppositely extending clips at each end of said plate adapted to engage the rail-flanges at opposite sides of said rail, said clips normally extending down at an angle to said rail flanges, and the inner ends of said clips projecting above said flanges.



1,425,916. AMMUNITION HOIST. HANS TECHEL, Kiel, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel, Germany. Filed Jan. 3, 1921. Serial No. 434,635. 7 Claims. (Cl. 89—46.)

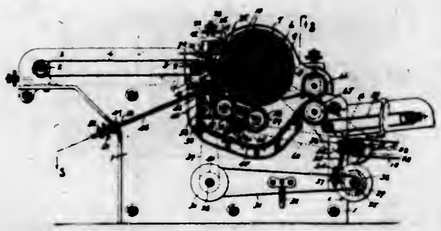


1. An ammunition hoist of the class described comprising a hoisting tube, a charging tube adapted to be swung underneath the hoisting tube and to be shifted in the direction of the hoisting tube and fluid-pressure means for shifting the charging tube and closing the connection between said charging tube and hoisting tube.

1,425,917. METHOD AND MEANS FOR PRODUCING OXIDE OF ZINC. JOHN THOMSON, Brooklyn, N. Y. Filed Mar. 16, 1921. Serial No. 452,641. 14 Claims. (Cl. 204—63.)

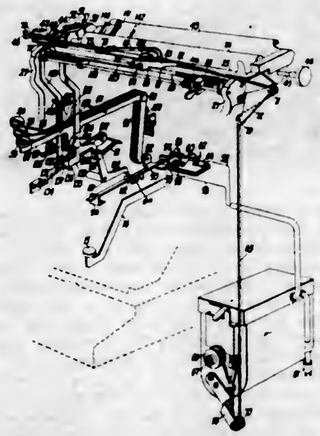
6. The method of producing oxide-of-zinc essentially consisting in oxidizing relatively pure, isolated zinc-gas by partially depotentiated generated oxygen, the zinc-gas being produced by re-distillation of metallic zinc in an electric furnace from whence it passes between impinging streams of the oxidizing medium, the oxide concurrently precipitating in a chamber.

1,425,918. METHOD AND MEANS FOR PRODUCING OXIDE OF ZINC. JOHN THOMSON, Brooklyn, N. Y. Filed May 5, 1921. Serial No. 466,866. 10 Claims. (Cl. 204—63.)



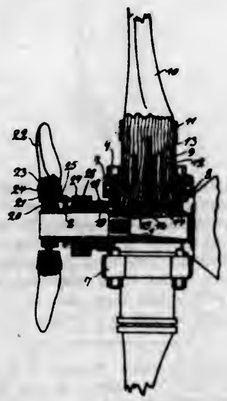
4. The method of producing crystalline oxide-of-zinc, which essentially consists in oxidizing super-heated zinc-gas by air, the zinc-gas being produced by re-distilling metallic zinc in an electric furnace from whence it passes between impinging streams of the oxidizing medium, previously preheated, the resulting product concurrently precipitating in a chamber.

1,425,919. METHOD OF MAKING SPECTACLE FRAMES AND SIMILAR ARTICLES. HORMIDAS TREMBLAY, Southbridge, Mass. Filed Mar. 10, 1921. Serial No. 451,126. 10 Claims. (Cl. 29—20.)



1. The method of making a frame which consists in stamping a blank out of sheet material in flat form and providing it with two arms parallel with each other, bending each arm of said pair away from the other in their plane until they are straight and in alignment so as to form a straight arm, and thereafter bending said arm in its own plane to form a closed figure for receiving the edge of a lens or the like.

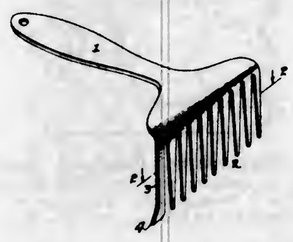
1,425,920. DISINTEGRATING MACHINE. FREDERICK VON OSTEN, East Orange, N. J., assignor to Sophie S. von Osten, East Orange, N. J. Filed Feb. 16, 1921. Serial No. 445,290. 9 Claims. (Cl. 19—83.)



2. In a machine of the kind described, a high speed rotatable teasing element having a surface of radially projected springy bristles, a pair of feed rollers, a pair of gripping rollers intermediate said feed rollers and the surface of said teasing element, means for rotating said feed rollers and said gripping rollers to slowly feed material to said teasing element, and a yieldable presser-plate beneath said gripping rollers and contiguous to the bristle surface of said teasing element to hold the material subject to the teasing and brushing action of the latter.

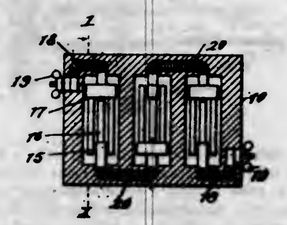
1,425,921. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 7, 1919. Serial No. 315,819. 27 Claims. (Cl. 197—66.)

1. In a typewriting machine, in combination, a carriage constantly urged in the letter-feeding direction, escapement mechanism whereby the movement of the carriage may be controlled, carriage-returning means, means to check the carriage at different predetermined positions in the return movement thereof, and means variably operable manually to start said carriage-returning means and to control the action of the checking means in accordance with the operation of said starting means.



1,425,922. ADJUSTABLE OR SELF-REGULATING PROPELLER. ERWIN WESNIGK, Berlin, Germany. Filed June 29, 1920. Serial No. 392,534. 8 Claims. (Cl. 170—163.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In screw propellers the combination with propeller blades rotatably mounted at a hub, of an auxiliary blade

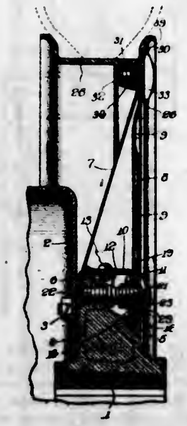


rotatably mounted at the said hub and means for transmitting the rotating movements of said auxiliary blade onto the rotatably mounted propeller blades.

1,425,923. BRUSH CLEANER. FREDERICK WEYHRAUCH, New York, N. Y. Filed Apr. 19, 1921. Serial No. 462,492. 1 Claim. (Cl. 15—142.)

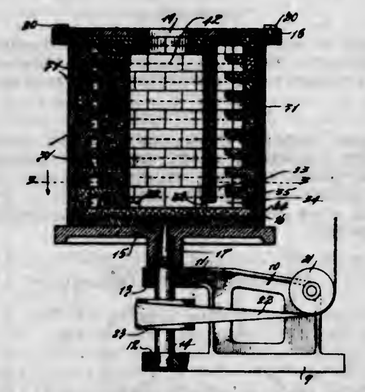
A brush cleaner comprising a handle, a comb depending therefrom, one end tooth of which is provided with a laterally extending projection in the plane of the teeth, said projection and outside edge of the tooth being provided with a cutting edge.

1,425,924. STORAGE BATTERY. THEODORE A. WILLARD, East Cleveland, Ohio. Filed Sept. 16, 1918. Serial No. 254,248. 8 Claims. (Cl. 204—29.)



1. A storage battery comprising a vessel having a cover and containing the electrolyte and battery elements and directly enclosing the same and conductors extending from the elements through the lateral walls of the vessel at a distance from and beneath the cover.

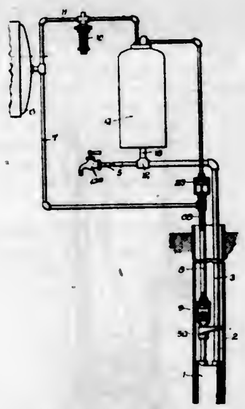
1,425,925. TIRE PATCH. LAURIN L. WILLIAMS, Oneida, Kans. Filed Sept. 12, 1919. Serial No. 323,259. 2 Claims. (Cl. 152—24.)



2. A fastener for a tire patch having first and second coacting walls to form a loop to receive a portion of a patch therebetween, the fastener being formed of a single blank of metal, the first wall being elongated and extending on opposite sides of the second wall, said first wall having a terminal patch-retaining hook extending towards the second wall, a flange at one end of the first wall extending in the same direction as said hook, said first wall having openings therethrough on opposite sides of the second wall for passage of a retaining element therethrough, said second wall being wider than and extending beyond said hook, and said second wall having a terminal hook extending in the same direction as the first hook and engageable with a tire-mounting rim.

1,425,926. HUB DEMOUNTABLE DOUBLE DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Sept. 23, 1920. Serial No. 412,158. 10 Claims. (Cl. 301—63.)

1. The combination with a hub having annular correspondingly inclined bearing surfaces unequally distant from its axis, of two inwardly divergent wheel disks having unequal central openings to fit over said surfaces, respectively, and clamping means for forcing the disks laterally against the inclined bearing surfaces.



1,425,927. CENTRIFUGAL CASTING MACHINE. WILLIAM F. WOLF, Somerville, N. J., assignor to Wasson Piston Ring Company, Plainfield, N. J., a Corporation of New Jersey. Filed Mar. 30, 1921. Serial No. 456,876. 19 Claims. (Cl. 22—65.)

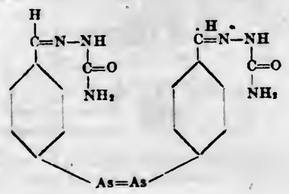
1. In a centrifugal casting-machine, a multiple-casting mold comprising successive layers of cores for forming

the rings concentrically arranged to form an inner trough, a plurality of vertical channels within the body of the cores connecting the successive layers of cores, and gateways between said trough and channels.

1,425,928. PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 27, 1917. Serial No. 183,097. 21 Claims. (Cl. 103—8.)

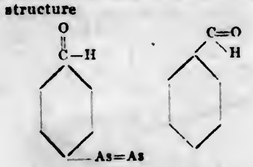
2. In combination, a single cylinder pneumatic displacement pump adapted to be submerged in the water in the well, a normally closed faucet controlled delivery system connected to said pump, a source of compressed air for operating the pump and a float valve at the head of the well for controlling the individual strokes of the pump by admitting compressed air to and exhausting the same from the pump cylinder, said delivery system being adapted to deliver the water to outlets lying a substantial distance above the float valve.

1,425,929. DERIVATIVES OF ORGANIC ARSENIC COMPOUNDS. AUGUST ALBERT, Munich, Germany. Filed Mar. 25, 1922. Serial No. 546,792. 2 Claims. (Cl. 260—14.)



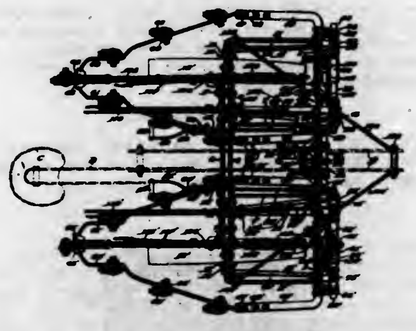
1. As a new composition of matter, an arseno hydrazone of the type

in which As represents pentavalent arsenic, R represents hydrogen or an alkyl group, R_2 represents a phenyl group, and R_3 represents a group containing a hydrazine nucleus.



1,425,930. PROCESS OF MANUFACTURING NEW ARSENIC OXIDES OR ARSENOBENZOLS. AUGUST ALBERT, Munich, Germany. Filed Mar. 25, 1922. Serial No. 546,793. 4 Claims. (Cl. 260—15.)

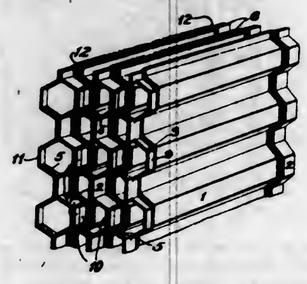
4. As a new compound, the semi-carbazone of p-arseno benzaldehyde.



1,425,931. METHOD OF PRODUCING NEW AROMATIC COMPOUNDS CONTAINING CARBONYLGROUPS WITH TRIVALENT ARSENIC. AUGUST ALBERT, Munich, Germany. Filed Mar. 25, 1922. Serial No. 546,794. 4 Claims. (Cl. 260—15.)

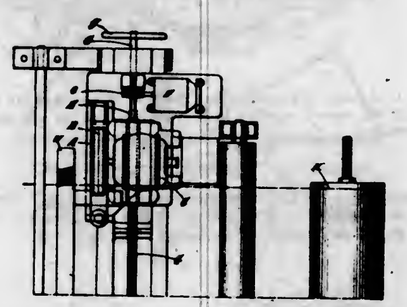
4. As a new compound, 1—4 arseno benzaldehyde of the general structure

1,425,932. CULTIVATOR. CHARLES J. ALLEN, Moorestown, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Apr. 6, 1921. Serial No. 459,048. 12 Claims. (Cl. 97—35.)



3. In a cultivator the combination with a frame, axles supported below the frame and wheels rotatable on the axles, of a yoke having a central portion adjacent the frame, portions depending downwardly therefrom and laterally outward oppositely directed portions adjacent the ends thereof, means for effecting lateral movement of said yoke with respect to said frame, a slide bar positioned adjacent each of said outwardly directed portions and carried by the yoke, means for supporting each of the slide bars from the frame comprising a hanger secured to the frame and anti-friction means carried by the hanger and positioned beneath the slide bar, a plurality of draft bars extending between each slide bar and the adjacent axle and movable with respect thereto on vertical pivots, a plurality of tool carrying gangs each gang having relatively movable members, adjustable means for supporting the rear end of each gang from the frame, means for operatively supporting one of the members of each gang in laterally fixed relation with respect to the adjacent outwardly directed portion of the yoke, means for movably supporting the other member of the gang from said portion of the yoke and comprising a sleeve slidable on the yoke and a slide carried by said sleeve and connected to said member, anti-friction means carried by said slide bar and vertically supporting said slide, means disposed in the rear of said slide operative to support said slide against the pull of the gang and manually operable means for moving the sleeve along the yoke in either direction to increase or decrease the width of the gang.

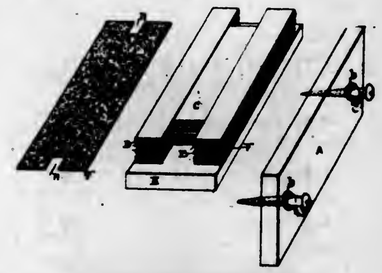
1,425,933. AUTOMOBILE RADIATOR. ANDERS P. ANDERSEN, Providence, R. I. Filed May 31, 1921. Serial No. 473,741. 5 Claims. (Cl. 257—130.)



1. A radiator comprising zig-zag water and air courses each water course defined by two nesting sheets of metal

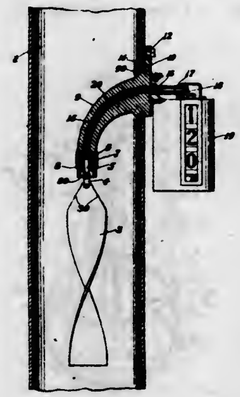
corrugated and having raised webs at each side to space the intermediate portions of the sheets, the web at one side only of each sheet and at relatively opposite sides

being slitted at intervals lengthwise of the sheet and the outer portions of the slitted web being pressed in the opposite direction to form spacing webs for the adjacent water courses on both sides.



1,425,934. TREATMENT OF CANVAS AND SIMILAR WOVEN FABRICS. THOMAS ANDREW, Rochdale, England, assignor to No. 2 D. R. Cotton Mills, Limited, Regent's Park, County of London, England, a British Company. Filed Dec. 27, 1921. Serial No. 525,186. 6 Claims. (Cl. 28—18.)

1. In a machine of the class described, the combination of a support, a saddle transversely mounted on said support, a rotatable cutter secured to said saddle, means on said support for intermittently moving said saddle, said machine adapted to receive a fabric therethrough, and separate means adapted to bring said cutter into contact with the edges of the fabric so as to remove certain of the warp threads therefrom and to simultaneously comb out the ends of the weft threads associated with said warp threads.

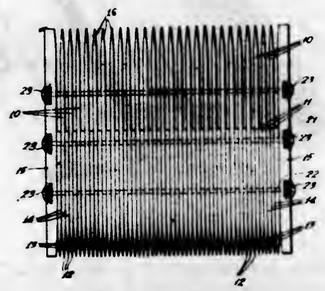


1,425,935. PROCESS OF AND MEANS FOR RECOVERING SILVER FROM PHOTOGRAPHIC AND OTHER BATHS. NATHANIEL B. AUKERMAN, Lakewood, Ohio. Filed May 31, 1919. Serial No. 300,891. 10 Claims. (Cl. 204—1.)

1. The process herein described of recovering silver in solution in a photographic or like bath, consisting in subjecting the solution to the electro-chemical action of an electro-couple and in restraining the free action of

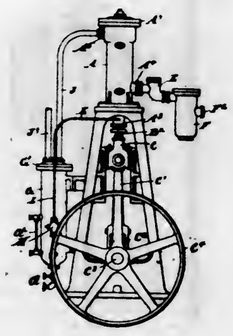
the solution and building up a silver deposit mainly apart from the active elements of the electro couple.

1,425,936. APPARATUS FOR METERING GRANULAR MATERIAL. ERVIN G. BAILEY, Cleveland Heights, Ohio, assignor to Bailey Meter Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1921. Serial No. 502,750. 4 Claims. (Cl. 73—37.)



1. An apparatus for metering the flow of granular material through a conduit, comprising a propeller adapted to be rotated about an axis substantially in or parallel with the axis of the conduit, combined with a curved supporting bracket for said propeller having a longitudinal curved passage therethrough, and having a base adapted to be secured in and to close an opening through the side of the conduit with the other end of the bracket terminating substantially in line with the axis of the conduit, a bearing for the propeller at said inner end of the bracket, and a flexible shaft connected with said propeller to be actuated thereby and extending through the passage in the bracket to actuate an external counting mechanism.

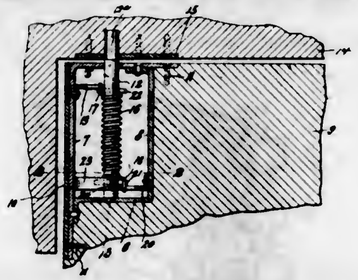
1,425,937. COMB. JULIUS BIDERMAN, New York, N. Y. Filed Mar. 12, 1921. Serial No. 451,932. 10 Claims. (Cl. 132—16.)



3. A comb, comprising a series of strips, each having a tapered end forming a tooth of the comb, each side of each strip providing a contact surface conforming to the adjacent contact surface of the succeeding strip and a tapering surface being a continuation of the contact surface so as to form between the teeth recesses each tapering inwardly to a point, retaining means located

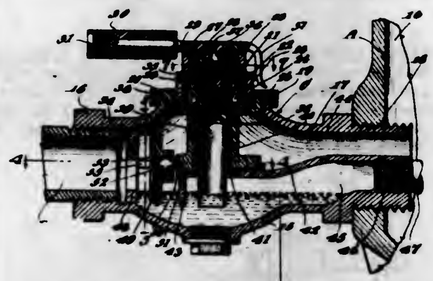
behind the inner ends of said recesses for holding said strips in alignment and permitting a separation of the tapered ends of the strips and the portion of the contact

surfaces of the strips nearest the tapered ends, and resilient means adapted normally to press said contact surfaces into engagement.



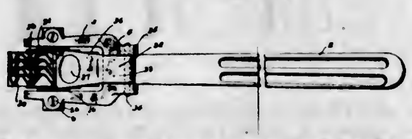
1,425,938. METHOD OF COMPRESSING GASES. LOUIS BLOCK, Mamaroneck, N. Y. Filed Mar. 13, 1918. Serial No. 222,066. 4 Claims. (Cl. 183—117.)

1. The method described of treating gas by circulating sulphuric acid through the gas for absorbing moisture in the gas, consisting of delivering such acid to a compressor prior to its entrance to the compressing zone, transferring such acid to such zone after the transfer of the charge of gas to such zone, compressing such charge of gas in the presence of such acid, and delivering such acid with the compressed gas.



1,425,939. SPRING HINGE. CHARLES BOCK, Chicago, Ill., assignor to Andrew Hoffman, Chicago, Ill. Filed Aug. 6, 1918, Serial No. 248,600. Renewed Oct. 15, 1920. Serial No. 417,268. 9 Claims. (Cl. 16—180.)

6. A mortise spring hinge for doors comprising a shallow frame, a hinge pin journaled adjacent its ends in the frame and having one end projecting beyond the frame and formed for interlocking engagement with a lintel plate or the like, a spring coiled about the pin within the frame and having hook-like terminals oppositely opening in an unwinding direction, studs projecting from the frame into engagement with the spring terminals, fingers projecting from the hinge pin in a plane parallel to and closely adjacent the studs for engagement with the spring terminals, and a resilient bifurcated latch member carried by the frame and em-

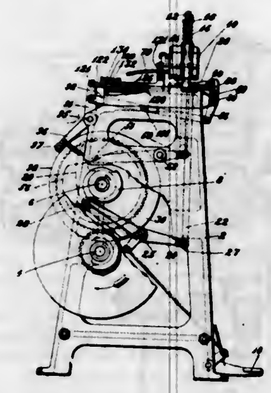


bracing the pin, the arms of the latch member engageable by oppositely disposed fingers when the door is open to hold the same when swung in either direction.

1,425,940. VALVE FOR RADIATORS. WALTER C. BOYD, Shepherdsville, Ky. Filed June 8, 1920. Serial No. 387,428. 11 Claims. (Cl. 277—55.)

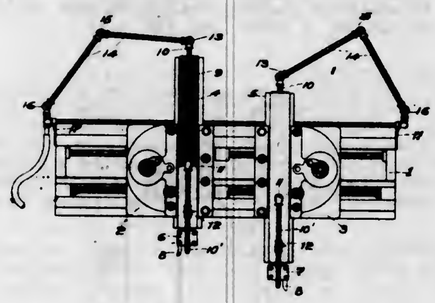
1. A valve for controlling the flow of the heating fluid and the return matter in a radiator, and an air escape arranged in the stem of the valve.

1,425,941. EMERY-WHEEL-DRESSING TOOL. GEORGE R. BRISBEN, Cleveland, Ohio. Filed December 11, 1920. Serial No. 429,901. 6 Claims. (Cl. 125—37.)



1. A cutter element for an emery wheel dressing tool having a chipping edge, successive portions of which include angles and curves.

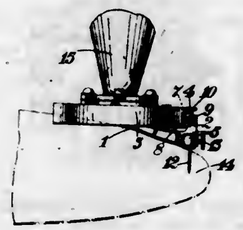
1,425,942. MACHINE AND METHOD FOR USE IN SHAPING UPPERS. MATTHIAS BROCK, Boston, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 22, 1917, Serial No. 197,863. Renewed July 25, 1921. Serial No. 487,519. 62 Claims. (Cl. 12—97.)



1. In an upper forming machine, a form having the shape which the forepart of the upper is to assume in the finished shoe, upper gripping means arranged to receive the marginal portions of the upper, means for moving the form and the gripping means relatively to

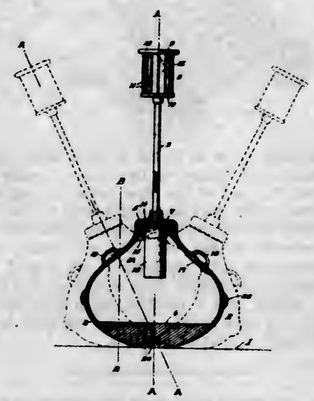
cause the upper to be wrapped about the form and progressively withdrawn from the gripping means, means for wiping the upper at the end and sides of the form

toward the bottom of the form, and means for bending outwardly the portion of the upper extending beyond the bottom of the form and pressing it against the wiping means.



1,425,943. MEANS FOR DELIVERING CUTTING COMPOUND TO THE TOOLS OF VERTICAL BORING AND TURNING MILLS. FREDERICK F. CLARKE, Franklin, Pa., assignor to The Colburn Machine Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 18, 1919. Serial No. 318,150. 4 Claims. (Cl. 77—4.)

1. Means for delivering cutting compound to the tools of vertical boring and turning mills comprising a tube carried in the tool-slide of the mill, a delivery tube adjacent the tool carried by the slide said delivery tube attached to the slide and communicating with the tube in the slide, a main delivery tube attached to the machine and a flexible tube connection between the tube in the tool slide and the main delivery tube.

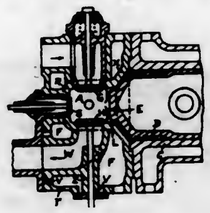


1,425,944. SOUND RECORDING AND REPRODUCING INSTRUMENT. WILLIAM ERNEST CLIFTON and JOHN STUBTON EWART, Nottingham, England, assignors to Cliftophone Limited, London, England. Filed June 21, 1921. Serial No. 479,380. 8 Claims. (Cl. 274—35.)

1. Means for articulating a stylus bar to the casing of a sound box of the type described, said means comprising at least two spring blades whereof one blade is disposed in a plane at right angles to the plane of the other blade and one of the blades is arranged in or substantially in the plane of the diaphragm, an operative connection between one end of each blade and the sound box casing

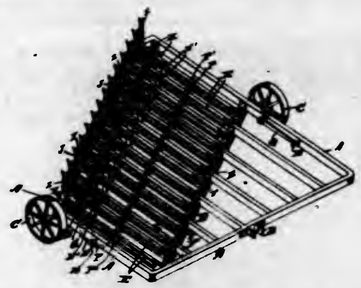
and another operative connection between the other end of each blade and the stylus bar at a position intermediate in the length of the latter.

1,425,945. SELF-RIGHTING POST. ERNEST W. CONGDON, Jr., Glen Ridge, N. J. Filed July 26, 1921. Serial No. 487,646. 7 Claims. (Cl. 40—145.)



1. In a self-righting traffic post, adapted for use on the surface of pavements, and the like, the combination with a base comprising a shell having a rotund weighted bottom extending upwardly and inwardly to form a mouth, a cover for the mouth, a container adapted to contain a supply of stored energy within the base, a lamp, a long slender upright projecting from the cover to support the lamp, and devices to operatively connect the lam to the supply of energy.

1,425,946. HORIZONTAL INTERNAL-COMBUSTION GAS AND OIL ENGINE. KENNETH IRWIN CROSSLEY and WILFRED LE PLASTRIER WEBB, Openshaw, Manchester, England. Filed June 25, 1918. Serial No. 241,878. 4 Claims. (Cl. 123—30.)

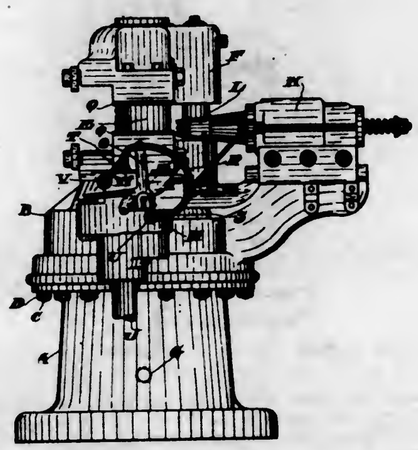


1. In combination, a cylinder, a head for the cylinder having a combustion chamber therein in axial alinement with the cylinder, an air intake port and an exhaust port arranged transversely of the chamber and at opposite sides, a fuel injector arranged in the plane of the

ports transversely of the axis of the cylinder, and a port at the end of the chamber and in axial alinement

with the cylinder for admiting compressed air only for the purpose of starting the engine.

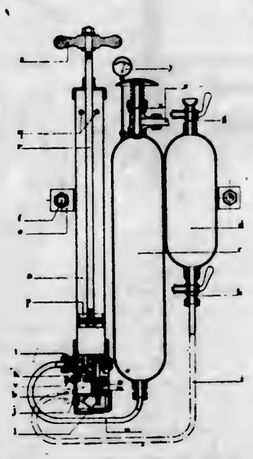
1,425,947. GANG PLOW FOR TRACTORS. NORMAN A. CUMMINGS, Detroit, Mich. Filed Dec. 17, 1920. Serial No. 431,368. 5 Claims. (Cl. 97—67.)



1. In a gang plow, a frame, a plow beam supporting a plow share and hinged to the frame, means for supporting the free end of the plow beam, an arm provided with a hook at its uper end and bolted to the free end of said beam and extending upwardly from the latter, a spring connected at one end with the frame, a flexible element connected with the hook at the end of said arm and extending downwardly from said hook and connected with the spring, and a plurality of pulleys for guiding and supporting said flexible element whereby to support said plow beam in normal position.

1,425,948. SUBSTITUTE FOR FABRICS, LEATHER, FURS, SPONGES, ETC., FROM COCOONS, AND METHOD OF MAKING SAME. AUGUSTE DELUBAC, Vals-les-Bains, France. Filed Aug. 17, 1920. Serial No. 404,253. 3 Claims. (Cl. 154—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. The method herein described for producing a fabric, consisting in flattening out the cocoons of caterpillars, cleaning the flattened cocoons, attaching the flattened cocoons together at their edges to form a fabric and then varnishing the fabric.

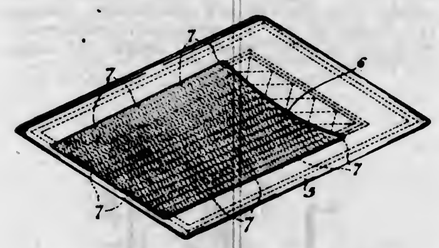


1,425,949. GUARD FOR VALVE HANDLES. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,736. 3 Claims. (Cl. 74—33.)

1. A guard for the pivoted rocking handle of a valve, comprising a piece of metal having a portion of bow shaped form to constitute the main body portion of the guard, the ends of the said guard piece being turned to one side at angles to the plane of said bow shaped body portion forming bracket arms adapted to be connected to the frame of the machine on which the valve handle is mounted, and support the said body portion at a distance

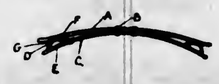
from the frame while permiting the valve handle to rock through a given arc between the frame of the machine and the bow shaped body portion of the guard without interference from the bracket arms.

1,425,950. STARTING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. EMILE PAUL DUMANOIS, Levallois-Perret, France. Filed Sept. 22, 1919. Serial No. 325,586. 4 Claims. (Cl. 123—180.)



1. A starting apparatus for internal combustion engines, comprising a fuel tank, a carburetter independent from the carburetter of the engine and in communication with said fuel tank, a pump drawing out of said carburetter a mixture of air and atomized fuel and storing and compressing said explosive mixture into a container and means for connecting said container to the explosion cylinder of the engine.

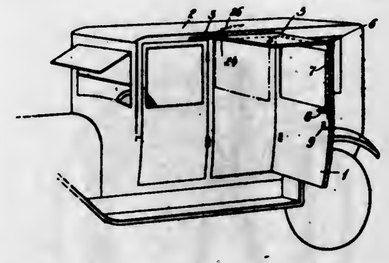
1,425,951. TROLLING SPOON. WILL JOHN EGGLESTON, Everett, Wash., assignor of one-half to George T. Wanick, Everett, Wash. Filed June 16, 1920. Serial No. 389,417. 1 Claim. (Cl. 43—45.)



A trolling spoon consisting of a single piece of sheet metal conforming in outline to that of a fish, having the forward portion of its body concavo-convexly curved and having its said forward curved portion gradually merging in a flat rear portion and a flat tail said tail being provided at its rear end with diverging fins curved laterally in relatively opposite directions beyond opposite sides of the body, said body having at its forward end an aperture to receive an attaching member and said tail having a similar aperture at its rear end between said fins, the two apertures being in the plane of the longitudinal axis of the spoon and the body being otherwise imperforate and having smooth unbroken side surfaces as and for the purpose described.

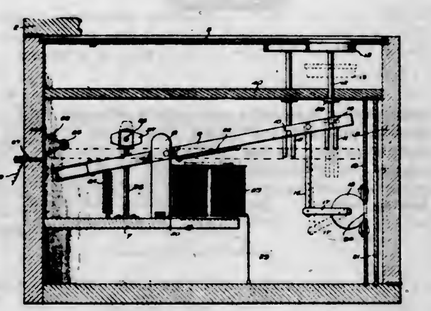
1,425,952. INFANT'S BED CLOTHING. HARRY FIDLER, Philadelphia, Pa. Filed Apr. 20, 1921. Serial No. 463,025. 2 Claims. (Cl. 5—3.)

1. Infants' bed clothing comprising upper and lower substantially flat members secured to each other by separable fasteners, portions of said fasteners carried by the lower member, and complemental portions of said separable fasteners carried by the upper member, and the respective portions of said fasteners being located a distance apart less than the width of the lower member so as to provide a greater fullness in the lower member.



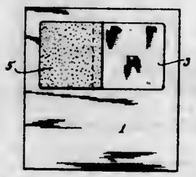
1,425,953. SOFT-COLLAR HOLDER. LOUIS FIGARSKY, Brooklyn, N. Y. Filed Oct. 1, 1920. Serial No. 413,980. 5 Claims. (Cl. 28—81.)

1. A soft-collar holder comprising two bars of highly resilient elastic material rigidly secured together at their common centers; one of the bars being provided adjacent to each end with a securing-loop formed integral with the bar at either end by being struck up therefrom; the surface of the unlooped bar abutting against the loops being provided with collar securing teeth; and such toothed bar being held under tensional strain against its own resiliency by such projecting loops.



1,425,954. CANOPIED AUTOMOBILE DOOR. PHILIP A. FISCHER, New York, N. Y. Filed Oct. 19, 1920. Serial No. 417,896. 8 Claims. (Cl. 296—99.)

1. A canopy for automobiles comprising a canopy member arranged to be opened and closed by the automobile door, means for connecting and disconnecting the canopy member and door, whereby the door can be opened with

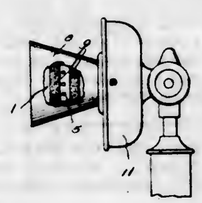


the canopy or independently thereof and means arranged at a distance below the canopy for operating said connecting and disconnecting means.

1,425,955. VOTING MACHINE. MARTINIANO FLORO, Champaign, Ill. Filed Apr. 18, 1921. Serial No. 462,223. 6 Claims. (Cl. 235—50.)

1. A voting machine comprising a counter, an operating lever connected to said counter, an electro-magnet arranged adjacent said lever and adapted to retain it in inoperative position when the magnet is energized, a rod connected to a source of current, means for completing a circuit through said magnet, and connecting means between said rod and said magnet to energize said magnet when the lever is depressed.

1,425,956. HAIR-WAVING MEANS. ERNEST O. FREDERICS, New York, N. Y. Filed Sept. 17, 1920. Serial No. 410,827. 10 Claims. (Cl. 132—36.)



1. A device of the class described, comprising an envelope formed of textile material, one portion of said envelope having therein a hair treating substance, and another portion of said envelope having therein a heat resisting material.

1,425,957. NONREFILLABLE BOTTLE. CHARLES W. FREID, Good Thunder, Minn. Filed Dec. 7, 1920. Serial No. 428,965. 8 Claims. (Cl. 215—21.)

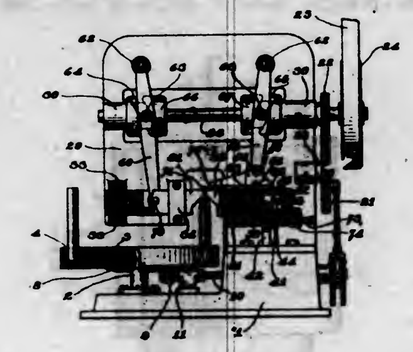
1. In a non-refillable bottle, the combination of a bottle having a tapering seat therein adjacent the bottle opening, said seat converging inwardly of the bottle, a buoyant valve having downwardly converging sides adapted for placement on the seat in said bottle, and means for rendering said valve inaccessible, yet permitting operation thereof to empty the bottle, and prevent refilling thereof.

1,425,958. SANITARY MOUTHPIECE. NATHAN GELB, Newark, N. J. Filed Mar. 15, 1922. Serial No. 543,870. 2 Claims. (Cl. 179—185.)

2. A mouth piece or body member with apertures in its wall and grooves in its outer side at opposite sides of said apertures, in combination with absorbent annuli in said grooves, and a jacket surrounding said member and annuli and detachably connected at its forward end to the member.

1,425,959. FOUNTAIN PAINTBRUSH. STANLEY GRZEBINSKI, Ituna, Saskatchewan, Canada. Filed Nov. 4, 1920. Serial No. 421,617. 1 Claim. (Cl. 15—184.)

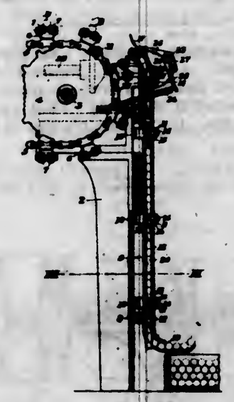
A brush comprising a handle having bristles set in one end, a neck portion formed with said handle adjacent the bristles, conic telescopic elements slidable on said neck adapted when extended to envelop the bristles, a cover hingedly engaging the outermost of said telescopic elements, and resilient means on said handle adjacent



said neck adapted to engage and confine said elements when retracted and disposed on the neck.

1,425,960. AIR-VENT CLEANER FOR FILLING MACHINES. JOSEPH F. HALLER, Pittsburgh, Pa., assignor to McKenna Brass & Manufacturing Company, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 15, 1920. Serial No. 396,446. 17 Claims. (Cl. 226—98.)

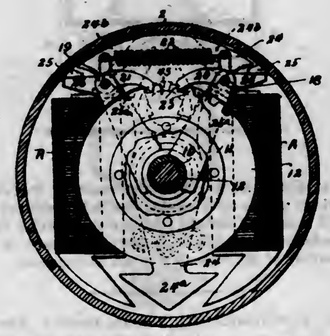
1. In a filling machine, a filling tube, an air vent tube normally open to the atmosphere, means for producing an air flow through the air vent tube for cleaning the same and forcing any foreign material into the receptacle being filled, and means for automatically connecting said means to said air vent tube for producing a flow of cleaning air through said air vent tube at approximately the termination of the filling operation, substantially as described.



1,425,961. COLLAPSIBLE-TUBE-CLOSING MACHINE. THOMAS L. HARRISON, Philadelphia, Pa. Filed Aug. 1, 1921. Serial No. 488,837. 11 Claims. (Cl. 113—54.)

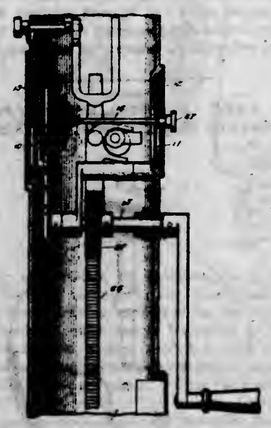
1. In a collapsible tube closing machine, the combination of reciprocating jaws, means for causing reciprocation of said jaws into and out of clamping relation with respect to each other, a slide secured upon one of said jaws, a yielding means intermediate said slide and said jaw, and a member pivotally connected to said slide for

turning the flattened end of a tube first laterally and then downwardly, the said member having connection directly with the means for actuating the said slide and jaw.



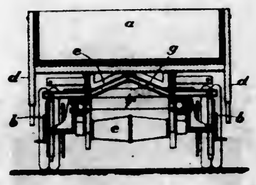
1,425,962. DELIVERY MECHANISM. BENJAMIN T. HEARLEY and DAVID IRVIN DU BOIS, Millville, N. J., assignors to Whitall-Tatum Company, Millville, N. J., a Corporation of New Jersey. Filed Mar. 28, 1921. Serial No. 456,083. 15 Claims. (Cl. 198—20.)

12. The combination with a vial bottoming machine, of a delivery mechanism therefor comprising means for engaging the sides of the finished vials, means for engaging the bottoms of the finished vials, a stripping finger cooperating with said means for transferring the vials from the bottoming machine to said means, and means for operating said stripping finger, substantially as described.



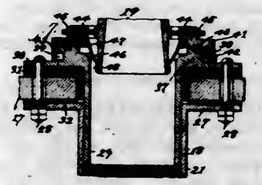
1,425,963. ELECTRICALLY-ACTUATED PERMUTATION MECHANISM AND CIRCUITS CONTROLLED THEREBY. JESSE B. HELLER, Wilkinsburg, Pa., assignor to Ralph W. Benson, New York, N. Y., Louis Widmeier, Cleveland, Ohio, and Robert J. Bryon. Filed July 11, 1919. Serial No. 310,068. 28 Claims. (Cl. 175—375.)

1. A device of the character described, comprising a driven member, a switch member, contact members, the switch member and contact members being carried by the driven member in order that the switch and contacts are moved relative to each other, said contacts being connected to circuits to be controlled, and electro-magnetically con-



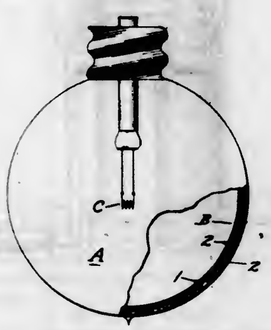
trolled permutation mechanism for moving said driven member step by step in either direction to close and open the circuits in a pre-arranged order, substantially as described.

1,425,964. DRIVING MECHANISM FOR COUNTERS SHERWOOD HINDS, Fort Wayne, Ind., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind., a Corporation of Indiana. Original application filed Sept. 26, 1917, Serial No. 193,257. Divided and this application filed May 17, 1920. Serial No. 381,869. 21 Claims. (Cl. 235—91.)



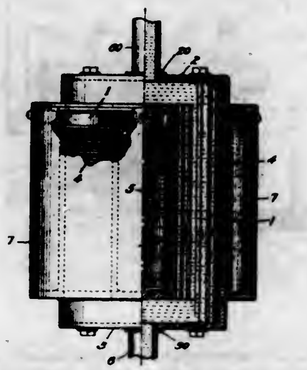
1. Driving mechanism for a registering device, comprising a rotary member, means for adjusting the peripheral length of said member, flexible means engaging the periphery of said member for transmitting motion therefrom to said registering device, and means for maintaining said flexible means taut at all times.

1,425,965. MOTOR TRUCK. JOHANN HOCKE, Wehetitz, near Karlsbad, Czecho-Slovakia, assignor to Fritz Meyer, Babel, Switzerland. Filed Oct. 31, 1921. Serial No. 511,880. 4 Claims. (Cl. 214—65.)



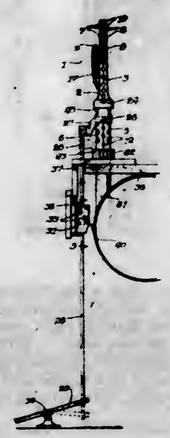
1. In a motor truck, an underframe, a movable car body thereon, means to raise said car body from the underframe and male and female roof-like positioning brackets on the underframe and the car body to ensure or adjust correct seating of the latter upon the underframe.

1,425,966. PHONOGRAPH. JOSEPH HOFFAY, New York, N. Y. Filed June 7, 1916, Serial No. 102,189. Renewed Jan. 10, 1922. Serial No. 528,139. 4 Claims. (Cl. 274—23.)



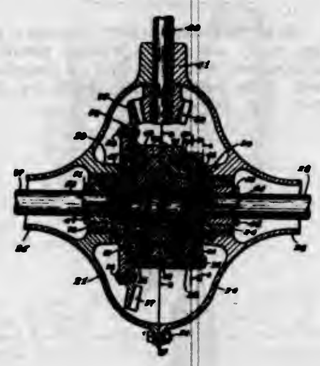
1. In a phonograph, the combination with a tone arm and a horizontally rotatable support in and upon which said tone arm is mounted to rock, of a flexible sealing sleeve surrounding and fixed at one end to said tone arm and fixed at its other end to said support with sufficient slack between said fixed ends so as not to interfere with the vertical swinging movements of said tone arm.

1,425,967. LAMP. SAMUEL O. HOFFMAN, San Francisco, Calif. Filed Nov. 28, 1921. Serial No. 518,256. 4 Claims. (Cl. 240—1.)



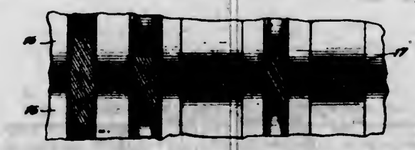
4. In a lamp, the combination of an incandescent source and a selective reflector around the same, said reflector consisting of a thin transparent film on each side of which is deposited a layer of a highly reflecting substance.

1,425,968. INDUCTION WATER HEATER. ANDREW J. HOLMES, Tacoma, Wash., assignor to Big-Four Electric Company, Tacoma, Wash., a Corporation of Washington. Filed May 6, 1919. Serial No. 295,167. 3 Claims. (Cl. 219—47.)



1. In an induction water heater, a unitary metallic body comprising a plurality of tubular cores, hollow heads adapted to integrally connect and communicate with said tubular cores at the adjacent ends thereof, said unitary metallic body constituting the secondary circuit of said heater; a supply pipe adapted to communicate with one of said hollow heads; a discharge pipe adapted to communicate with the other of said hollow heads; and primary coils adapted to be disposed around said tubular cores.

1,425,969. MEANS FOR SHAPING AND DRYING FABRIC ARTICLES. ARTHUR W. JOHNSON, Milwaukee, Wis., assignor to Bradley Knitting Company, Delavan, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1920. Serial No. 377,289. 13 Claims. (Cl. 223—17.)



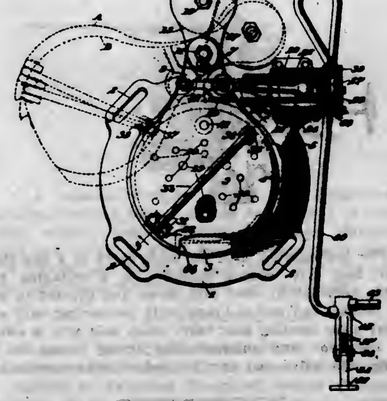
1. The combination with a shaping form upon which a fabric article is adapted to be shaped, of a fabric engaging element adjustable relative to said form, means for effecting disengagement of said fabric engaging element, said disengaging means being adjustable relative to said form, and a lost motion connection between said fabric engaging element and said disengaging means.

1,425,970. DIFFERENTIAL MECHANISM. JOHN D. JOHNSON, Seattle, Wash., assignor to Johnson Power Transmission Company, Seattle, Wash. Filed Sept. 22, 1920. Serial No. 411,879. 7 Claims. (Cl. 74—7.)

1. A locking differential mechanism comprising propelling means, driven members, annular flanges on the said driven members, gripping means extending between the said propelling means and the said annular flanges adapted to straddle the said flanges and to bind therewith during the rotary movement of the said propelling means to thereby impart rotary motion to the said driven members, frictional retarding means adapted to be operatively associated with the said gripping means, and means to permit the gripping means of one of the said annular flanges to control the action of the gripping means for the other of the said annular flanges.

1,425,971. METHOD OF PRODUCING FINISHED SECTIONS FROM IRON AND STEEL SCRAP. CHARLES JOHNS, Chicago, Ill. Filed May 24, 1920. Serial No. 383,895. 3 Claims. (Cl. 80—65.)

1. The herein described method of producing finished sections from iron and steel scrap which consists in cutting the scrap into strips of excess width, rolling said strips edgewise to thicken the strips and reduce them to desired width, and then rolling the strips to desired section.



1,425,972. LUBRICATOR. LEOPOLD KASSANDER, New York, N. Y., assignor to Nathan Manufacturing Company, New York, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,586. 6 Claims. (Cl. 184—58.)

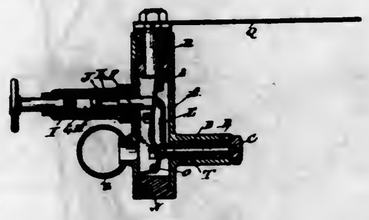
1. In a lubricator the combination of an oil reservoir, adjustable means of regulating the flow of oil from said reservoir into a two chamber member connected to said reservoir, a downwardly seating valve in the upper chamber, and an upwardly seating valve in the lower chamber, said valves being rigidly connected by a stem, together with additional means of venting air from said chamber

to the top of said oil reservoir consisting of a passage from said chamber and from said oil reservoir to an annular groove common to each.

1,425,973. FIRE DOOR. RICHARD W. KAUCHER, Reading, and JOHN WALTER BARR, Sinking Spring, Pa. Filed July 28, 1920. Serial No. 399,515. 5 Claims. (Cl. 110—177.)

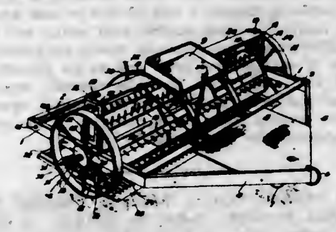
5. A fire door comprising, in combination a pivot, a door mounted thereon for oscillating movement, power operated means for operating said door on its pivot from closed to open position, said means including a cylinder, a piston mounted therein, a link pivoted to said door and having a portion abutting against said piston and freely movable therefrom in one direction, means for guiding the movement of said portion from and to its abutting engagement with said piston, manually operable means for oscillating said door, the link during manual operation of the door moving freely under direction of the guiding means independently of the piston.

1,425,974. DOLL. NELLIE KEARNEY, Holyoke, Mass. Filed June 18, 1921. Serial No. 478,476. 2 Claims. (Cl. 46—40.)



1. As an article of manufacture, a doll having its opposite sides made different in appearance to represent

different races, a movable cap or the like attached to the head to cover either one of the faces, and leg portions,

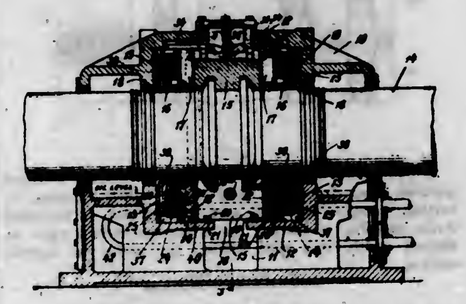


pivotally connected together whereby the feet and cap may be placed in corresponding relation to the rest of the article, as desired.

1,425,975. VALVE FOR GAS STOVES. WALTER J. KENNEDY, Cleveland, Ohio. Filed Feb. 12, 1920. Serial No. 358,246. 9 Claims. (Cl. 126—52.)

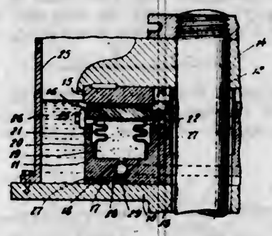
2. The combination with the inlet valve of a gas stove burner, and valve casing therefor, of a swinging arm movable horizontally over said stove, and pivoted in said valve casing, and means operatively connecting said arm and valve for opening said valve when said arm is swung upon its pivot, and automatically acting means for returning said valve and arm to their former positions.

1,425,976. CLOD CRUSHER. BUDD KENT, Woodburn, Oreg. Filed July 19, 1921. Serial No. 485,877. 4 Claims. (Cl. 55—1.)



1. A clod crusher comprising a main frame, wheels supporting said frame, a beater cylinder mounted in said frame concentric with the wheels and actuated thereby, and a sifter frame arranged below the beater cylinder and carried by the first-mentioned frame and adapted to run below the surface of the ground and lift the soil and clods to be acted upon by the beater.

1,425,977. TELEPHONE HAND SET. WALTER C. KIMBEL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,321. 13 Claims. (Cl. 179—103.)



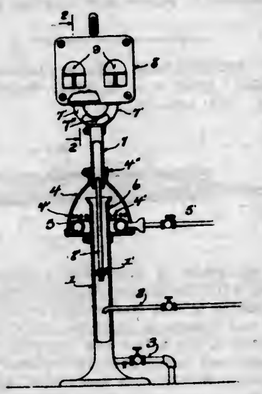
1. A hand-set handle having a rigid electrically conducting strip embedded in and extending longitudinally of the handle to reinforce the handle and designed for inclusion in the electrical circuit of the hand-set.

1,425,978. BEARING FOR HORIZONTAL OR INCLINED SHAFTS. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Nov. 27, 1918. Serial No. 264,287. 33 Claims. (Cl. 64—25.)

1. A horizontal or inclined thrust bearing comprising a rotatable member having a thrust surface, a relatively stationary cooperating thrust member, means providing an oil-retaining chamber in which the bearing surfaces of said members are disposed, and means cooperating with said rotatable member for maintaining a bath of lubricant in said chamber in which the bearing members are immersed.

1,425,979. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Jan. 30, 1919. Serial No. 273,936. 32 Claims. (Cl. 64—25.)

1. A thrust bearing comprising relatively rotatable bearing members including a plurality of annularly-arranged bearing segments and fluid means on which said segments are mounted to tilt with respect thereto.



1,425,980. PHOTOGRAPHIC SHUTTER. RUDOLPH KLEIN, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 11, 1921. Serial No. 491,405. 5 Claims. (Cl. 95—63.)

1. In a photographic shutter, shutter blades, an operating mechanism for the shutter blades, and a retarding mechanism arranged for cooperation with said operating mechanism and embodying a pressure receiving member arranged to receive pressure from the operating mechanism and a movable retarding device, one of said parts being provided with an irregular way in which a portion of the other part operates to effect the movement of said retarding device for the purpose of resisting the movement of the pressure receiving member.

1,425,981. SHOE-TOP-SOFTENING MACHINE. RICHARD AUGUST KOEPKE, Milwaukee, Wis. Filed Oct. 12, 1921. Serial No. 507,227. 3 Claims. (Cl. 12—1.)

2. A shoe tip softening device comprising a dome having apertures therein for the reception of shoes to be operated upon, a mixing pipe in communication with the dome, a live steam pipe in communication with the mixing pipe, a superheating chamber surrounding the live steam pipe and in communication with the mixing pipe, the superheating chamber being provided with air intake ports, a heating unit associated with the aforesaid heating chamber, and means extending into the superheating chamber and surrounding the steam pipe

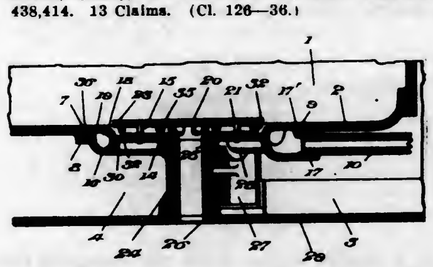
nozzle for trapping condensed steam from the dome and associated parts thereabove.

1,425,982. REVOLUTION COUNTER. LUDWIG KEDO, New York, N. Y. Filed Jan. 29, 1920. Serial No. 354,798. 7 Claims. (Cl. 235—139.)

1. A rotation counter or the like comprising digit wheels, carrying wheels having engagement to rotate the digit wheels, relatively-rotatable means between each digit and carrying wheel for avoiding casual rotation of the wheels, and means on each digit wheel for actuating the associated carrying wheel intermittently.

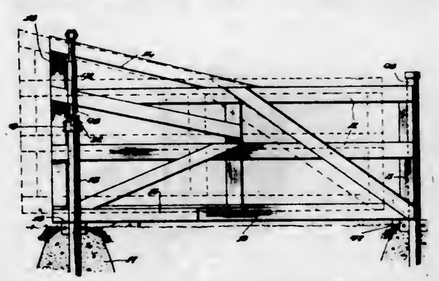
1,425,983. ELECTRIC SOLDERING IRON. FRANK KUHN and LAWRENCE H. THOMAS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 20, 1922. Serial No. 545,061. 7 Claims. (Cl. 219—27.)

1. In an electrically heated instrument, the combination with a cylindrical metallic core member, of an insulator wrapping surrounding said core, a resistor



wound upon said insulator wrapping and having a terminal portion extending outward longitudinally of the core, and an insulator block insert in said core adjacent to and channeled to receive said terminal portion of the resistor.

1,425,984. PENHOLDER. ERNST LABHARD, Thalwill, Switzerland. Filed Nov. 17, 1921. Serial No. 515,831. 3 Claims. (Cl. 120—98.)

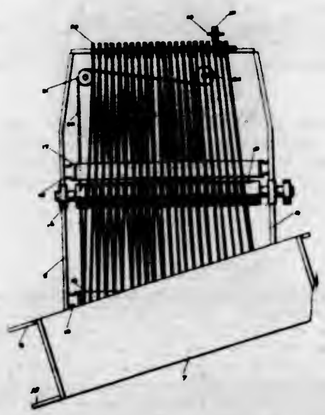


3. In a pen-holder of substantially tubular form, the combination, with the sleeve adapted to receive the pen, of a pin mounted in and transversely of the front end of the holder and forming a pivot for the sleeve, a spring-blade mounted in the holder and engaging the sleeve on the one hand and being fixed in the rear part of the holder on the other hand, a second pin mounted transversely of the central part of the holder and forming a rest for the spring-blade, and means to adjust the said second pin in relation to the spring-blade, all as and for the purpose described and shown.

1,425,985. GAS BURNER FOR COAL OVENS. HENRY LANGE, Quincy, Ill. Filed Jan. 19, 1921. Serial No. 438,414. 13 Claims. (Cl. 126—36.)

1. A stove having an oven and a flue under the bottom of the oven, said oven bottom having an opening, and a gas burner removably fitted in and closing said opening and constructed for the upward penetration of heat through the burner from the products of combustion in said flue.

1,425,986. GATE AND HINGE. JACOB LANGE, Jackson, Mich. Filed Nov. 10, 1921. Serial No. 514,284. 2 Claims. (Cl. 39—83.)

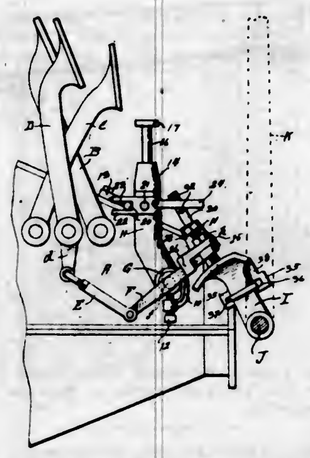


1. The combination with a gate having an inclined track formed in the hinge end thereof; of a gate post, a vertical pivot on said post, a collar on said pivot for supporting the pivot on said post, an arm rigidly attached to said collar and stops on said post for said arm adapted to limit the turning of said pivot on said post, a spring acting between said arm and said post in the direction of closing the gate, and means on said pivot engaging said track, whereby the gate may be given a limited lateral movement before being swung open.

1,425,987. FABRIC-WORKING MECHANISM. RICHARD H. LANSING, Chicopee Falls, Mass. Filed Apr. 6, 1921. Serial No. 459,184. 6 Claims. (Cl. 271—87.)

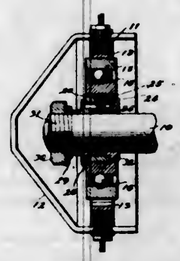
4. A flipper mechanism consisting of a rotative bar, means slidably mounted on said bar, springs engaging said means, said means projecting from said bar on opposite sides thereof, and means for imparting a step-by-step rotative movement to the bar.

1,425,988. CONVEYER. RICHARD H. LANSING, Chicopee Falls, Mass. Filed Apr. 6, 1921. Serial No. 459,186. 6 Claims. (Cl. 198—130.)



1. A conveyer consisting of a frame, rollers journaled on the frame, a series of grooved wheels journaled on the frame and an endless cable trained over the rollers and grooved wheels to provide a series of parallel horizontal portions and a series of variably inclined portions.

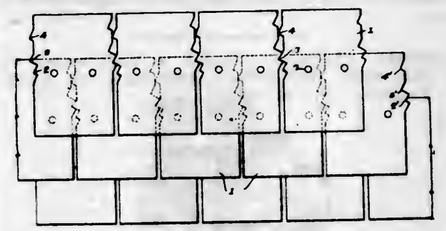
1,425,989. CLUTCH-PEDAL-LOCKING DEVICE FOR FORD CARS. JOHN P. LECRONE, York, Pa. Filed Dec. 17, 1921. Serial No. 523,026. 14 Claims. (Cl. 74—81.)



1. In a motor vehicle, a clutch lever, a speed lever, shiftable means carried by the clutch lever operatively

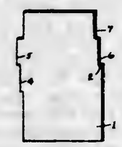
engaging the speed lever when the latter is in a neutral position and preventing the accidental forward move-

ment of the speed lever, and pedally operated means for releasing the shiftable means from its engagement with the speed lever.



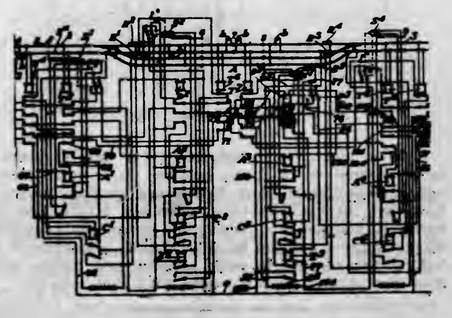
1,425,990. TIMER. ELMER JESSE LEE, Bangor, Pa. Filed Nov. 12, 1920. Serial No. 423,623. 3 Claims. (Cl. 200—27.)

1. A contact member for ignition timers having a rotating timer shaft and a relatively stationary distributing annulus provided with distributing points and disposed in spaced concentric relation around the shaft, said member consisting of a pair of relatively rotatable rings, the outer ring of which is of slightly reduced diameter as compared to the inner surface of the annulus and is engageable with said surface, and an automatically adjustable cam in two spring controlled parts, one part of which is fixed within the inner ring and the other part of which is secured on the timer shaft.



1,425,991. SHINGLE. EARL W. LESHER, Cleveland, Ohio. Filed Dec. 6, 1920. Serial No. 428,546. 12 Claims. (Cl. 108—8.)

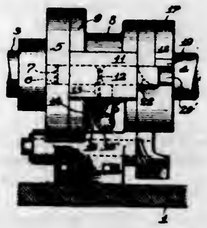
1. A shingle having along one edge a plurality of spaced projecting members of different lengths and along its opposite edge a recess, said recess being arranged in transverse alignment with said longer projection of said



shingle and adapted to receive the longer projection on a similarly shaped shingle when it is correlated therewith.

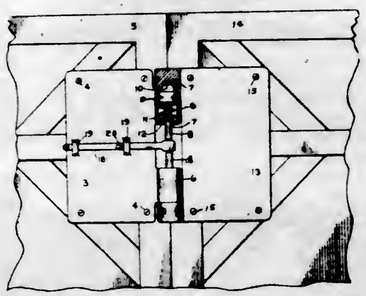
1,425,992. SHINGLE. EARL W. LESHER, Cleveland, Ohio. Filed Apr. 4, 1921. Serial No. 458,244. 4 Claims. (Cl. 108—8.)

1. A shingle having along one edge projections extending one beyond the other but of equal width longitudinally of the shingle and along its opposite edge a recess complementary in shape and size to the shorter projection but in transverse alignment to said longer projection.



1,425,993. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 309,710, filed July 9, 1919. This application filed Aug. 5, 1920, Serial No. 401,431. Renewed Feb. 27, 1922. Serial No. 539,766. 4 Claims. (Cl. 246—33.)

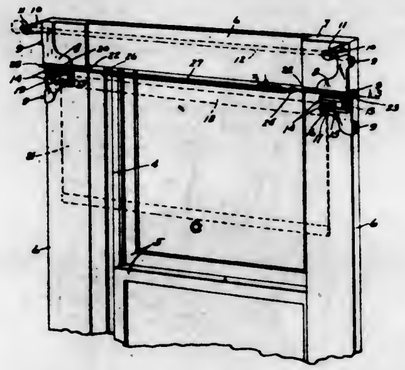
1. In combination, a stretch of railway track over which traffic moves in both directions, two signals governing movements in opposite directions along said track and separated by at least double maximum braking distance, train-controlled means including track circuits for placing both of said signals at stop when a train enters the portion of track between said signals and for holding the signal at the exit end at stop until the train leaves said portion, means for permitting the other signal to



return to a proceed indication when the train has passed a point between said signals, a train controlling ramp adjacent each signal, and means for preventing emergisation of each ramp when the adjacent signal indicates stop.

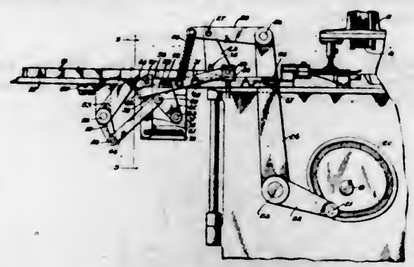
1,425,994. CLUTCH. WILLIAM D. MCCULLOUGH, Detroit, Mich. Filed July 19, 1920. Serial No. 397,273. 2 Claims. (Cl. 192—25.)

1. In a clutch, a drive shaft, a driven shaft adapted to rotate counterclockwise, confronting collars carried by said shafts, a stop member supported by said driven shaft, a reciprocable locking pin slidable in said stop member and a collar of said driven shaft and adapted to enter the collar of said drive shaft, an undercut head carried by said pin, means for holding said pin in engagement with said drive shaft collar, and a trip member adapted to engage said stop member and recede into the undercut of said pin head to move said pin out of engagement with said drive shaft collar, said trip member preventing further rotation of said stop member until said trip member is retracted.



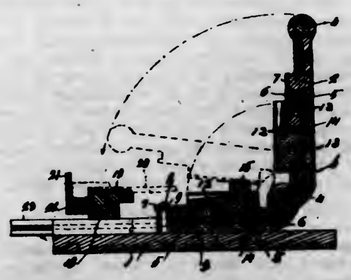
1,425,995. SNAP HINGE. JOHN MCGIVERNEY, New York, N. Y. Filed Jan. 5, 1922. Serial No. 527,093. 3 Claims. (Cl. 16—176.)

1. In a hinge, the combination of a pair of pintles each mounted under spring pressure in a hinge plate, and a second hinge plate having cup bearings adapted to receive the heads of said pintles and retain them in operative position, and means for locking said pintles in the engaged position in said pockets, consisting of a locking bar adapted to enter between said pintles and hold them against disengagement from said pockets.



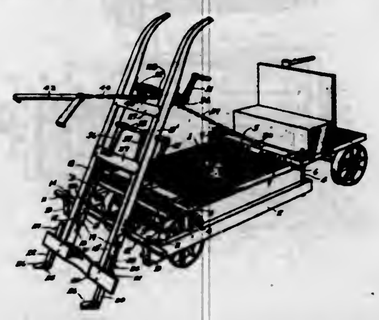
1,425,996. ADJUSTABLE WINDOW CURTAIN AND SHADE HOLDER. CARL FREDRICK MAGNUSSON, Minneapolis, Minn. Filed Mar. 9, 1921. Serial No. 451,075. 1 Claim. (Cl. 156—23.)

A holder of the kind described comprising a pair of casing plates having shade and curtain holding devices and also having smooth inturned ears adapted to frictionally engage outer edges of a casing, a pair of aligned rods extending across the outer faces of said plates and having barb-equipped laterally bent ends, said barbed-equipped ends being extended through apertures in certain of said ears and adapted to be pressed into the



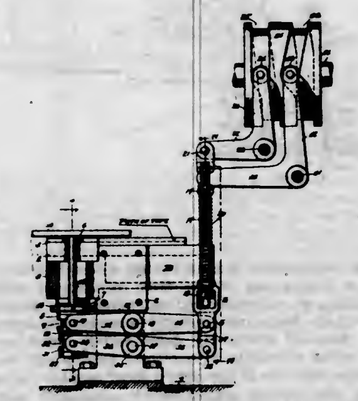
respective edges of the casing, and a spring connecting said two rods and under strain to draw the same toward each other.

1,425,997. CARTON-FILLING MECHANISM. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1920. Serial No. 351,650. 29 Claims. (Cl. 83—92.)



1. In combination, means for supporting a series of containers, and means for imparting sufficient force to each container in said series to discharge said container from said support in case said container is not properly filled.

1,425,998. CANDY MACHINE. CARLOS C. MORIAN, Olean, N. Y. Filed Mar. 31, 1920. Serial No. 370,198. 6 Claims. (Cl. 107—8.)



4. A machine of the character specified, comprising complemental frames provided with corresponding cutters and molding elements, and a back stop adapted to be secured between the frames and having clearance spaces for the cutters to prevent injury thereto.

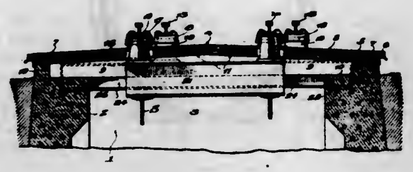
1,425,999. TRUCKING MECHANISM. ALFRED JOHN MORROW, Seattle, Wash., assignor to Clare E. Farnsworth, Seattle, Wash. Filed Jan. 4, 1921. Serial No. 434,902. 8 Claims. (Cl. 214—77.)

1. A trucking device comprising in combination with a wheeled vehicle, a supporting frame applicable to said vehicle and comprising laterally adjustable side beams, a cross bar supported by said beams at one end of the vehicle, a pair of trucking handles pivotally mounted upon said cross bar to swing vertically between substantially vertical loading position and inclined position for transporting articles thereon, and means on said handles for sustaining articles thereon for transportation.

1,426,000. STAMPING MECHANISM. ELOF NORDSTROM, Newark, N. J., assignor, by mesne assignments, to American Dan Bottle Seal Corporation, a Corporation of Delaware. Filed Nov. 11, 1919. Serial No. 337,202. 7 Claims. (Cl. 113—42.)

1. In a machine of the character described, the combination with blank punching mechanism and blank shaping mechanism, said mechanisms including spaced die plates and plungers cooperating respectively with said die plates, of means constituting an abutment for limiting the approach of the blank cutting plunger with respect to the blank shaping die plate.

1,426,001. FREQUENCY CHANGER AND GENERATOR OF ALTERNATING CURRENT. NIKOLAI OBOUKHOFF, Harbin, China. Filed Feb. 28, 1917, Serial No. 151,603. Renewed Jan. 5, 1922. Serial No. 527,271. 7 Claims. (Cl. 172—237.)

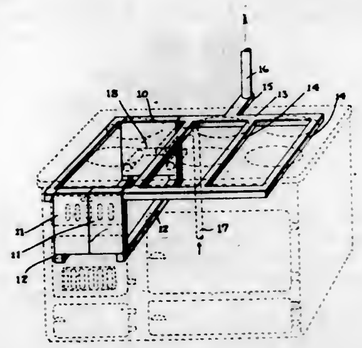


1. An alternating current generator and frequency changer of the character described comprising two or more dynamo electric machines mounted on a common shaft, primary and secondary windings in inductive relation on each machine, the primaries and secondaries of the two machines being connected to each other in such a manner that currents will flow through one pair in the same direction and will be opposed in the other pair, and means for varying the reluctance of the flux paths in each machine in such a manner that currents of different frequencies will be induced in the primary and secondary windings of the machines, substantially as described.

1,426,002. SALVE. STEPHEN O. O'DELL, Detroit, Mich. Filed Aug. 6, 1920. Serial No. 401,664. 3 Claims. (Cl. 167—9.)

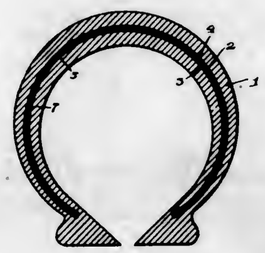
2. An ointment comprising in combination, carbolic acid, red oxid of mercury, oil of spike, oil of origanum, rosin, beeswax and lard.

1,426,003. WEATHER COVER FOR TRACK SCALES. JOHN W. ORROCK, Montreal, Quebec, Canada, assignor of one-half to John M. R. Fairbairn, Westmount, Quebec, Canada. Filed Dec. 6, 1920. Serial No. 428,690. 5 Claims. (Cl. 265—71.)



1. A weather cover for scale pits including in combination with the scale pit walls, rafter joists seated on said walls, a roof supported on said joists, a scale member carrying live rail supports projecting through the roof and supporting live rails thereover, stationary supporting beams seated on the pit walls beneath the roof and dead rail supports carried by said stationary supporting beams and projecting through the cover and carrying dead rails above the same.

1,426,004. HOUSEHEATING SYSTEM. JOSEPH OSTER, Locust Valley, N. Y. Filed Nov. 2, 1921. Serial No. 512,198. 3 Claims. (Cl. 126.5.)

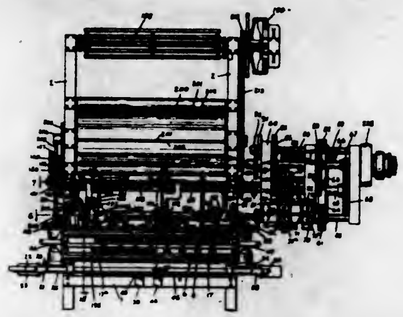


1. A water heating attachment for ranges, comprising opposed headers shaped to fit in the end portions of the

range fire box, cross pipes connecting the lower portions of the headers and disposed near the corners of the fire box, a rearwardly extending grid adapted to lie flat in the top part of the range and connecting with the

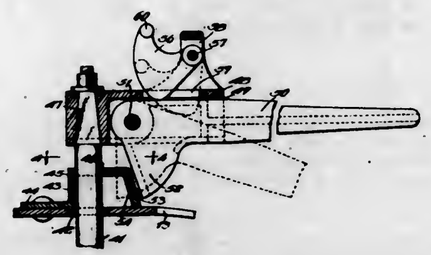
upper portions of the headers, said grid comprising side pipes extending along the side portions of the stove top and cross pipes connecting said side pipes and circulation pipes connected with the grid and one of the headers.

1,426,005. PNEUMATIC TIRE. FRED BROWN PFEIFFER, Akron, Ohio. Filed Nov. 28, 1919. Serial No. 340,995. 3 Claims. (Cl. 152—18.)



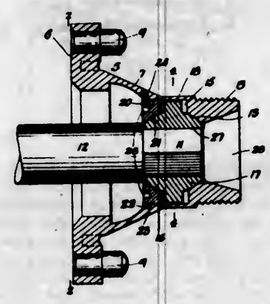
1. In a device of the class described, a casing; and superposed metal strips embedded in the casing, each strip having diagonal slits, all of which are located entirely within the strip, the slits of one strip being disposed at an angle to the slits of an adjoining strip.

1,426,006. METHOD OF MAKING PUDDING COMPOSITIONS. EDUARD POLAK, Groningen, Netherlands. Filed July 21, 1920. Serial No. 397,987. 1 Claim. (Cl. 99—11.)



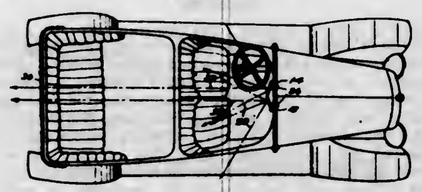
Method of making pudding compositions consisting in heating a bath of molten sugar to evaporate the water contents thereof, adding the ready pudding powder, heating the mixture until complete evaporation of the moisture contained therein, and pressing the mass into the solid form of tablets and the like.

1,426,007. FENCE-WEAVING LOOM. CARL A. PORATH, Kokomo, Ind., assignor to Kokomo Steel and Wire Company, Kokomo, Ind., a Corporation of Indiana. Filed Nov. 2, 1920. Serial No. 421,371. 29 Claims. (Cl. 140—5.)



1. In a fence weaving machine, sectional means for forming twists in the line wires of a fence structure, means for feeding pickets between the line wires, and means for simultaneously lifting one section of each twisting device for separating the line wires for receiving the pickets.

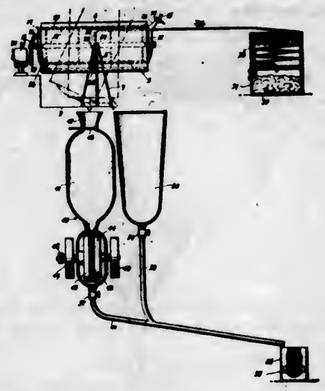
1,426,008. TANK OUTLET VALVE AND OPERATING MECHANISM THEREFOR. EDWARD POSSON, Park Ridge, Ill. Filed Aug. 27, 1920. Serial No. 406,299. 4 Claims. (Cl. 137—21.)



1. In combination: a tank having a dome; of an outlet valve at the bottom of the tank including a rotatable valve plug; an operating rod extending from said valve plug into the dome and rotatably mounted; an operating handle disposed within the dome and mounted on said rod to swing vertically with respect thereto and to drop under the influence of gravity; a fixed member having an arcuate cam surface approximately concentric with the axis of rotation of said rod, said member having also a shouldered notch therein and the handle having a portion thereof adapted to enter said notch when the handle drops under the influence of gravity, said portion of the handle riding upon said arcuate cam surface during the opening and closing movements of the valve plug; and means for holding said handle in its lowermost position with said portion of the handle in said notch to thereby prevent rotation of the rod accidentally.

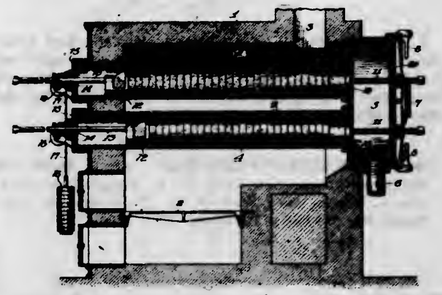
1,426,009. AXLE MOUNTING FOR MOTOR VEHICLES. EDWARD J. RANTSCH, Brooklyn, N. Y. Filed Aug. 8, 1921. Serial No. 490,474. 13 Claims. (Cl. 301—105.)

1. An axle mounting of the class described comprising a clutch member mounted in connection with said axle and movable therewith, and said clutch member being mounted in a suitable support in such manner as to permit of lateral movement of said axle in said support.



1,426,010. MIRROR ATTACHMENT FOR VEHICLES. FRANK W. REES, Seattle, Wash., assignor to See-All Manufacturing Co., Seattle, Wash., a Corporation. Filed Feb. 25, 1920. Serial No. 361,291. 2 Claims. (Cl. 88—67.)

1. As an article of manufacture, a double rear sight mirror for motor vehicles comprising two plane reflectors arranged with their reflecting surfaces at an angle of substantially two hundred degrees with respect to each other, and adjustable means for securing said mirror to the windshield of a motor vehicle whereby an occupant of either side of the front seat of said vehicle may see images of objects to the rear of the vehicle in one reflector and images of objects at the other side of the vehicle in the other reflector.



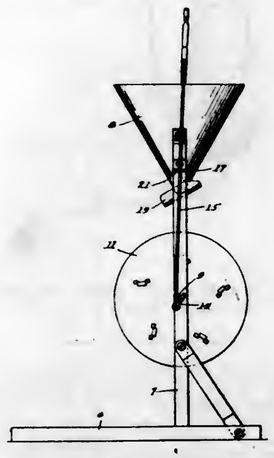
1,426,011. METHOD OF ROASTING AND PACKING GROUND OR WHOLE COFFEE. JOHN A. REYNOLDS, Detroit, Mich. Filed Dec. 4, 1919. Serial No. 342,489. 3 Claims. (Cl. 99—11.)

1. The method of treating and packing coffee, consisting in roasting a charge of green coffee in an air-excluded enclosure and producing a vacuum therein, liberating the vapors carrying the aromatic constituents of coffee to and conserving them by condensation and causing such condensed constituents to be absorbed by a cellulose menstruum, and depositing a quantity of the roasted

coffee with a portion of the cellulose menstruum in an enclosure and hermetically sealing the latter.

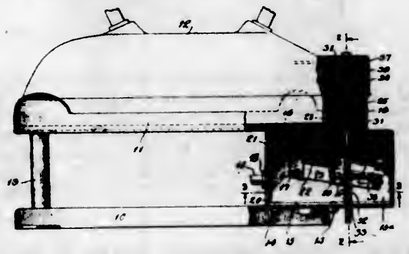
1,426,012. ART OF TREATING COAL. FRANK J. ROOT, Chicago, Ill. Filed Apr. 7, 1919. Serial No. 287,957. 7 Claims. (Cl. 202—8.)

7. The process of treating coal to produce a smokeless fuel therefrom which consists in compressing coal particles into dense blocks by a pressure of at least three tons per square inch, applying pressure to said blocks in one direction while subjecting it to a temperature of 450° C., the blocks being surrounded by a retort of larger dimensions transverse to the direction of application of pressure.



1,426,013. SHOCK ABSORBER. WILLIAM T. SCHRUM, Hammond, Ind., and EDWARD KRANTZ, Chicago, Ill., assignors, by direct and mesne assignments, to Schrum Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 16, 1921. Serial No. 469,843. 10 Claims. (Cl. 267—16.)

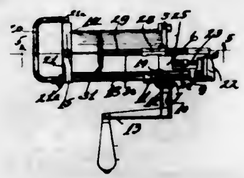
9. In a device of the character described, a spring support, a leaf spring rigidly mounted on the spring



support, and a bell crank pivotally mounted on the spring support, the end of one arm of said bell crank bearing against the leaf spring and resilient means for cushioning movement of the other arm.

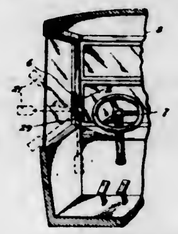
1,426,014. SAND TOY. HENRY A. SCHULKE, Cleveland, Ohio. Filed May 31, 1921. Serial No. 473,640. 2 Claims. (Cl. 46—37.)

1. The combination of a hopper, a bucket wheel under the hopper, a crank shaft on which the wheel is mounted, a rod connected to the crank, a figure carried by the rod above the hopper, and a stirring rod carried by the figure and depending into the hopper.



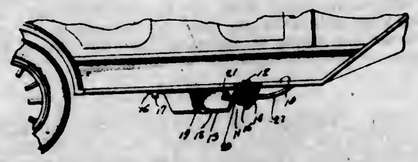
1,426,015. ELECTRIC PRESS IRON. ART J. SHIRK and SOLOMON COHEN, New York, N. Y., assignors to Abraham S. Iserson, New York, N. Y. Filed Apr. 15, 1920 Serial No. 374,088. 7 Claims. (Cl. 219—25.)

1. In electric flat iron construction, in combination an iron containing an electric heating element, a stand provided with means for leading electric current thereto, means on said iron for leading current to said heating element, means on said stand for leading current into said current-leading means on said iron and means on the iron other than the current-leading means thereon for operating said current-leading means on said stand.



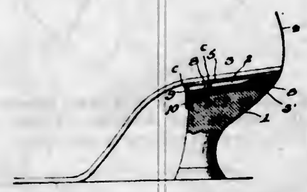
1,426,016. BUTTER CUTTER. CHARLES F. SMITH, Chicago, Ill., assignor to Maxim Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1920. Serial No. 398,292. 4 Claims. (Cl. 31—65.)

1. In a butter cutting machine, butter feeding mechanism comprising a plurality of relatively movable non-concentric members, having a one-way connection with each other, and an adjustable abutment on one of said members for varying the relative movement of said members.



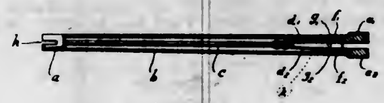
4. In a butter cutting machine, a butter advancing member, a reciprocable element non-concentric therewith and spaced therefrom, a one-way connection between said member and element permitting said member to be readily removed from operative relation with said element, an adjustable stop on said element, adapted for coacting with a stationary abutment upon the inoperative or return movement of said element, and a driving shaft having a cam for actuating said element.

1,426,017. VEHICLE SIGNAL DEVICE. ORVAL R. STRAWN, Columbus, Ohio. Filed Feb. 23, 1921. Serial No. 447,090. 8 Claims. (Cl. 116—52.)



1. In a vehicle signal, a sleeve capable of being stationarily supported in connection with the wind shield structure of the vehicle, a notched quadrant connected with one end of the sleeve, an operating rod journaled within said sleeve, a crank handle connected with the inner end of said rod, a pawl carried by said handle and disposed for cooperation with the notches of said quadrant, and a signalling arm connected with the outer end of said rod and capable of operating in unison therewith upon the oscillation of said handle, said pawl and quadrant serving to maintain said arm in various positions of adjustment.

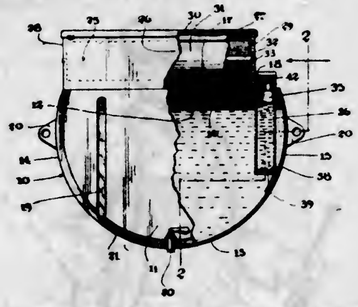
1,426,018. WASHBASIN FOR AUTOMOBILES. FRANK P. SULLIVAN, Belvidere, Ill. Filed Sept. 15, 1919. Serial No. 323,751. 1 Claim. (Cl. 280—164.)



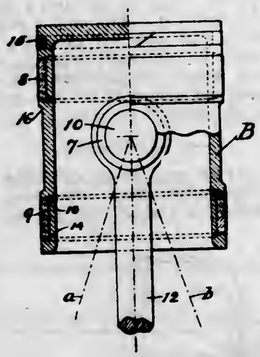
The combination with the running board of a motor vehicle, of a wash basin disposed beneath the running board, means pivotally connecting the wash basin to the running board whereby the basin may be swung from a concealed position beneath the running board to an outer position clear of the running board so that the basin is exposed for service, means on the under side of the running board for engaging the outer end of the basin when in its concealed position for retaining it therein, and means for supplying water to said basin from the motor vehicle.

1,426,019. SHOE HEEL. BERNARD SUMMERFIELD, Chicago, Ill. Filed Oct. 23, 1920. Serial No. 418,974. 1 Claim. (Cl. 36—42.)

The combination with a shoe having a plate attached to the heel portion thereof, spaced outstanding ears formed on said plate, flanges disposed at right angles to the ears and having their ends projecting beyond the side portions of the ears and a down turned ear formed at one end of the plate, of a heel member having a longitudinal slot provided in its side walls with undercut grooves to receive the projecting ends of the flanges, a correspondingly shaped metal plate arranged within said slot and grooves, a tongue struck up from the central portion of said plate and normally projecting upwardly within the slot for engagement with one of the outstanding ears on the plate when the heel is attached to the shoe and means for connecting the down turned ear on the plate to the body of the heel as and for the purpose set forth.



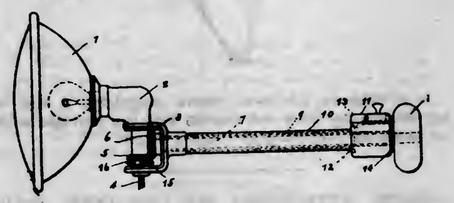
1,426,020. HAIR CURLER. EUGÈNE FRANÇOIS SUTER, London, England. Filed Mar. 4, 1922. Serial No. 541,049. 2 Claims. (Cl. 132—34.)



1. A hair curler comprising in combination a long hollow part, and a short part mounted at one end of said long part and having an extension passing through said hollow part and terminating in a projection which normally engages said hollow part and prevents it turning in either direction with respect to said hollow part, said extension being releasable from said hollow part and permitting said short part to be turned in either direction, for the purpose described.

1,426,021. TOILET OUTFIT. SVERRE RACHSTANG SVENDSGAARD, Portland, Oreg. Filed Oct. 4, 1921. Serial No. 505,416. 6 Claims. (Cl. 45—119.)

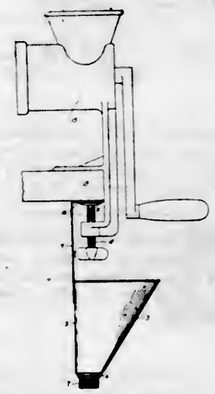
5. A toilet outfit or the like comprising a water receptacle having a top including two sections, a towel receptacle mounted on one of said sections, the other of said sections of said top constituting a readily accessible shelf, a soap container arranged in the water receptacle, a filling cap for the soap container arranged on said shelf and a filling cap for the water receptacle positioned on said shelf in spaced relation to said first mentioned filling cap.



1,426,022. ENGINE PISTON. JOHN THOMSON, Brooklyn, N. Y. Filed May 10, 1921. Serial No. 468,210. 6 Claims. (Cl. 74—108.)

1. The combination, with an engine-cylinder and a reciprocating piston therein, of monolithic graphite bearing and jointing rings rigidly mounted in recesses on the exterior curcumferential portion of the piston.

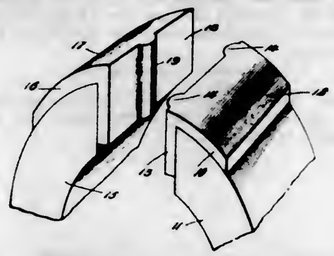
1,426,023. SPOT LAMP FOR AUTOMOBILES AND THE LIKE. SAMUEL H. THOMSON, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio. Filed Dec. 27, 1921. Serial No. 525,146. 4 Claims. (Cl. 240—7.)



1. In spot lamp controlling means, the combination of a pivotally mounted lamp, intermeshing gears and means for operating the same to effect angular adjustment of said lamp, and means mounted and variably adjustable relative to one of said gears, and adapted to engage with the other gear to limit said adjustment of the lamp in a given direction.

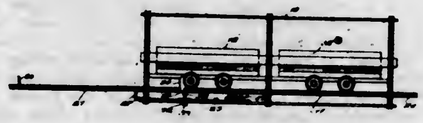
1,426,024. HUNTING AND FISHING JACKET. JOHN A. THURESON, Eureka, Calif. Filed Mar. 9, 1921. Serial No. 450,811. 8 Claims. (Cl. 224—7.)

1. In a garment adapted to hang from the shoulders before and behind, a back portion extending below the hips and laterally the width of the back, a pocket open at the top and extending the width of said back portion, said pocket including an outer wall extending the width of said back portion and upwardly from the lower edge thereof to a point between the shoulders, and having its upper end tapered and secured to the back portion at a middle point on the shoulders thereof.



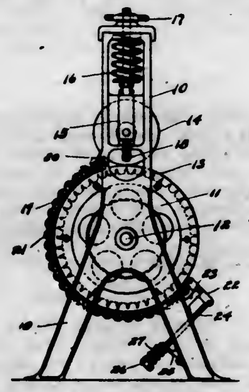
1,426,025. DRIP-CUP FOR FOOD CUTTERS. HELMA T. WALDNER, Middletown, Conn. Filed June 22, 1922. Serial No. 570,065. 3 Claims. (Cl. 17—20.)

1. A drip-cup for food cutters comprising a cup, a cap closing the lower end thereof, said cup provided with an upwardly projecting arm and a finger.



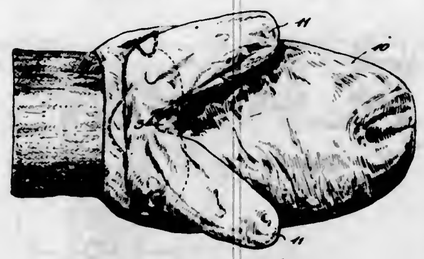
1,426,026. ATTACHMENT FOR VISE JAWS. OSCAR A. WEBSTER, Edgewood, R. I., assignor to Allen Wrench & Tool Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 1, 1921. Serial No. 457,602. 1 Claim. (Cl. 81—38.)

A work-bending attachment for vise-jaws, comprising a pair of cooperating shoes shaped to approximately fit and be independently supported on the opposite jaws of the vise, one shoe having a pair of vertically-disposed widely-separated ribs and the other shoe having a single rib



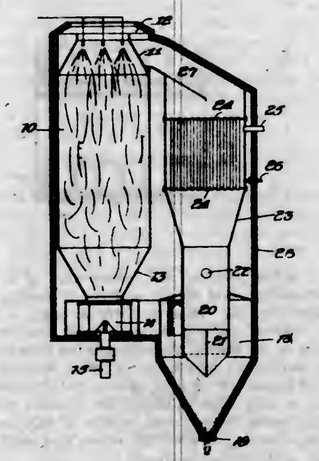
located to engage the work at a point intermediate the pair on the opposite jaw whereby a closing action of the jaws bends the work engaged by said ribs.

1,426,027. ROTARY CAR TIPPLE. ALEXANDER H. WOOD, Kildav, Ky., assignor to Wood Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1917. Serial No. 174,969. 3 Claims. (Cl. 214—52.)



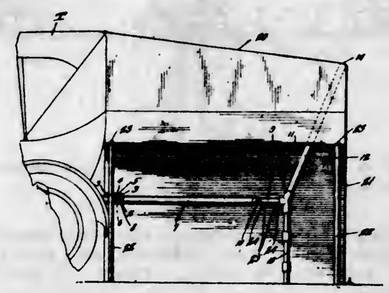
1. In a car unloading apparatus, the combination of a rotatable dump structure having rails therein to receive a car, a fixed approach track leading thereto, a fixed receiving track leading therefrom, a movable stop within the rotatable structure to hold a car, said stop adapted to be released through movement of the structure from its overturning position to its normal upright position, a part on the fixed receiving track, and means for resetting the stop, said means being set in operation by contact of a passing car with the part on the fixed receiving track.

1,426,028. HOOP-FORMING MACHINE. JAMES E. WRIGHT, Bay City, Mich. Filed Apr. 19, 1920. Serial No. 375,016. 6 Claims. (Cl. 144—255.)



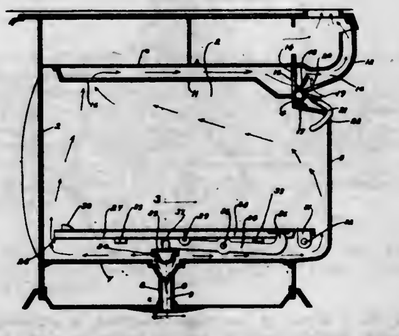
1. A hoop forming machine comprising a frame, a crimping wheel mounted in the frame and having crimping teeth to engage the inner face of the stock, a flexible member extending partially around the crimping wheel concentric with the same and provided at intervals with means for engaging, kneading, and stretching the outer face of the stock while the opposite portion of the inner face is being crimped, and means for rotating the crimping wheel.

1,426,029. GLOVE OR MITTEN. CHARLES E. YOUNG, Shenandoah, Iowa. Filed June 8, 1921. Serial No. 476,023. 3 Claims. (Cl. 2—103.)



1. A hand covering comprising, in combination, a hand portion having a thumb opening, a plurality of tabs integral with said hand portion projecting into said opening, a thumb portion having a tab thereon, said thumb portion secured to said opening by a seam, said tabs each crossing said seam at points where the greatest strain will come, and secured to the material upon the other side of the seam.

1,426,030. SPRAY DESICCATION APPARATUS. HANS J. ZIMMERMANN, Chicago, Ill., assignor, by mesne assignments, to R. Stutzke Company, a Corporation of Illinois. Filed Oct. 25, 1918. Serial No. 259,655. 4 Claims. (Cl. 127—9.)

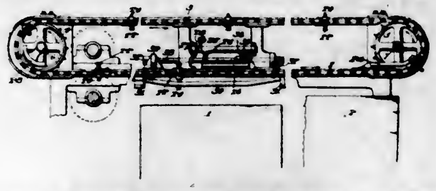


1. In combination with a vertical drying chamber, a centrifugal fan mounted below the said chamber and with its axis vertical, the central axial inlet of the fan forming the bottom of the said chamber, a vertical cyclone dust collector mounted in proximity to the said fan, and a communication duct forming the tangential outlet of the said fan and the tangential inlet of the said cyclone dust collector.

1,426,031. CAMPING ATTACHMENT FOR MOTOR VEHICLES. LOREN W. RAY ANDRIST, Mankato, Minn. Filed Nov. 19, 1921. Serial No. 516,420. 5 Claims. (Cl. 5—72.)

1. A structure of the class described including an end member for attachment to a vehicle, side arms extending therefrom, a second end member, side rods extending therefrom for attachment to the side arms, standards extending from said second end member, the said member being reversible to position the standards for use either as supporting legs or as upstanding members, side rails insertible between and detachably connected to the arms and rods for holding the end members apart for use as bed frame, a bed bottom detachably connected to the end members and to the side rails, and means upon the arms and rods for engaging and holding the side rails when arranged transversely between the end members when the arms and rods are secured together.

1,426,032. STOVE OVEN. EUGENE L. BAKER, Taunton, Mass. Filed Jan. 17, 1921. Serial No. 437,868. 4 Claims. (Cl. 126—36.)

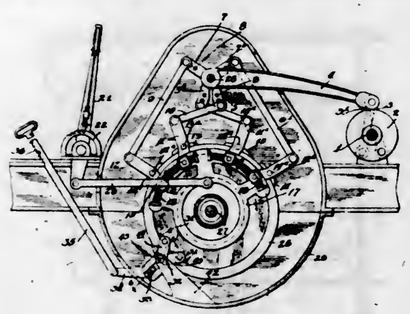


1. In a device of the class described, an oven having an air inlet in its bottom; a member forming a closure for the inlet and rendering the bottom continuous; means for lifting said member to open the inlet; and a deflector mounted to swing in the oven over and away from said member, the deflector engaging and actuating said means when the deflector is swung over said member.

1,426,033. DELIVERY MECHANISM FOR PRINTING MACHINES. HOWARD M. BARNES, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1921. Serial No. 457,644. 25 Claims. (Cl. 271—64.)

1. In a sheet delivery mechanism, an endless delivery carrier having a series of sets of grippers operable to

take all of the sheets at the same point, and means for automatically causing certain of the sets of grippers to

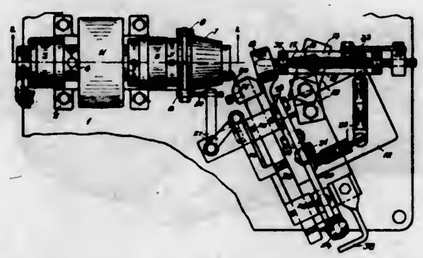


travel in different paths for conveying and delivering sheets to different piles.

1,426,034. LIFTING DEVICE FOR PHONOGRAPH DISKS. JACOB L. BAUER, Milwaukee, Wis. Filed July 20, 1920. Serial No. 397,594. 2 Claims. (Cl. 274—9.)

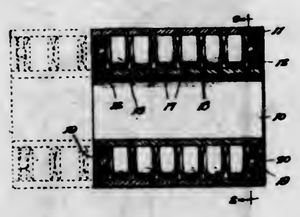
1. The combination of a phonograph turn table, a plate carried thereby, and means adapted to raise said plate by contact therewith at one point so as to tilt the plate and exercise a tilting action on a record.

1,426,035. POWER TRANSMISSION. CLEMENT G. BRANSTRATOR, Bushnell, Ill., assignor of one-fourth to John C. Hoehnen and one-fourth to George G. Bayne, both of Bushnell, Ill., and one-fourth to Bayne Manufacturing Company, Bushnell, Ill., a Corporation of Illinois. Filed Apr. 29, 1920. Serial No. 377,426. 4 Claims. (Cl. 74—53.)



1. In a device of the class described, a plurality of friction driving members having pivots at their lower ends, a reversing member having slots through which said pivots extend, said reversing member also having abutments, springs between said pivots and abutments, and means to shift said reversing member to simultaneously reverse the action of said friction members.

1,426,036. PROCESS FOR THE MANUFACTURE OF BORNEOLS AND CAMPHENE. BENJAMIN T. BROOKS, Bayside, N. Y., assignor of one-half to the Viscoloid Co., Leominster, Mass., a Corporation of Massachusetts, and one-half to The Fiberloid Corporation, Indian Orchard, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1920. Serial No. 371,751. 2 Claims. (Cl. 260—99.)

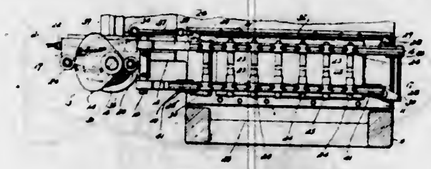


1. In a process of making borneols and camphene, the step which consists in reacting upon the mother liquor, obtained by reacting upon pinene with dry hydrochloric acid and separating crystallizable bornyl chlorid from the reaction mixture, with a fatty acid in presence of a fatty acid salt of an alkali metal for the preparation of a bornyl ester and camphene.

1,426,037. DEVICE FOR FORMING COUPLING ENDS FOR GAS AND FLEXIBLE METAL TUBING. PETER J. BURKE, Meshanticut Park, R. I., assignor to Atlantic Tubing Company, Providence, R. I. Filed Mar. 7, 1921. Serial No. 450,506. 13 Claims. (Cl. 82—2.)

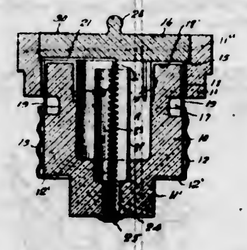
1. A machine for forming coupling ends for flexible tubing, comprising a stationary tube guide, a rotary chuck having a rearward hollow support journaled for rotation about the guide, the latter having a stationary extension into the hollow support, a cutter mounted for movement toward and from the chuck to sever the projecting end of the tube, and a single means of control for operating the chuck and the cutter.

1,426,038. ROLLER BEARING. ALLEN B. BURKHOLDER, Flint, Mich. Filed Aug. 7, 1920. Serial No. 401,985. 6 Claims. (Cl. 64—62.)



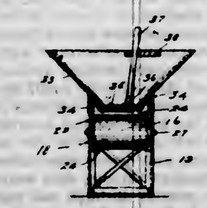
6. In a roller bearing, the combination of a sleeve, a ring surrounding said sleeve, spacers extending between and connecting the rings to form a cage, a series of abutting rollers confined between said spacers parallel to the axis of the sleeve, the rollers being loosely mounted for free individual movement, a shell surrounding the sleeve and sustained by said rollers, anti-friction devices journaled on said rings to project at opposite sides thereof coacting with the terminal rollers of said series, and thrust rings fitting between the sleeve and shell coacting with said anti-friction bearings.

1,426,039. TRANSFER MECHANISM. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 20, 1920. Serial No. 383,003. 12 Claims. (Cl. 198—218.)



1. A transfer mechanism having companion members, means having connection with both of said members at

points relatively distant from each other for positively moving said members toward and away from each other,



and means for imparting an endwise movement to said members while held in one of their relative positions.

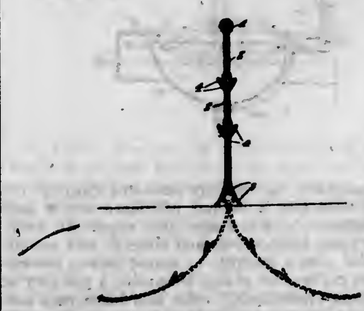
1,426,040. MAGAZINE FUSE PLUG. PETER M. CARMICHAEL, New York, N. Y. Filed June 12, 1920. Serial No. 388,502. 3 Claims. (Cl. 200—125.)

1. An electric fuse plug comprising a body having socket engaging contacts and channels leading to one of them, fuse wires disposed in the channels and connected with the contact to which the channels lead, the body having also radial ribs alternating with the fuse wires, a rotatable cap for the body having radial grooves disposed to receive the ribs respectively and separate the fuse wires, a contact carried by the cap and rotatable therewith into engagement with the fuse wires successively, and a resilient conducting element connected between the last named contact and with the socket engaging contact to which the fuse wires are not connected and under the influence of which resilient member the cap is held yieldably with the ribs in the grooves.

1,426,041. FEED REGULATOR. HUGH J. CARSON, Fairfax, Minn. Original application filed July 27, 1916, Serial No. 111,636. Patent No. 1,294,397, dated Feb. 18, 1919. Divided and this application filed Mar. 19, 1919. Serial No. 283,601. 3 Claims. (Cl. 83—44.)

1. A feeding device comprising a hopper having parallel end walls and converging side walls spaced at their bottom edges, a flat member extending substantially horizontally between said edges and overlapping one of the same, said member being pivoted to the end walls of the hopper on an axis located above said member and at one side of the center thereof.

1,426,042. WATCH FOB. JULIAN EVELYN CHURCH, Providence, R. I. Filed Apr. 14, 1922. Serial No. 552,802. 4 Claims. (Cl. 63—21.)



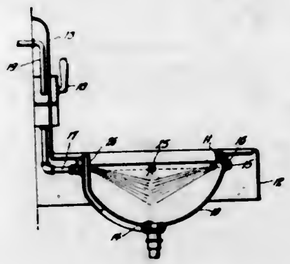
1. A watch fob comprising an attaching and adjusting member formed from a single length of wire provided with a plurality of bends defining parallel gripping arms one end portion of said length of wire being formed with a hook adapted for engaging the article to which the fob is connected, the other end of the wire being formed with a bend defining a closed loop, and a ribbon having one end portion permanently attached to one of the arms and passed between and gripped by the other arm and forming short and long ornament supporting loops.

1,426,043. BOOKBINDING. EUGENE A. CLAUSS, Providence, and DAVID H. ADAMSON, Cranston, R. I. Filed Apr. 1, 1921. Serial No. 457,712. 1 Claim. (Cl. 281—21.)

In a book, a stack of leaves having a cloth strip attached to the rear side edge thereof by a flexible adhesive and having perforations adjacent said edge, a cover having a back and side boards connected thereto, and tapes passed through the perforations and having their ends turned outwardly and then inwardly and their terminals cemented to the side boards in a position to hold the rear side edge of the stack spaced from the back in both open and closed position of the book.

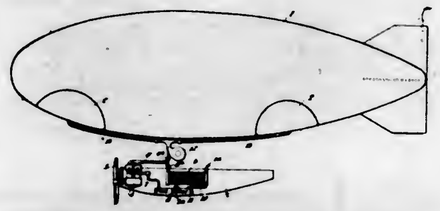
1,426,044. ANCHOR FOR FENCES. IRA E. CLUM, Lima, Ohio. Filed Dec. 9, 1919. Serial No. 343,465. 1 Claim. (Cl. 189—90.)

A fence anchor formed of a single strip of sheet metal bent to provide a central strand receiving eye and legs ex-



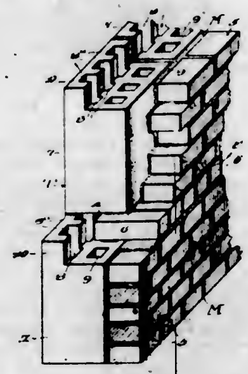
tending from the eye and having outwardly curved pointed terminals, said legs normally contacting throughout those portions thereof between the eye and the curved terminals, there being barbs upon the legs and diverging toward the eye, said eye being completely closed around the wire of a fence fabric after application thereto.

1,426,045. CORNCRIB. IRA E. CLUM, Lima, Ohio. Filed Dec. 10, 1919. Serial No. 343,849. 1 Claim. (Cl. 189—3.)



A metal wall for corn cribs and the like provided with horizontal angular corrugations and outstruck rectangular lips upon the under or overhanging portions of the exterior corrugations, said lips providing angular ventilating openings in said portions, the lower edges of the lips being disposed in horizontal planes extending below the horizontal lower edges of the openings back of the lips, all of the lips being disposed vertically with their side edges substantially in the same vertical plane with the corresponding edges of the opening.

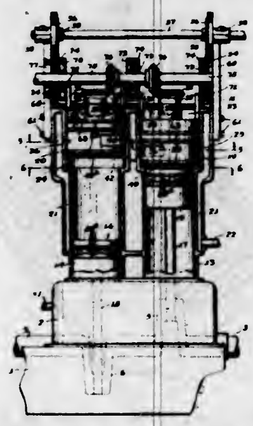
1,426,046. WASH-ROOM FIXTURE. JACOB LOUIS COHEN, Chicago, Ill., assignor of one-third to Lewis Ruskin, Chicago, Ill. Filed Oct. 20, 1921. Serial No. 508,949. 1 Claim. (Cl. 4—24.)



A wash receptacle, an inwardly extending flange at the top of said receptacle, a conduit positioned within said receptacle adjacent to said flange, said receptacle, flange and conduit being homogeneous and integral, said conduit being provided with a plurality of spaced orifices communicating with the interior of said receptacle, a plurality of nozzles positioned immediately under said flange, each nozzle having an inlet operture, and means for securing said nozzles to the inner surface of said receptacle with their inlet apertures registering with said orifices respectively.

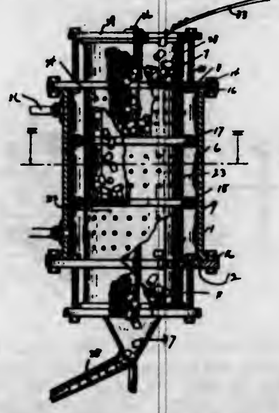
1,426,047. AIRSHIP. CHARLES JOHN COOKE, Washington, D. C. Filed Feb. 13, 1919. Serial No. 276,711. 3 Claims. (Cl. 244—6.)

1. The combination in an airship, an internal combustion engine, with a propeller and a liquid fuel supply; a gas bag with sustaining gas, and a separate receiver with combustible gas; and connection with regulating means for cutting off the liquid fuel and opening the gas supply from the receiver to the engine when the airship encounters a warm air stratum, to thereby reduce the total volume of expansible gas.



1,426,048. WALL CONSTRUCTION. WILLIAM GUSTAVUS DEMAREST, Metuchen, N. J. Filed Sept. 2, 1920. Serial No. 407,642. 1 Claim. (Cl. 72—41.)

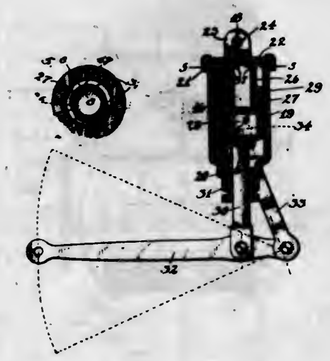
A composite brick and tile wall construction comprising in combination with a brick facing having ordinary courses and header courses, courses of tile including relatively large blocks arranged adjacent the ordinary courses and constructed of vertical webs defining inner and outer vertical openings, said header courses of the facing extending over the ends of said relatively large blocks and overlapping the outer vertical openings thereof and terminating short of the inner vertical openings, said large blocks having relatively small block portions at one end disposed behind the header courses and spaced therefrom and comprising integral extensions of vertical webs of said large blocks, said web extensions defining vertical openings, the vertical openings of the relatively small block portions being alined with the inner vertical openings of the relatively large blocks, and the inner vertical openings of the large blocks and the vertical openings of the small block portions being in open and direct communication to define continuous air passages through said walls whereby passage of moisture entirely through the wall is prevented and the moisture is dissipated.



1,426,049. HYDROCARBON ENGINE. WILLIAM DINWIDDIE, Metuchen, N. J. Filed Nov. 1, 1918. Serial No. 260,660. 22 Claims. (Cl. 123—48.)

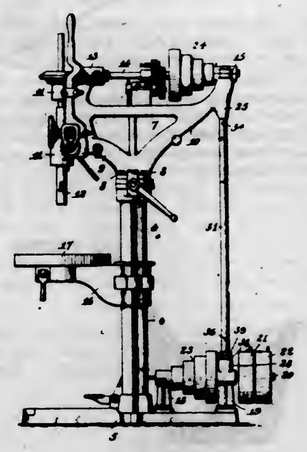
1. A hydrocarbon engine having, in combination, a work cylinder, the upper part of which is of greater diameter than the lower part; pistons working in the upper and lower parts of the cylinder; valve mechanism carried

by the upper piston; means for actuating said valve mechanism, and means by which variable compression of the charge may be produced in the work cylinder.



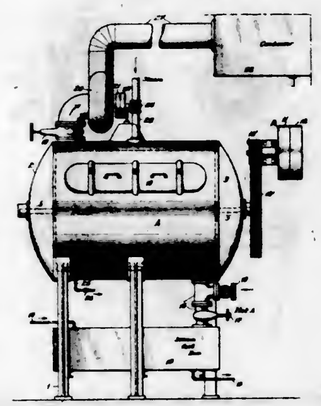
1,426,050. COOKING RETORT. FRANK B. DONNELLAN, San Francisco, Calif. Filed Sept. 3, 1921. Serial No. 498,244. 2 Claims. (Cl. 126—272.)

1. In a cooking retort, a vertically disposed cylindrical casing having end members rigidly secured thereto, a vertical shaft centrally mounted therein, means for revolving the shaft, a plurality of cylinders having radial webs therein for dividing the cylinders into sectorial compartments slidably engaging the shaft and rotary therewith, a plate having a sectorial opening therein interposed between each two cylinders so that no two succeeding sectorial openings register, and means for preventing the plates from rotating comprising radial projections extending from the plates and vertical guide members engaging the projections.



1,426,051. SHOCK ABSORBER FOR VEHICLES. JOHN ECKHARD, Buffalo, N. Y. Filed Sept. 24, 1919. Serial No. 326,014. 7 Claims. (Cl. 188—88.)

1. A shock absorber comprising a closed casing adapted for connection to one part of a vehicle, a dash-pot device within said casing, a lever connected at diametrically opposite points to the exterior of said casing, and a second lever pivotally connected to said dash-pot



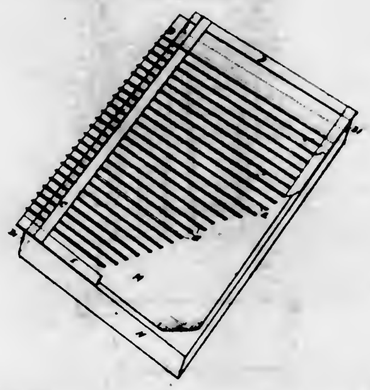
device and to said first-mentioned lever and adapted for connection to another part of a vehicle movable with respect to the first-mentioned part of the vehicle.

1,426,052. DRILL PRESS. JOHN ECKHARD, Buffalo, N. Y. Filed Apr. 8, 1921. Serial No. 459,525. 6 Claims. (Cl. 77—5.)

1. A drill press having a frame provided with a rearwardly-projecting portion at its upper end and a rearwardly-extending portion at its lower end, a pair of bearing uprights secured to said rearwardly-extending portion, one of said bearings having an upwardly opening socket formed therein, a drive shaft journaled in said bearing uprights, and a tubular brace column having connection at its upper end with said rearwardly-projecting portion and its lower end externally threaded and entered in said upwardly opening socket, and a nut threaded onto said externally threaded lower end and bearing against the upper end of the bearing upright having said socket therein.

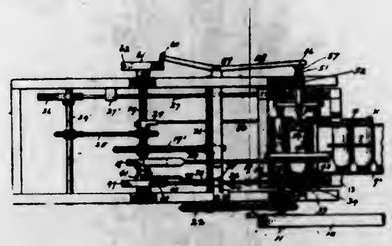
1,426,053. DRY CLEANING AND STERILIZING PROCESS. THOMAS P. ENDICOTT, Atlantic City, N. J. Filed Aug. 14, 1920. Serial No. 403,529. 6 Claims. (Cl. 8—8.)

1. The process of dry-cleaning wearing apparel or the like, which comprises stirring or tumbling a quantity such material dampened by a solution of soap and solvent immiscible in water, steam-distilling the solvent from the material and drying the material in a current of warm air.



1,426,054. PROCESS OF DESULPHURIZING IRON ORES, IRON AND STEEL, AND COKE USED IN THE METALLURGY OF IRON. WILLIAM L. ESTABROOKE, Yonkers, and DANIEL D. JACKSON, New York, N. Y., assignors, by mesne assignments, to John Teele Pratt, New York, N. Y., Daniel Dana Jackson, Brooklyn, N. Y., and John Davis Sears, Bloomfield, N. J., trustees. Filed July 13, 1920. Serial No. 395,873. 19 Claims. (Cl. 75—60.)

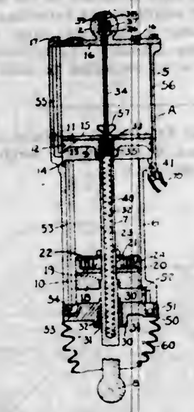
1. A process of treating iron ores, iron and steel, for diminishing or eliminating the sulphur content thereof, comprising bringing the sulphur or sulphur compounds of said metal into contact with a halogen, whereby a volatile sulphur halide is formed.



1,426,055. DEVICE FOR USE OF THE BLIND IN WRITING. PAUL FAST, Fresno, Calif. Filed Oct. 27, 1919. Serial No. 333,558. 2 Claims. (Cl. 35—6.)

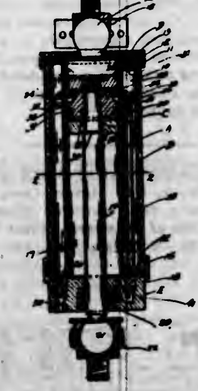
1. In a device of the character described, in combination with a flat base having two sides at right angles to each other, of a frame having depending flanges on two sides thereof at right angles to each other, and

a plurality of rigid cross bars rectangular in cross section attached to said frame parallel with one of said flanges and equi-distant apart, substantially as described.



1,426,056. FRUIT-JAR-CAPPING MACHINE. GEORGE E. FRAZIER, Muncie, Ind., assignor of one-half to Clyde C. Cook, Muncie, Ind. Filed Dec. 3, 1920. Serial No. 427,972. 10 Claims. (Cl. 226—88.)

1. In a machine for capping jars, means for holding a cap in a fixed and stationary position, means for supplying a jar for each cap so held with the threaded mouth of the jar opposite the threaded mouth of the cap, rotating roller means for rotating the jar, means for forcing the jar while rotating into the cap, and means for holding the jar-rotating means at a fixed distance from the cap-holding means.

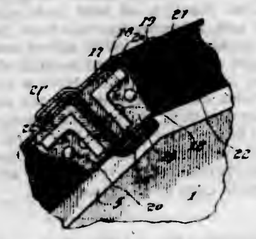


1,426,057. PNEUMATIC VEHICLE-BODY SUPPORT AND AIR CONTROL. WILLIAM G. FRITZ, Clear Lake, Minn. Filed Mar. 1, 1920. Serial No. 362,407. 9 Claims. (Cl. 267—65.)

1. A pneumatic vehicle body support comprising a cylinder, a piston reciprocably mounted within said cylinder, means connecting the cylinder with the vehicle body, means adapted to connect the piston with the vehicle running gear, means for admitting air under pressure to the cylinder to form a pneumatic cushion between the cylinder and piston, a spring actuated relief valve mounted in the cylinder, means connected with and controlled by the position of the piston for opening said valve, said means comprising a rod connected at its upper end to the valve and having its lower end slidably mounted in the piston, a stop secured on the

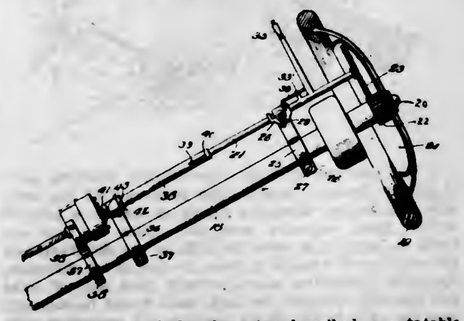
lower end of the rod, and means above said stop on said rod for deflecting the upward course of oil around said rod.

1,426,058. SHOCK ABSORBER. WILLIAM G. FRITZ, Clear Lake, Minn. Filed Nov. 11, 1920. Serial No. 423,330. 5 Claims. (Cl. 267—65.)



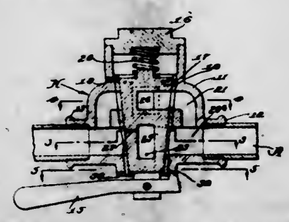
1. A shock absorber, comprising, in combination, a piston, a pair of cylinders of different diameters forming an enlarged expansion chamber and in the smaller of which cylinders the piston is reciprocably disposed and divides the space into upper and lower cushioning chambers, means connecting the cylinders with a body to be supported, means connecting the piston with a support, means for admitting air to the inner cylinder from the outer atmosphere to form a pneumatic cushion between said cylinder and piston, pressure transferring means connected with the expansion chamber and with the upper and lower cushioning chambers, and means for relieving compressed air back into the expansion chamber from the upper cushioning chamber at a point below the upper end of the stroke of the piston.

1,426,059. OVEN. MORRIS FROEHLICH, Chicago, Ill. Filed July 17, 1919. Serial No. 311,466. 5 Claims. (Cl. 107—59.)



4. In an oven of the kind described, and in combination, a pair of end frames each having an inwardly

extending flange of angle iron formation, a plurality of side frames mounted upon said flange, each side frame section comprising a frame member having a lug pro-

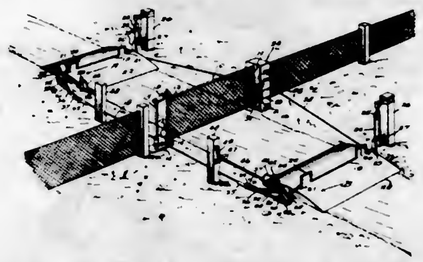


jecting therefrom at each end and bars mounted over and secured to said lug to connect the end portions, cover sheets for said sections, and insulating material disposed between said cover sheets.

1,426,060. ILLUMINATING SYSTEM FOR VEHICLES. SAMUEL V. GRAMLICH, Paradox, Colo. Filed Aug. 31, 1920. Serial No. 407,096. 3 Claims. (Cl. 200—59.)

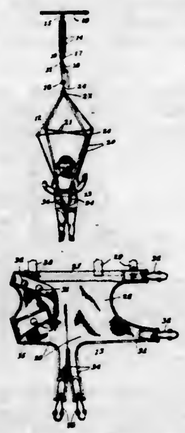
1. In a device of the character described, a rotatable element operated from the steering mechanism of an automobile, a fixed switch box having segments, a head rotatable upon the box and provided with a brush to coact with said segments, a shaft coupled with said element and connected to said head for rotating the head, the shaft being formed of telescopic sections whereby said shaft may be uncoupled from the element, a stationary bracket supporting the shaft, and manually releasable means carried by the shaft to coact with said bracket locking the shaft coupled with said element.

1,426,061. AIR-BRAKE SYSTEM. JOHN H. HANLON, Somerville, Mass. Filed Nov. 19, 1920. Serial No. 425,208. 8 Claims. (Cl. 303—85.)



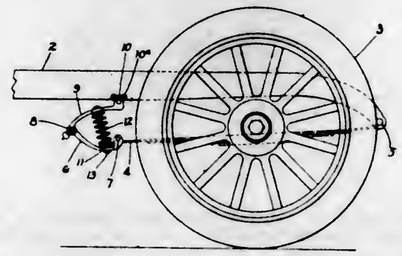
1. In combination with the train pipe and the branch pipe leading to the auxiliary tank of an air brake system, a valve at the junction of said train pipe and said branch pipe, said valve having two ports through the movable member of said valve, one of said ports being a

two-way port and the other of said ports being a three-way, said ports being one above the other.



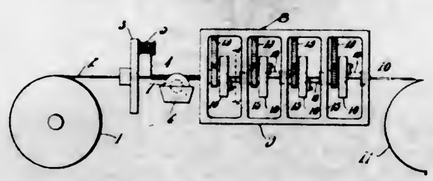
7. In combination with the train pipe and the branch pipe leading to the auxiliary tank of an air brake system, a valve at the junction of said train pipe and said branch pipe, said valve having two main ports through the movable member of said valve, one of said main ports being a straight port through said movable valve member, and the other of said main ports being a three-way passage, there being bleed ports, one in the movable valve member connecting with the straight passage through it, and the other in the valve body leading to the atmosphere, so that when the straight main port is crosswise of the train pipe the portion of the train pipe at the rear of the valve will be open to the atmosphere.

1,426,062. AUTOMATIC GATE. THOMAS E. HARRINGTON, Silver City, N. Mex. Filed July 26, 1921. Serial No. 487,730. 8 Claims. (Cl. 39—33.)



1. The combination with a horizontally swinging gate, of a trip device arranged upon each side of the gate, said trip device embodying a pair of cranks, a pair of slotted links connected with the cranks so that one crank is adapted to move its link in one direction, and the other crank adapted to move its link in one direction, operative connecting means between each pair of links and the gate to swing the gate, latch means to normally lock the gate in the closed position and connected with the trip device, and latch means to lock the gate in the open position and connected with the trip device.

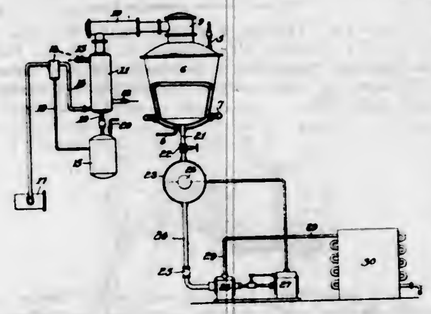
1,426,063. BABY EXERCISER. FRANCES M. HASKINS, New York, N. Y. Filed Sept. 20, 1921. Serial No. 501,930. 4 Claims. (Cl. 155—20.)



2. In a baby exerciser, a sling comprising a flexible seat portion extending well forward beneath the baby's hips and shaped to fit the body so as to leave its legs perfectly free and unobstructed and extending also upward to its waist line, a waist band attached to the portion having the seat, a pair of crotch straps extending forward and upward from the seat to the waist band, and a pair of hip straps extending laterally and forward around the hips and adapted to be connected to each other at the front.

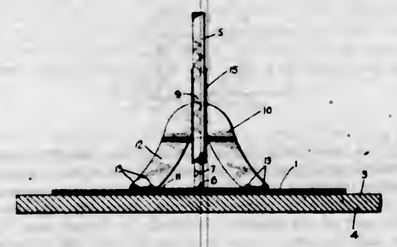
1,426,064. SPRING SHACKLE. GEORGE H. HAYES, St. Paul, Minn. Filed Nov. 6, 1920. Serial No. 422,313. 5 Claims. (Cl. 267—17.)

1. The combination, with a vehicle frame, of a spring having one end attached to said frame and a shackle pivotally connecting the other end of said spring with said frame, said shackle comprising a link and carrier having a comparatively long pivotal bearing upon one another at one end, the other end of said link and carrier being pivotally connected respectively to said spring and frame, and compression springs interposed between said link and carrier, and separated a considerable distance for yieldingly resisting relative movement of said link and carrier toward one another.



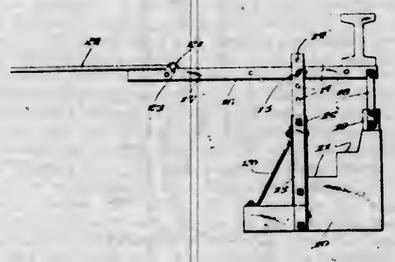
1,426,065. INSULATING FLAT-WIRE CONDUCTORS. JOHN ALLEN HEANY, New Haven, Conn., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Delaware. Filed Nov. 16, 1918. Serial No. 262,873. 6 Claims. (Cl. 173—244.)

5. An apparatus for finishing covered flat wire, comprising, a wire supporting member arranged to engage one of the faces of a section of wire, a wire supporting member arranged to engage the opposite face of a different section of the wire, means for advancing the wire to effect a longitudinal smoothing action on the engaged sections, and means for transversely smoothing the free faces of the supported sections.



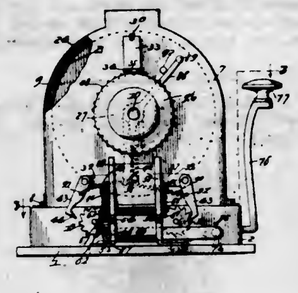
1,426,066. ART OF DEALCOHOLIZING BEVERAGES. HERMAN HEUSER, Evanston, Ill. Filed June 4, 1919. Serial No. 301,762. 4 Claims. (Cl. 195—1.)

1. In apparatus for dealcoholising beverages, in combination with means for heating the beverages under reduced pressure, a receptacle, a stand pipe adapted to receive the discharge from the heating means and



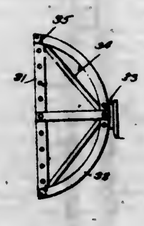
terminating near the bottom of the receptacle, and cooling coils within the receptacle.

1,426,067. DEVICE FOR STENCILING. EDWARD F. HILL, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1921. Serial No. 521,104. 8 Claims. (Cl. 101—4.)



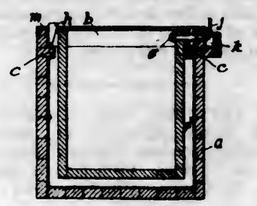
1. A device for cutting stencils, comprising, in combination, an impression implement having type and adapted to be manually directed against the surface of a stencil sheet to cut an impression of said type therein, and means, comprising a movable frame providing a guideway for said implement, for guiding said type against the surface of said stencil sheet when said implement is operated.

1,426,068. AUTOMOBILE JACK. EDWIN A. HOWE, Bancroft, Iowa. Filed June 11, 1921. Serial No. 476,861. 1 Claim. (Cl. 254—120.)



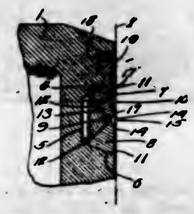
A jack comprising a base block having its upper face formed with a longitudinal series of steps, a standard erected on the lowermost of the steps, a lifting lever pivotally supported on the upper end of the standard, a pivotally mounted extension lever mounted on the lifting lever, depending links pivotally supported on the working end of the lifting lever, and a block carried by the lower ends of the links for engagement on the upper face of one or another of the steps to support the working lever at different elevations.

1,426,069. PRINTING AND STAMPING MACHINE. HUGH F. HURST, Richmond, Va., assignor to Hurst Label Printing Machine Company, Incorporated, a Corporation of Virginia. Filed May 7, 1921. Serial No. 467,639. 16 Claims. (Cl. 101—102.)



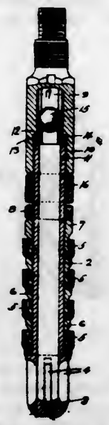
1. In a label printing and stamping machine, a casing, rolls mounted therein, an inking ribbon operatively winding from one to the other of said rolls, a printing cylinder in said casing, a label supporting and unreeling mechanism, an escapement detent operatively connected with one or the other of said rolls, a label feed carried by the escapement detent and operatively connected with the label supporting and unreeling mechanism, for feeding the label into the machine, a label printing die in the casing, and means for simultaneously impressing the label and the ribbon toward and upon the cylinder and actuating the escapement detent.

1,426,070. TRACTOR. VICTOR IVARSON, Cleghorn, Iowa. Filed Sept. 27, 1918. Serial No. 255,971. 1 Claim. (Cl. 280—33.44.)



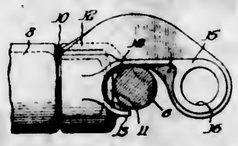
In a draft device for tractors, the combination of a frame adapted to be rigidly secured at its front end to a rearwardly extending draft ing of a tractor and having rearwardly extending diverging arms, and a cross bar connecting the ends of said arms and having a plurality of openings for the attachment of draft means adjustably along said cross bar.

1,426,071. ARRANGEMENT IN ELECTROLYTIC TANKS WITH DIAPHRAGM CELLS. GUSTAV HAGLUND, Christiania, Norway. Filed Sept. 10, 1920. Serial No. 409,387. 8 Claims. (Cl. 204—5.)



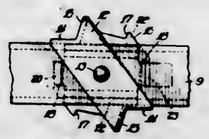
1. The combination with an electrolytic tank and a diaphragm cell arranged therein of a tube, one end of which is situated in the diaphragm cell, the other end being pressed against the walls of an opening in a wall of an electrolytic tank to form a tight connection therewith.

1,426,072. PISTON. OSCAR W. HANSON, Salina, Kans. Filed Oct. 27, 1920. Serial No. 419,902. 6 Claims. (Cl. 74—109.)



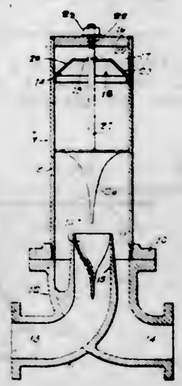
3. A piston having an annular groove provided with gently inclined side walls, and packing rings arranged in said grooves and having abruptly inclined inner surfaces and gently inclined outer surfaces, one of said rings being provided with an oil groove and reduced rapid wearing and seating projections.

1,426,073. PUMP VALVE. ROLAND L. HAY, Lancaster, Ohio, assignor to Frick & Lindsay Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 9, 1919. Serial No. 309,679. 1 Claim. (Cl. 103—225.)



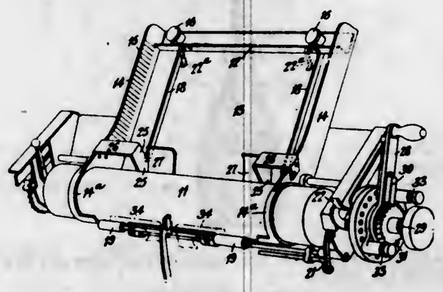
A working or pumping valve for oil-well pumps, comprising a barrel having a bottom-head integral therewith, a crown secured directly to the upper end of said barrel, cups and rings on said barrel, interposed between said head and a lock-nut engaging the uppermost of said rings, and a lock-nut on said barrel engaging the lower end of said crown.

1,426,074. FULCRUM MECHANISM. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,501. 10 Claims. (Cl. 188—232.)



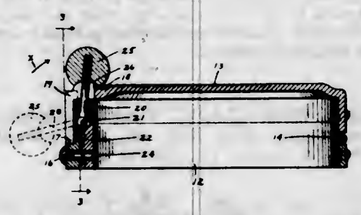
3. In a brake beam having a compression member, a tension member and a fulcrum interposed therebetween, the fulcrum having a face engaging the tension member, and a member coacting with the fulcrum and tension member to maintain the fulcrum face in engagement therewith.

1,426,075. REVERSIBLE FULCRUM STRUCTURE. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 11, 1921. Serial No. 491,406. 5 Claims. (Cl. 188—232.)



3. An integrally formed reversible fulcrum having V-shaped wall portions for embracing a brake beam compression member and limiting reversible movements of the fulcrum with respect thereto, shoulders on the fulcrum, and means adapted positively to engage said shoulders and the brake beam member to lock the fulcrum in operative position relative to the brake beam member.

1,426,076. AIR SEPARATOR FOR FEED WATER. MILLARD R. HICKMAN, San Francisco, Calif. Filed Feb. 20, 1922. Serial No. 538,054. 11 Claims. (Cl. 183—2.5.)

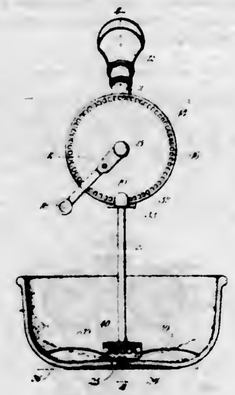


1. In an air separator for feed water, a casing having a water inlet provided with means for imparting a whirling motion to water passing therethrough, a water outlet, a deflector for causing the water to be deaerated by centrifugal force, a baffle, a chamber for the reception of the air separated from the water and means for exhausting air from said chamber.

1,426,077. TYPEWRITING MACHINE. CHARLES M. HILSER, Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 24, 1917. Serial No. 208,543. 24 Claims. (Cl. 197—127.)

2. The combination of a revoluble platen, an introductory chute for said platen, a gage for the rear ends of sheets placed in said chute, a clip for said sheets on said gage, and a feed roll to hold the sheets upon the platen, said roll serving as a gage for the leading end of a second sheet introduced between the first sheet and the platen.

1,426,078. TOP FOR HAND BAGS, ETC. CROFTON C. HOLDEN, Leominster, Mass., assignor to Royal Comb Company, Leominster, Mass., a Corporation of Massachusetts. Filed Jan. 26, 1922. Serial No. 531,853. 3 Claims. (Cl. 150—46.)

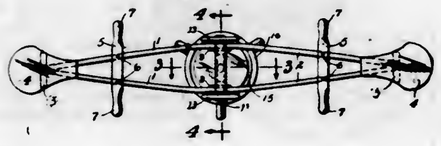


1. A receptacle top of the character stated, comprising two members hinged together, and having opposed abutting faces, which meet when the top is closed, one member having an outwardly projecting convex boss, constituting a fixed fastener member, and a slot formed in part in said boss, and extending to and through a marginal portion of said member, and a swinging fastener member composed of a shank hinged to the other member, and a solid head unyieldingly attached to the shank and having a concave recess formed to receive said boss, the arrangement being such that when the swinging fastener member is moved to engage the boss, the head is initially pressed against the boss, and causes a slight displacement of one of said parts from its normal position, until the head receives the boss, without moving the head longitudinally of the shank, whereupon the displaced part springs back to its normal position, so that the head recess and the boss are interengaged, the unyielding attachment of the head to the shank of the swinging member confining the said head in firm engagement with the boss.

1,426,079. SERVICE BOX OR TRAY. WILLIAM V. HOLLEY, New York, N. Y., assignor to New York Bath Manufacturing Co., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,585. 3 Claims. (Cl. 217—69.)

1. A service box or tray having side walls and a bottom and means for fastening the bottom to the walls, a metal reinforce extending entirely around the bottom and projecting beyond the edges thereof and secured to the bottom by the fastening means and subsequently folded inwardly to overlie the fastening means to prevent displacement thereof, in addition to accomplishing its reinforcing purposes.

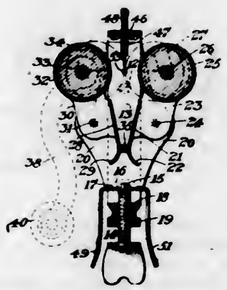
1,426,080. CREAM WHIP AND THE LIKE. EDWARD E. HOLT, Chicago, Ill. Filed Jan. 11, 1922. Serial No. 528,401. 4 Claims. (Cl. 259—134.)



1. As a new article of manufacture, a paddle for a cream whip, comprising in combination a pair of blade members located at right angles to each other, said blade members comprising strips of relatively thin and broad spring-like metal, the central crosswise portions of said strips being flat and lying in direct contact, and the arms of one strip being curved in such a manner as to be concave upwardly, and the arms of the other strip being curved in such a manner as to be concave downwardly, the paths of travel of said arms intersecting each other during rotation, a hub member in contact with the central portion of the top face of the top member, and a locking sleeve in contact with the central portion of the bottom face of the bottom member, and having prongs extending through both members into locking engagement with the hub member aforesaid, substantially as described.

1,426,081. SEPARATING ALUMINUM CHLORIDE FROM HEAVY HYDROCARBON. CHARLES OSCAR HOOVER, Chicago, Ill., assignor to The Hoover Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1922. Serial No. 548,912. 8 Claims. (Cl. 23—13.)

1. The improvement in the method of recovering aluminum chloride from aluminum chloride hydrocarbon



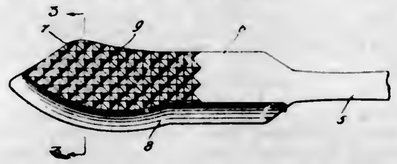
which consists in supplying a solvent to the aluminum chloride hydrocarbon and subliming the mixture thus produced.

1,426,082. TEETER TOTTER. ISIDOR M. JACOBS, Kansas City, and WILLIAM CRAMER, St. Louis, Mo., assignors to Truck, Tractor, and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 12, 1920. Serial No. 395,667. 6 Claims. (Cl. 46—22.)

1. The combination of a base, a kingbolt, a rotatable casting fastened to the said base by the said kingbolt, the said base having a groove, a shaft passing through the said casting, wheels mounted thereon and adapted to run in the said groove, a pair of castings through which the said shaft passes, and a beam attached to the said last-mentioned castings.

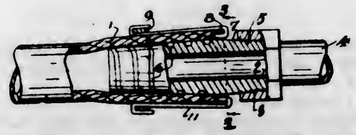
1,426,083. EDGE-TOOL SHARPENER. OTTO KAMPFE, Bellmore, N. Y., assignor of one-half to Henry C. Walker, New York, N. Y. Filed Apr. 3, 1920. Serial No. 370,977. 5 Claims. (Cl. 51—80.)

1. An instrument for sharpening edge tools comprising an outer frame adapted to receive and hold a tool in a fixed position for the sharpening operation, an inner frame adjustable to position in the outer frame, a pair of roller frames pivotally mounted in the inner frame so as to be movable therewith, a roller mounted adjacent the corresponding ends of each roller frame, a tension device extending between the opposite ends of the roller frames to normally maintain the rollers in contact with each other, and means for turning the said rollers in opposite directions.



1,426,084. MOP. DUNCAN KENNER, New Orleans, La., assignor to Dry Hand Mop Company, New Orleans, La., a Corporation. Filed Nov. 1, 1920. Serial No. 421,047. 6 Claims. (Cl. 15—120.)

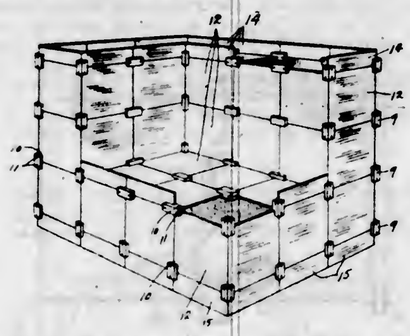
1. In a mop, the combination of a handle, a mop-head consisting of a plurality of loose strands having loops brought together beyond the end of the handle, means securing the strands around the ends of the handle, a



hand grip movable over the handle and carrying the free ends of the strands.

1,426,085. BUTTER SPREADER. SIMON N. KOHN, Cleveland, Ohio. Filed Sept. 1, 1921. Serial No. 497,501. 2 Claims. (Cl. 91—62.5.)

1. A butter spreader provided with a blade having one side flat and a longitudinal edge portion of its other side beveled to form a knife edge, with the portion of the latter side adjacent said beveled portion knurled to form a roughened surface.

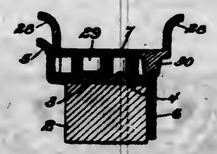


1,426,086. HOSE CLAMP. JOHN R. LOWREY, San Pedro, Calif. Filed Mar. 15, 1920. Serial No. 365,929. 3 Claims. (Cl. 285—84.)

1. In a hose clamp, a hose, a nipple received within said hose, the projecting end of said nipple being tapered away from said hose, a collar having a wedging engagement upon said tapered end of said nipple, a tie wire threaded through apertures formed in said collar, and a clamping band for clamping said hose to said nipple, and the ends of which tie wire are formed into hooks which engage said clamping band.

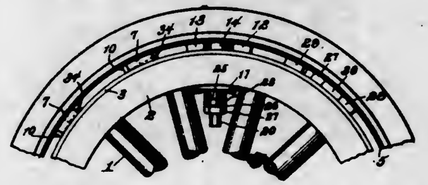
1,426,087. TOY BUILDING CONSTRUCTION. SYDNEY A. METCALFE, Chicago, Ill. Filed June 30, 1921. Serial No. 481,458. 6 Claims. (Cl. 46—35.)

1. A toy building construction comprising blocks substantially square in transverse cross-section and of substantially twice the length of their widths with slots in their ends, and rectangular sheet material pieces having



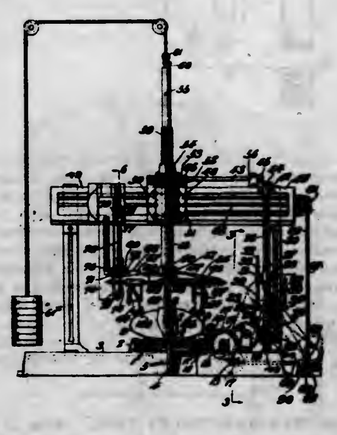
notches in their corners with the edges of said sheets adjacent said notches engaging said slots and held by said blocks in building formation.

1,426,088. TRIPOD AND TRIPOD CLAMP. GEORGE A. MITCHELL, Los Angeles, Calif., assignor to Mitchell Camera Co., Los Angeles, Calif., a Corporation of California. Filed Sept. 21, 1920. Serial No. 411,826. 5 Claims. (Cl. 248—43.)



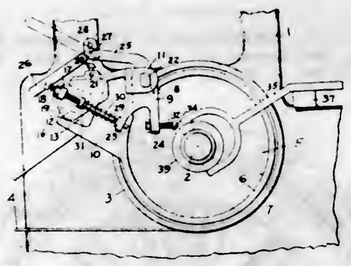
1. In a tripod or the like having an adjustable leg formed of adjustable overlapping sections, means for clamping the sections together, said means comprising a band extending around the sections, a nut member carried by the band to be spaced from one of the sections, a plate carried by said section, and a screw member carried in the nut member to engage the plate.

1,426,089. DEMOUNTABLE RIM. HOWARD N. MOODY, New Orleans, La. Filed Dec. 12, 1921. Serial No. 521,852. 7 Claims. (Cl. 301—17.)



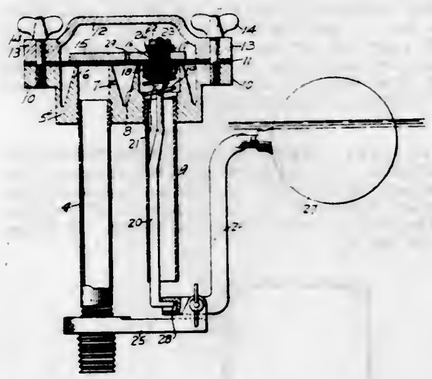
1. In a demountable rim for vehicle wheels, the combination of a fixed rim having a flange at the inner side thereof and flangeless at the outer side thereof, a demountable rim movable laterally on and off the fixed rim via the flangeless side thereof and also movable circumferentially on said fixed rim, inclined ribs upon one of said rims forming spiral threads extending diagonally across the face of said rim substantially at a pitch angle of from 13 to 16°, said ribs having substantially straight longitudinal inner faces arranged perpendicularly to the plane of the wheel, lugs upon the other of said rims having lateral surfaces for bearing and sliding contact engagement with said straight longitudinal inner faces of the inclined ribs, and means for moving the demountable rim circumferentially in one direction or the other on the fixed rim.

1,426,090. DEMOUNTABLE RIM. HOWARD NADIN MOODY, New Orleans, La. Filed Feb. 9, 1922. Serial No. 535,296. 9 Claims. (Cl. 301—17.)



1. In a demountable rim, the combination of a fixed rim member, a demountable rim member movable laterally on and off the fixed rim member and also circumferentially on said fixed rim member, coacting binding elements on said rim members, engageable and disengageable on reverse relative circumferential movements of said rim members, whereby the demountable rim member is adapted to be held from or released for lateral motion on the fixed rim member, a wedge lug on one rim member, a pair of spaced abutment lugs on the other rim member arranged to come on opposite sides of said wedge lug, and a removable bendable-metal wedge key of greater length than the width of the rim members adapted to be driven transversely from one side of the wheel across the faces of said rim members between either side of said wedge lug and one or the other of said abutment lugs, said key having an end projecting at the other side of the wheel and adapted to be bent to form a stop for holding it from displacement.

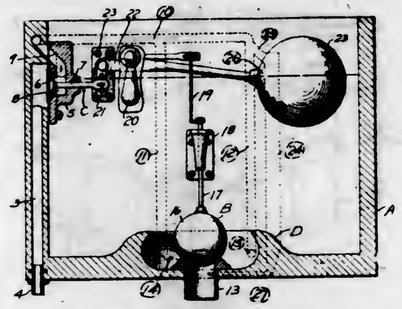
1,426,091. MACHINE FOR FACING PROPELLER BLADES. FRANK EGON NEITZEL, San Francisco, Calif., assignor to Bethlehem Shipbuilding Corporation, Ltd., South Bethlehem, Pa., a Corporation of Delaware. Filed Oct. 16, 1919. Serial No. 330,978. 20 Claims. (Cl. 90—31.)



1. In a machine for facing propeller blades, an oscillatory support for the propeller, and means aligned by the propeller to face a blade of the propeller during the oscillation of said support.

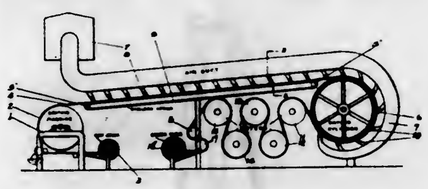
1,426,092. MACHINE BRAKE. ABRAHAM NOVICK, New York, N. Y., assignor to F. L. Smithe Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 16, 1920. Serial No. 366,277. 7 Claims. (Cl. 188—105.)

1. In a braking mechanism, a control lever, a slidable collar operated by said lever, means actuated by said collar for setting said mechanism, and means for operating said mechanism independently of said control lever, adapted to be set into brake releasing position and arranged to drop automatically into its inoperative position on the manipulation of said control lever.



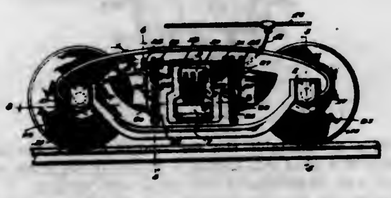
1,426,093. MUFFLER TOILET VALVE. JESSE C. OWENS, Los Angeles, Calif. Filed Jan. 31, 1921. Serial No. 441,125. 5 Claims. (Cl. 137—104.)

3. In a device of the class described, the combination of a chamber having a diaphragm dividing it into upper and lower compartments, said lower compartment having an intake for liquid opening thereinto and normally closed by said diaphragm and a discharge for liquid opening thereinto and normally closed by said diaphragm, said diaphragm having a relief port for affording communication between the upper compartment and said discharge, valve means normally closing said relief port, and means to initially actuate said valve means to open said relief port and after an interval lift said diaphragm to place said intake and discharge in communication.



1,426,094. MUFFLER TOILET TANK. JESSE C. OWENS. Los Angeles, Calif. Filed May 16, 1921. Serial No. 469,756. 4 Claims. (Cl. 4—5.)

4. A flush tank for toilets comprising a reservoir having formed in the bottom thereof a circular filling basin, a conduit leading to said basin for directing supply water thereinto in a tangential direction, an intake valve actu-



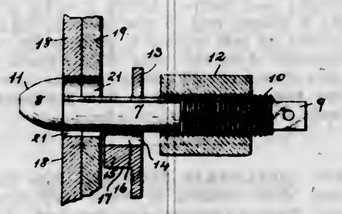
ated by a float controlling the flow of water through said conduit, a discharge port for said tank, and a flush valve for said discharge port.

1,426,095. DRIER FOR DRYING COATED PAPER. ALBERT H. PARKER, Otsego, Mich. Filed Oct. 18, 1920. Serial No. 417,807. 4 Claims. (Cl. 34—48.)

3. In a drier for coated paper, the combination of an endless apron for supporting the coated sheet, a heated drier cylinder disposed at the delivery end of said endless apron to receive the coated sheet, an air duct disposed in proximity to the said apron and encircling the said drying drum, and air nozzles from the said air duct directed against the coated surface of the sheet.

1,426,096. SAFETY APPLIANCE FOR RAILWAY-CAR TRUCKS. CARL L. PITTMAN, De Leon, Tex., assignor to The Pittman Company, De Leon, Tex., a trust estate consisting of J. B. Pool, C. L. Pittman, and R. F. B. Logan. Filed Dec. 28, 1921. Serial No. 525,390. 7 Claims. (Cl. 105—216.)

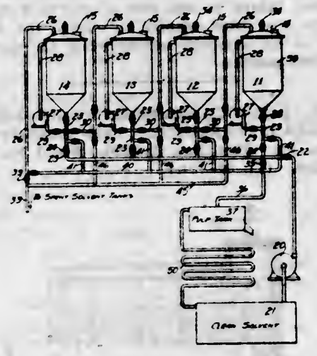
1. A safety device for railway car trucks comprising a unitary side frame, and a shoe or skid formed integrally therewith, said skid constituting a downward and lateral extension of the side frame overlying the track rail and having lateral marginal flanges and bifurcated ends to straddle the wheels.



6. A safety device for railway car trucks comprising side frames having downwardly moving journal boxes, levers pivoted intermediate their ends to the side frames and extending beneath each journal box, vertically pivoted sliding members secured to the side frames, each member having a lug engaging the free end of an adjacent pivoted lever, air brake valves on the side frames, and a horizontal pivoted rod on each side frame, each rod having crank arms overlying the adjacent sliding members and an arm engaging the air valve.

1,426,097. FRONT AND LOCK ROD FOR SWITCHES. ERNEST K. POST, Collingswood, N. J. Filed Nov. 17, 1920. Serial No. 424,636. 14 Claims. (Cl. 246—452.)

1. A pair of switch rail points, a front rod therefor, comprising a strip extending transversely of the track and beyond the track at one side, having an end thereof turned parallel with the rail points and adapted to be connected thereto, an auxiliary strip connected with the main strip at an intermediate point, extending parallel therewith and bent parallel with the switch points for connection with the other point, and means for connecting the two strips.

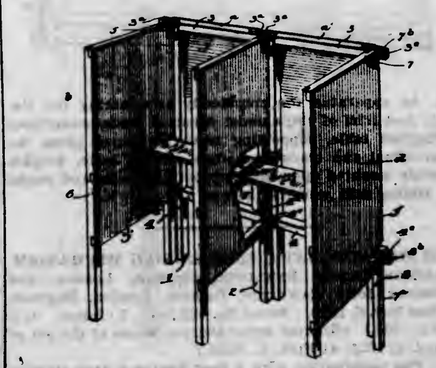


1,426,098. TEMPORARY FASTENING. EUGENE R. PRUITT, Baltimore, Md. Filed Feb. 14, 1920. Serial No. 358,693. 3 Claims. (Cl. 85—9.)

1. In a temporary fastening the combination with a bolt having a hook-head at one end thereof and provided with circumferential screw-threads adjacent to the other end, a portion of the bolt being threadless between the head and threaded end, said threadless portion having a smaller diameter than the diameter through the threaded portion and a nut having an interior threaded portion to engage the threaded portion of the bolt said interior threaded portion of the nut being of a greater diameter than the threadless portion of the bolt.

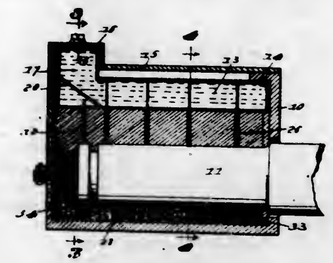
1,426,099. APPARATUS FOR WASHING INSOLUBLE POWDERS. PAUL W. PRUTZMAN, Los Angeles, Calif., assignor to General Petroleum Corporation, a Corporation of California. Filed Aug. 20, 1921. Serial No. 493,985. 15 Claims. (Cl. 23—31.)

1. In an apparatus for washing insoluble powdered substances, the combination of: a shell for containing a mass of powdered substance; means for circulating a solvent upward through said mass of powdered substance; and means for carrying off the overflow solvent from said shell.



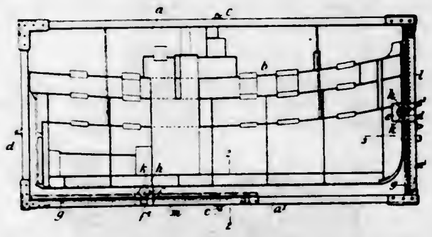
1,426,100. SNAP-FASTENER TOP. GEORGE F. PULLEN, Waterbury, Conn., assignor to Waterbury Fastener Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 8, 1922. Serial No. 542,013. 10 Claims. (Cl. 24—220.)

1. In a top member for a separable snap fastener, the combination with an exterior shell, of a cap-disc, a spreader, and a collet, said shell enclosing said cap-disc, spreader and collet, and engaging an outer vertical flange on said collet, said flange having means for preventing rotation of the shell relative thereto.



1,426,101. VOTING BOOTH. TRUMAN J. PURDY, Sunbury, Pa. Filed Jan. 20, 1921. Serial No. 438,710. 3 Claims. (Cl. 20—3.)

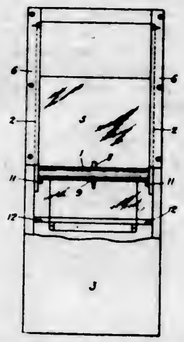
1. In a sectional system of voting booths composed of similar units, a unit comprising a back frame having



laterally projecting portions having notches in their rear faces at the one end of the same and notches in the forward faces at the other end of the same adapted to interlock with similar portions on adjacent sections, and a partition hinged to one side of the back frame and having its rear edge adapted to engage the projecting portions of an adjacent section when the partition is in unfolded position.

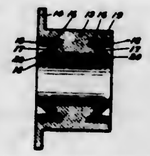
1,426,102. CAR JOURNAL BEARING AND LUBRICATING MEANS THEREFOR. FRED RADCLIFFE, Philadelphia, Pa. Filed Dec. 2, 1920. Serial No. 427,720. 4 Claims. (Cl. 64—24.)

1. A journal bearing having a box or casing, and a bearing block or brass surmounted by an oil fount or reservoir, said box or casing being provided at its inner end with an overhanging flange for engagement with the adjacent end of said fount or reservoir, and the block or brass being provided with downwardly divergent lateral centering wings having exterior impact ears.



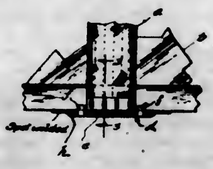
1,426,103. APPARATUS FOR GRAPHICALLY ASCERTAINING THE STABILITY AND TRIM OF SHIPS UNDER ASSUMED LOADS. SHIRLEY BROOKS RALSTON, Glasgow, Scotland. Filed Mar. 11, 1920. Serial No. 364,983. 3 Claims. (Cl. 73—151.)

1. An apparatus for graphically ascertaining the stability and trim of ships under assumed loads, comprising a diagram table, supporting means arranged along the longitudinal and transverse edges of said table, weights movably mounted upon said supporting means and means for sliding said weights thereon.



1,426,104. AUTOMATIC SASH-RAISING MECHANISM. ARTHUR DANIEL RAWLINGS, Clapham, London, and ERNEST JOHN RAWLINGS, Balham, London, England. Filed Nov. 6, 1920. Serial No. 422,344. 7 Claims. (Cl. 292—194.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. The combination with a door having a sash opening therein and a sash slidable vertically in said opening, of a pair of spring-controlled arms pivoted at their upper ends at opposite sides of said opening and provided with friction strips normally engaging said sash, and automatic sash-raising mechanism secured to the lower ends of said arms and movable in a horizontal plane

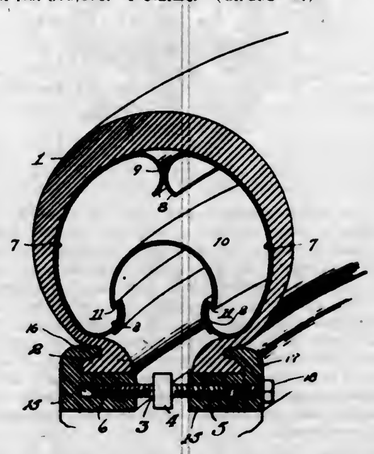


for swinging the arms on their pivots thereby to carry the friction strips out of contact with the sash and permit the same to be raised.

1,426,105. COMMUTATOR-SEGMENT MOUNTING. WALTER E. RICHTER, Toledo, Ohio, assignor to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Aug. 8, 1917. Serial No. 185,082. 5 Claims. (Cl. 171—321.)

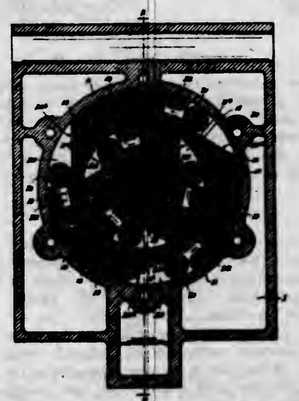
1. In a device of the class described, the combination of a supporting member; a plurality of segments mounted thereon; each segment having a notch in the end thereof; a locking ring on said member, engaging one side of each of said notches to position the segments, the inner edge of the ring being slightly spaced from the other side of each of said notches, and the outer edge of said ring being bent radially to form a support for the outer ends of the segments.

1,426,106. PULL-STRAP FIXTURE. PAUL RISSMANN, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed May 18, 1921. Serial No. 470,648. 4 Claims. (Cl. 296—48.)



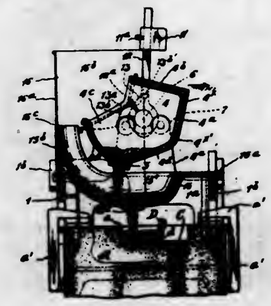
1. An attachment for securing pull straps to window sashes, having in combination, a loop provided with ears and adapted for attachment to the bottom of a window sash, and a pull strap fixture in the form of an angle plate and clamp having end extensions on one of the webs, said web adapted to engage between the loop and the bottom of the window sash and be removably secured therein by turning the said ears of the loop up to a right angular position to engage the said end extensions.

1,426,107. POLISHING COMPOSITION. WILLIAM ROTH, St. Louis, Mo., assignor of one-half to Edward F. Springmeyer, St. Louis, Mo. Filed Sept. 19, 1921. Serial No. 501,733. 1 Claim. (Cl. 134—24.)



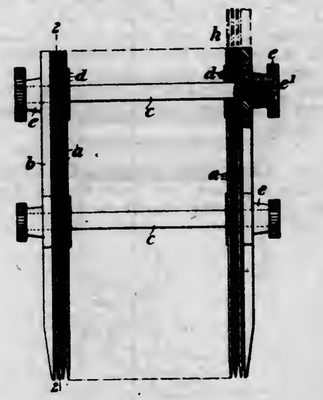
A composition of matter for polishing and cleaning furniture and the like, composed of about fifty per cent of turpentine, about twenty-five per cent of vinegar, about twenty-four per cent of crude oil, and about one per cent of powdered rotten stone.

1,426,108. RESILIENT TIRE. DANIEL M. ROTHENBERGER, Leesport, Pa., assignor of one-third to Ephraim P. Wanner and one-third to William M. Fryermuth, both of Reading, Pa. Filed Nov. 9, 1921. Serial No. 515,876. 4 Claims. (Cl. 152—8.)



2. In a resilient tire, a hollow tread, tread engaging members, two opposed spring members located inside the tread in opposed relation, the outer and inner edges of said members being curved and the outer curved edges bearing against each other; an annular resilient member centrally located within the tread, said resilient member having a ledge on each side and adapted for engagement by the inner curved edges of the opposed spring members.

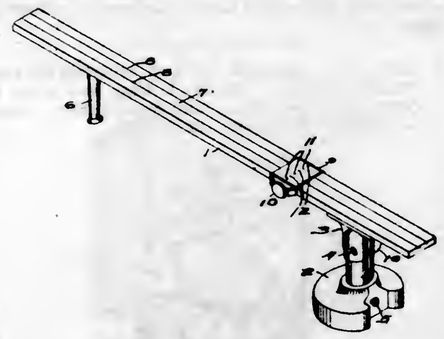
1,426,109. RATCHET DRIVE. CHARLES W. RUDOLPH and WILLIAM J. SCHLACKS, Chicago, Ill. Filed Apr. 1, 1920. Serial No. 370,517. 2 Claims. (Cl. 74—53.)



1. A frictional ratchet drive comprising an oscillatory hub provided with peripheral cam-actuating pockets and rollers therein, a ring flange surrounding said hub and the rollers thereof, and provided with peripheral cam-acting roller pockets and rollers therein, a roller runway surrounding said ring flange and the rollers thereof, the pockets and rollers of said hub and ring flange being arranged for frictional clutching actions in opposite directions, said ring flange having an extended portion at one side of said hub, a driving shaft extended through and connected to said hub and extended into and journaled in the said portion of said ring flange, and means at the other side of said hub for oscillating said driving shaft.

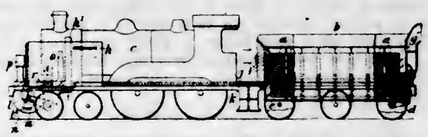
1,426,110. PROCESS OF AND APPARATUS FOR POURING METAL. DANIEL J. RYAN and LOUIS J. FELTES, Cleveland, Ohio. Filed Aug. 29, 1917. Serial No. 188,761. 60 Claims. (Cl. 22—79.)

1. In mechanism of the class described, the combination of a support, and a metal holder trunnioned on said support and adapted to be moved from a normal position to a discharging position, one side wall of said holder being formed with a discharge opening which is arranged above the level of the metal when the holder is in normal position but is moved to a position below such level when said holder is tilted, the upper portion of said side wall extending inwardly, whereby it operates to hold the metal when the holder is tilted to its discharging position.



1,426,111. HAIR COMB. JOHN SACKER, Finsbury Park, London, England. Filed Sept. 13, 1920. Serial No. 409,878. 3 Claims. (Cl. 132—16.)

1. A hair comb constructed of non-flexible material, comprising teeth, provided with thickened portions at their ends, to space said teeth apart, means for securing

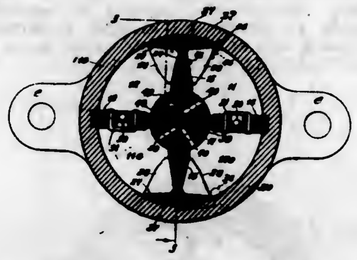


said upper ends together to form a handle, said handle being of a greater area than the portion comprising the teeth, to secure a firm grip by the hand of the user.

1,426,112. CHECKER BAR. JOHN H. SAMPLE, Toledo, Ohio. Filed Jan. 10, 1921. Serial No. 436,066. 5 Claims. (Cl. 33—125.)

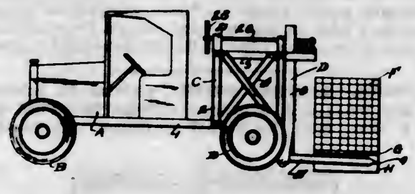
2. In a checker bar a standard, a bar pivotally supported by the standard, a saddle supported on the bar and having holes extending through the saddle, and holes extending a short distance into the metal of the saddle.

1,426,113. CONDENSING SYSTEM FOR LOCOMOTIVES. CYRIL EUSTACE SAYER, Purley, England. Filed July 22, 1918. Serial No. 246,102. 2 Claims. (Cl. 261—92.)



1. In a condensing system for locomotives, the combination with the condenser of a water cooler comprising a closed chamber the sides and ends of which are formed by the sides and ends of the tender, inlet and outlet openings in the said ends for the passage of air through the chamber and a cylindrical drum formed of many turns of sheet metal rotating with its lower part immersed in the water to be cooled and which water is contained in the lower part of the said chamber.

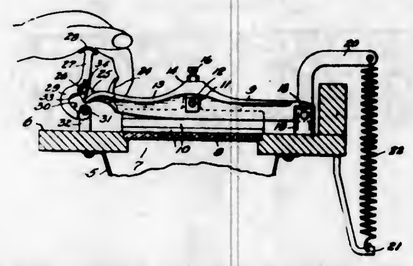
1,426,114. ARTIFICIAL INTERCHANGEABLE TOOTH. ABRAHAM SCHWARTZ and JOHN WIEDER, Boston, Mass. Filed Dec. 7, 1920. Serial No. 428,887. 6 Claims. (Cl. 32—9.)



2. An artificial tooth comprising a detachable and interchangeable porcelain or like facing recessed at the upper portion of the inner side thereof with undercut rebates around the sides of said recess, and a metal back of boxed form bearing rim portions having an interlocking fit with said facing, and said back presenting a base of substantial dimension engaging a ledge of said facing.

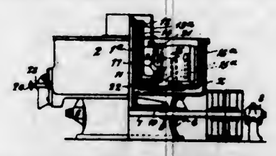
1,426,115. SHOCK ABSORBER. ALBERT B. SHULTZ, Buffalo, N. Y. Filed Aug. 8, 1921. Serial No. 490,442. 7 Claims. (Cl. 188—89.)

1. A shock absorber comprising a pressure chamber having a curved peripheral wall and two flat side walls arranged at right angles to the axis of said curved wall, and a piston oscillating in said chamber and having a hub journaled concentrically with said peripheral wall, a wing extending outwardly from said hub to said peripheral wall and engaging its opposite longitudinal edges with said side walls, circumferential flanges projecting circumferentially from opposite sides of said wing and in engagement with said peripheral wall, and radial flanges projecting from opposite sides of said wing adjacent to its longitudinal edges and in engagement with said side walls.



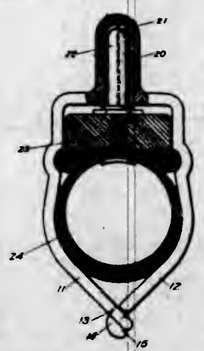
1,426,116. LOADING AND UNLOADING MACHINE. JOSEPH SIMONS, Los Angeles, Calif. Filed Apr. 29, 1920. Serial No. 377,517. 6 Claims. (Cl. 214—75.)

1. The combination with a vehicle, of an upright frame, an elevating means slidable along said frame and having a projecting portion arranged to engage beneath a load, said frame and elevating means having cooperating surfaces arranged to tilt said elevating means when at the bottom of said frame so as to lower the outer end of said load engaging portion of the elevating means.



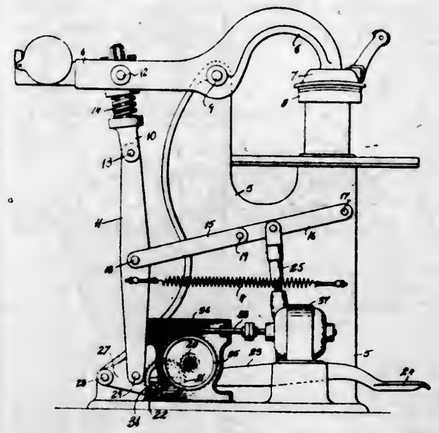
1,426,117. PHOTOGRAPHIC-PRINTING MACHINE. JULIAN H. SMITH, Seattle, Wash., assignor to Specialty Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 13, 1920. Serial No. 430,134. 1 Claim. (Cl. 95—77.)

In a photographic printing machine, a cabinet, a platen provided with axially aligned studs projecting laterally therefrom, a presser comprising a rectangular frame enclosing said platen, the side members of said frame being provided with slots to receive the platen studs, said frame members being also provided with apertured bracket elements extending over the platen, screws adjustably engageable in said apertures and, extending into proximity of the platen, springs interposed between the respective bracket elements and the platen,



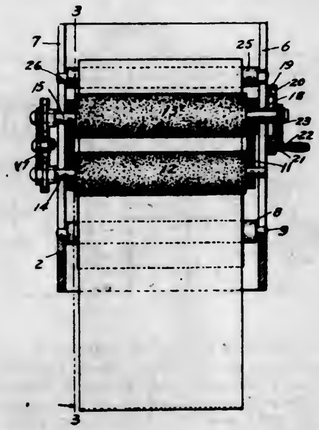
a catch provided on the cabinet, and means carried by the presser and engageable with said catch for releasably securing the platen under pressure upon the cabinet.

1,426,118. MACHINE FOR MIXING CHOCOLATE OR OTHER MATERIAL. ASBJORN SONSTHAGEN, Leytonstone, England. Filed Jan. 24, 1922. Serial No. 531,436. 28 Claims. (Cl. 259—107.)



1. A machine for mixing chocolate or other material comprising a suitable pan, a body revolving in said pan, outer plates upon said body arranged adjacent the wall of the pan and designed to direct the material inwards towards the center thereof, so shaped and arranged as to impart thereto a turning over movement at different heights, other similar plates to direct the material outwards from the center of the pan said plates being so shaped and arranged as to cause the material to be downwardly directed towards the bottom of said pan, and backwardly outwardly curved means at the bottom of said pan whereby the effective mixing is secured.

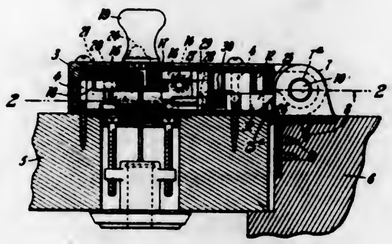
1,426,119. AUTO THEFT SIGNAL. JOHN H. SOUTHARD, Glendale, Calif., assignor to Miller-Chapman Company, a Corporation of California. Filed July 14, 1919. Serial No. 310,820. 4 Claims. (Cl. 70—90.)



1. An auto theft signal comprising: two members fitting about the valve stem of a tire; a hook formed on one of said members and so shaped that said members can be readily disassociated from each other when said signal is in the open position, said members being locked together by said hook when said signal is in the closed position; and means for locking said members together at a point remote from said hook.

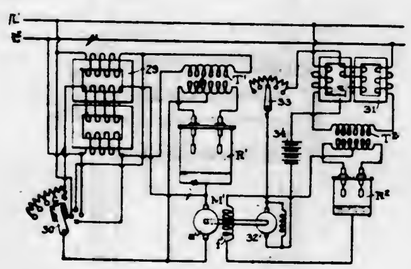
1,426,120. GARMENT PRESS. JAMES B. SPENCER and PETER EDUARD GELDHOF, Syracuse, N. Y., assignors, by mesne assignments, to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 14, 1920. Serial No. 416,936. 8 Claims. (Cl. 74—14.)

1. A pressing machine of the kind having co-operating press elements movable one in relation to the other, comprising a toggle linkage arranged to close the press by being straightened and open the press by being broken or collapsed, a second toggle adapted to straighten the first toggle, a lever arranged to operate the second toggle to close and open the press, a cam having connection with the first toggle to exert final maximum pressure on the press elements, and motor means to rotate the cam.



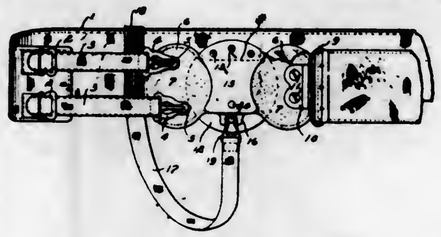
1,426,121. ROLLER-TOWEL CABINET. GEORGE A. STEINER, Salt Lake City, Utah, assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 15, 1918. Serial No. 262,658. 18 Claims. (Cl. 45—32.)

2. A towel cabinet having guide ways therein, a clean towel roll mounted in said guideways, a soiled towel roll



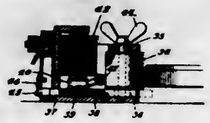
also mounted in said guideways, a frame interposed between said rolls and having freedom of vertical movement, feed rolls journaled in said frame and having a driving connection between them, one of said feed rolls engaging the clean towel and resting by gravity thereon, the other feed roll contacting with the soiled towel roll, revolution of said clean towel feed roll delivering the clean towel from one roll and synchronously winding the soiled towel on the other roll.

1,426,122. LOCK. LOUIE STERN, New York, N. Y., assignor to Stern & Welsbart, New York, N. Y., a Partnership composed of said Louie Stern and Benjamin Welsbart. Filed Apr. 30, 1921. Serial No. 465,912. 5 Claims. (Cl. 70—46.)



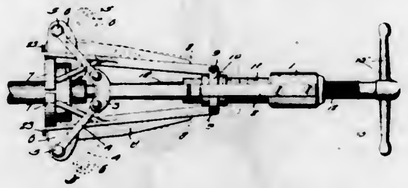
5. A lock including in combination a pair of opposed bolts each carried by a shank, means for guiding said shanks for parallel movement, spring means for urging said shanks relatively toward each other, hand actuated means for moving said shanks against their spring urging means, a latch between said shanks mounted for movement transversely to the direction of movement of said shanks, spring means for urging said latch in one direction, means on said latch for holding one of said shanks in retracted position, a keeper for receiving said bolts, and means on said latch for engagement with said keeper for moving said latch for releasing the shank held in retracted position by said latch.

1,426,123. MOTOR-CONTROL SYSTEM. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1919. Serial No. 284,665. 11 Claims. (Cl. 171—242.)



1. In a system of control the combination with a direct current motor of an alternating current supply source, rectifying means through which current is supplied to said motor from said source, and means for varying the impedance of said source in accordance with speed variations of said motor to maintain the speed of said motor substantially constant.

1,426,124. TRUSS. CASSIUS M. THOMAS, St. Louis, Mo. Filed May 11, 1921. Serial No. 468,645. 1 Claim. (Cl. 128—114.)

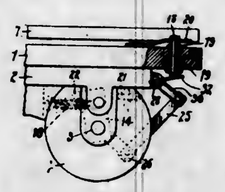


A truss comprising a suitable body-embracing member, a belt-plate having a reduced neck intermediate of its ends, the latter being detachably connected to said body-embracing member, a hard pad-base, a flat spring carried by the latter for detachably connecting said pad base to the reduced neck of said belt-plate, and a pad detachably carried by said pad-base.

1,426,125. STOP FOR PHONOGRAPHS. HERMAN WALTER TROEGER, Detroit, Mich. Filed June 17, 1919. Serial No. 304,855. Renewed Jan. 10, 1922. Serial No. 528,135. 2 Claims. (Cl. 192—116.)

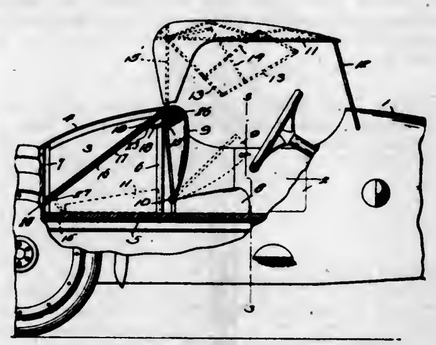
2. In combination with a phonograph, of a cam member adapted to engage the turn table to stop the same, a sliding member connected with the cam member for rotating the same, spring means for moving said sliding member, magnetic means for holding the sliding member in retracted position, a circuit including said magnetic means and means for completing the circuit when the reproducer reaches the end of the record.

1,426,126. GENERATOR AND MAGNETO BEARING PULLER. HENRY N. TUGGLE, Clay Center, Kans. Filed Aug. 11, 1920. Serial No. 402,865. 4 Claims. (Cl. 29—85.)



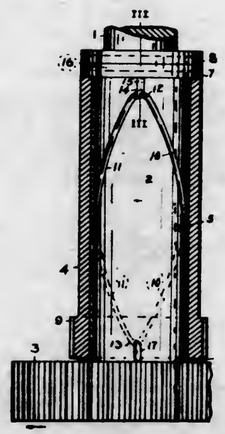
1. A tool of the class described, comprising a main threaded shaft, a sleeve traveling thereon, arms secured to said sleeve, an annular collar sliding on said sleeve, levers pivotally attached to said collar, toggle-joint-heads connected to said arms, toggle-levers attached to said first named levers and pivotally secured to said heads, a shaft connecting each pair of said toggle-joints, a chuck, jaws for the reception of said chuck therebetween, said jaws being secured to said first named levers and attached to said arms by means of said toggle-levers, and means for actuating said jaws for the purpose of gripping said chuck.

1,426,127. RATCHET WRENCH. WALTER I. TUTTLE, Providence, R. I., assignor to Frank Mossberg Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Apr. 23, 1920. Serial No. 375,935. 5 Claims. (Cl. 81—60.)



1. In construction for ratchet wrenches and the like, in combination, means comprising a ratchet adapted to engage and turn a nut, a mounting for said ratchet through which said ratchet is turned and provided with a substantially round recess directed toward said ratchet, a round pawl fitting said recess, and a spring within said recess urging said pawl toward said ratchet to lock said ratchet against relative turning in one direction, said pawl being provided at its engaging end with a pair of flattened surfaces angularly disposed with respect one to another and adapted to fit between the teeth of said ratchet and with a flattened lateral bearing portion adapted to hold said pawl against rotation in its recess.

1,426,128. PHONOGRAPH. HARRY S. UBER, Philadelphia, Pa. Filed Sept. 4, 1920. Serial No. 408,342. 3 Claims. (Cl. 185—43.)



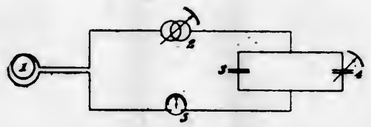
3. A phonograph having in combination a motor-spring, a winding-shaft for said motor-spring, a pawl to hold the winding-shaft against unwinding movement, a movable member upon which the pawl is fulcrumed, a spring to move the movable member against the action of the motor-spring when the latter is partially run down, a connecting rod pivotally attached at one end to the movable member, a rock-shaft actuated by the connecting rod, an arm upon said rock-shaft, a pin actuated by the said arm and a control lever for starting and stopping the phonograph adapted to be engaged by said pin and held against starting movement when the said movable member has been shifted against the reduced tension of the motor-spring.

1,426,129. DISAPPEARING AUTOMOBILE TOP. ANTHONY C. VELO, New York, N. Y., assignor of one-half to Frederick Trinca, West New York, N. J. Filed June 25, 1920. Serial No. 391,597. 8 Claims. (Cl. 296—116.)

1. In a disappearing top for automobiles, the combination of an automobile body having a seat compartment and a storage compartment, said storage compartment being provided with a forward, vertical entrance-way facing said seat compartment, a seat within the seat compartment having a hinged back movable forwardly and rearwardly to open and close the said entrance-way to said storage compartment, downwardly and rearwardly inclined guides within the storage compartment, pivot members slidably engaging said guides, a folding top including a frame having arms pivotally engaging said pivot members and slidable therewith along said inclined guides, whereby the folded top may be swung downwardly through the entranceway into said compartment and caused to travel along said guides so as to be received in said storage compartment and rest upon the floor thereof, and means coacting with said pivot members to secure the same against sliding movement upon the guides and to secure the top against pivotal motion on said pivot members.

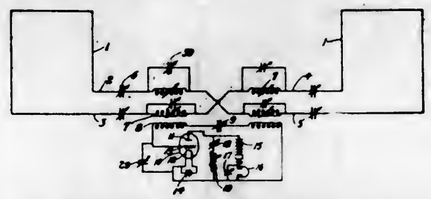
1,426,130. BEARING. LORENZO E. WAITE, Toledo, Ohio, assignor to The Toledo Milling Machine Company, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 18, 1920. Serial No. 417,744. 5 Claims. (Cl. 64—56.)

1. A pair of co-operating vertical bearing surfaces, one rotatable on the other, means rotating them in the same



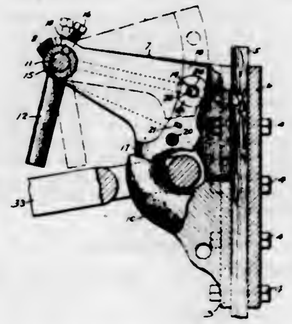
direction and at different speeds, a single spiral groove on one of the surfaces, the said groove beginning near the top of the bearing and running thence around the bearing surface 180° to a point slightly above the lower end of the bearing, and thence running around the bearing surface 180° to the point of beginning, the groove making a sharp angle at the lower end of the bearing, and means for feeding lubricant to the said point of beginning.

1,426,131. MAGAZINE PENCIL. JAMES H. WARING, Milwaukee, Wis., assignor of one-half to Paul F. Schryer, Wauwatosa, Wis. Filed June 17, 1921. Serial No. 478,256. 1 Claim. (Cl. 120—17.)



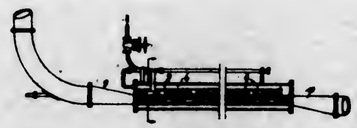
In a magazine pencil, the combination of a hollow plunger, means for reciprocating said plunger, a housing, a clutch collar rigidly secured to said plunger and reciprocable in said housing at one end thereof, a retaining ring secured to said housing at the other end, a second clutch collar slidably positioned in said housing adjacent said retaining ring, a plurality of balls interposed between said second collar and said retaining ring, a second retaining ring, a spring interposed between said second clutch collar and second retaining ring, a plurality of balls interposed between said second retaining ring and first mentioned clutch collar, and a mandrel extending through said hollow plunger, said first mentioned clutch collar, said second retaining ring, said first mentioned retaining ring and adapted to be gripped by said balls.

1,426,132. ELECTRICAL MEASURING INSTRUMENT. FRANK N. WATERMAN, Summit, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 23, 1917. Serial No. 156,980. 9 Claims. (Cl. 250—39.)



1. In a measuring instrument for high frequency oscillations, an oscillatory circuit including a coupling coil, and two means for varying the frequency of said circuit, one of said means having a greater range than the other and the means of lesser range having a scale graduated in terms of decrement.

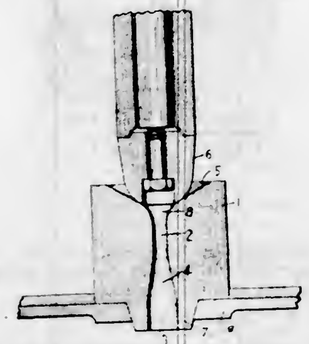
1,426,133. APPARATUS FOR PREVENTING STATIC INTERFERENCE IN RADIOSIGNALING. ROY A. WEAGANT, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 12, 1917. Serial No. 206,723. 17 Claims. (Cl. 250—20.)



17. At a receiving station, an antennae system extending horizontally an appreciable fraction of a wave length comprising directive portions directively arranged and conductive connections between said portions whereby electromotive forces due to signal waves received in a given order are combined, and electromotive forces due to disturbances simultaneously received are opposed therein.

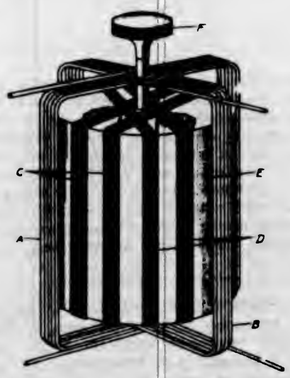
1,426,134. TRAILER COUPLING. TOBIAS WEBER, Los Angeles, Calif. Filed Mar. 7, 1922. Serial No. 541,796. 3 Claims. (Cl. 280—33.15.)

1. In a coupling the combination with a hook and a pivotal guard for closing the mouth of said hook, of locking means to positively hold said guard in a predetermined position relative to said hook, said locking means comprising a latch, means to manually set said latch in unlocking position, and means operated by opening of the guard to release said latch from unlocking position.



1,426,135. APPARATUS FOR FLUSHING CONDUITS. WILHELM WEBER, Wiesbaden, Germany, assignor to the Firm Gewerkschaft Hausbach II, Wiesbaden, Germany. Filed Jan. 22, 1921. Serial No. 439,273. 2 Claims. (Cl. 302—30.)

2. An apparatus to be inserted in flushing conduits for refuse from mining and designed to increase the speed of flow and to help to get over long horizontal or inclined parts of the tubular closed conduit comprising



in combination with the flushing conduit, with a tubular body inserted in said flushing conduit and with a source of fluid under pressure, a chamber mounted upon said tubular body designed to receive the fluid under pressure and radial channels arranged in the inner surface of the wall of the tubular body whose orifices stand tangentially and obliquely to the flow of material in said tubular body and designed to connect said chamber with the source of fluid under pressure, substantially as described and shown and for the purpose set forth.

1,426,136. NOZZLE. WILLIAM H. WILLS, Jr., Charlerol, Pa. Filed Apr. 18, 1922. Serial No. 554,935. 6 Claims. (Cl. 22—85.)

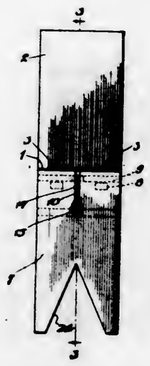
1. A nozzle for pouring molten metal and the like, comprising a body portion having a conduit, the upper and lower portions of which are of different diameters and are connected one to the other by an intermediate portion, the walls of which diverge downwardly and are arranged at an angle to the walls of both the upper and lower portions of said conduit.

1,426,137. RADIOGONIOMETER. GEORGE MAURICE WRIGHT, Chesterfield, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 16, 1921. Serial No. 461,940. 4 Claims. (Cl. 250—11.)

4. A radiogoniometer comprising two stationary coils in planes at substantially right angles and a rotatable search coil comprising two windings in planes at an acute angle with each other.

1,426,138. PISTON. EDMUND E. ALLYNE, Cleveland, Ohio, assignor, by mesne assignments, to Aluminum Manufactures, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed Jan. 9, 1919. Serial No. 270,318. 2 Claims. (Cl. 74—108.)

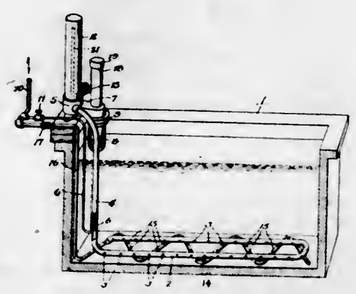
1 A piston for internal combustion engines composed of aluminum alloy and having on that part exposed to the combustion gases means for protecting the aluminum alloy from the corrosive action of said gases, said means comprising a coating of iron intimately united to the aluminum alloy.



1,426,139. HOISTING MACHINE. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed June 24, 1920. Serial No. 391,405. 1 Claim. (Cl. 254—187.)

The combination with a gas engine of standard type comprising a drive shaft, an explosive cylinder for driving said shaft, a pinion fixed upon said drive shaft, and a pair of fly wheels also fixed upon said drive shaft spaced apart at opposite sides of the engine, of a hoisting drum positioned partly between said fly wheels, a carrying shaft for said drum arranged substantially parallel to said drive shaft, a pair of bearing standards for said carrying shaft, a common base from which said engine and said standards rise, control levers for the drum closely adjacent the engine, and a drive gear for said drum fixed to said carrying shaft being positioned partly between said fly wheels and directly intermeshing with said pinion.

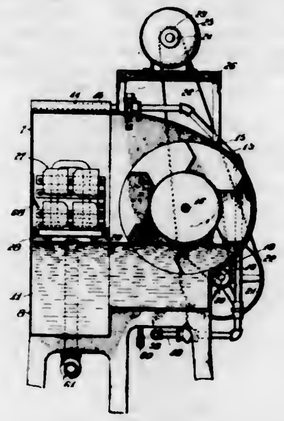
1,426,140. FOLDING CHAIR. WILLIAM B. ANSELMS, Norfolk, Va. Filed Apr. 5, 1922. Serial No. 549,746. 1 Claim. (Cl. 155—148.)



A folding chair having a seat, a front leg movably secured to the seat, a rear leg movably secured to the seat, brace strips movably secured to the seat between the legs, and means on each leg to interlock with a brace strip to hold the leg in operative position, the front leg

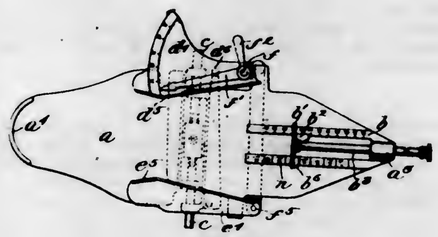
being formed with a slot extending above said means to permit movement of the brace strip in the folding opera-

tion, the rear leg being formd with a slot throughout the length thereof to receive both brace strips in the folding operation.



1,426,141. PROCESS AND APPARATUS FOR ELECTROPLATING. WILLIAM E. BELKE, Chicago, Ill. Filed Mar. 15, 1922. Serial No. 543,889. 14 Claims. (Cl. 204—1.)

1. In a process of electroplating, the circulation of the electroplating solution from the body thereof to a point above the body of the solution and the filtering of the solution thus drawn off before it is discharged on to the top of the body of said solution.

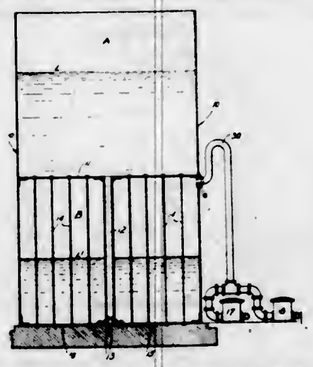


1,426,142. WASHING MACHINE. GEORGE S. BLAKESLEE, Chicago, Ill. Filed Oct. 5, 1918. Serial No. 257,015. 6 Claims. (Cl. 141—9.)

1. A washing machine comprising a tank, means for supporting the articles to be washed while they are moved over the water therein, means for throwing water from said tank upon the articles, showering means for discharging water upon said articles after they pass

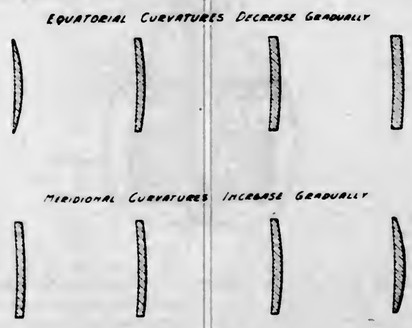
beyond said water-throwing means, and means for deflecting water delivered by said showering means laterally against said articles.

1,426,143. DEVICE FOR MEASURING FEET. ELMER J. BLISS, Boston, Mass. Filed Aug. 7, 1918. Serial No. 248,717. 14 Claims. (Cl. 33—3.)



1. A device for measuring feet embracing in its construction a foot supporting base provided with heel-positioning means combined with a pair of side-gauging members arranged on opposite sides of the ball portion of the base each of which is capable of movement independently of the other and a width-indicating device operatively interconnected with both said side members to indicate the width size of shoe for the foot being measured according to the width of the space between said gaging members, substantially as described.

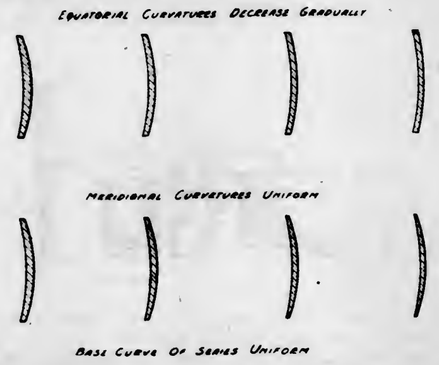
1,426,144. PRODUCTION OF CARBON. WALTER E. F. BRADLEY, Piermont, N. Y. Filed Sept. 4, 1918. Serial No. 252,586. Renewed June 15, 1922. Serial No. 568,584. 6 Claims. (Cl. 134—60.)



3. The method of producing carbon, which comprises passing a hydrocarbon gas into contact with iron oxide at a temperature in the neighborhood of 800° C. to 1,000° C. with exclusion of air, cooling the resulting mixture of iron oxide and carbon out of contact with air, and separating the carbon from the iron oxide.

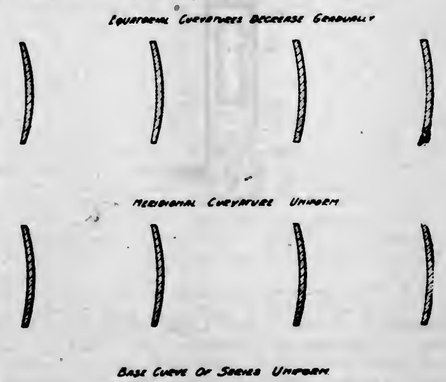
1,426,145. PRESSURE-GAS HOLDER. ARTHUR F. BAIDOE, Los Angeles, Calif. Filed Apr. 21, 1921. Serial No. 463,245. 2 Claims. (Cl. 48—174.)

1. A gas holder, embodying an upright shell, a horizontal partition across its central portion forming an upper water chamber and a lower gas chamber, means to admit gas to the lower chamber, and to withdraw gas from the upper part of the lower chamber under suitable pressures, an upright pipe in the lower chamber connected with the bottom and with the partition to form a stay connection between them and to form a support for the partition, and other stays extending between the bottom and partition to stay them substantially over their entire surfaces; the pipe having communication at its upper end with the upper water chamber and having communication at its lower end with the lower part of the lower gas chamber.



1,426,146. TORIC-LENS SERIES AND PROCESS OF MAKING SAME. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Nov. 12, 1920. Serial No. 423,669. 5 Claims. (Cl. 88—54.)

1. A toric lens series of varying thickness having substantially the same power and having a constant base curve on the concave sides thereof and convex toric surfaces on the convex sides with their curvatures in one principal meridian varying according to the thickness of the lenses.

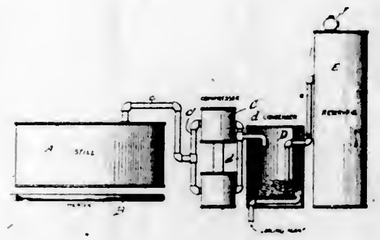


1,426,147. TORIC-LENS SERIES AND PROCESS OF MAKING SAME. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Nov. 26, 1920. Serial No. 426,562. 8 Claims. (Cl. 88—54.)

1. A toric lens series having a constant base curve on the concave sides thereof and toric surfaces on the convex sides thereof with one curvature thereof varying and the other curvature thereof being constant and the lenses having substantially the same power in the constant toric curvature.

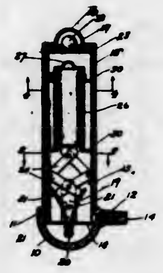
7. The process of making a toric lens series, which process consists in first grinding the concave side thereof with a constant curvature, mounting the same upon spotting wheels of varying diameters, and applying a grinding element to the exterior surfaces of the lenses for giving them a constant meridional curvature, whereby the equatorial curvatures of the lenses will vary and the lenses will have substantially the same power in the meridional curvature.

1,426,148. TORIC-LENS SERIES AND PROCESS OF MAKING THE SAME. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Dec. 6, 1920. Serial No. 428,759. 5 Claims. (Cl. 88—54.)



1. A toric lens series having a constant base curve on the concave sides thereof and toric surfaces on the convex sides thereof with a constant meridional curvature and with varying equatorial curvatures, the thickness of said lenses at the central portions and the lens power in the meridional curvature thereof being substantially constant.

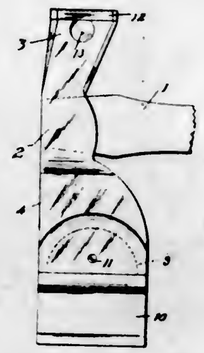
1,426,149. PROCESS OF PRODUCING LIGHT HYDROCARBONS. CHARLES R. BURKE, Pittsburgh, Pa., assignor to Lulu P. Burke, Pittsburgh, Pa. Filed Jan. 16, 1912. Serial No. 671,500. 17 Claims. (Cl. 196—27.)



4. The process of producing light hydrocarbons from heavy hydrocarbon oil, which consists in distilling such

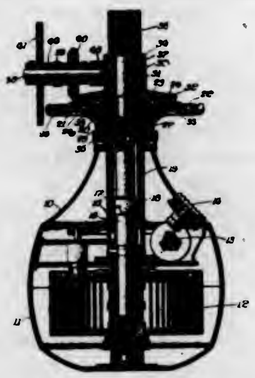
heavy hydrocarbon oil, then compressing the resultant vapors and then condensing same, the specific gravity and character of the resultant product being determined by the pressure used in compressing the distilled vapors.

14. The herein described process for producing a condensate of a predetermined specific gravity and character from a material producing vapors of varying specific gravity, which consists in vaporizing said material, then subjecting the vapors to a pressure sufficient to heat and compress the same to the temperature and pressure of conversion.



1,426,150. RADIATOR VALVE. JOSEPH CARMEL, New York, N. Y., assignor to Samuel Orenbuch, New York, N. Y. Filed Jan. 7, 1922. Serial No. 527,683. 3 Claims. (Cl. 236—66.)

1. A valve comprising a casing, an outlet in the upper end of said casing, a cap having vents therein surrounding said outlet, a light-weight sphere lying within said cap and adapted normally to close said outlet, an inlet near the bottom of said casing, a piston slidably mounted in said casing and having a plurality of horizontal radiating fingers separating said piston from the walls of said casing to allow the free passage of fluid past the same, a pair of thermostatic blades bound together at one end in the form of an erect V and mounted in the bottom of said casing and adapted to be actuated by heat to close toward each other, and a lazy tongs having its upper extremity in contact with said piston and its lower extremity in contact with said blades.

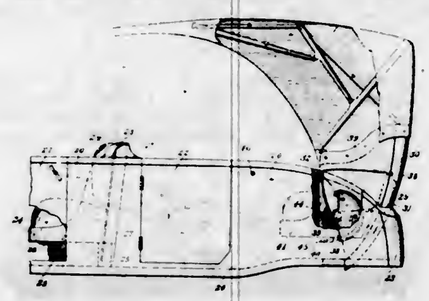


1,426,151. LATHER'S HATCHET. CHARLES S. CASON, Oakland, Calif. Filed May 27, 1920. Serial No. 384,569. 1 Claim. (Cl. 145—3.)

A lather's hatchet comprising a head, a handle secured thereto, said head being formed into a blade and having a semi-circular pocket, a hardened blade having a shank adapted to fit said semi-circular pocket with

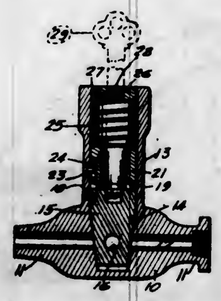
shoulders bearing on the hatchet blade entirely around the pocket, and a pin for securing the blade in place in said pocket.

1,426,152. ROTARY RAZOR SHARPENER. CAP B. COLLINS, Oak Park, Ill., assignor to Collins Safety Razors, Chicago, Ill., a Common Law Business Trust. Filed June 7, 1919. Serial No. 302,476. 3 Claims. (Cl. 51—89.)



2. A stropping attachment for razors comprising in combination a pair of stropping elements, means to revolve said elements, and means to detachably secure said attachment to a razor having blade-rotating means with said element revolving means operatively connected to said blade rotating means and with the stropping elements engaging the opposite sides of the edge of the blade, whereby the blade-rotating means actuates the element revolving means to strop the blade on both sides of its edge simultaneously during the rotation of the blade.

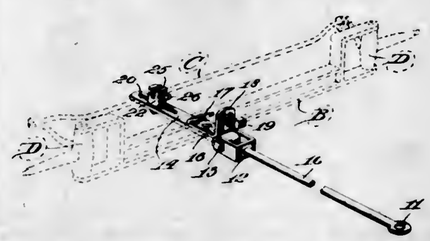
1,426,153. CONVERTIBLE VEHICLE BODY. BAZEL E. CARRM, New York, N. Y. Filed Feb. 26, 1918. Serial No. 219,236. 3 Claims. (Cl. 296—66.)



1. A convertible vehicle body comprising a fixed main section having a front compartment, a seat in said compartment, a deck member pivotally supported in the rear of said front compartment, a rear seat member

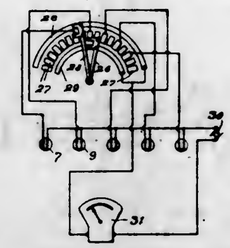
pivotally secured intermediate its seat and back to said pivotally supported member; said rear seat member, in one of its positions constituting a continuation of said pivotally supported deck member, and a member pivotally

secured adjacent to the upper end of said front seat, serving jointly with said rear seat member and the deck member first named to form a complete enclosure for the portion of said fixed main section to the rear of said front seat, substantially as specified.



1,426,154. GASOLINE-LINE LOCK. DANIEL R. COX and DAVID A. KINNIE, Pasadena, Calif. Filed June 27, 1921. Serial No. 480,603. 5 Claims. (Cl. 251—6.)

1. A gasoline line lock comprising a substantially tubular member adapted to be located in the gasoline line, a tapered valve plug arranged for rotation within said tubular member and provided with a port that is adapted to coincide with the opening through said tubular member, spring pressed means for maintaining the valve plug in position within said tubular member, a pair of lugs formed on top of the valve plug, there being a series of radially disposed recesses formed in the under side of said spring pressed means, which recesses are adapted to receive said lugs, and means for rotating said valve plug.



1,426,155. AUTOMOBILE TOWING BAR. BART E. DE VOL and JESSE R. MONCRIEF, Santa Ana, Calif., assignors to Universal Manufacturing Company, Santa Ana, Calif., a Corporation of California. Filed Dec. 22, 1920. Serial No. 432,610. 1 Claim. (Cl. 280—33.5.)

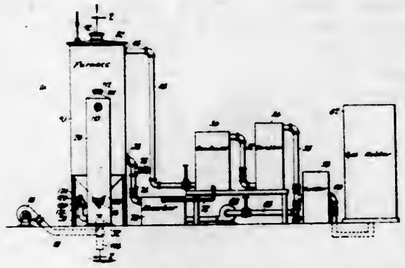
An automobile towing bar comprising a main bar having an attachment means at its forward end, a U-shaped yoke secured to the rear end of the bar and having its arms extending backwardly in horizontal planes, a pin extending through the rear ends of the yoke arms, a plate fitting between the yoke arms and having a bearing through which the pin extends, a bracket mounted upon the plate near its forward end and having a horizontally disposed base plate, one end of which terminates in a rebent hook and the other end of which extends vertically upwardly to form a bearing, a bolt mounted in the bearing, a lock nut upon the bolt, there being a longitudinally extending slot vertically through the rear end of the

plate, a stud arranged to slide freely in the slot, a U-shaped block extending upwardly from the stud, and a set screw in the U-shaped block so that an axle may be placed in the bracket and held in place by the bolt and lock nut, and a steering gear rod placed in the U-shaped block and held in place by the set screw.

1,426,156. DISPLAY STAND. THOMAS DINSEN and JOHN J. KRICKER, New York, N. Y. Filed Nov. 23, 1920. Serial No. 426,097. 13 Claims. (Cl. 211—24.)

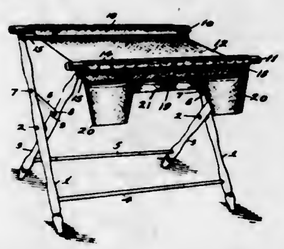
11. In combination, a display stand, a plurality of electrical devices mounted thereon in fixed position, a plurality of contact members selectively connected to said devices, terminal members adapted to be connected to a source of current and a plurality of contact devices for co-operating with said contact members to selectively connect any one or any two thereof with said terminal members.

1,426,157. WHEEL STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Dec. 13, 1920. Serial No. 430,272. 8 Claims. (Cl. 301—66.)



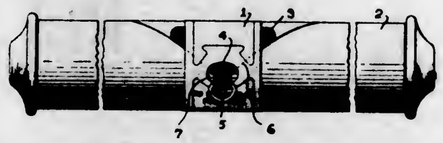
1. A sheet metal wheel body, comprising hub portions each having one-half of a series of tubular spokes integral therewith, the outer ends of the respective halves of each tubular spoke being integral with each other

1,426,158. WHEEL STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Dec. 13, 1920. Serial No. 430,273. 3 Claims. (Cl. 301—66.)



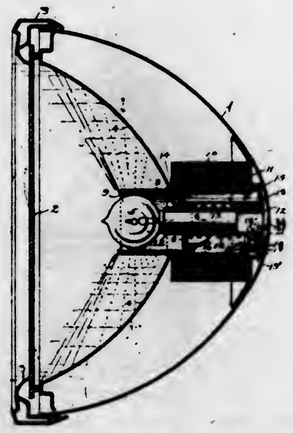
1. A sheet metal wheel body made in a single piece and comprising a hub member and radial spoke strips projecting therefrom and bent to provide free members projecting toward the axis of the hub member.

1,426,159. PROCESS OF PRODUCING COMBUSTIBLE GAS AND FOR CARBONIZING COAL. HENRY L. DOHERTY, New York, N. Y. Filed Sept. 7, 1918. Serial No. 253,045. 20 Claims. (Cl. 48—202.)



1. A process of producing combustible gas comprising, supporting a column of fuel in a shaft furnace, intermittently blasting a combustion-supporting gas transversely through a mid portion of said column to produce a mid zone of sufficiently high temperature to decompose steam, and circulating steam upwardly through said column between said blasting operations.

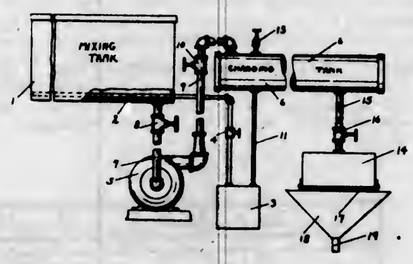
1,426,160. INFANT'S DRESSING STAND. WILBUR B. DRIVER, East Orange, N. J., assignor to New York Bath Manufacturing Co., a Corporation of New York. Filed Mar. 11, 1920. Serial No. 364,908. 3 Claims. (Cl. 45—11.)



3. A dressing stand for infants, comprising a folding frame including opposed pairs of pivotally connected legs, a latch associated with each pair of legs for releasably holding the same extended, opposed supporting bars connected to the upper portions of the opposite legs, stretcher rods located slightly below the supporting bars and connected with the opposite legs and a fabric top secured to the bars and about the rods so that the rods will hold the apron relatively taut and provide opposed ledges substantially as described and for the purposes set forth.

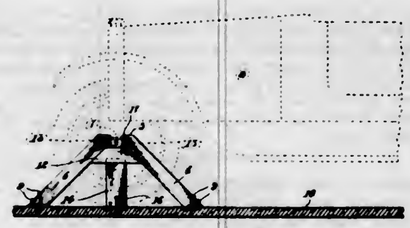
1,426,161. MUSIC-ROLL SEAL. EDWIN S. DWELLY, East Orange, N. J., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed July 1, 1921. Serial No. 481,922. 5 Claims. (Cl. 206—53.)

1. The combination with a music roll having a reinforced end presenting a tab and a relatively stiff edge adjacent thereto, of a label overlying said edge adjacent said tab to hold said end in rolled relation and adapted to be torn thereby when the tab is pulled outwardly.



1,426,162. LAMP DIMMER. CHARLES W. EISELE, Flint, Mich. Filed Oct. 18. 1920. Serial No. 417,776. 15 Claims. (Cl. 240—45.)

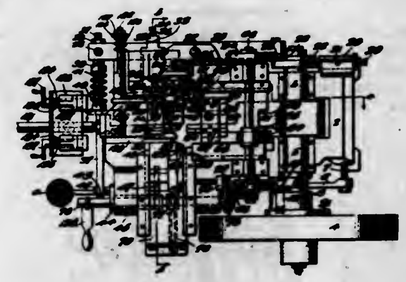
1. A lamp construction wherein, an illuminating element and a shield are relatively movable in relation with each other including, a spring tending to relatively move one of said members in one direction, and electromagnet adapted to relatively move said spring actuated member in the opposite direction, characterized by a pivoted detent member, having an operating arm extending into the path of travel of the movable member, and operatively engaged thereby to positively actuate the detent to insure locking engagement thereof, said operating arm being subject to magnetic influence upon a subsequent impulse through said electro magnet to effect a reverse oscillation of the detent and release of the locked element.



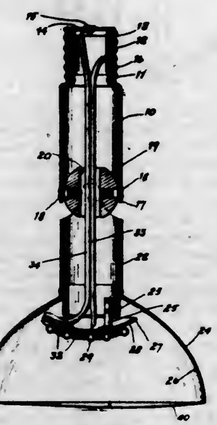
4. In a lamp, an illuminating element, a support therefor, and a shield for the illuminating member, said support and shield being relatively movable, a solenoid of which the movable member forms the core, a spring against the tension of which the solenoid core is attracted to relatively adjust said shield and illuminating element and means for intermittently energising said solenoid.

1,426,163. INSULATING MATERIAL AND METHOD OF MANUFACTURING THE SAME. FRANK C. EMRICK, Kalamazoo, Mich. Filed Feb. 17, 1921. Serial No. 445,029. 6 Claims. (Cl. 154—28.)

1. The method of manufacturing insulating material from mineral wool consisting of agitating the mineral wool in water containing laundry starch by means of an air blast, felting the wool and such starch containing water, subjecting to a high pressure and discharging while under such pressure upon a screen, pressing, and drying.



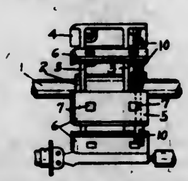
1,426,164. FLOOR LOADING BUCK. EDWARD S. EVANS, Detroit, Mich. Filed Sept. 15, 1921. Serial No. 500,829. 5 Claims. (Cl. 188—32.)



1. A floor loading buck for holding an automobile against undue forward or backward movement when being shipped in a freight car comprising a stirrup adapted to receive an axle of the automobile, means to support said stirrup from the floor of the freight car in a position to engage said axle, said supporting means being adapted to be secured to said floor, and means carried by the stirrup in position to engage opposite sides of the axle to yieldingly allow limited forward or backward shifting of the automobile held thereby.

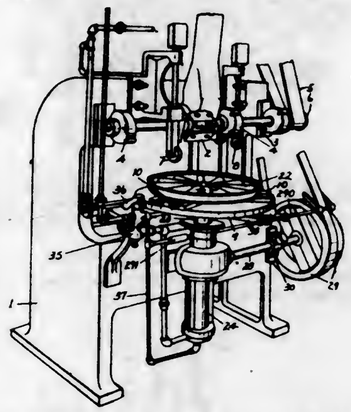
1,426,165. MACHINE FOR MAKING SPRING EYES. WILLIAM EVANS, Philadelphia, Pa., assignor to John Evans' Sons, Philadelphia, Pa., a Firm composed of William Evans, Robert Evans, and John H. Evans. Filed July 1, 1921. Serial No. 481,774. 10 Claims. (Cl. 29—33.)

1. In an eye-making machine, the combination of the following instrumentalities for forming a completed eye on the end of a blank, namely:—means for imparting a half turn to the end of a blank,—means for cutting a scarf on the half-turned end of said blank,—means for effecting the ultimate and complete bending of the partly bent and scarfed end,—and means which operate in continuing advance with the foregoing means, for conjointly with said means imparting a true cylindric interior to the eye during the period of its ultimate bending.



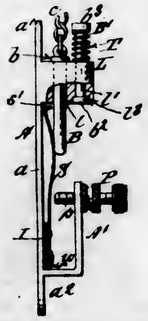
1,426,166. ELECTRIC HEATER. TOBIAS M. FEDER, Brooklyn, N. Y. Filed Dec. 7, 1921. Serial No. 520,529. 5 Claims. (Cl. 219—34.)

3. An electric heating device comprising upper and lower shell members, a ball pivotally suspended between ears of the upper shell member, said lower member having similar ears pivotally attached to the said ball at right angles to the upper shell member, a parabolic reflector secured to the lower shell member and adapted to reflect heat rays downwardly, means for releasably retaining the lower shell in angular position and means for securing the device in a socket.



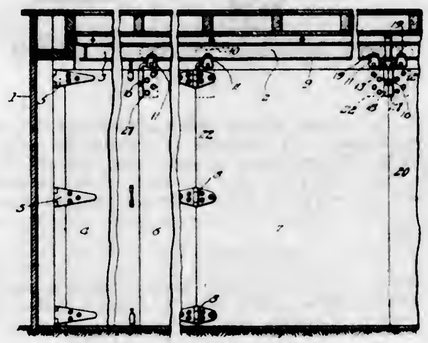
1,426,167. REVOLVING CUTTER HEAD FOR SPOKE-TURNING LATHES. HENRY FLICK, Jackson, Mich. Filed Oct. 4, 1921. Serial No. 505,242. 1 Claim. (Cl. 144—223.)

The combination of a cutter head with main blades curved at one end and straight at the other, and a spider with obliquely disposed saws at the outer ends of its arms



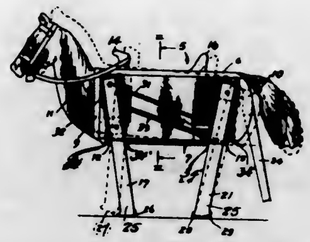
disposed between the straight ends of the said blades whereby a groove is cut at the same time the body of a spoke is turned, as specified.

1,426,168. FACING MACHINE FOR FACING THE CENTERS OF WOOD SPOKE WHEELS. HENRY FLICK, JOHN P. VOELKER, and HARRY DUNN, Jackson, Mich. Filed Oct. 14, 1921. Serial No. 507,761. 7 Claims. (Cl. 144—154.)



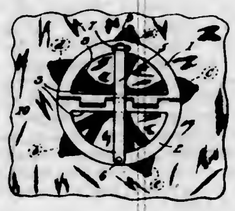
1. The combination of a suitable frame-work, a revolving cutter head carried by an overhanging portion thereof, means for driving the same, a horizontal revolving work table disposed with a raised center to one side of the cutter head, a center stop pin therefor and a corresponding stop carried by the overhanging portion, clutch jaws radially disposed on the said plate with shanks projecting there-beneath, segment pinions with pitman connected to actuate said jaws simultaneously, a central segment gear meshing with the said pinions to actuate the same simultaneously, a trunnioned air cylinder carried on the under side of said plate connected to an arm on the central gear for operating the same, an upright air cylinder with a piston for carrying the said table to and from the said cutter head, a gear for revolving the plunger for rotating the said table, a tight and loose pulley with air actuated belt shifter, and air connections for simultaneously operating the said clutch and plunger cylinders, coacting as specified.

1,426,169. BURGLAR ALARM. GEORGE WILLIAM FRANK, Jr., and FREDRICK CARLOCK, Jersey City, N. J., assignors to themselves and George William Frank, Sr., Jersey City, N. J. Filed Aug. 25, 1921. Serial No. 495,437. 2 Claims. (Cl. 200—55.)



1. In a device of the character designated, the combination of a back plate formed with a projecting lug having a recess for the reception of a locking bolt, said locking bolt formed with a shoulder, a spring bolt resting in said lug, formed with a shoulder on its lower end, a spring contact attached to said back plate, but insulated therefrom, said spring contact formed at its upper end with a shoulder for engagement with the shoulder on the spring bolt, a bracket formed on said back plate, and projecting therefrom, and an adjustable contact mounted thereon, for the purpose described.

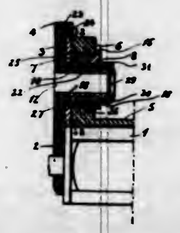
1,426,170. GARAGE-DOOR CONSTRUCTION. PETER FRANTZ, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Apr. 20, 1918. Serial No. 229,851. 8 Claims. (Cl. 20—20.)



5. In a sliding door structure, a track, door hangers having wheels to travel on said track, a rod depending from each hanger, each rod being bent to extend horizontally from the hanger and then downwardly to the door, a swivel bearing on the door for each rod, whereby each rod turns about a vertical axis relatively to the door, and means to maintain each rod in the vertical plane of its allotted hanger.

1,426,171. TOY VEHICLE. JOSEPH H. FREDRICH and CHARLES BOCK, San Francisco, Calif. Filed Oct. 17, 1921. Serial No. 508,090. 1 Claim. (Cl. 46—22.)

A device of the character described, comprising a body simulating that of an animal, legs pivotally connected to said body and engageable with the ground for propelling the device upon a rocking movement of a rider seated on said body portion, said legs terminating in enlarged end portions, and inclined to limit the rocking movement of a rider thereon, tension means connected separately to each pair of legs and to the body of the device for controlling the movement of the said legs, buffers positioned on said body and adapted to receive the impact of the legs, and auxiliary safety means secured to the rear of the body, said means comprising a rod of a lesser length than the legs of the device and adapted to contact with the ground upon an extreme rearward rocking movement of the device.



1,426,172. METHOD OF AND APPARATUS FOR MAKING AND SEWING STAR FORMS ON FABRICS. JOHN A. FREEZE, Sayreville, N. J. Filed Sept. 22, 1921. Serial No. 502,344. 5 Claims. (Cl. 223—52.)

1. A method of making and sewing star forms on fabrics consisting in forming a star upon a collapsible frame, placing the frame and formed star upon a fabric, stitching the star to a fabric and then collapsing the frame to disengage the frame from the star and fabric.

3. A device for forming stars embodying a pair of hinged semi-circular frame sections, radial points carried by the sections and means for holding the sections in circular formation.

1,426,173. ADJUSTABLE BEARING. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Dec. 27, 1918. Serial No. 268,554. 8 Claims. (Cl. 64—53.)

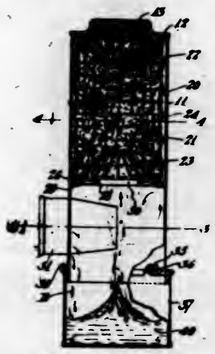
1. As an article of manufacture, a bushing having straight sides and rounded ends and an eccentric opening therethrough, one of said ends having a groove to be engaged by a fastening element and the other end having a recess to be engaged by a similar element, said recess communicating with said opening, and an external flange on the bushing.

1,426,174. POLYCHROME CANDLE AND METHOD OF MAKING SAME. KARL V. GAMBELL, Chicago, Ill. Filed Apr. 14, 1921. Serial No. 461,356. 6 Claims. (Cl. 87—21.)

6. The method which consists of forming a plain wax candle, applying to said candle a jacket of hot wax having a suitable pigment entrained therein, permitting said jacket to cool, and applying thereto while said candle is supported in the atmosphere, an unrestrained covering of hot wax having a different pigment entrained therein, said covering being arranged irregularly and unsymmetrically on said jacket so as to produce homogeneous, variegated polychrome candle.

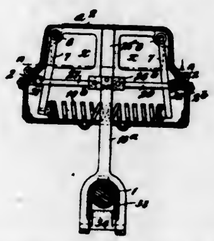
1,426,175. PICKER-HEAD HOLDER. ROBERT S. GAMBRELL, Honea Path, S. C. Filed Sept. 6, 1921. Serial No. 498,739. 1 Claim. (Cl. 139—21.)

A picker head holder comprising a member including spaced limbs and a cross piece connecting the limbs at one end thereof, and said limbs being inset with relation to the cross piece to form inwardly directed flanges to reinforce and strengthen said holder as and for the purpose specified.



1,426,176. TRACE HOOK. JAMES A. GARDNER, Dixon, Miss. Filed Mar. 25, 1921. Serial No. 455,546. 1 Claim. (Cl. 24—230.5.)

A trace hook of the character described comprising a shank terminating to provide a single convolution wholly disposed to one side of the shank, and adapted to be received by the adjacent link of the trace, the terminal of said convolution being also curved to form a continuity thereof and projecting a slight distance beyond

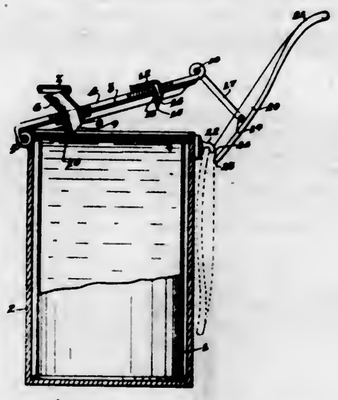


the circumference of said convolution, and spaced an appreciable distance from said shank to engage and bind against the outer edge of said link for the purpose specified.

1,426,177. WET-FILTER AIR CLEANER. HERMAN H. GARNER, Pomona, Calif. Filed Jan. 8, 1921. Serial No. 435,908. 10 Claims. (Cl. 183—8.)

1. An air filter comprising: a casing adapted to contain a body of liquid; a filter in said casing above said body of liquid; and means for producing an air vortex in said casing of sufficient strength to draw said liquid into said filter.

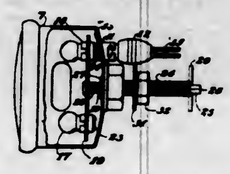
1,426,178. SPRING SUSPENSION. ALFRED WARWICK GATTIE, London, England. Filed Feb. 3, 1922. Serial No. 533,777. 9 Claims. (Cl. 267—20.)



1. In a suspension and shock absorbing device, a case secured to the object to be suspended: an axle; the case being interposed between said axle and object; a plunger operatively connected to said axle and movable in said case; lever means operatively connected to said case; spring means appurtenant to said lever means and arranged for cooperating therewith for compression thereby; and operatively disposed members carried by said plungers comprising links cooperating with said lever means; the ends of the links being provided with means for engaging inclined surfaces appurtenant to said case.

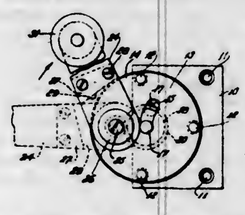
1,426,179. CONVEYER. GEORGE GLASS, Milwaukee, Wis. Filed Mar. 1, 1919. Serial No. 279,956. 1 Claim. (Cl. 198—140.)

A conveyer construction comprising a series of bucket members connected together to form an inclined run, sprockets at the upper end of said run around which said buckets pass, each bucket member comprising a pocket portion and a bridging portion, said buckets lying substantially within the circumferential confines of the sprockets as they travel over said sprockets, said pocket portion being open on top to form a mouth lying substantially in a plane extending longitudinally of the plane of travel of the bucket, and comprising front, rear and side walls, said front, rear and side walls being rigid with respect to each other, said pocket being suspended in substantially vertical position on said inclined run, said bridging portion bridging the space between adjacent pockets and lying substantially in the plane of the mouth of its pocket, the front wall of the pocket forming an acute angle with respect to the mouth, and the rear wall of said pocket forming an obtuse angle with respect to the mouth, the rear wall and bottom of the bucket forming a heel portion which fits into and is embraced by the bridging portion and front wall of the succeeding bucket as the buckets pass around the sprockets, the teeth of said sprockets having a pitch equal to the distance between the pivotal connections between the buckets, and having operative engagement with the buckets at the pivotal points, the pivotal connection between the buckets being at the point of connection between the bridging portion of one bucket and the adjacent rear wall of the preceding bucket.



1,426,180. CAN OPENER AND DISPENSER. CARL GOTTFREDSEN, Los Angeles, Calif. Filed July 22, 1920. Serial No. 398,266. 3 Claims. (Cl. 65—61.)

1. The combination with a receptacle for a can, of a closure lid arranged to overlie said can and having a reinforcing strip diametrically across said lid and one end pivoted to said receptacle, a discharge spout and air vent carried by the lid and supported by said strip and arranged to puncture said can, the other end of said strip having a pivotal link connection with a lever, said lever having one end adapted to engage an outwardly extending lug fastened to said receptacle so that the lever can draw said lid downwardly against the can and retain the same in position.



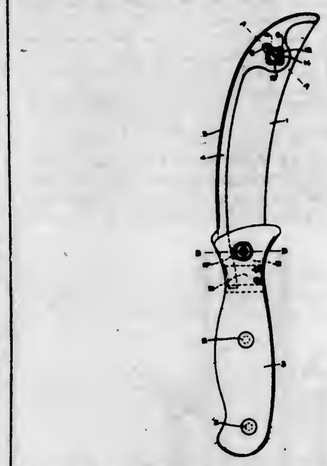
1,426,181. AUTOMOBILE LAMP. FRANK E. GREGORY, Sacramento, Calif., assignor of one-fourth to George A. McKinley, Vacaville, Calif. Filed June 18, 1920. Serial No. 389,946. 2 Claims. (Cl. 240—37.)

1. In a device of the character described, the combination of a lamp casing having a centrally located aperture in the rear wall thereof, a rotatable disk mounted within said casing, said disk having a rearwardly extending rod adapted to enter the aperture of said casing, a series of lamps detachably mounted on said disk, contacts detachably carried on said casing and adapted to

register with said lamps when said disk is rotated, means for rotating said disk, tension means mounted between said disk and said casing, said tension means serving to position the said disk and prevent rotation of said disk.

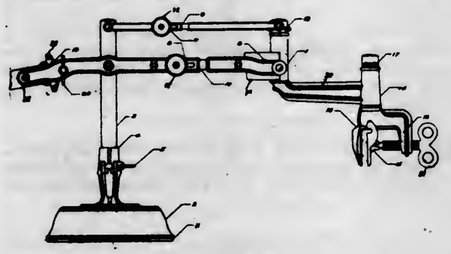
1,426,182. CAN OPENER. CARL WILH. GROSS, Bridgeport, Conn., assignor to Gross and Steiner, Bridgeport, Conn., a Copartnership consisting of Carl W. Gross and Victor A. Steiner. Filed Mar. 7, 1921. Serial No. 450,332. 9 Claims. (Cl. 30—3.)

1. In a can opener, a pair of spaced apart upper and lower plates having duplicate, aligning slots, and can opening means associated with said plates.



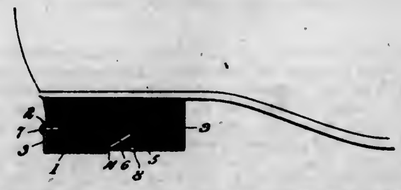
1,426,183. NECKTIE HOLDER. THEODORE M. GUEST, Rochester, N. Y., assignor to Guest Neckwear Company, Rochester, N. Y. Filed Nov. 12, 1920. Serial No. 423,626. 1 Claim. (Cl. 2—84.)

A necktie holder including a single length of spring wire bent to form a loop having a contracted open lower end, upwardly diverging curved arms having free upper ends, and integral connections between the arms and the sides of the contracted open end of the loop, said connections being spaced apart to provide a broad button receiving space opening into the contracted open end of the loop and being disposed in a plane at an angle to the plane of the arms, thereby to support the loop back of the arms and at an angle to the plane thereof and to the plane of the connections.



1,426,184. PROTECTING DEVICE FOR THE EDGE OF BUTCHERS' KNIVES. FRITIOF CORNELIUS HAMMAR, Gottenborg, Sweden. Filed July 3, 1922. Serial No. 572,667. 3 Claims. (Cl. 30—9.)

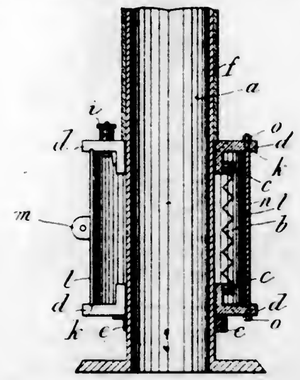
2. A protecting device for the edge of butchers' knives comprising an edge protecting member attached to the blade of the knife by means of a pin passing through holes in said member and blade, a handle for the knife,



a spring provided adjacent to said handle, and said spring adapted to retain the one end of said protecting member when in operative position.

1,426,185. WASHING MACHINE FOR WASHING FABRICS. JACOB J. HARPEL, Elmira, N. Y. Filed Apr. 14, 1920. Serial No. 373,880. 4 Claims. (Cl. 259—124.)

1. In a washing machine of the character specified, a plunger, relatively upper and lower bars pivotally connected at one end to the stem of the plunger and spaced apart and a support having the opposite end of the bars pivotally connected thereto, one of said bars comprising relatively adjustable sections whereby the inclination of the plunger within certain limits may be varied.



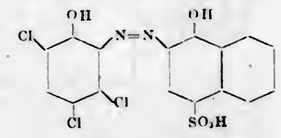
1,426,186. HEEL PLATE. NOAH HARRIS, Indianapolis, Ind. Filed Jan. 13, 1922. Serial No. 529,020. 1 Claim. (Cl. 36—73.)

In a wear plate for rubber heels, comprising a body portion of oval shape, lugs formed integral on the

periphery of the body portion; one of the lugs extending at right angles to the body portion and adapted to bear against the back of the heels and the other of the lugs extending at an approximate angle of forty-five degrees with respect to the body portion and having a pointed end whereby the last named lug may be forced into the heel, each of the lugs having elongated slots therein to receive fastening means whereby pressure exerted on the plate will cause the fastening means to move in the slots.

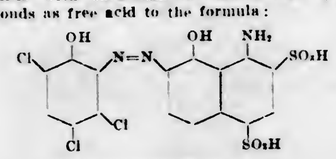
1,426,187. METHOD OF AND MEANS FOR VAPORIZING FUEL FOR INTERNAL-COMBUSTION ENGINES. WILFRID M. HARRISON, Cheshunt, England. Filed Apr. 21, 1921. Serial No. 463,288. 7 Claims. (Cl. 219—38.)

1. The herein described method of supplying gaseous fluid to an internal combustion engine in heat augmented condition which consists in passing the fluid through a conduit, electrically heating the conduit, and preventing loss of heat from the fluid by radiation from the conduit after the fluid has passed the heating zone, substantially as described.



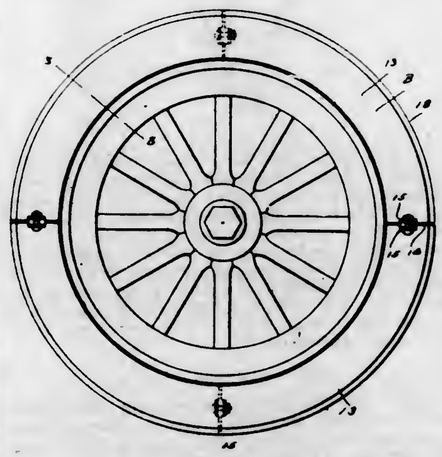
1,426,188. SHUTTLE FOR LOOMS FOR WEAVING. JAMES E. HAUGHTON and GEORGE BERRY, Manchester, England. Filed Mar. 15, 1921. Serial No. 452,525. 1 Claim. (Cl. 139—46.)

In a shuttle formed with a recess in its head, a guide block arranged in said recess, comprising three portions, one approximately horizontal, the second inclined thereto, and having a depression at their junction through which the yarn passes and is presented to the eye, the third portion having an aperture for the yarn and arranged in front of the other two portions in a vertical plane at right angles to the longitudinal axis of the shuttle to direct the yarn and prevent it ballooning out of position between the other two portions.



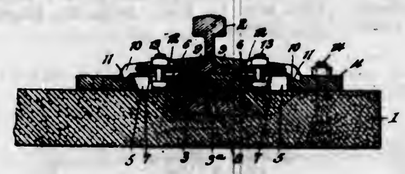
1,426,189. ORTHO-OXYAZO DYES. WILHELM HERZBERG, Berlin-Wilmersdorf, and OSWALD SCHARFENBERG, Berlin-Schoneberg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Nov. 5, 1921. Serial No. 513,169. 7 Claims. (Cl. 260—94.)

7. The new ortho-oxy-azo-dye which forms in the dry pulverized shape a dark powder soluble in water with reddish-violet color from which an acid separates a red precipitate, the aqueous solution becoming bluish-red by addition of sodium carbonate and orange by addition of sodium hydroxide, yielding upon reduction 3.4.6-trichlor-2-amino-1-oxybenzene and 2-amino-1-oxynaphthalene-4-sulfonic acid, dyeing on wool in the presence of an alkali metal chromate and an ammonium salt, such as ammonium sulfate violet tints of excellent fastness, the same shades being obtained by dyeing on wool mordanted with a chromium mordant or by dyeing wool in an acid bath and treating these tints afterwards with chromium mordants, which dye corresponds as free acid to the formula:



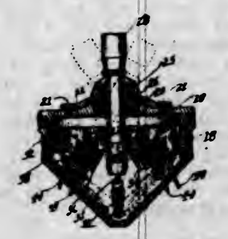
1,426,190. ORTHO-OXYAZO DYES FOR WOOL. WILHELM HERZBERG, Berlin-Wilmersdorf, and OSWALD SCHARFENBERG, Berlin-Schoneberg, Germany, assignors to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Nov. 5, 1921. Serial No. 513,170. 7 Claims. (Cl. 260—92.)

7. The new ortho-oxyazo dye which forms in the dry pulverized shape of its sodium salt a dark powder soluble in water with greenish-blue color, the aqueous solution becoming violet by addition of sodium carbonate, red by addition of sodium-hydroxide and red-violet by addition of an acid, yielding upon reduction 3.4.6-trichloro-2-amino-1-oxybenzene and 1.7-diamino-8-oxynaphthalene-2.4-disulfonic acid, dyeing on wool mordanted with chromium mordants greenish-blue tints, the same shades being obtained by dyeing wool in an acid bath and treating them afterwards with chromium mordants, this dye which corresponds as free acid to the formula:



1,426,191. TIRE PROTECTOR. ELIAS A. HITCH, Guymon, Okla. Filed Aug. 6, 1921. Serial No. 490,246. 4 Claims. (Cl. 150—54.)

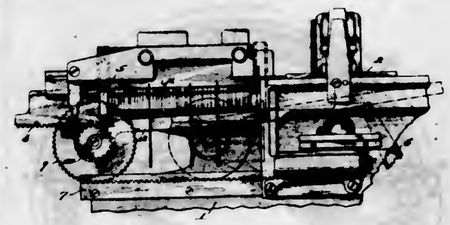
1. A pneumatic tire protector comprising opposite side members, each member being divided into a plurality of



sections, means for interlocking the corresponding sections of the respective members and define a rib arranged circumferentially of the tire for the purpose specified, and means for securing the sections of each member together.

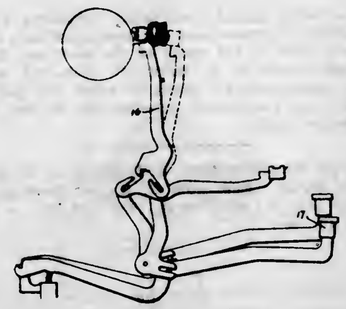
1,426,192. RAIL ATTACHMENT. JACOB HITZERT, Saginaw, Mich. Filed Apr. 5, 1922. Serial No. 549,676. 4 Claims. (Cl. 238—298.)

1. In rail fastening means, the combination of a plastic tie, a block of suitable material anchored in each end of the tie, said block having a recess therein, a plate adapted to rest upon and be secured to the tie and having a projection that rests in the aperture of the block, a bolt and nut receiving aperture formed in the plate adjacent the projection and on each end of the plate, transverse kerfs formed in the plate and a dog having a chamber and aperture to receive bolts whereby the dog is secured to the plate; said dog having one end that bears against the web of a rail and having the other end seated in one of the kerfs of the plate.



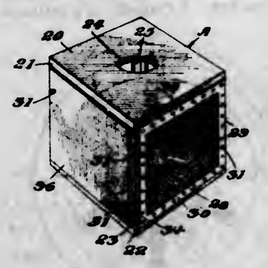
1,426,193. SWITCH FOR AUTOMOBILE DIRECTION INDICATORS. JOHN E. HOLMGREN, San Francisco, Calif. Filed Jan. 3, 1921. Serial No. 434,691. 3 Claims. (Cl. 200—6.)

1. In a selective switch control mechanism for a signal device, a cup shaped member, a conducting ring positioned within said member, a plurality of pairs of spring contacts connected to said ring, one of each of said pairs of contacts being directly connected to said ring, the other of each of said pairs being insulated therefrom, and a universally movable switch element joined to the base of said cup member and adapted to bridge any one pair of said spring contacts.



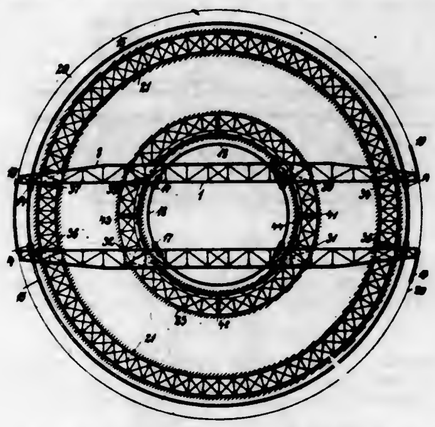
1,426,194. TYPOGRAPHICAL MACHINE. THOMAS S. HOMANS, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 19, 1921. Serial No. 508,684. 9 Claims. (Cl. 199—48.)

1. In a typographical machine having a line-transfer carriage and a reciprocatory actuating member therefor, means for enabling said carriage to advance lines of matrices of a length greater than the usual length, comprising motion-transmitting means operatively connecting



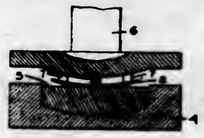
such carriage and actuating member and operative to reciprocate the carriage through a range greater than the range of reciprocation of the actuating member.

1,426,195. TYPEWRITER ATTACHMENT. WILLIAM JŪSABRŌ IWAMI, New York, N. Y. Filed June 13, 1921. Serial No. 477,141. 2 Claims. (Cl. 197—184.)



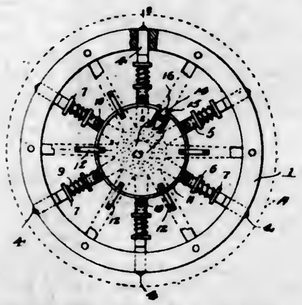
1. A typewriter attachment including in combination with the type bar of a conventional typewriting machine, of a cleaning element detachably secured to said bar.

1,426,196. FILTER. ANDERS JORDAHL, New York, N. Y., assignor of one-half to Midwest Steel and Supply Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 14, 1921. Serial No. 522,447. 5 Claims. (Cl. 183—46.)



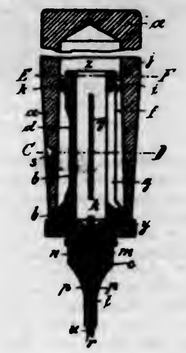
1. A filter comprising a frame unit having a plurality of open sides; filter units adapted to be secured in some of said open sides; and plates adapted to be secured in the remaining open sides, the filter units being interchangeable with each other and with the plates.

1,426,197. SHED FOR AIRSHIPS. BRUNO KANNENBERG, Berlin-Grunewald, Germany. Filed Feb. 19, 1921. Serial No. 446,478. 7 Claims. (Cl. 189—15.)



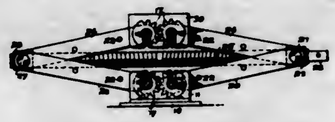
1. A rotary shed for air ships, comprising a pair of horizontal side frames, and ring means having a diameter at least equal to the width of the shed, and to which the side frames of the latter are connected, said ring means constituting tie means by which the side frames of the shed are united, substantially as and for the purpose set forth.

1,426,198. RUBBER HEEL AND METHOD OF MAKING THE SAME. FREDERICK R. KEITH, Randolph, Mass. Filed Dec. 2, 1921. Serial No. 519,320. 4 Claims. (Cl. 18—59.)



4. A rubber heel having a concavo-convex reinforcing plate pressed into the rubber constituting the heel before it is vulcanized and while it is soft and plastic.

1,426,199. TRACTION ATTACHMENT FOR WHEELS. PHILIP J. KENNY, Chicago, Ill. Filed Feb. 19, 1921. Serial No. 446,453. 5 Claims. (Cl. 301—47.)

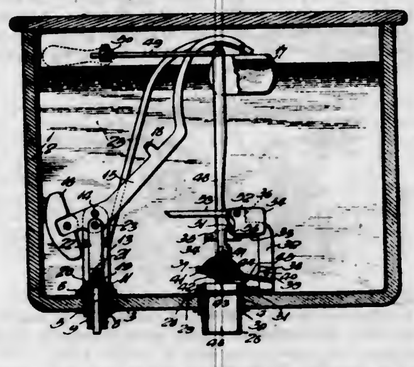


4. In a traction attachment, an auxiliary rim, a plurality of traction studs extending through said rim and normally resting in operative position, rollers rotatably carried by the inner ends of said studs, an expansible ring engaging said rollers and having its ends inturned, an expanding cam between said inturned ends and adapted to expand said ring for forcing said studs into inoperative position, said cam provided with flat portions at its maximum radii to hold said ring expanded, and yieldable means for maintaining said rollers in engagement with the perimeter of said expansible ring.

1,426,200. FOUNTAIN PEN. THEODOR KOVÁCS, Berlin, Germany. Filed Sept. 13, 1920. Serial No. 410,030. 8 Claims. (Cl. 120—43.)

7. Fountain pen comprising in combination with a hollow pen holder serving as an ink reservoir, a body inserted in said pen holder and stopping the open end the same being of smaller diameter than said pen holder so that between the outer surface of which body and the inner wall of the pen holder a separate capillary space is formed which is connected on the one hand with the ink reservoir and on the other hand with the atmosphere, a ring at the inner end of said body bearing against the inner wall of the pen holder having a slot connecting said capillary space with the ink reservoir and a capillary groove as extension of said slot designed to retain ink even if the ink level in the reservoir stands below said capillary groove, an extension at the outer end of said body having a capillary boring and a mouth piece for drawing thin lines being enlarged in one direction and forming a comparatively small tongue in a direction of 90° with regard to the first direction mounted upon said extension.

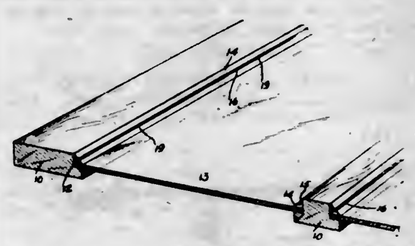
1,426,201. JACK. AMOS F. LANIER, Worcester, Mass., assignor, by mesne assignments, to Hi-Lo-Jack Company, a Corporation of Massachusetts. Filed June 4, 1920. Serial No. 386,519. 6 Claims. (Cl. 254—122.)



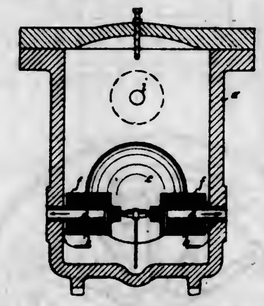
1. In a load lifting jack, the combination of a base having openings, shafts located in said openings, bearing members pressed into the openings and carrying the shafts, said base having slots along which the shafts can be moved into the openings in the absence of the bearing members, with a lazy tongs structure carried by said shafts.

1,426,202. SHAFT FOR GOLF CLUBS AND THE LIKE. ALLAN E. LARD, Washington, D. C., assignor to The Metallic Shaft Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 15, 1921. Serial No. 500,792. 13 Claims. (Cl. 46—4.)

1. A tapered shaft for golf clubs comprising a core having a series of V-shaped channels extending longitudinally thereof, said channels narrowing in width and depth toward the lower end of the shaft; and a filler strip secured within each of said channels.



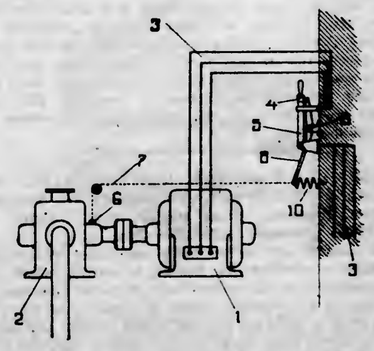
1,426,203. FLUSH TANK. EDWARD LEEBERG, Roselle, N. J. Filed Nov. 13, 1919. Serial No. 337,743. 5 Claims. (Cl. 4—5.)



1. A device of the class described comprising a tank having inlet and outlet openings therein, an inlet valve for said inlet opening, a bushing disposed in and extending through said outlet opening and provided at its inner end with a head and a valve seat, a ring clamped between said head and said tank and provided with a lateral extension, an upright arm formed integral with the outer end of said extension, a horizontal arm extending laterally from the upper end of said upright arm, a guide carried by said horizontal arm, a weighted outlet valve hinged to said upright arm and seating upon said valve seat, means for opening said outlet valve and including a link slidably received in said guide, an overbalanced lever pivoted to said horizontal arm, interlocking elements carried by said link and said lever for holding said outlet valve open when opened to permit said tank to drain, means carried by said link for swinging said lever as said valve is opened to position said elements for interlocking engagement, and a movable member having its movement controlled by the level of the liquid in said tank and connected to said inlet valve to open the latter as the level of the liquid in said tank descends, said member being positioned for engagement with said lever when said tank has been flushed to swing said lever and disengage said element to permit said outlet valve to close.

1,426,204. WINDOW-PANE FASTENER. WILLIAM LEICHTFUSS, New York, N. Y. Filed Apr. 12, 1921. Serial No. 460,761. 1 Claim. (Cl. 20—56.4.)

A device for fastening a window pane in a rabbeted sash, comprising a flat metallic strip of material having a longitudinally extending centrally arranged V-shaped depression forming a groove of gradually decreasing widths at the transverse center of said strip, said strip adapted for oblique arrangement within the angle formed at the juncture of the pane with the sash to dispose the opposite edges thereof respectively in engagement with the sash and pane, said strip adapted to have fastening elements driven through the V-shaped depressed portion thereof and anchored in the sash with the heads thereof disposed within the groove defined by the depressed portion of the strip whereby said heads will be gripped by the V-shaped groove and retained in a countersunk position.

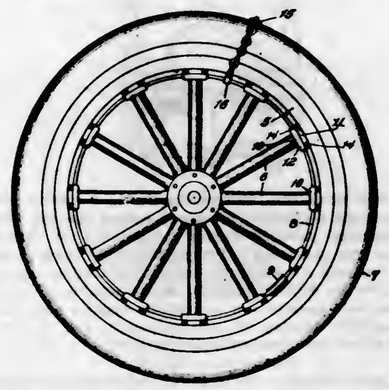


1,426,205. STEAM TRAP. REINHOLD LÖFFLER, Berlin, Germany, assignor to Actien Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Mar. 23, 1922. Serial No. 546,188. 4 Claims. (Cl. 137—103.)

1. In a steam trap, the combination of a tubular member carrying a plurality of axially spaced external disks, a cylindrical member having a plurality of internal annular ribs positioned to take up the spaces between said disks, the said disks and ribs having perforations adapted to register to define a passage, means defining a conduit between said passage and the tubular member and means for angularly moving the tubular member and the cylindrical member relatively to one another.

1,426,206. PUMP. GUNNAR FREDRIK LYBECK, Gottenborg, Sweden. Filed Mar. 7, 1922. Serial No. 541,877. 4 Claims. (Cl. 103—25.)

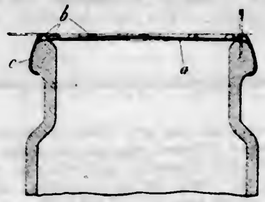
1. In an apparatus of the character described, the combination with a circuit breaker and an electrically driven



device capable of becoming overheated on continuous operation, of a melting body for application on the electrically driven device, and means associated with the circuit breaker and operably connected with the body for breaking the circuit upon the melting of the body.

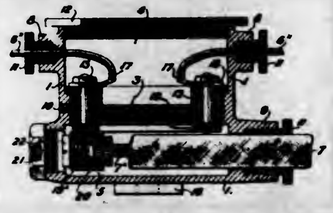
1,426,207. CENTER AND SURFACE TESTING INDICATOR. DANIEL M. DUFF, Dorchester, Mass. Filed Oct. 21, 1920. Serial No. 418,354. 8 Claims. (Cl. 33—172.)

1. An indicator adapted for use as a center or surface tester comprising a supporting member, a flexible member secured to the supporting member, a feeler mounted thereon and movably supported thereby, and an indicating member arranged to be moved by movements of the feeler upon flexure of the flexible member.



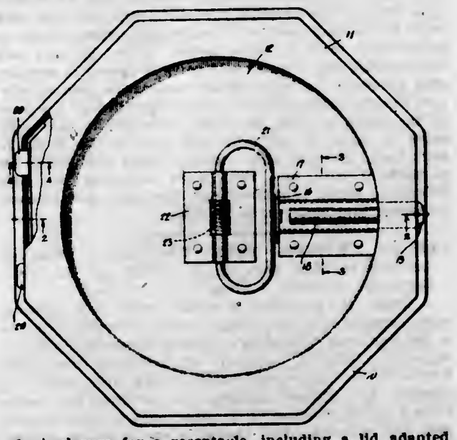
1,426,208. ATTACHMENT FOR MOTOR-VEHICLE WHEELS. THOMAS F. MULCAHEY, Colfax, Ill. Filed Feb. 23, 1922. Serial No. 538,701. 1 Claim. (Cl. 152—14.)

In a device of the class described, a pair of rings one disposed upon each side of a wheel and against the spokes thereof, a pair of grip irons, said grip irons comprising base portions and ring engaging portions, the said base portions resting upon the felly of the wheel and adjacent the spokes thereof and one upon each side of said spokes, the ring engaging portion of each iron embracing the adjacent portion of the ring, and bolts disposed transversely of the wheel and connecting the said grip members.



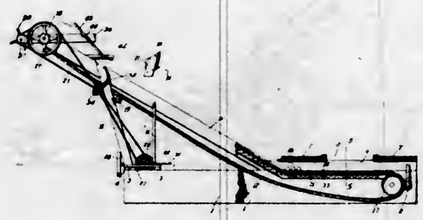
1,426,209. CLOSURE FOR BOTTLES, JARS, AND OTHER RECEPTACLES. CHARLES LESLIE NEWLAND, Eltham, England. Filed May 2, 1922. Serial No. 557,888. 3 Claims. (Cl. 215—38.)

1. A closure for bottles, jars and other receptacles, comprising a resilient disc having a central bulged portion capable of being sprung into opposite positions on each side of a horizontal plane, a plurality of marginal fingers integral with the central bulged portion and adapted to be moved away from or into contact with the beaded edge of the receptacle according to whether the flexible disc is sprung in towards said fingers or away from same, and a plurality of upstanding projections near the periphery of the said disc, the said projections providing in effect a discontinuous flange and being so arranged



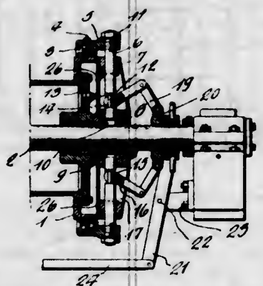
or disposed that they always tend to protect the bulged portion of the disc and also assist in the closing of the cap.

1,426,210. JUNCTION BOX FOR ELECTRIC CONDUCTORS. RODOLPH STUART O'NEIL, London, England, assignor to O'Neil's Recorder Syndicate Limited, London, England. Filed Sept. 23, 1920. Serial No. 412,254. 1 Claim. (Cl. 247—14.)



In a junction box for connecting the ends of a plurality of electrical conductors to a main cable carrying a single conductor, the combination with a casing, a disc of insulating material dividing said casing into two chambers and a plurality of terminal pins of conducting material passing through said disc and spaced apart therein, said plurality of conductors being respectively connected to said terminal pins in one chamber, of a ring of conducting material located in the other of said chambers and electrically connected with all of said terminal pins, a boss formed on said ring, and means for connecting said single conductor with said boss.

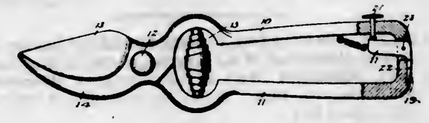
1,426,211. CLOSURE. HUGO RICHARD PAUSIN, Allendale, N. J. Filed Mar. 23, 1921. Serial No. 454,883. 8 Claims. (Cl. 220—57.)



1. A closure for a receptacle, including a lid adapted to be applied to a receptacle, a latch secured to said lid and being adapted to co-operate with said receptacle to retain the same in applied position, and a handle for carrying said receptacle, said handle being movably secured to said lid and being adapted to co-operate with said latch to normally prevent a retraction of the same.

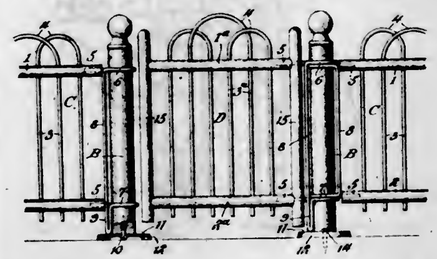
1,426,212. LOADER. HANS H. PETERSEN, Correctionville, Iowa. Filed Oct. 14, 1920. Serial No. 416,787. 2 Claims. (Cl. 198—128.)

1. In a loader, the combination of a conveyer having an inclined portion, spreader arms pivotally mounted at the upper end of the inclined portion of the conveyer, a spreader shaft mounted in the outer ends of said arms, radial blades extending along the shaft between the arms, means for rotating the shaft, and means for pivotally adjusting the arms, the arms being normally so disposed that the spreader shaft is below the end of the conveyer.



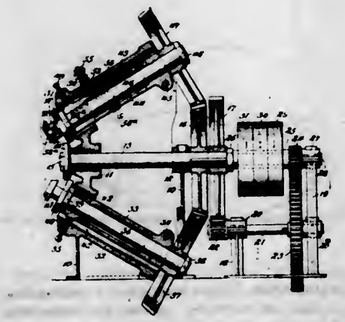
1,426,213. CLUTCH MECHANISM. JOHN K. PIERCE, Fort Worth, Tex. Filed May 13, 1921. Serial No. 469,242. 2 Claims. (Cl. 192—70.)

1. In a clutch mechanism in which external clutch shoes are adapted to bind upon the outside surface of a rotary friction drum, and in which the shoes are carried upon the outer ends of reciprocating rods carried in a rapidly rotating clutch wheel, with means to shift the rods in and out accordingly as the clutch is to be engaged or disengaged, of means carried by the rods at portions thereof within the clutch wheel and extending transversely through the rods with end portions of said means adapted to project outwardly beyond the surface of the rods and to lie in the path of inner portions of the clutch wheel whereby to encounter such inner portions of the clutch wheel to avoid the rods becoming disengaged therefrom on breakage of the means for reciprocating the rods or the rod's connection with such means, substantially as described.



1,426,214. ATTACHMENT FOR PRUNING SHEARS. ANTONIO RAUSSE, Northvale, N. J. Filed Apr. 1, 1922. Serial No. 548,746. 3 Claims. (Cl. 30—11.)

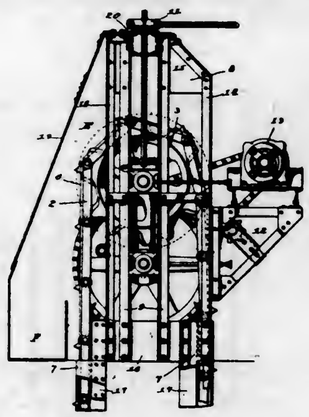
1. In combination with a tool of the scissors type including spring-controlled operating handles, a locking attachment comprising latch means pivoted to one handle, means in conjunction with the other handle adapted to be engaged by the latch means when the handles are



brought together, spring means for normally retaining the latch means in active position, and means associated with the handle for retaining the latch means out of active position while the handles are being operated.

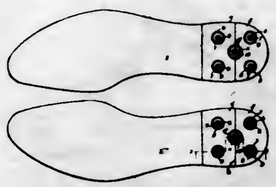
1,426,215. MINIATURE FENCE. WILLIAM I. RAVEAT, Hazleton, Pa., assignor to A. W. Drake Manufacturing Co., Hazleton, Pa., a Corporation of Pennsylvania. Filed June 8, 1921. Serial No. 476,028. 4 Claims. (Cl. 256—24.)

1. A toy fence, comprising separate posts, each having extended bases, and separate panels, connecting rings located on each end of a panel, the connecting rings of the adjacent ends of the panels adapted to be slipped on a post in superposed relation, and a foot on one end of each panel adapted to rest on the base of said post and support the panels in swinging relation spaced above the horizontal plane of the post base.



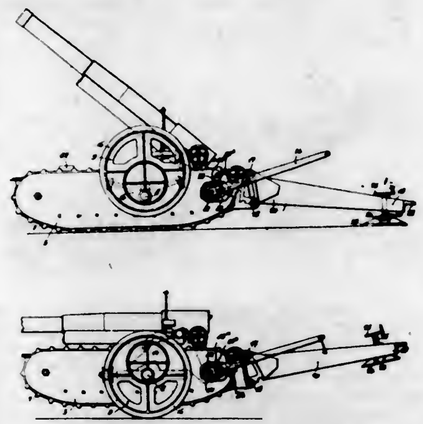
1,426,216. BEVEL SHEARING MACHINE. ALBERT R. ROBERTS and GEORGE T. SMITH, Chattanooga, Tenn. Filed Sept. 15, 1920. Serial No. 410,384. 15 Claims. (Cl. 164—60.)

1. In a bevel shearing machine, a main frame, a main shaft, a pair of auxiliary frames hingedly mounted on the main frame, a shaft journaled in each auxiliary frame, beveling cutters on the corresponding ends of each shaft, and means for rotating the three shafts in unison.



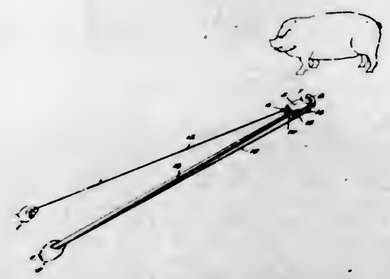
whereby the edges of plates or bars may be beveled in opposite directions without necessitating the turning over of the plates or turning end for end of the bars.

1,426,217. TRAVELING WATER SCREEN. GUSTAV R. RODDY, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 26, 1921. Serial No. 448,133. 5 Claims. (Cl. 210—175.)



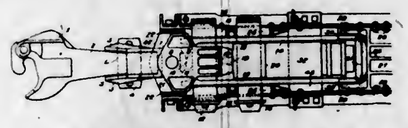
1. In an endless traveling water screen comprising separate screening elements, parallel chains to which these are connected and head wheels with which the chains engage, a framework for supporting the head wheels and their shaft bearings, constructed to expose the peripheries of the head wheels and portions of the chains immediately adjacent thereto, on one side of the screen.

1,426,218. RUBBER HEEL. ARTHUR E. ROPE, Brooklyn, N. Y. Filed May 28, 1921. Serial No. 473,471. 2 Claims. (Cl. 36—35.)



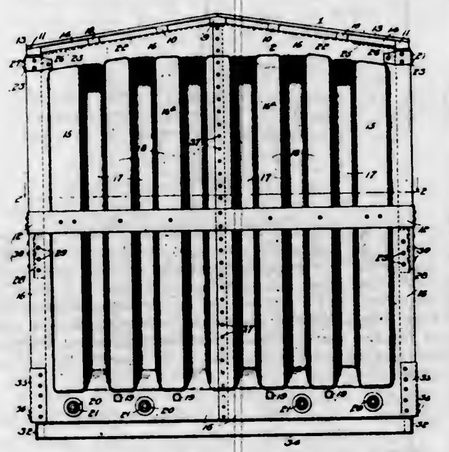
1. In combination with a shoe heel, a rubber heel comprising a pair of sections, means for attaching each section to the shoe heel, said rubber heel sections having recesses located in alinement with one another and extending inward from their meeting edges to provide a counter-sunk opening through them when the sections are fitted together, means for mounting in the counter-sunk opening to engage both sections, and means for attaching said section engaging means to the shoe heel.

1,426,219. GUN-CARRIAGE TRAILER WITH COMBINED PROPULSION BY WHEELS AND BY ENDLESS TRACK MEMBERS. IRÈNE ROY, Paris, France. Filed June 28, 1920. Serial No. 392,307. 6 Claims. (Cl. 89—40.)



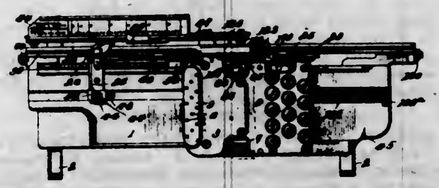
1. An artillery truck comprising a frame, two endless tracks and two road wheels adapted to be put in use alternately, and in the rear portion of the said frame a pivoted trail adapted for rigid connection wtih the said frame in different positions and a plate pivoted to the movable end of the said trail and adapted to be placed flat upon the ground.

1,426,220. ANIMAL CATCHER. FRANK SAJTAR, Polar, Wis. Filed June 14, 1921. Serial No. 477,459. 1 Claim. (Cl. 119—151.)



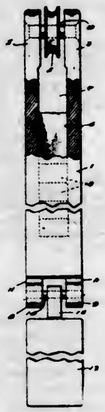
An animal catching device embodying a snap hook having a side entrance opening and a spring projected longitudinally slidable latch normally closing said opening, a relatively long handle detachably secured to said snap hook, flexible means operable from a distant point for retracting said latch, and flexible means attached to the snap hook for leading the animal upon detachment of said handle, the means for detachably connecting the handle to the snap hook embodying a lateral prodding pin upon one end of the handle, and said snap hook being provided with a socket for reception of said one end of the handle with one wall of the same provided with a bayonet slot for reception of said pin.

1,426,221. DRAFT RIGGING. AUGUST G. SANDMAN, Baltimore, Md. Filed July 20, 1920. Serial No. 397,778. 9 Claims. (Cl. 213—42.)



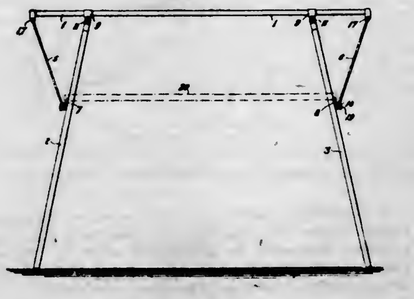
1. In a draft rigging, the combination with a yoke, of a block slidably connected thereto and adapted to engage the cushioning mechanism of the draft rigging, a coupler and means interposed between the said coupler and the said block and pivotally connected to one of said members for transmitting draft strains from the coupler to the said yoke.

1,426,222. END PLATE FOR FREIGHT CARS. AUGUST G. SANDMAN, Baltimore, Md. Filed Aug. 19, 1921. Serial No. 493,524. 5 Claims. (Cl. 105—410.)



1. The combination with a car end framing, of a metallic end adapted to cooperate therewith, said framing including an inner lining, an end sill, a body bolster and corner posts, said metallic end comprising a plurality of metallic plates fitting over said corner posts and secured to said end sill, said plates each being furnished with corrugations whose depth is substantially equal to the distance between said inner lining and the front face of said end sill, and means for securing said metal end to said bolster, said means extending between each corner post and the adjacent side sheathing and being connected to the former.

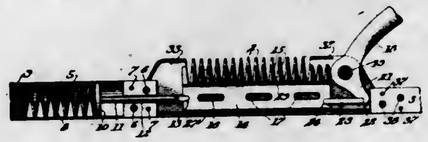
1,426,223. VERIFYING MACHINE. JOHN T. SCHAAFF, Washington, D. C. Filed Aug. 12, 1921. Serial No. 491,725. 39 Claims. (Cl. 164—112.)



1. In a machine of the class described, the combination of a series of key controlled punches, a card carrier for presenting a card to said punches, said card carrier including adjustable means engaging one end of the card whereby said card may be shifted on the carrier for registration.

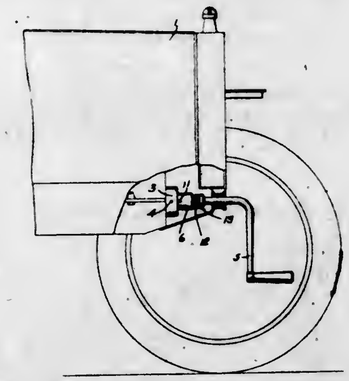
1,426,224. WINDOW-SASH WEIGHT. CHRISTIAN L. SCHNEIDER, Davenport, Iowa. Filed Jan. 10, 1921. Serial No. 436,193. 1 Claim. (Cl. 16—218.)

A window sash weight comprising a rectangular body having a hook arranged at its bottom end and parallel arms extending from its other end and further having a longitudinally centrally arranged recess that opens out at the base of said arms, and a pulley mounted in the upper ends of the arms so as to be spaced from the open end of said recess, and weights adapted to be passed under the pulleys and deposited in the open end of the recess.



1,426,225. PORTABLE STAND FOR DISPLAYING GARMENTS. HENRY CHARLES SHORT, Southall, England. Filed Apr. 12, 1922. Serial No. 551,842. 4 Claims. (Cl. 211—14.)

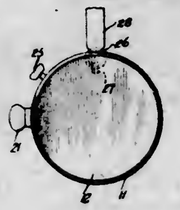
1. A portable collapsible stand for displaying garments; comprising in combination a horizontal bar from which said garments are to be suspended, a supporting device adjacent each end of said bar, each said supporting device comprising a pair of supporting legs, means for loosely pivoting the upper ends of said pair of legs adjacent to each other and to said horizontal bar near one end thereof and about an axis extending at right angles to said bar to allow said pair of legs to be splayed apart in planes at right angles to the axis of said bar to



support the latter or be turned about said pivot to about parallel with said bar when not required for use, a cross piece for each pair of legs, a pivot secured to one end of said cross piece to one leg of a pair, means for detachably connecting the other end of the cross piece to the other leg of the pair to hold said legs splayed apart, a tie rod for each pair of legs, a pivot connecting one end of said tie rod to one end of said horizontal bar, said tie rod extending angularly downwards to said cross piece of the adjacent pair of legs, and means for detachably connecting said end of said tie rod to said cross piece.

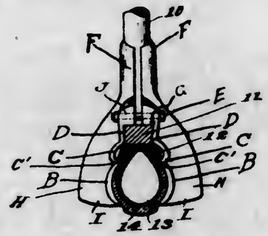
1,426,226. HAIR CUTTER. LOUIS JOHN SIGORSZKY, Easton, Pa. Filed July 31, 1920. Serial No. 400,428. 5 Claims. (Cl. 30—1.)

1. A hair-cutter, comprising a back plate provided with comb teeth and a stationary handle, and a reciprocating cutter-bar arranged on said back plate, an operating lever movably connected with said cutter-bar at one end, a concealed spring movably connected with said cutter-bar at the other end and in substantial alinement therewith, and a cover for the body of the cutter-bar and its operating parts.



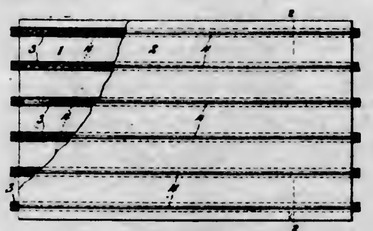
1,426,227. FAN-PULLEY WHEEL AND CRANK RATCHET. GEORGE A. SLEIGHT, Hyde Park, N. Y. Filed Aug. 13, 1921. Serial No. 492,001. 8 Claims. (Cl. 74—33.)

1. A combined pulley and crank ratchet comprising a pulley, means for connecting the same to a crank shaft, a sleeve connected to said crank shaft by the same means as the pulley, a clutch carried by said sleeve, and a notched crank for actuating said clutch.



1,426,228. MIRROR AND LIGHTING MEANS THEREFOR. NATHAN SLOANE and MAX SLOANE, Brooklyn, N. Y. Filed Nov. 29, 1921. Serial No. 518,729. 2 Claims. (Cl. 240—8.4.)

1. In a mirror and lighting means therefor, a shell constituting a battery casing, a pair of clamps secured to the shell for holding a battery therein, a lamp on the shell and projecting to the exterior of the latter, means on the shell to make and break the lamp in the battery circuit, a clamp ring on the shell at the front and detachably engaging by its rear edge the shell at the open front of the latter, a mirror within said ring, and means on the ring permanently holding the mirror inde-

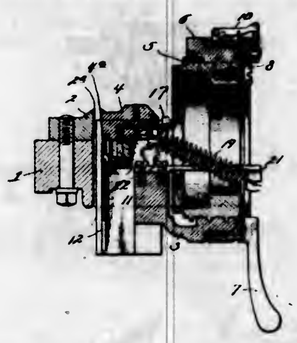


pendently of the engagement of the clamp ring with said shell.

1,426,229. TIRE TRACTION LUG. GEORGE W. SMITH, Dallas, Tex. Filed Jan. 31, 1921. Serial No. 441,522. 3 Claims. (Cl. 301—44.)

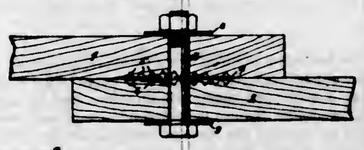
2. A tire traction lug comprising a wedge shaped portion to engage the free edge of the tire mounting rim, means to engage the inner annular wall and a side wall of the felly, means to fasten the lug to a spoke of the wheel, and a curved portion extending downwardly from the portion first named and embracing the side wall of the tire and a laterally extending combined traction lug and reinforcing rib carried by said tire embracing plate.

1,426,230. CRIB OR BED COVER. ROBERT RITCHIE SMITH, Chester, Pa. Filed Sept. 7, 1921. Serial No. 499,009. 7 Claims. (Cl. 5—3.)



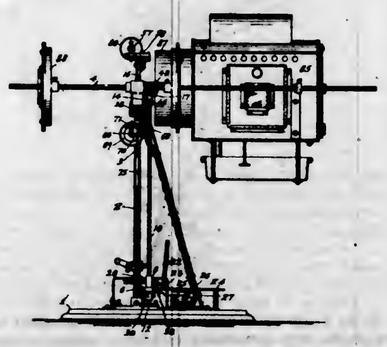
1. A cover or blanket comprising facing and backing sheets of fabric with spaced, elastic strips located between the sheets and secured to the fabric, with the sheets shirred where secured to and by the elastic strips to permit extension of the cover or blanket in one direction and to hold the cover or blanket substantially non-extensible in a direction at right angles to the first named direction.

1,426,231. SLUG-TRIMMING KNIFE FOR LINE-CASTING MACHINES. SAMUEL E. SPERRY, Woodhaven, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 30, 1921. Serial No. 488,592. 9 Claims. (Cl. 199—59.)



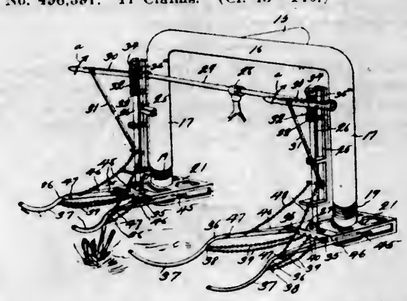
1. A slug-trimming means for line casting machines comprising a support, cooperative knives one of which is

adjustable relatively to said support in a direction toward and from the other knife, the support having rests on which the adjustable knife bears at its respective



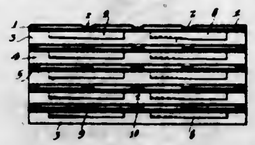
ends and which rests extend in advance of the edge of the adjustable knife, and means for holding the adjustable knife in engagement with said rests.

1,426,232. WOOD JOINT. OLAV TRYGVE THEODORSEN, Christiania, Norway. Filed Aug. 13, 1920. Serial No. 403,271. 4 Claims. (Cl. 85—11.)



1. A wooden joint comprising wooden members and a sheet metal plate between the wooden members, the sheet metal plate being provided at its outer edges with teeth alternately bent in opposite directions, and so arranged that the base of each tooth is at less than a right angle to the edge of the plate.

1,426,233. TELAUTOGRAPHIC APPARATUS. GEORGE S. TIFFANY, Summit, N. J., assignor to Telautograph Corporation, Richmond, Va., a Corporation of Virginia. Filed Feb. 1, 1918. Serial No. 214,853. 1 Claim. (Cl. 33—24.)



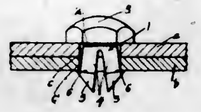
In a telautograph, the combination with a transmitter and a receiver provided with a tracer and pen respectively, of a pair of suitably supported oscillating shafts provided with gears, gears meshing therewith and connected with the receiving pen, and connections between said shafts and the transmitter tracer whereby the receiving pen is caused to reproduce the writing movements of the tracer.

1,426,234. BOLL-WEEVIL DESTROYER. PAULINE B. WEISS, New York, N. Y. Filed Aug. 29, 1921. Serial No. 496,397. 11 Claims. (Cl. 43—140.)

1. A boll weevil collecting machine comprising a wheel supported frame, plant agitating means carried by said frame, a suction pipe disposed rearwardly of the agitating means, said suction pipe having its intake end disposed adjacent the surface of the ground, ground engaging means for maintaining the suction pipe at a uniform distance from the ground as the machine advances and means located forwardly of the suction pipe whereby dislodged weevils and squares will be guided to a position under the intake end of the suction pipe.

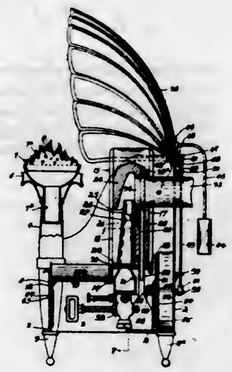
1,426,235. RADIATOR CONSTRUCTION. FRANK B. WENTWORTH, Los Angeles, Calif. Filed Sept. 22, 1919. Serial No. 325,501. 6 Claims. (Cl. 257—130.)

1. A radiator having a plurality of parallel tubes, and intermediate spacing elements folded to provide oppositely disposed channels with a series of air deflecting fins stamped from the wall of each channel and extending into said channel, the fins in each channel being relatively and alternately disposed in respective planes converging inwardly, with the rear portions of the fins spirally contoured.



1,426,236. BALL BEARING. EDWARD WILLIAMS, Smethwick, England. Filed May 11, 1922. Serial No. 560,204. 5 Claims. (Cl. 64—36.)

1. In combination, an inner race ring, an outer race ring, a single row of rolling elements arranged between



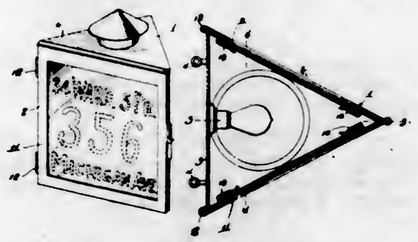
said rings, one of said rings consisting of two annular sections arranged on opposite sides of a perpendicular line intersecting the axis of said rings, said sections being provided with shaped surfaces engaging opposite sides of each of said rolling elements, and a shell cooperating with said sections and having end flanges engaging the outer side surfaces of the sections, said shell being provided intermediate its ends with an annular depressed portion extending between said sections for preventing said sections from binding on the rolling elements.

1,426,237. SNAP STOVE BOLT. ETIENNE WITZBERGER, Carnegie, Pa., assignor to Witzberger Heating Appliances Company, a Corporation of Pennsylvania. Filed Nov. 12, 1921. Serial No. 514,685. 3 Claims. (Cl. 85—9.)

1. In a device of the character described, a body threaded to receive a nut on one end and provided at its other end with outwardly diverging resilient arms, said arms being provided at their outer ends with enlarged heads forming shoulders projecting beyond the arms for engagement with the inner surface of a sheet of material through which the bolt is inserted

1,426,238. MOVABLE REFLECTOR HEATER. ETIENNE WITZBERGER, Carnegie, Pa., assignor to Witzberger Heating Appliances Company, a Corporation of Pennsylvania. Filed Nov. 15, 1921. Serial No. 515,395. 6 Claims. (Cl. 126—92.)

1. In a stove of the character described, a casing, a fireback supported in the casing and provided with a passage extending through the body of the back from the lower end thereof, heat generating means adjacent to the fireback, a rockably mounted deflector above and in rear of the fireback, the upper end of said passage being disposed to discharge air flowing through the passage against the deflector, and means for causing air to flow through said passage from the lower end thereof and for imparting rocking movement to the deflector.

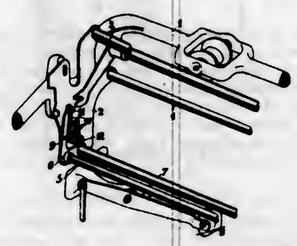


1,426,239. SPRING STOVE BOLT. ETIENNE WITZBERGER, Carnegie, Pa., assignor to Witzberger Heating Appliances Company, a Corporation of Pennsylvania. Filed Nov. 15, 1921. Serial No. 515,396. 4 Claims. (Cl. 85—9.)

1. In a device of the character described, a body threaded at one end for reception of a clamping ring, two telescoping members mounted transversely of the body, means for forcing said members away from each other, and means

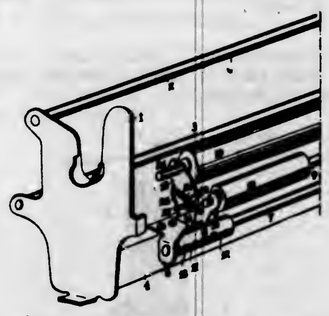
for limiting outward movement of the telescoping members.

1,426,240. INDICATOR LAMP. EMANUEL E. ZIENNER, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,386. 1 Claim. (Cl. 40—132.)



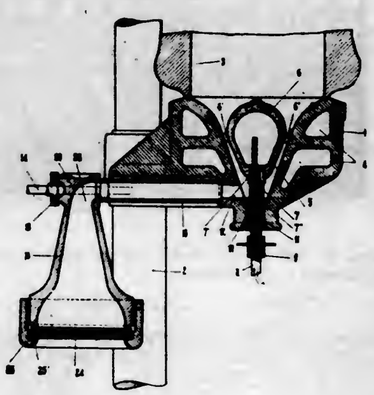
In an indicator lamp of the character described, a body structure having a back wall and open side walls and forming a structure substantially triangular in cross section, hinged door frames mounted upon said side walls and adapted to meet at the apex of said triangular body structure, each of the said door frames being equipped with sockets adapted to register with each other for aligning the said sockets at the apex of the said body structure when the doors are closed, a locking pin in one of said sockets adapted to be received in the other socket to lock the doors at their meeting edges, and a pair of sign plates attached to each door frame.

1,426,241. SEDIMENT-CONTAINING BOTTLE CAP. JOSEPH J. ZINI, Chicago, Ill. Filed Feb. 21, 1922. Serial No. 538,252. 3 Claims. (Cl. 215—73.)



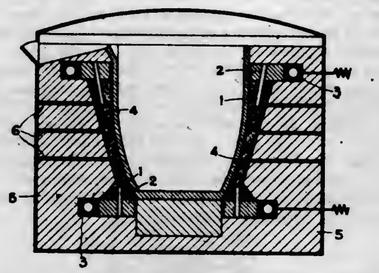
1. As a new article of manufacture, a sediment containing bottle cap comprising a hollow having a relatively large supporting end, a bottle mouth engaging end, an annular flange formed about said cap, a connecting member extending partly about said cap and abutting said flange, and a clamping member connected to said connecting member.

1,426,242. PLATEN LOCK. HEINRICH FRANZ EDMUND BAESELER, Dresden, Germany, assignor to Akt. Ges. vorm Seidel & Naumann, Dresden, Germany, a Corporation of Germany. Filed Oct. 12, 1920. Serial No. 416,575. 5 Claims. (Cl. 197—79.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a typewriting machine in combination a carriage, a platen frame mounted in said carriage normally in lower case position but vertically movable relative to said carriage to upper case position, a latch carried by said platen frame and engageable with said carriage to hold said platen frame and carriage relatively fixed when in lower case position, said latch being constructed to be free from contact with any element extraneous to the platen frame during return movement of said frame to permit frictionless return of the latter.

1,426,243. ARRANGEMENT OF THE PAPER-PRESSING ROLLERS OF TYPEWRITING MACHINES. HEINRICH FRANZ EDMUND BAESELER, Dresden, Germany, assignor to Akt. Ges. vorm. Seidel & Naumann, Dresden, Germany, a Corporation of Germany. Filed Oct. 12, 1920. Serial No. 416,581. 7 Claims. (Cl. 197—131.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

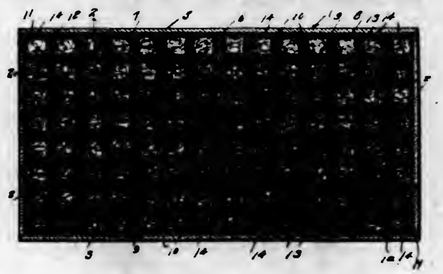


1. In a typewriting machine, a cylinder frame, an impression cylinder mounted to rotate in said frame, a rock shaft carried by the frame, a pair of bearing levers mounted to rock on said rock shaft, a rollers journaled in said bearing levers and adapted to engage said impression cylinder, a second pair of bearing levers carried by said frame, a second roller journaled in the latter bearing levers and adapted to engage said impression cylinder at a point on its periphery at a distance from said first-named roller, spring means tending to maintain said rollers in engagement with said impression cylinder and means carried by said rock shaft and engageable with one of each of said pairs of bearing levers to rock said levers and move said rollers out of engagement with said impression cylinder when said rock shaft is actuated.

1,426,244. PRESS FOR PASTY MATERIALS. FILADE BARDUCCI, Naples, Italy. Filed Jan. 19, 1920. Serial No. 352,265. 5 Claims. (Cl. 107—14.)

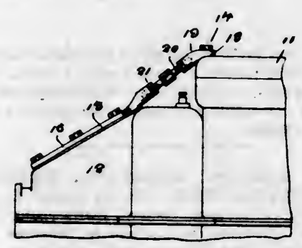
3. In a press for drawing pasty materials, the combination of a block having a conical main chamber and secondary chambers connected with said block; and a heating member removably mounted in the central portion of said main chamber.

1,426,245. ELECTRIC RESISTANCE HEATER FOR HIGH TEMPERATURES. BRUNO BAUER, Zurich, and ALFRED VON ZEERLEDER, Geneva, Switzerland, assignors to Societe Anonyme des Ateliers de Sécheron, Geneva, Switzerland. Filed Dec. 10, 1919. Serial No. 343,919. 4 Claims. (Cl. 204—64.)



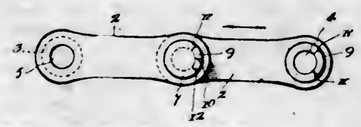
1. In an electric resistance heater for high temperatures, for electric furnaces, the combination of a mouldable heating body of any resistance material stable at high temperatures, current supply poles arranged in front of the upper and lower ends of the resistance heating body, rod-like electrodes of similar resistance material to that of the resistance heating body, carried by said current supply poles and arranged so as to deeply extend from above and below into the resistance heating body, an envelope of refractory material surrounding the latter, subtantially as described.

1,426,246. EGG CARRIER. MARIA A. BENEDICT, New York, N. Y. Filed Nov. 30, 1918. Serial No. 264,825. 2 Claims. (Cl. 217—35.)



1. An egg carrier having a tray provided with a pocket, cushioning means for the egg in said pocket, a

tray resting on said tray and closing the open end of the pocket, and said second tray having an egg cushioning

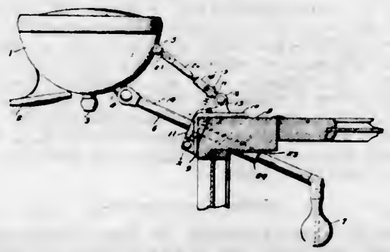


means on the under surface of its bottom wall over and exposed to the pocket.

1,426,247. ADJUSTABLE BRACE. ALBIN BENGTSON, Luck, Wis. Filed Oct. 10, 1919. Serial No. 329,779. 1 Claim. (Cl. 180—54.)

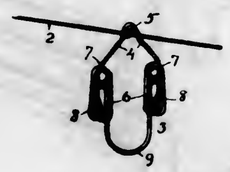
In combination with the motor and transmission casings of an automobile, said motor casing having its head secured thereto by bolts, the transmission casing having the usual opening provided with a closure plate that is bolted thereto, of reinforcing means between the casings, comprising straps secured to the plate by the bolts that hold the plate on the transmission casing, each of said straps having its outer end enlarged and formed with an interiorly threaded socket, an angle socket member secured by the end bolts to the motor casing and disposed in a line with the first mentioned sockets having interior threads of an opposite pitch from those of the first mentioned sockets, bolts having oppositely pitched ends received on the sockets, and lock nuts on the bolts contacting with the sockets.

1,426,248. SPROCKET CHAIN. LEO BETHKE, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1918. Serial No. 254,305. 4 Claims. (Cl. 74—32.)



3. A link such as described in claim 1, wherein the projection therein mentioned is the segment of a hub surrounding the pintle opening, the ends of which segment are radial with the axis of such opening, in combination with a pintle having a head recessed to fit the projection carried by the side bar of the link, when the pintle is seated and in working position.

1,426,249. NAIL-HOLDING DEVICE. STEFAN BOCHONOK, Pittsburgh, Pa. Filed Jan. 24, 1921. Serial No. 439,466. 1 Claim. (Cl. 1—47.)

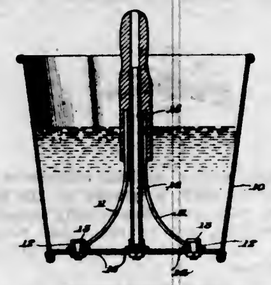


In a device of the character described, a handle, and a shank secured at one end of said handle and flattened at the other end, the flattened end portion of the shank being longitudinally slotted to form resilient jaws, said jaws being adapted at their outer ends to be forced over and to fit about a nail or similar article, the jaws being provided in their inner faces with opposed transverse slots for reception of a nail or similar article.

1,426,250. MOTOR-VEHICLE SPOTLIGHT. FRED S. BOYES, Knightstown, Ind. Filed May 28, 1921. Serial No. 473,542. 6 Claims. (Cl. 240—7.)

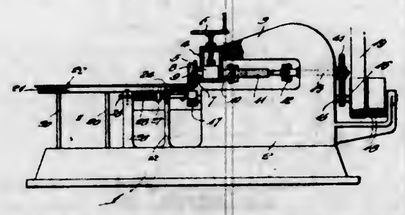
1. In combination, a vehicle spot light, a shaft having pivotal connection therewith, a support in which said shaft is mounted for free, independent, rotary and longitudinal movement to angularly adjust the spot light both vertically and laterally, and constraining means wholly independent of the shaft and having pivotal connection with the spot light and support and having a universal joint in its length.

1,426,251. CLOTHESPIN. DAVID S. BOYLES, Rock Hill, S. C. Filed June 25, 1921. Serial No. 480,474. 3 Claims. (Cl. 24—139.)



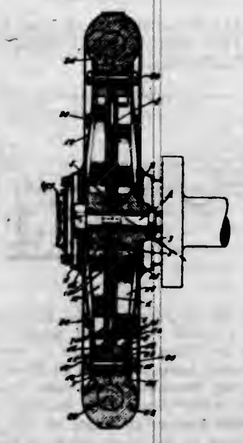
1. In a spring wire clothes pin, a wire gripping member including a coil in the general plane of the clothes line and adapted to rest thereon to limit the downward movement of the pin, the ends of said coil having laterally opposite loops depending therefrom and straddling said line and extending below the same and adapted to pin the clothes to the line.

1,426,252. CALF FEEDER. IKE BRATCHER and OSCAR BURGHARDT, Protection, Kans.; said Burghardt assignor to said Bratcher. Filed Apr. 25, 1921. Serial No. 464,119. 2 Claims. (Cl. 119—71.)



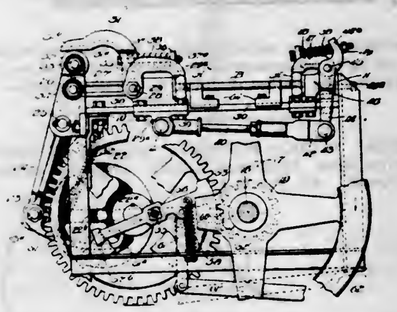
1. The combination with a receptacle, of a tubular member supported from the bottom centrally of the receptacle and disposed within the latter, a sleeve of

relatively soft material fitted on the tubular member and projecting above the latter and also above the



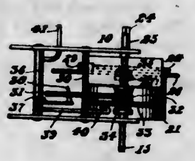
receptacle, and a plurality of elements supporting said sleeve and terminally secured to the bottom of the receptacle at spaced points about the tubular member.

1,426,253. METAL-FLANGING MACHINE. HENRY R. BREMER, Kansas City, Mo. Filed Aug. 8, 1921. Serial No. 490,678. 4 Claims. (Cl. 153—29.)



1. A flanging machine comprising a pair of spaced rollers and driving means for at least one of said rollers, means mounting said rollers with their axes in parallel relation, one of said rollers having a circumferential flange, a sheet-carrying die adapted to travel between said rollers, and means for forcing said die continually toward the flange of said one roller.

1,426,254. WHEEL. WILLIAM S. BRICKELL, Buffalo, N. Y. Filed Dec. 21, 1920. Serial No. 432,248. 3 Claims. (Cl. 152—51.)

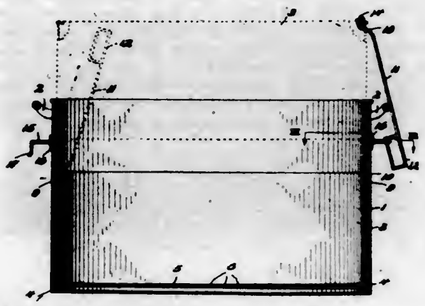


1. A wheel including hub sections, a disk therebetween, dowels extending through the disk and into the hub sections, rings forming the rim of the wheel, an annular rib upon one of the rings and engaging the other ring to hold the rings spaced apart, angular guide projections upon the other ring and interposed between both rings, flanges extending inwardly from the inner portions of the rings and spaced apart by the guides, said flanges constituting means for receiving the marginal portion of the disk, and annular series of springs interposed between each ring and one of the hub portions, said disk and flanges being extended between the series of springs.

1,426,255. LADDER-MAKING MACHINE. PETER BROMAN, Chicago, Ill., assignor to Brown Safety Ladder Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1919. Serial No. 334,834. 5 Claims. (Cl. 144—2.)

1. A machine for pressing metal rungs into side bars including relatively movable plates adapted to press said side bars, means for relatively positioning the rungs and side bars, adjustably connected means to clamp the tops of said side bars, and means for forcing said plates toward each other, said latter means including a plurality of slidable blocks, a cam for moving each of said blocks and a cam shaft for moving said cams.

1,426,256. MOTOR FAN. JOSEPH BRZOZOWSKI, Wilkes-Barre, Pa. Filed Aug. 4, 1921. Serial No. 489,751. 4 Claims. (Cl. 230—1.)

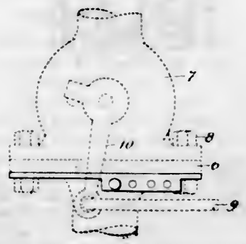


1. A spring motor for fans including a spring and a plurality of train of gears operatively connected thereto, a transverse shaft adjacent said gears, a stop hook projecting from said shaft with an angular end portion adapted for engaging between the shaft of one of said gears, a brake wire projecting from said shaft at a different angle from the stop hook with an angular end portion adapted for frictionally engaging another one of said gears during the stopping operation.

1,426,257. WASHBOILER. JOE BRZYSKI and WALTER FELSKI, Milwaukee, Wis. Filed Aug. 29, 1921. Serial No. 496,446. 2 Claims. (Cl. 68—30.)

1. A wash boiler of the class described including an outer receptacle, a clothes container removably posi-

tioned within the outer receptacle, detachable means for elevating the inner receptacle and rotatable hook mem-

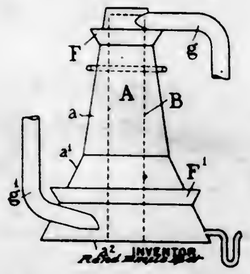


bers carried by the opposite ends of the outer receptacle for detachable engagement with the elevating means for maintaining the clothes container in a raised position.

1,426,258. CUBOID SUPPORT. WILLIAM C. BURNS, Albany, Oreg. Filed Sept. 7, 1921. Serial No. 498,998. 3 Claims. (Cl. 36—71.)

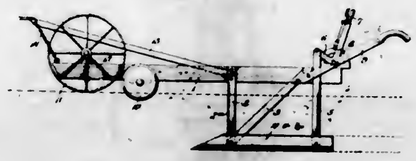
2. A cuboid support comprising a leather body having a substantially straight outer edge whereby the same is widened transversely, said body having a longitudinal slit providing a pocket, an insert received in and adhesively connected to the walls of the pocket, said insert being at its greatest thickness at the portion thereof arranged to support the cuboid bone thereof, and gradually decreasing in thickness from said point in all directions.

1,426,259. CONTROLLING DEVICE FOR CARBURETORS. SAMUEL CRUCES and ERNESTO LOBO, Mexico, Mexico. Filed Mar. 6, 1922. Serial No. 541,403. 3 Claims. (Cl. 137—139.)



1. A controlling device for carburetors, comprising a standard provided with two legs adapted to be attached straddling over the carburetor, the upper part of said standard being cut out to form a guiding groove for a valve stem to slide in, a projecting flange at both the upper and the lower edge of said guiding groove and provided with aligned adjusting perforations, and a sealed stop pin piercing said flanges.

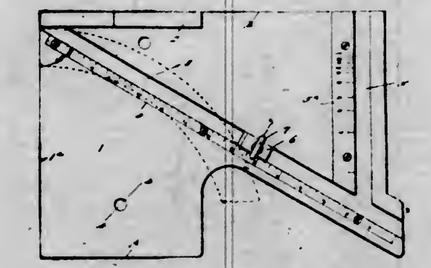
1,426,260. DISH-WASHING MACHINE. FREDERICK LELAND DAVIDSON, Halifax, Nova Scotia, Canada. Filed July 8, 1921. Serial No. 483,339. 1 Claim. (Cl. 141—9.)



In combination with a washing machine of the kind described, a rotary shaft, a splasher on the shaft comprising a hub, with two diametrically opposite vanes extending therefrom, one of the vanes being curved longitudinally, and a flattened portion on the outer end of the curved vane.

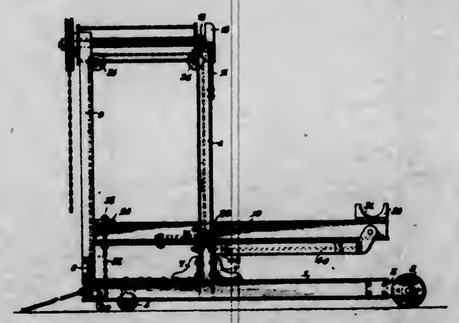
1,426,261. CONSTRUCTION OF SULPHURIC-ACID CHAMBERS. RENÉ EMILE DION, Billancourt, France. Filed Mar. 25, 1921. Serial No. 455,487. 6 Claims. (Cl. 23—1.)

1. A chamber for use in the manufacture of sulphuric acid formed of two frusto-conical portions disposed in upright position and the one portion superposed on and connected to the remaining lower portion, the sides of the lower portion being of greater inclination to the vertical than the sides of the upper portion and the upper portion of the chamber forming a contracted enclosing area, an inlet connection to the lower portion of the chamber, and an outlet connection to the upper portion of the chamber.



1,426,262. DRAINING DEVICE. AUGUST DISK, Loganville, Wis. Filed Sept. 1, 1921. Serial No. 497,607. 1 Claim. (Cl. 37—52.)

In means for the purpose set forth, the combination of a main beam, a small disk wheel secured at a point slightly beyond the transverse center of the beam, traction wheels secured upon the beam in front of the disk wheel, downwardly extending brace rods depending from the main beam, angle brace rods secured to the first named brace rods and at an angle on the main beam, guide rods secured to the main beam, a movable brace rod arranged adjacent the main beam, an arm secured to the movable rod, a rack mounted on the main beam



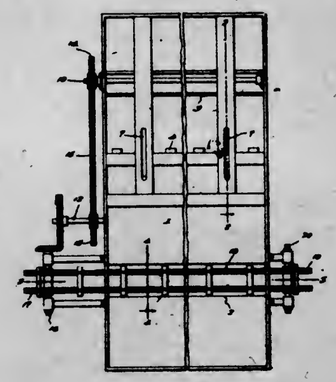
and adapted to act as a fulcrum for the arm, a dirt removing log having a pointed end secured to the brace rods and movable rod, and a draw bar mounted on the upper end of certain of the brace rods.

1,426,263. SEGMENT-TRIMMING INSTRUMENT. FRANK DOX, Pittsburgh, Pa. Filed Aug. 27, 1920. Serial No. 406,332. 4 Claims. (Cl. 33—174.)

1. In an instrument of the character described, a base provided at one end with a straight edge, a setting member adjustable on said base along a line disposed at an angle of 60° to said straight edge, and a stop member secured to the base at right angles to the straight edge and intersecting the path of travel of said setting member.

1,426,264. HOIST. FRANCIS E. DRAKE, Davenport, Iowa. Filed Nov. 21, 1921. Serial No. 516,722. 6 Claims. (Cl. 254—4.)

1. A hoist comprising a frame having a movable guide, lift arms fulcrumed on said guide and horizontally adjustable, a plate extending from said movable guide and having the ends of said lift arms pivoted thereto, a pair of links pivoted at one end to each other, a pin passing through the pivoted ends of the links, said plate provided with a slot for receiving said pin, the other ends of the links being pivoted to the respective lift arms intermediate their ends.



1,426,265. TOOL HANDLE. PETRA ELENCHUK, Boston, Mass. Filed Dec. 29, 1921. Serial No. 525,800. 4 Claims. (Cl. 81—177.)

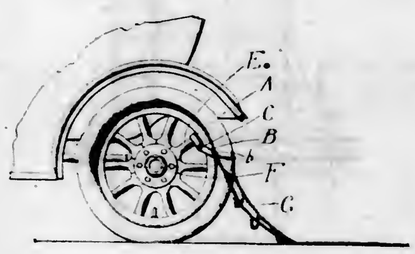
1. A tool handle comprising a body portion, a side arm extending from one end thereof, a locking arm pivoted to said end adjacent the other side, a stub shaft having a rotatable bearing end journaled in the fixed arm, a polygonal head carried by the other end of the stub shaft, the intermediate portion of the stub shaft being rectangular

in cross section, a toothed wheel and disk tool received on the rectangular portion of the stub shaft, and tensioned means carried by the handle engaging the toothed wheel to hold the shaft rigidly mounted.

1,426,266. DAIRY BARN. ISAAC H. EVANS, Ava, Mo. Filed July 9, 1921. Serial No. 483,588. 7 Claims. (Cl. 119—15.)

1. In a barn, a movable stanchion adapted to be moved by the animal in reaching for its feed, a driven member, cleaning means actuated by said member and means for imparting the movement of the stanchion to said member.

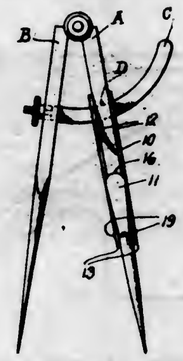
1,426,267. COMBINED SCREEN AND STORM SASH. LAWRENCE W. FISHER, Wilsonville, Nebr., assignor of one-half to Arthur Bird, Wilsonville, Nebr. Filed Apr. 30, 1920. Serial No. 377,874. 1 Claim. (Cl. 20—36.)



A device of the class described having a frame and sashes, said frame having recesses to receive said sashes between its side faces with one side face of the frame flush with one side face of each of the sashes, a mullion

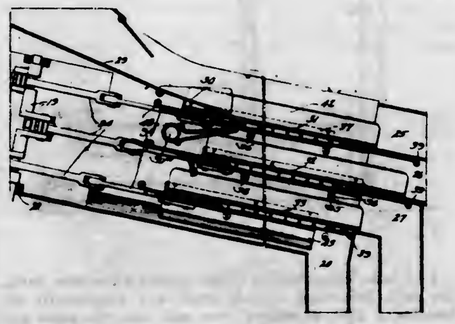
between the recesses, said sashes and said recesses being substantially of the same size, said frame having a retaining portion to overlap the other side of each face of the

sashes, the sashes at the first mentioned side face being rabbeted to selectively receive either screens or glass plates, and means to secure either said screens or glass plates in the rabbets.



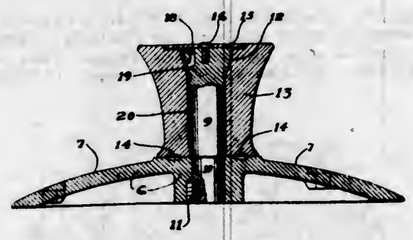
1,426,268. TIRE-CHAIN-ATTACHMENT DEVICE. CLIFFORD FLUGEL, Cincinnati, Ohio. Filed Mar. 10, 1920. Serial No. 364,819. 1 Claim. (Cl. 152—14.)

An anti-skid chain applying device comprising a U clip adapted to engage a wheel spoke, arms formed on the clip, fingers pivotally attached to the arms and hooks formed on the fingers adapted to engage an anti-skid chain.



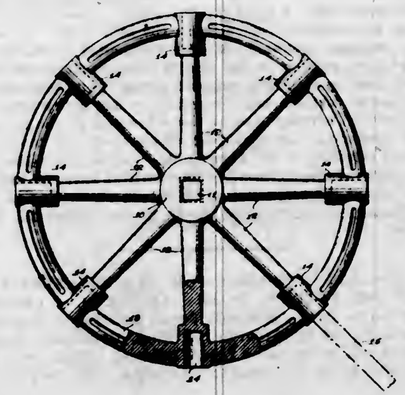
1,426,269. DIVIDERS. ORLANDO FORCE, Akron, Ohio. Filed Jan. 29, 1921. Serial No. 441,000. 3 Claims. (Cl. 33—153.)

3. A clamping device for dividers including a pair of pivoted legs, one of which is provided with a slot, and a guide carried by the other leg and slidable through said slot; said device comprising a member adapted to be disposed against the slotted leg and formed at one end with ears provided with slots adapted to be registered with the



slots in the legs, said member being provided at its other end with spaced ears, and a locking lever pivoted between said second named ears and having a cam extension adapted to engage the slotted leg.

1,426,270. GRAIN CLEANER. FRIEND FOWLER, Moose Jaw, Saskatchewan, Canada. Filed Apr. 20, 1920. Serial No. 375,300. 4 Claims. (Cl. 130—15.)

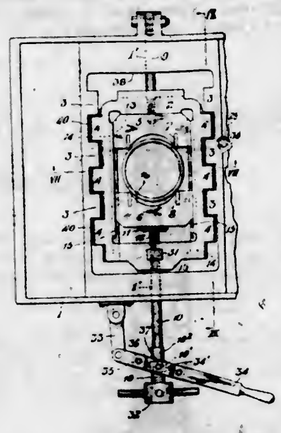


2. A grain separator including a chute, supporting means positioned within said chute, carriages movably resting upon said supporting means, said carriages each comprising angle irons and screens extending between said angle irons, a combing device arranged below each of said screens, supporting means interposed between said combing device and the upper face of the lowermost arm of each of said angle irons, and means for reciprocating each of said carriages.

1,426,271. MINING SHEAVE. ANDREW BANDURA, Chicago, Ill. Filed Oct. 18, 1921. Serial No. 508,477. 9 Claims. (Cl. 104—189.)

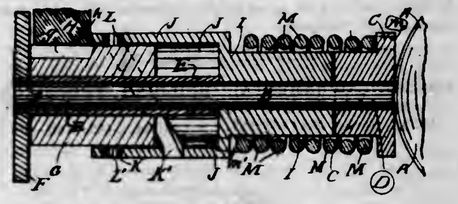
1. A mining sheave comprising an arched base; a support formed centrally beneath said arched base, said support providing a bearing; and a sheave roller mounted in said bearing, substantially as described.

1,426,272. VALVE HANDWHEEL. FREDERICK ROCKWOOD BANKS, Paterson, N. J., assignor to McNab & Harlin Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1921. Serial No. 445,711. 2 Claims. (Cl. 74—33.)



1. A handwheel for high pressure valves having a rim and radiating spokes, said rim being provided with radial sockets open at the peripheral face of the rim for the insertion of a leverage extension member with which to turn the wheel said sockets extending into the respective spokes.

1,426,273. ATTACHMENT FOR TAPPING MACHINES. ALBERT J. BARBER, Steubenville, Ohio, assignor to The Pipe Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 17, 1920. Serial No. 381,927. 11 Claims. (Cl. 10—107.)

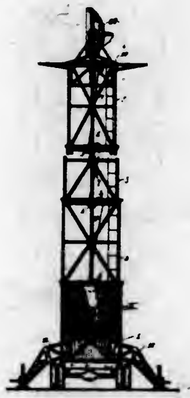


11. In attachments for tapping machines and the like, the combination of a table; a yoke longitudinally movable thereof; two series of inwardly and outwardly extended blocks formed upon said table and yoke, respectively, and adapted, in one position of said yoke, to be positioned one series above the other to support said yoke, and in another position of the latter, to be positioned so that one series can pass the other in a vertical plane; a pair of relatively movable gripper blocks; means securing said blocks to said yoke; a trunnion secured to one of said gripper blocks and having an externally threaded portion; a nut secured in said yoke and adapted to receive and co-

operate with said trunnion; means for turning said trunnion; a second trunnion mounted in said table and secured

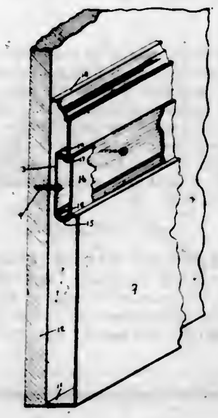
to said yoke; and an operating lever pivoted at one end upon said table and pivoted intermediately its ends to said first-mentioned trunnion.

1,426,274. ELECTRIC STARTER. ODILON BRISBOIS, Gary, Ind. Filed July 25, 1921. Serial No. 487,306. 3 Claims. (Cl. 74—7.)



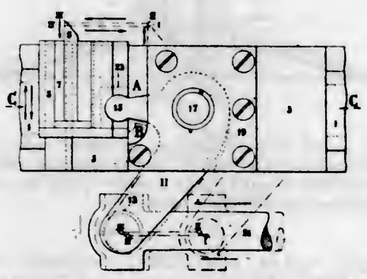
1. In an electric car starter, a rotatably mounted shaft, a non-rotatable sleeve mounted on said shaft, and a combined hub and cylindrical member mounted on said shaft, said cylindrical member provided with a spirally extending slot, and a yielding connection between said combined hub and cylindrical member and said shaft, in combination with a gear pinion member loosely mounted on said sleeve and a projection on said gear member engaging with said spirally extending slot.

1,426,275. METHOD OF MAKING RINGS AND THE LIKE. ALPHONSO S. CAMPBELL, West Medford, Mass., assignor to A. S. Campbell Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1921. Serial No. 459,115. 4 Claims. (Cl. 113—116.)



1. The method of making rings and the like from sheet metal, which comprises stamping on the sheet the desired ring while leaving the center portion of the metal to stiffen the ring, reinforcing the ring by assembling therewith a stiffening member and subsequently removing the center portion.

1,426,276. CONSTRUCTION OF EXTENSIBLE TOWERS. HANS L. CHRISTIE, Pittsburgh, Pa., assignor of one-fourth to Charles H. Clark, one-fourth to Howard Beach, and one-fourth to Frederick Shaefer, all of Pittsburgh, Pa. Filed June 9, 1919. Serial No. 302,894. 2 Claims. (Cl. 189—14.)



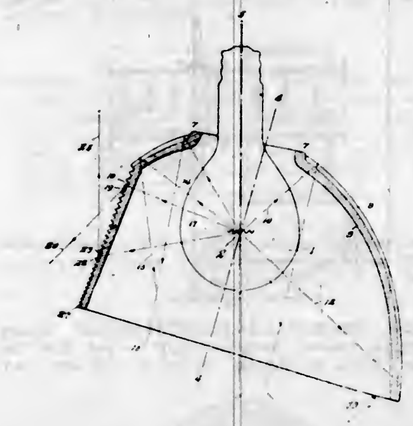
1. A portable extensible tower comprising a truck, mounted on wheels having a casing or body portion, a series of extensible sections supported on said truck, the casing constituting a receptacle for the said sections when collapsed, the upper section having a platform, a search light mounted on said platform, the said platform forming the roof or cover of the structure when the said sections are collapsed.

1,426,277. ORNAMENTAL BUILDING TRIMMINGS. FLORENCE L. CONANT, Yonkers, N. Y. Filed Mar. 21, 1921. Serial No. 453,887. 8 Claims. (Cl. 189—34.)

1. A construction of the class described comprising a channelled member adapted to rest against a supporting surface and arranged to support the channel at a distance from said surface; securing members passed through the bottom of said channel to said surface adapted and arranged to adjust the width of the channel; and a member removably fitting said channel, substantially as described.

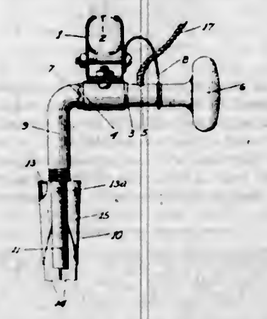
1,426,278. MACHINE FOR CUTTING BEVEL-GEAR WHEELS WITH HELICAL OR STRAIGHT TEETH. VICTOR GASPARD DARTOIS, Paris, France. Filed Nov. 13, 1920. Serial No. 423,897. 2 Claims. (Cl. 90—8.)

1. A device producing the spacing of the planing tools of a machine for cutting gear wheels or other machine-tool, comprising: a fixed carriage-guide—a horizontal carriage longitudinally movable on the said guide,—a vertical carriage mounted in the horizontal carriage,—a tool-holder secured in the said vertical carriage,—a bent lever having a limited angular stroke, mounted on the horizontal carriage and connected by one of its arms to the vertical carriage and by the other arm to the driving link producing the rectilinear displacement of the horizontal carriage on the fixed guide,—means for producing the vertical displacement of the vertical carriage and of the tool at the beginning of the return stroke and at the beginning of the forward stroke of the horizontal carriage.



1,426,279. PROCESS FOR MAKING AXLES FOR MOTOR-DRIVEN ROAD VEHICLES. CHARLES WILLIAM DAVIS, Kirkstall Forge, near Leeds, England, assignor of three-fourths to Hugh Myddleton Butler, Kirkstall Forge, near Leeds, England. Filed Nov. 21, 1918. Serial No. 263,572. 2 Claims. (Cl. 74—56.)

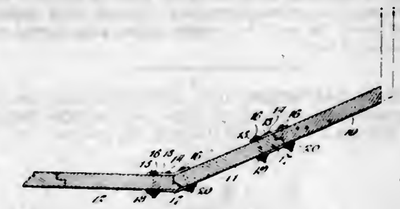
1. That process of making an axle housing which consists in drop-forging a suitable billet of metal by pressing the central part of said billet between suitable dies to force same into a dish part leaving the ends of the billet extending laterally therefrom.



1,426,280. REFLECTOR. WILLIAM A. DOREY, Newark, Ohio, assignor to Holophane Glass Company, Inc., New York, N. Y., a Corporation of New Jersey. Filed Mar. 24, 1920. Serial No. 368,360. 6 Claims. (Cl. 240—93.)

1. A reflector for artificial light sources casting the maximum intensity of the beam to one side of the lamp axis and having a portion of the reflector wall displaced by a transmitting screen on the side towards the beam such screen acting through a greater angle than the re-

flector wall displaced and having a conformation adapted to deflect the light rays from the source out of an extended field of view.

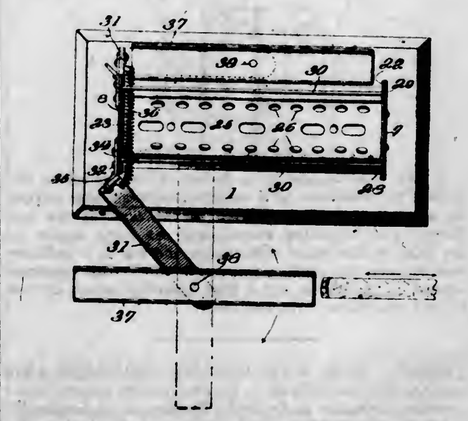


1,426,281. DIRECTION SIGNAL FOR AUTOMOBILES. CAMILLE DUBEAULT, Chico, Calif. Filed Aug. 3, 1921. Serial No. 489,532. 3 Claims. (Cl. 116—54.)

1. A direction signal including a substantially horizontal sleeve adapted to be secured to a windshield, a shaft slidably and turnably mounted in the sleeve, a handle on the shaft to the rear of the sleeve, a right-angle bend on the shaft ahead of the sleeve, notches cut in the sleeve at that end thereof, a member on the corresponding end of the shaft for engagement with any of said notches, and spring means acting on the shaft to hold said member in engagement with any of said notches at a time.

1,426,282. SAFETY LOCK FOR AUTOMOBILE FOOTBOARDS. ADELARD JOSEPH DUBEE, Glens Falls, N. Y. Filed Feb. 25, 1921. Serial No. 447,714. 4 Claims. (Cl. 296—1.)

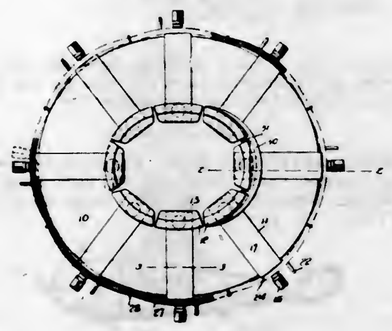
4. In a device of the class described, the combination with the removable sections of an automobile footboard, of a plurality of retaining members each having one end fixedly secured to the lower surfaces of one of said sections and each formed with a hole near one end and a slot in the opposite end, a plurality of retaining members pivotally secured to the upper surfaces of said sections and having oppositely opening slots at opposite ends adapted to be brought into registry with the aforesaid holes and slots in the lower retaining members, bolts



adapted to pass through registering holes and slots for securing said sections in place, and nuts for said bolts having means for securing them against loss.

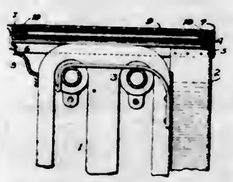
1,426,283. ARTIFICIAL BAIT. WALTER SCOTT EWERT, Los Angeles, Calif. Filed Dec. 16, 1919, Serial No. 345,262. Renewed Dec. 24, 1921. Serial No. 524,740. 1 Claim. (Cl. 43—46.)

An artificial bait comprising a fish like body provided with paddle wheels mounted, one on each side thereof, to rotate in the longitudinal direction of said body, the axes of said wheels being in the same plane, said plane being on the transverse center but slightly below the longitudinal center of the body the inner edges of said wheels lying in planes parallel with the longitudinal axis and outside of the widest portion of said body; line attaching means at one end and a hook at the other end of said body.



1,426,284. ELECTRIC TOASTER. MAURICE F. FITZGERALD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 13, 1921. Serial No. 436,928. 3 Claims. (Cl. 53—5.)

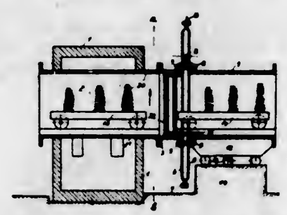
1. In a toaster, a support including spaced end plates, means for supporting therebetween a source of radiant heat, a substantially U-shaped bracket vertically pivoted to one of said end plates and adapted to swing out-



wardly away from said source of heat, a slice holder mounted on a vertical axis on the free ends of said bracket, a turning knob on said pivot whereby said bracket may be swung outwardly and the slice holder rotated about its pivot to present either side thereof to the source of heat.

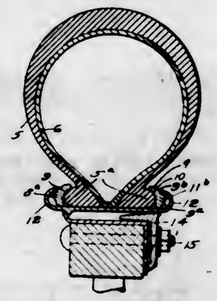
1,426,285. HAT STRETCHER AND SHAPER. DAVID FREEDLINE, Brooklyn, N. Y. Filed June 9, 1921. Serial No. 476,269. 7 Claims. (Cl. 223—33.)

1. A hat stretcher and shaper including a series of individual stretching and shaping elements, and screws on which said elements are mounted, said screws being adapted to have relative approximately radial movement and being angularly adjustable individually to vary the angular positions of said elements.



1,426,286. AIR MOISTENER AND DUST ARRESTER. MYERS A. GARRETT, Chicago, Ill., assignor to Carlton M. Garrett, Chicago, Ill. Filed Apr. 4, 1921. Serial No. 458,363. 4 Claims. (Cl. 237—78.)

2. The combination in a device of the character described for radiators, of a tank for holding water having an open top, a frame secured to the tank at the top thereof and extending substantially at right angles to the tank so the frame will engage the top of a radiator and support the tank, a removable cover with openings carried by the frame, and a dust arresting means carried by and removable with the cover.



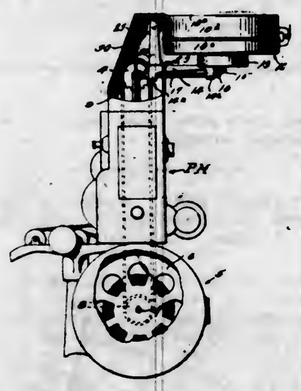
1,426,287. KILN WITH HEATING CHAMBERS AND COOLING CHAMBERS. VICTOR GELPKE, Lusern, Switzerland, assignor to Deutsche Evaporator-Aktien-Gesellschaft, Berlin-Wilmersdorf, Germany. Filed Mar. 16, 1921. Serial No. 452,827. 2 Claims. (Cl. 263—28.)

1. A kiln, comprising, in combination, a furnace, a heating-chamber, a cooling-chamber, and a compensating-member arranged between said chambers; said member consisting of two sheet-metal plates arranged in an appropriate distance one from the other, and gas-tight

connections between said plates, as well as between them and the structure-components with which they are connected.

1,426,288. SECTIONAL DEMOUNTABLE RIM. ELMER WILLIAM GINZEL, Redlands, Calif. Filed Mar. 30, 1921. Serial No. 457,006. 2 Claims. (Cl. 301—30.)

1. A rim of the character described comprising a pair of rings adapted to engage the opposite sides of the tire at the inner edge thereof, said rings having outwardly flaring outer side walls, a plurality of rim sections having inturned portions at their opposite edges adapted to ride upwardly over said flaring walls of the rings and to engage with said rings above said flaring portions.

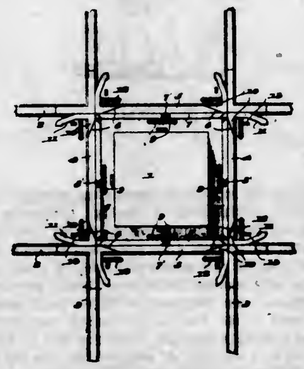


1,426,289. COBBLING OUTFIT. CHARLES L. GLAPCKE, Michigan City, Ind. Filed Apr. 18, 1919. Serial No. 290,934. 5 Claims. (Cl. 12—123.)

1. A cobbling outfit comprising a support; a last on said support; a head freely slidable on said support;

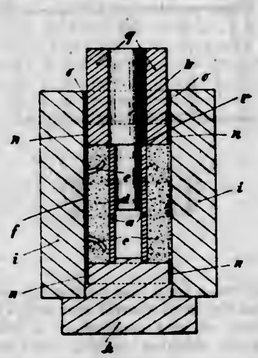
means for automatically securing said head in adjusted positions on said support; and a flexible binding loop secured to said head and passing around said last, substantially as described.

1,426,290. APPARATUS FOR UNWINDING MOTION-PICTURE FILMS. CHRISTIAN M. GOTTSCHAU, Denver, Colo., assignor, by mesne assignments, to Automatic Non-Rewinding Reel Company, a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,251. Renewed May 24, 1922. Serial No. 563,367. 1 Claim. (Cl. 88—18.7.)



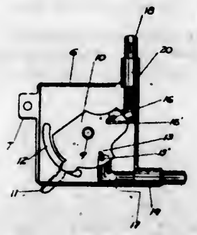
A film feeding attachment for Simplex motion picture machines comprising a bracket for mounting on the casing of the machine and having longitudinally spaced bearings, a shaft mounted in said bearings and projecting at opposite ends beyond said bearings and having a sprocket wheel on one end and a bevelled cog on the other, an arm extending laterally from said bracket and having depending longitudinally spaced bearings arranged in a plane at right angles to said first mentioned bearings, a shaft mounted in said bearings with bevelled cogs at its ends, one meshing with that of the first mentioned shaft, a feeding film casing carried by said bracket arm, a spindle extending through and rotating in the bottom of said casing and having a cog on its lower end meshing with one of the cogs on said second mentioned shaft, a roll holder carried by the inner end of said spindle within said casing, a film receiving roll holder, and a connection between said holder and said sprocket wheel to cause said holders to move in unison, and actuating means for said holders.

1,426,291. BOOK. JAMES G. HALL, Burlingame, Calif. Filed Jan. 16, 1922. Serial No. 529,547. 1 Claim. (Cl. 281—2.)



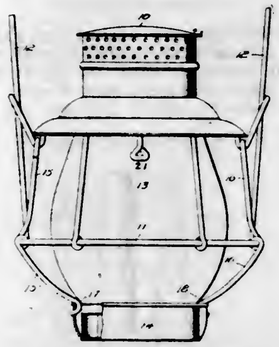
A book consisting of a sheet divided vertically into a plurality of sections connected at their opposite ends, each of said sections being folded transversely to provide a plurality of outwardly extended hinged leaves, said sections being centrally creased vertically through said leaves to provide half portions adapted to fold face to face, said section connecting portions of the sheet being vertically creased to permit corresponding half portions of adjacent sections to fold back to back, and a cover to which the terminal end portions of the top and bottom of said sheet are attached.

1,426,292. RAILWAY CROSSING. JAMES HARRIS HARDY, Crawford, Miss. Filed July 14, 1921. Serial No. 484,652. 6 Claims. (Cl. 246—273.)



1. In a railroad crossing-rail, each comprising a central stationary section, longitudinally movable guard-rail sections resiliently held against the stationary rail sections, each being provided with members arranged in alignment with the oppositely disposed stationary rail sections, said guard-rail sections adapted to be moved laterally by the wheels of the moving train.

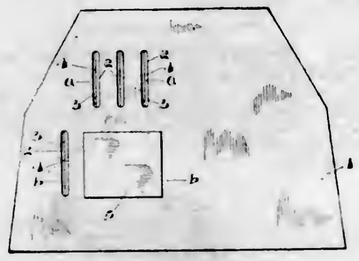
1,426,293. METHOD OF MANUFACTURING ELECTRICAL COLLECTORS, COMMUTATORS, CONTROLLERS, OR INTERRUPTERS, OR EQUIVALENT DEVICES. HENRI HERRMANN, Paris, France. Filed July 14, 1920. Serial No. 396,287. 4 Claims. (Cl. 171—321.)



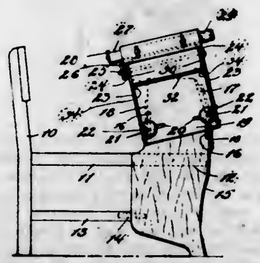
1. The method of manufacturing a commutator, which comprises longitudinally slotting a metal cylinder between its ends to form a series of spaced strips, mounting the slotted cylinder in a cylindrical mould, mounting a cylindrical hub concentrically within the slotted cylinder, and introducing heated insulating material between the cylinder and hub under sufficient pressure to compress the insulating material between the strips of the cylinder and against the mould.

1,426,294. WINDOW LOCK. WILLIAM E. HUBER, Chicago, Ill. Filed Feb. 9, 1920. Serial No. 357,287. 2 Claims. (Cl. 292—40.)

1. A device for locking co-operating window sashes in fixed relation, comprising a casing; plungers slidably mounted in knuckles formed on said casing; said plungers being adapted to project into openings formed in one of said sashes and in the window frame; a plate pivotally mounted on said casing, said plate being provided with slots; studs on the inturned ends of said plungers to engage in said slots; and an operating member integral with and extending vertically from one end of said plate, through a slot in the top of said casing, thence laterally over said casing, substantially as described.



1,426,295. LANTERN CONSTRUCTION. JOSEPH J. HUGHES, Memphis, Tenn. Filed Sept. 12, 1921. Serial No. 500,183. 3 Claims. (Cl. 240—40.)



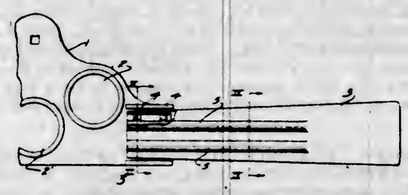
1. In a lantern, a lamp base hoving depressions formed in the vertical side wall thereof and slotways formed in the outer walls of said depressions, a globe retaining frame detachably mounted on said base, means carried by said frame for interlocking engagement with slotways of said base, and a globe removably positioned within said frame and cooperative with said means whereby to prevent the accidental separation of said frame from said base.

1,426,296. RUBBER MAT. JAMES H. S. KERR, Toronto, Ontario, Canada. Filed May 14, 1921. Serial No. 470,819. 9 Claims. (Cl. 74—81.)

1. A mat, having an opening therein, constructed of low grade rubber, said opening being closed with a portion of high grade rubber having a slit therein, said portion of high grade rubber being secured to the mat to form an integral structure.

1,426,297. CHAIR DESK. HERBERT E. KINCHELOE, Maplewood, Mo. Filed Mar. 5, 1921. Serial No. 449,860. 3 Claims. (Cl. 155—128.)

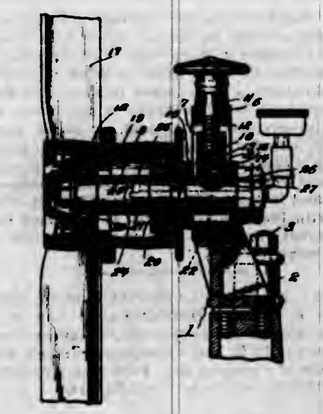
1. In a device of the class described, a leg having a bolt opening therein, a fitting having a bolt opening therein disposed at an angle relative to the bolt opening in the leg, means extended through said openings for clamping the fitting to the leg, a bearing carried by the fitting, a slotted sill and means for pivotally securing the sill to said bearing.



1,426,298. METHOD OF RENDERING ANIMAL AND VEGETABLE FIBERS ACTIVE. JOHANNES KORSELT, Zittau, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Oct. 24, 1917. Serial No. 198,337. 13 Claims. (Cl. 8—5.)

2. The process of increasing the strength, elasticity and absorbent power of textiles, which comprises treating said textiles in a bath containing an oxidase and a substance capable of favorably influencing the action of the oxidase.

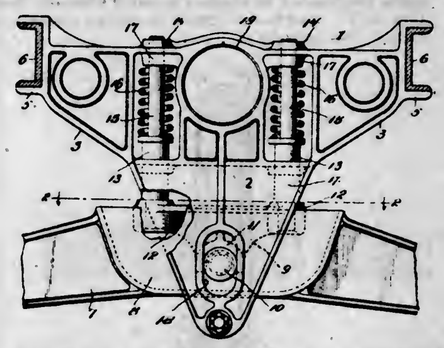
1,426,299. MULTICOLOR PRINTING. FELIX KUNERT and EDWIN ACKER, Offenbach-on-the-Main, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Nov. 2, 1916. Serial No. 129,115. 5 Claims. (Cl. 8—5.)



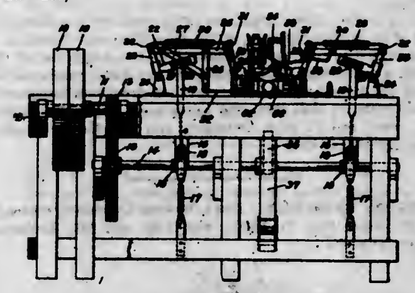
1. The process of multi-color printing with mixtures of nitrosamines and naphthols upon white goods, comprising printing on said goods with nitrosamine printing colors to which have been added metallic salts which form color lakes uninfluenced by steaming and subsequently developing in a bath containing an organic acid having two atoms of carbon in its molecule.

1,426,300. SEMAPHORE BLADE. FREDERICK C. LAVARACK, Montclair, N. J., assignor to Railroad Accessories Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1921. Serial No. 456,887. 21 Claims. (Cl. 246—482.)

4. As a new article of manufacture, a semaphore blade constructed entirely of a single sheet of metal having at one end means for attachment, including a portion substantially parallel to the face of the blade and a portion connecting said first named portion and the body of the blade.



1,426,301. FAN MOUNTING FOR MOTOR VEHICLES. ALFONSO M. LEONI, Philadelphia, Pa., assignor, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 9, 1919. Serial No. 329,582. 2 Claims. (Cl. 64—52.)

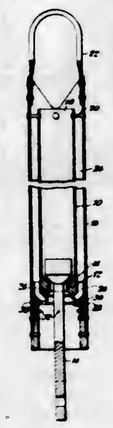


1. A fan mounting comprising a yoke, a carrier slidable therein, means for adjusting the carrier with respect to the yoke, a fan shaft mounted in the carrier, means for moving the fan shaft relatively to the carrier, and means operative in such movement of the fan shaft to secure the carrier against movement in the yoke.

1,426,302. FRONT-AXLE CONSTRUCTION. ALFONSO M. LEONI, Philadelphia, Pa., assignor, by mesne assignments, to Steinmetz Electric Motor Car Corporation, Baltimore, Md., a Corporation of Maryland. Filed Nov. 25, 1919. Serial No. 340,550. 2 Claims. (Cl. 280—112.)

1. A motor vehicle frame suspension, comprising a cross-frame secured to the vehicle frame, a pedestal base pivotally supported in a recess in the front axle, bolts carried by said base and extending through the cross-frame, and spring means to resist the movement of said bolts.

1,426,303. MACHINE FOR CLEANING ROVING BOBBINS. JOSEPH A. LONSO, Fitchburg, Mass. Filed Feb. 17, 1921. Serial No. 445,610. 10 Claims. (Cl. 28—20.)



1. In a machine for cleaning bobbins, the combination with a plurality of pairs of jaws arranged in a series, one pair adapted to engage a bobbin near one end, another pair near the other end and the others at several points along it and to hold it against side motion at both ends, and yielding means for forcing them toward each other to grip the bobbin, of a horizontal pusher rod, and means for forcing said rod horizontally against the end of a bobbin held by said jaws to push it through them and eject it therefrom.

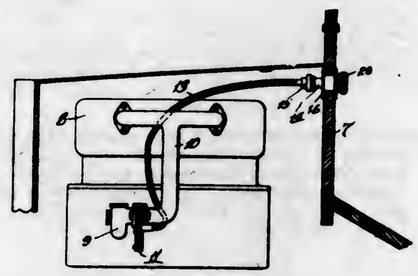
1,426,304. CRATE FOR MILK BOTTLES. WILLIAM LYNCH, Brooklyn, N. Y. Filed Nov. 3, 1921. Serial No. 512,508. 4 Claims. (Cl. 217—20.)

1. In a crate, a supporting member, said supporting member being crimped to provide depressed portions arranged in spaced pairs, the legs of each of said depressed portions being of different angles.

1,426,305. BAILER. GEORGE BAN MCDONELL and EDWARD LAWRENCE PECK, Bartlesville, Okla., assignors, by mesne assignments, to Doherty Research Company, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,367. 3 Claims. (Cl. 166—19.)

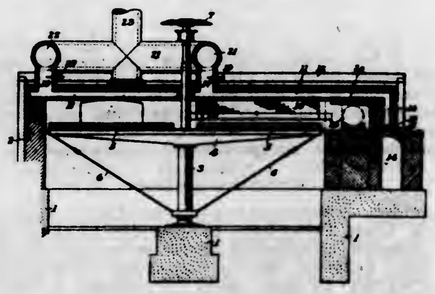
1. A bailer comprising, an outer shell of substantially the same shape and area as the bore of a well in which it it to be used, a lifting attachment at the upper end of the shell, a container of approximately the same length as the shell positioned within said shell to provide a peripheral space between said shell and container, a valve for closing the lower end of said container, and a valve for closing said peripheral space.

1,426,306. STOPPER. JOHN MCFADDEN, South Chicago, Ill. Filed Aug. 31, 1920. Serial No. 407,147. 1 Claim. (Cl. 215—52.)



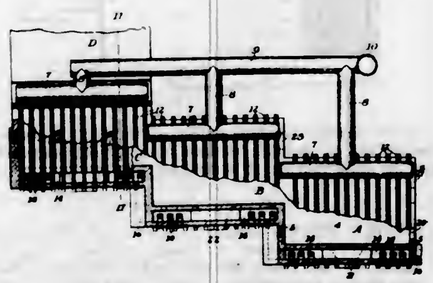
A stopper comprising a cylindrical rubber body having an opening extending axially therethrough, an eye bolt passing through said opening, a cup washer arranged under the eye of the bolt and having its marginal edge engaging the top of the body, and a disc engaging the under surface of the body and having a cylindrical extension threaded on the bolt and positioned between the bolt and the wall of said opening.

1,426,307. RIM-LOCKING ATTACHMENT. WILLIAM H. MCGOWEN, Vincennes, Ind. Filed Mar. 5, 1921. Serial No. 449,604. 1 Claim. (Cl. 301—29.)



In combination with a vehicle wheel having a felly of channel construction provided with an outer flange and an inner flange, said inner flange being of greater height than the outer flange, a demountable rim having flanges adapted to register with the outer edges of the flanges of said felly, a plurality of tapering bolts journaled to rotate in the flanges of said felly, means for permanently holding said tapering bolts in said flanges, the outer ends of the bolts projecting beyond the outer flange of the felly and provided with nut heads thereon, lugs made integral with the bolts inwardly of the nut heads and provided with cammed inner faces for engaging the outer flange of the demountable rim, the lugs being provided with removed portions adapted to permit of the passage thereover of the demountable rim, the edge of said lugs being provided with a series of notches at one side and with recesses at the opposite side, and a yieldable dog adapted to enter said recesses and a selective notch, substantially as described.

1,426,308. MANIFOLD LOCK FOR INTERNAL-COMBUSTION ENGINES. HENRY P. MALONEY, St. Louis, Mo., assignor of one-half to Harry Harris, St. Louis, Mo. Filed Feb. 8, 1919. Serial No. 275,729. 2 Claims. (Cl. 70—91.)



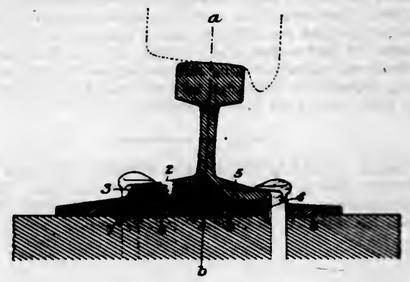
1. A manifold lock for internal combustion engines comprising a sleeve, an annular flange formed on one end thereof, a cylindrical flange formed on the annular flange and concentric with said sleeve, a shank rotatably mounted in said sleeve, a knob formed integral with said shank, a key operated barrel mounted in said knob, a pair of levers pivotally attached to said key barrel, spring actuated pins attached to the levers, openings formed in the shank, said openings adapted to permit the passage of the pins therethrough, a plurality of radially disposed openings formed in the cylindrical flange, said openings registering with the openings formed in the shank and adapted to permit the entrance of the pins to lock the knob against rotation.

1,426,309. MUFFLE-FLATTENING OVEN AND LEER. EDWIN E. MILNER, Scott Township, and WILLIAM J. LYTLE, Rosslyn Farms Borough, Allegheny County, Pa., assignors to H. L. Dixon Company, Carnegie, Pa., a Corporation of Pennsylvania. Filed Aug. 12, 1921. Serial No. 491,701. 18 Claims. (Cl. 49—44.)

18. A flattening oven comprising a flattening stone, a chamber above said stone, a plurality of flues in the top wall of said chamber, an off-take at one end of each of said flues and an off-take for each of said flues intermediate its ends, and means for regulating the flow of gases in said off-takes.

1,426,310. PLATE-GLASS ANNEALING LEER. EDWIN E. MILNER, Scott Township,, and WILLIAM J. LYTLE, Rosslyn Farms Borough, Allegheny County, Pa., assignors to H. L. Dixon Company, Carnegie, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1921. Serial No. 492,660. 8 Claims. (Cl. 49—46.)

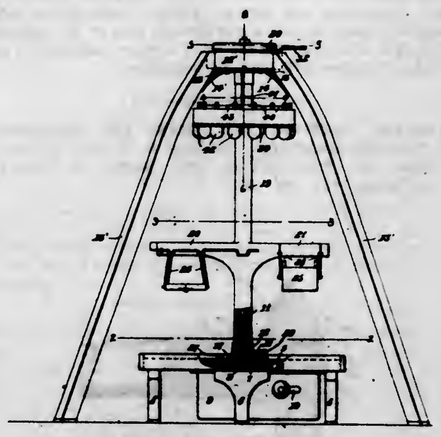
8. A plate glass annealing leer having a plurality of muffle heating chambers arranged zig-zag with respect to each other, a plurality of heating flues in the top wall of each of said chambers, means for producing combustion for each of said flues, means common to all of said combustion producing means in the side wall of each of said chambers, and offtake means for each of said flues, and means for connecting all of said offtakes together, substantially as described.



1,426,311. METHOD OF SOLDERING. JOSEPH MORRAU, Chicago, Ill., assignor to Perry N. Nelson, Chicago, Ill. Filed Apr. 15, 1921. Serial No. 461,672. 4 Claims. (Cl. 219—12.)

1. The herein described method of uniting the ends of a work-piece to form a continuous element, which consists in depositing solder on the work-piece where the joint is to be made, engaging the work-piece at that point with a high resistance electrode, and completing the circuit by engaging a low resistance electrode with the work-piece adjacent the solder, whereby heating of the work-piece is localized at the joint.

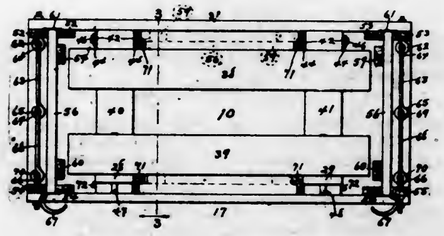
1,426,312. TIE PLATE. ANDREW MORRISON, Penn Township, Allegheny County, Pa., assignor to Dilworth, Porter & Co., Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1921. Serial No. 518,499. 7 Claims. (Cl. 238—298.)



1. A tie plate for railway rails, having an upper rail seat substantially normal to the line of thrust of a standard coned tread car wheel and having a series of wide lower bearing surfaces upwardly and inwardly inclined at an oblique angle to the rail seat, said upwardly inclined surfaces being connected by projecting ribs, substantially as described.

1,426,313. PROCESS FOR THE PREPARATION OF DINITROGLYCOL AND ITS HOMOLOGUES. HERMANN OEHME, Cologne-on-the-Rhine, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed June 27, 1919. Serial No. 307,234. 4 Claims. (Cl. 260—144.)

1. A process for the preparation of dinitroglycol and its homologues consisting in treating the nitrated product obtained by the action of a nitrating acid on an unsaturated hydrocarbon with an alkali metal carbonate.

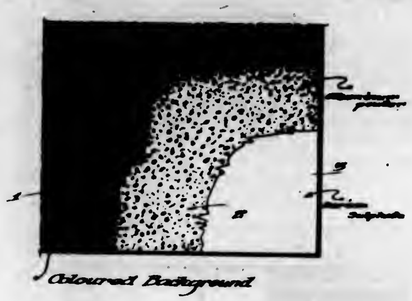


1,426,314. ROUNDABOUT. WALTER PASTUSZAK, Fairmont, W. Va., assignor of one-half to Frank Szulc, Fairmont, W. Va. Filed Dec. 10, 1921. Serial No. 521,519. 5 Claims. (Cl. 46—27.)

1. In a roundabout of the class described, a platform having supporting legs and provided with a central opening, a motor having a power shaft projecting vertically through said opening of the platform, a second shaft arranged in a vertical position and having its lower end rigidly connected to the upper end of said power shaft, a tripod for steadying the second named shaft including a plate member through which said shaft is rotatably mounted and which is provided with supporting legs, a hollow standard through which the second named shaft projects,

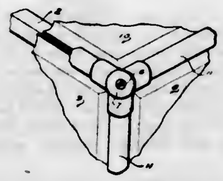
means connecting said standard with said power shaft whereby the same will be caused to rotate in unison, radially projecting arms rigid with the intermediate portion of said standard, a car suspended from one of said arms, a yieldably suspended baby jumper seat associated with the other arm, a pick depending from and fastened to the plate member of said tripod, and a hollow musical instrument body having radial sounding strings disposed to be successively engaged by said pick as said standard is rotated, said body being fixed to said standard.

1,426,315. COLLAPSIBLE HOG CRATE. WILLIAM E. PETTY, Storm Lake, Iowa, assignor to Jens Peter Christiensen, Newell, Iowa. Filed Aug. 25, 1920. Serial No. 405,791. 9 Claims. (Cl. 217—47.)



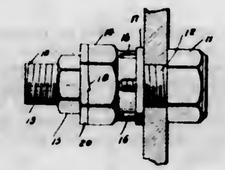
1. A collapsible crate having a solid bottom member, slatted side members hinged to the bottom member and adapted to form box-angles therewith, a cover member of less length than the bottom and side members hinged to one side member and slidingly engaging the other side member, jointed tie-rods parallel with each other connecting the side members and end-gates removably and replaceably and slidingly mounted between the side members and also in a plane between that of the tie-rods and that of the ends of the cover member and adapted to form box-angles with the bottom member.

1,426,316. METHOD AND MEANS FOR SECURING WOODEN HANDLES. FAYETTE R. PLUMB, Philadelphia, Pa. Filed Oct. 6, 1921. Serial No. 505,871. 4 Claims. (Cl. 306—33.)



1. The method of tightening a wooden shaft in the socket of a tool head or the like which consists in driving into the end of the shaft within the socket, a wooden wedge having a dried and hardened coating of cement that softens when heated.

1,426,317. CINEMATOGRAPHIC SCREEN. JULIAN MACARTNEY OGILVIE, London, England. Filed Aug. 22, 1921. Serial No. 494,358. 4 Claims. (Cl. 88—24.)

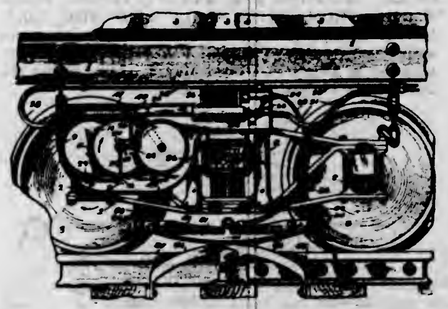


1. A cinematographic screen comprising a colored background, a metallic surface of powdered aluminum, and an outer coating of barium sulphate.

1,426,318. FRAME AND CASING FOR WASHING MACHINES. JOSEPH S. POWER, Dayton, Ohio, assignor to The Davis Sewing Machine Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 24, 1921. Serial No. 455,270. 3 Claims. (Cl. 220—80.)

3. A casing comprising a plurality of walls, an inner frame composed of angle bars whose ends abut, one bar being located at each corner and fitted against the adjacent walls, an outer frame composed of circular corner strips, one strip being located at each corner and fitted against the outer surface of the adjacent walls, a three armed corner fastening engaging three of the corner strips, a plate within the abutting ends of the angular bars, and a screw connecting each plate to a corner fastening.

1,426,319. NUT LOCK. TULLUS A. RANDALS, Pecos, Tex. Filed Mar. 17, 1921. Serial No. 452,920. 1 Claim. (Cl. 151—16.)

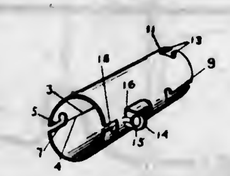


A nut lock including a bolt having right and left hand screw threaded portions, nuts threaded on said portions, washers of soft material on said bolt between the nuts and between the end of one nut and the object to which the bolt is applied, and spaced projections formed on both ends of one nut and on one end of the other nut and adapted to bite into said washers when the nuts are turned towards each other.

1,426,320. HOLDER FOR SCREWS, NAILS, AND THE LIKE. ALFRED J. REID, San Francisco, Calif., assignor of one-half to Peter M. Savage, San Francisco, Calif. Filed Nov. 28, 1921. Serial No. 518,233. 2 Claims. (Cl. 145—52.)

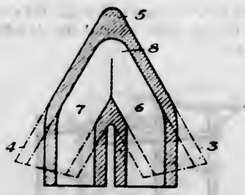
2. An attachment for tools of the type disclosed, comprising a rectangular sleeve formed of rigid material, a pair of spring leaves arranged within the sleeve and connected to the walls thereof intermediate their ends, one end of each of the leaves projecting out from the sleeve and forming jaws to grip the tool near the inner end thereof and the other end of each of the leaves lying within the sleeve and forming jaws to grip the tool near the outer end thereof, and a second and separate pair of spring leaves arranged within the sleeve and secured at their inner ends to the walls thereof, said last-named springs extending out from the sleeve and forming at their free ends a pair of jaws to receive a screw or the like.

1,426,321. AUTOMATIC TRAIN STOP. THOMAS M. RIGGLE, Oakland, Calif., assignor of one-eighth to Lida E. Riggle, Oakland, Calif. Filed Sept. 4, 1920. Serial No. 408,365. 12 Claims. (Cl. 246—183.)



1. An automatic train stop comprising an actuating means for engaging and actuating the brake valve of a standard air brake system to stop a train; controlling means for controlling the actuating means for actuating the valve; and retarding means actuated by movement of said train for retarding the action of the controlling means whereby said controlling means may be operated at the ends of predetermined distances travelled by the train.

1,426,322. PROCESS FOR TANNING WITH IRON SALTS. OTTO RÖHM, Darmstadt, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed June 13, 1917. Serial No. 174,643. 4 Claims. (Cl. 149—5.)



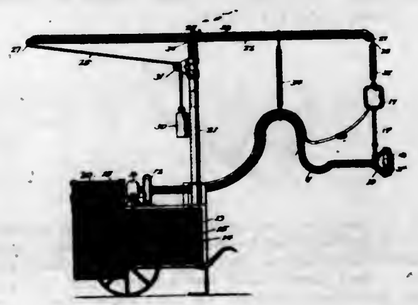
1. The process of tanning consisting in subjecting the leather to the action of iron salts, then treating the same with a neutralising agent without rendering the grain of the leather brittle, and finally subjecting the leather thus treated to the action of formate of iron.

1,426,323. CONNECTOR. HERMAN R. SAXON, Toledo, Ohio, assignor, by mesne assignments, to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 10, 1916. Serial No. 83,314. 2 Claims. (Cl. 173—328.)

1. A connector comprising a cylindrical shell having a pair of bayonet slots in each end of the shell, a longitudinal slit connecting the bottom portions of one of each pair of said bayonet slots and a lug integral with said tube projecting outwardly at right angles thereto and spaced from said slit, said shell being adapted to receive a terminal supporting member and a lamp, and being adapted to be moved longitudinally by said lug to focus the lamp.

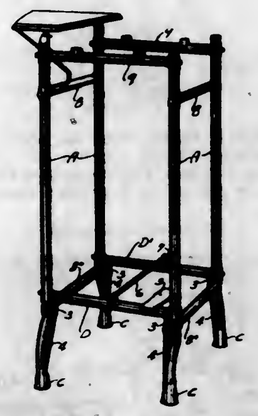
1,426,324. METHOD OF MAKING RETURN L'S. EDWIN E. SLICK, Johnstown, Pa. Filed Sept. 26, 1919. Serial No. 326,624. 4 Claims. (Cl. 29—157.6.)

1. The method of making return L's, which consists in forming a V-shaped blank, piercing the legs of the V-shaped blank to form a V-shaped passage therethrough, and bending the legs of the V parallel, substantially as described.



1,426,325. AIR COMPRESSOR. JOSEPH STANIS, Riverton, Ill. Filed July 11, 1921. Serial No. 484,007. 2 Claims. (Cl. 230—27.)

1. In an apparatus of the class described the combination of a propellible vehicle having a rotative axle; a sprocket wheel fixed on said axle; a double series of compression cylinders on said vehicle; pistons sliding in the respective cylinders; a rotative main drive shaft in

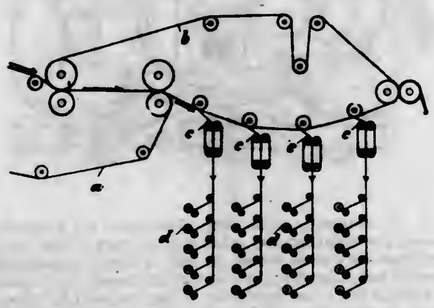


operative relation to said cylinders; a sprocket wheel loose on said shaft; a sliding clutch-member rotating with said shaft and engaging said loose sprocket wheel; piston-operating devices actuated by said main drive shaft; a drive chain connecting the sprocket wheel on the axle with the sprocket wheel on the main drive shaft; and spring-controlled sheaves pulling on the upward run and on the downward run of drive chain to maintain uniform tension of the chain.

1,426,326. COTTON-PICKER SUCTION NOZZLE. LOUIS CARROLL STUKENBORG, Chicago, Ill., assignor to Frederick W. Stukenborg, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 290,031. 12 Claims. (Cl. 56—32.)

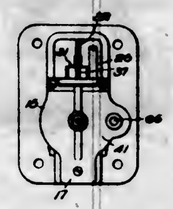
1. A cotton picking and conveying device comprising, in combination with a suction tube, a picker nozzle having a receiving mouth provided with a series of rotative picker elements disposed radially about the axis of said nozzle, driving gears for the picker elements, and casings enclosing said gears.

1,426,327. STAND. HIERO GILLAS TIFFANY, St. Louis, Mo. Filed Oct. 4, 1920. Serial No. 414,585. 2 Claims. (Cl. 280—44.)



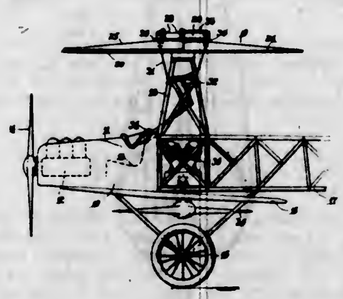
1. A stand provided with legs equipped with rollers, a tubular member arranged in telescopic relation with the lower end portion of each leg and adapted to be moved downwardly into engagement with the floor so as to elevate the leg and the roller thereon, a pair of horizontally-disposed rock shafts carried by said legs, rigid arms on said shafts arranged adjacent the ends of same, each of said arms being adapted to co-operate with one of said tubular members, and links that join said arms to their co-operating tubular members.

1,426,328. STAND. HIERO G. TIFFANY, St. Louis, Mo., assignor to Simplex Steel Stamping & Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 23, 1921. Serial No. 446,997. 6 Claims. (Cl. 280—44.)



1. A stand provided with legs, supporting members arranged in telescopic relation with said legs, a pair of toggle links associated with each leg and supporting member and pivotally connected with same in such a manner that said links exert a downward thrust on said supporting members when the links are straightened, and an operating mechanism for said toggle links comprising an operating bar connected to each pair of toggle links and having its outer end projecting into an opening in the adjacent leg of the stand, whereby said bar is accurately guided.

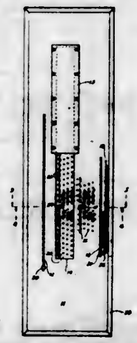
1,426,329. MACHINE FOR MANUFACTURING FIBER STRIPS FROM PAPER PULP AND THE LIKE. GUSTAV TÜRK, Meisingen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 5, 1919. Serial No. 294,993. 4 Claims. (Cl. 92—39.)



1. A machine for manufacturing fiber strips from paper pulp and the like comprising an endless sieve-band, and a felt-band in contact with the endless sieve-band and adapted to pick up fiber strips carried along by the sieve-band in combination with a number of delivering devices arranged in such manner as to pick up the fiber strips from the felt-band in separate groups.

1,426,330. MACHINE FOR ATTACHING LAUNDRY TAGS. GEORGE H. WILLIAMS, Boston, Mass., assignor to Boston Clip and Tag Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1920. Serial No. 374,566. 16 Claims. (Cl. 153—1.)

1. A machine of the class described comprising a clinching mechanism embodying an anvil and an opposed plunger, a magazine, a turret interposed between said clinching mechanism and magazine, a lever for operating the plunger and arms connected therewith for delivering tags from the magazine to the turret and from the turret to the anvil.



1,426,331. FALL-CHECKING DEVICE FOR AIRCRAFT. ALEXANDER ZEITLIN, New York, N. Y., assignor of one-fourth to Jack Heller, one-fourth to Joseph Rifkin, and one-fourth to Samuel Heller, all of New York, N. Y. Filed June 17, 1921. Serial No. 478,368. 4 Claims. (Cl. 244—19.)

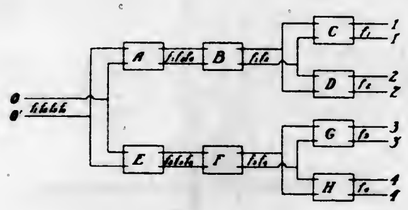
1. In an air craft, a combination plane and parachute, comprising a stationary annular supporting frame, a relatively fixed semicircular solid disc portion carried by said frame, and additional solid disc portions slidably supported in said frame and movable relatively to the fixed portion.

1,426,332. COMPUTING DEVICE. NATHAN M. PURVIANCE, Lewiston, Idaho. Filed Mar. 10, 1921. Serial No. 451,285. 8 Claims. (Cl. 235—61.)

1. A computing device of the class described, comprising a housing provided with an opening in its front wall; slidable means mounted in said housing, including a member mounted beneath said opening and having means adjustably attached thereto; numbers on the rear faces of said members; means extending from one of said slidable

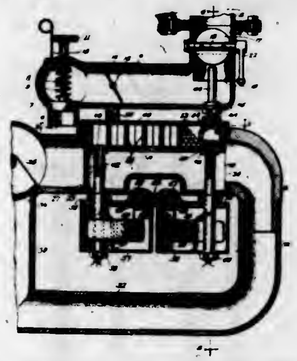
members adapted to engage said adjustable means and raise the slidable member attached thereto; and means displaying the result from said rear numbers.

1,426,333. SPARKING PLUG. WILLIAM ARTHUR JONES, Manchester, England, assignor to Sonje Limited, Manchester, England, a Company of the United Kingdom of Great Britain and Ireland. Filed Dec. 7, 1920. Serial No. 428,994. 3 Claims. (Cl. 123—169.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A sparking plug comprising an insulating body provided with an abutment, an electrode mounted in said body, a complementary electrode mounted on said body, a ring or washer of conducting material separate from the complementary electrode and tightly fitting on said body against said abutment and securing said complementary electrode to said body to form a unit therewith, an outer casing in which said insulating body is fitted and provided with an internal abutment against which said ring or washer bears, and means for securing said body on said casing.

1,426,334. SELECTIVE RECEPTION OF ALTERNATING CURRENTS. FREDERICK E. PEMOT and LESTER J. RICH, Washington, D. C. Filed Mar. 30, 1922. Serial No. 548,254. 1 Claim. (Cl. 178—44.)

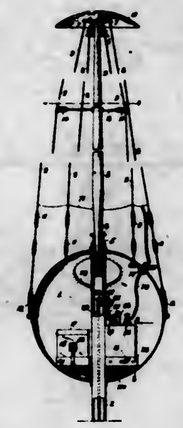


A system for the selective transmission of a plurality of currents of different frequency between a common

transmisson circuit and circuits individual to said frequencies, comprising a plurality of branches for said common circuit and sub-branches for each branch, selective suppressing devices for each frequeny comprising input and output circuits conjugate to one another as to a single frequency and connected into the branches and

sub-branches so as to provide for each frequency a single selective path extending from the common circuit to its individual circuit by way of a branch, a sub-branch and selective frequency devices for each of the other frequencies, whereby said other frequencies are individually and successively suppressed.

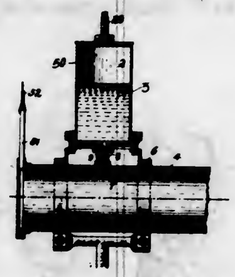
1,426,335. DUPLEX CARBURETOR. FRANK R. PERRY, Chicago, Ill., assignor, by mesne assignments, of one-half to Benjamin Motor Products Co., Detroit, Mich., a Corporation of Delaware. Filed Jan. 7, 1918. Serial No. 210,691. 1 Claim. (Cl. 261—18.)



In a device of the kind described, a supply chamber to contain a heavy fuel, a supply chamber to contain a lighter fuel, means for producing a primary mixture of each of said fuels with a small quantity of air, a conduit for a heating medium arranged adjacent said supply chamber, a chamber providing an extended surface mounted in said conduit, an outlet connection from the supply chamber for the heavy fuel across said conduit to the inlet end of the heating chamber, an outlet connection from the supply chamber for the lighter fuel across said conduit to the outlet end of said chamber, a valve at said outlet to control the flow of mixture from the heating chamber or the light fuel supply chamber to the nozzle of a mixer, and means for supplying additional air to said mixer.

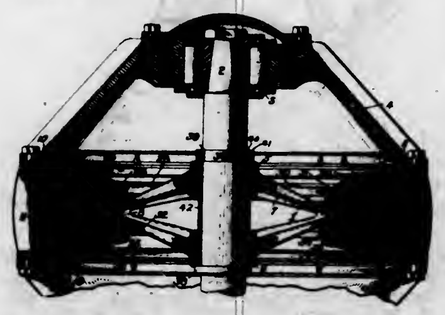
1,426,336. ROTOR FOR GYROSCOPES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 20, 1917. Serial No. 163,342. 31 Claims. (Cl. 74—78.)

1. A fly wheel comprising a hub portion having a resilient yielding periphery and a rim connected to said periphery whereby expansion of the rim will cause the periphery to follow.



1,426,337. SIGNALING APPARATUS FOR DETECTING SUBMARINES. ELMER A. SPERRY, Brooklyn, N. Y. Filed July 9, 1917. Serial No. 179,586. 15 Claims. (Cl. 250—1.)

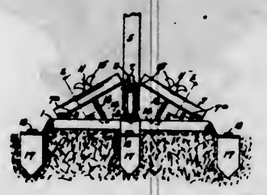
1. A signaling buoy comprising a body portion, means carried within said body portion for producing electrical oscillations and means for absorbing moisture within said body portion.



1,426,338. VISUAL SIGNALING MEANS. ELMER A. SPERRY, Brooklyn, N. Y. Filed July 9, 1917. Serial No. 179,587. 4 Claims. (Cl. 116—18.)

4. In a signaling means for aircraft, the combination with the exhaust pipe of the engine, of a container for a cloud-producing substance mounted adjacent thereto, a valve opening out of said container into said exhaust, said valve being sufficiently close to the exhaust to utilize the heat thereof to keep it substantially free of de-

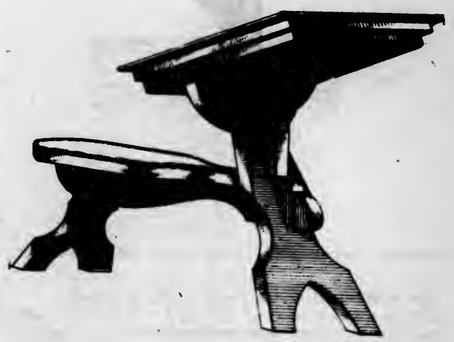
posits, an opening for admitting air into said container, and means for preventing clogging of said opening.



1,426,339. WIRE-WOUND GYRO ROTOR. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 26, 1918. Serial No. 264,160. 9 Claims. (Cl. 74—78.)

1. In a fly wheel, a hub, a rim, means connecting said hub and said rim, said rim including a plurality of layers of wire, the tension of the layers varying in proportion to the forces they are called upon to withstand.

REISSUES.



15,431. ADJUSTABLE HOLDER. ANDROV H. CARLSON, Bridgeport Conn., assignor to The Prestoy Manufacturing Company, Bridgeport, Conn. Filed Apr. 6, 1922. Serial No. 550,189. Original No. 1,335,724, dated Apr. 6, 1920, Serial No. 336,720, filed Nov. 8, 1919. 4 Claims. (Cl. 248—28.)

1. A metal holder of the character described, comprising two channel iron base plates, a centrally located bolt connecting the base plates, said bolt having a pointed end, means integral with one plate engaging the other plate to maintain the latter at right angles to the former, inclined side braces having openings at their outer ends, means integral with the base plates interlocking with said openings, bolts projecting through the base plates and side braces, means connected with said bolts to exert a downward pressure on the side braces, and springs adapted to exert an outward pressure on the braces when the downward pressure has been released.

DESIGNS.

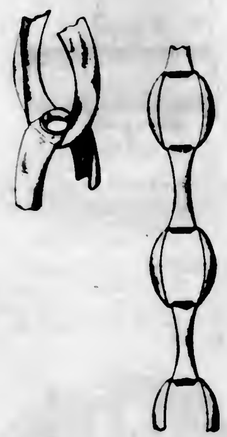
61,355. DESK. CARL THOMAS ANDERSON, Madison, Wis. Filed Dec. 12, 1921. Serial No. 521,943. Term of patent 14 years.

The ornamental design for a desk substantially as shown.

61,356. BRUSH. DANIEL A. ANDREWS, Cedar Keys, Fla. Filed Apr. 8, 1922. Serial No. 1,651. Term of patent 7 years.

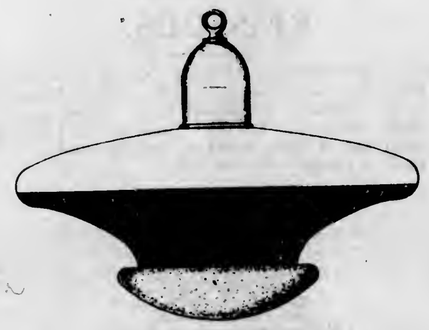
The ornamental design for a brush, as shown.

61,357. BRUSH. DANIEL A. ANDREWS, Cedar Keys, Fla. Filed Apr. 11, 1922. Serial No. 1,690. Term of patent 7 years.



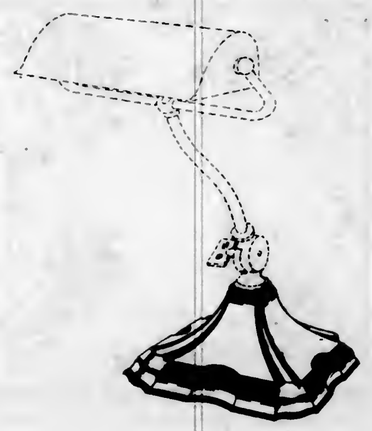
The ornamental design for a brush, as shown.

61,358. BRUSH. DANIEL A. ANDREWS, Cedar Keys, Fla. Filed Apr. 15, 1922. Serial No. 1,773. Term of patent 7 years.



The ornamental design for a brush, as shown.

61,359. CHAIN. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1920. Serial No. 396,615. Term of patent 7 years.

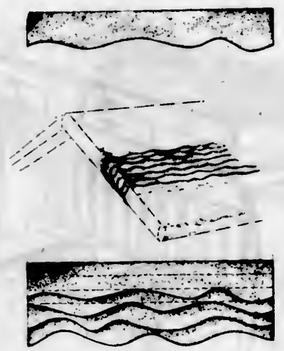


The ornamental design for a chain substantially as shown.

61,360. LIGHTING FIXTURE. WILLIAM T. BLACKWELL, Westfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 21, 1921. Serial No. 516,892. Term of patent 14 years.

The ornamental design for a lighting fixture, as shown.

61,361. PORTABLE LAMP BASE. AUGUST BOSTROEM, New York, N. Y., assignor to Samuel Robert Schwartz, New York, N. Y. Filed Nov. 3, 1921. Serial No. 512,639. Term of patent 7 years.

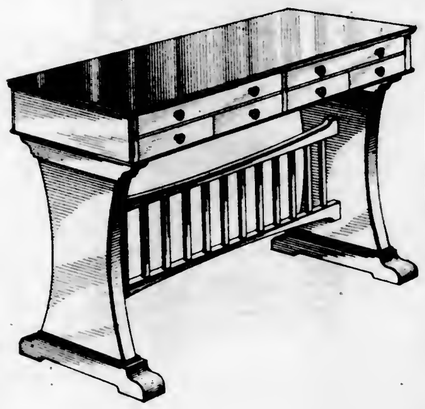


The ornamental design for a portable lamp base, as shown.

61,362. PORTABLE LAMP BASE. AUGUST BOSTROEM, New York, N. Y., assignor to Samuel Robert Schwartz, New York, N. Y. Filed Dec. 22, 1921. Serial No. 524,311. Term of patent 7 years.

The ornamental design for a portable lamp base, as shown.

61,363. ROOFING ELEMENT. NAASON Z. BUTTERICK, Jacksonville, Fla. Filed Mar. 20, 1922. Serial No. 1,262. Term of patent 14 years.



The ornamental design for a roofing element, as shown.

61,364. CABINET. HARRY C. GOWRAN, Two Rivers, Wis., assignor to The Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 525,272. Term of patent 14 years.

The ornamental design for a cabinet, as shown.

61,365. TABLE. HARRY C. GOWRAN, Two Rivers, Wis., assignor to The Hamilton Manufacturing Company, Two Rivers, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 525,273. Term of patent 14 years.

The ornamental design for a table, as shown.

61,366. HANDKERCHIEF, NAPKIN, OR SIMILAR ARTICLE OF MANUFACTURE. JAMES HARDEN, New York, N. Y., assignor to The Acheson Harden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1921. Serial No. 515,967. Term of patent 7 years.

The ornamental design for a handkerchief, napkin, or similar article of manufacture substantially as shown and described.

61,367. HANDKERCHIEF, NAPKIN, OR SIMILAR ARTICLE OF MANUFACTURE. JAMES HARDEN, New York, N. Y., assignor to The Acheson Harden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1921. Serial No. 515,968. Term of patent 7 years.

The ornamental design for a handkerchief, napkin, or similar article of manufacture substantially as shown and described.

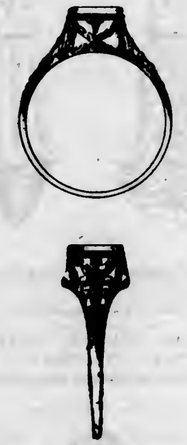
61,368. HANDKERCHIEF, NAPKIN, OR SIMILAR ARTICLE OF MANUFACTURE. JAMES HARDEN, New York, N. Y., assignor to The Acheson Harden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1921. Serial No. 515,969. Term of patent 7 years.

The ornamental design for a handkerchief, napkin, or similar article of manufacture substantially as shown and described.

61,369. HANDKERCHIEF, NAPKIN, OR SIMILAR ARTICLE OF MANUFACTURE. JAMES HARDEN, New York, N. Y., assignor to The Acheson Harden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 17, 1921. Serial No. 515,970. Term of patent 7 years.

The ornamental design for a handkerchief, napkin, or similar article of manufacture substantially as shown and described.

61,370. SHELF PAPER. EDWARD KARFIOL, Brooklyn, N. Y. Filed June 3, 1922. Serial No. 2,523. Term of patent 14 years.



The ornamental design for shelf paper, as shown.

61,371. CARTON. FELIX LOWY, Milwaukee, Wis., assignor to The Palmolive Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 9, 1920. Serial No. 395,163. Term of patent 7 years.

The ornamental design for a carton, as shown.

61,372. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Apr. 18, 1922. Serial No. 1,819. Term of patent 7 years.

The ornamental design for a ring or similar article, as shown.

61,373. WEDDING RING. CHARLES B. NAMIOT, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,735. Term of patent 3½ years.

The ornamental design for a wedding ring as shown.

61,374. TASSEL FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Dec. 6, 1921. Serial No. 520,451. Term of patent 3½ years.

The ornamental design for a tassel for lighting fixtures, as shown.

61,375. LOOP FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Dec. 6, 1921. Serial No. 520,452. Term of patent 3½ years.

The ornamental design for a loop for lighting fixtures, as shown.

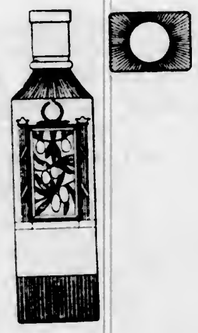
61,376. WALL BRACKET. BARNET NEWLAND, New York, N. Y. Filed Dec. 8, 1921. Serial No. 521,038. Term of patent 3½ years.

The ornamental design for a wall bracket as shown.

61,377. LIGHT FIXTURE. ALBERT G. NYGREN, Milwaukee, Wis. Filed Dec. 8, 1921. Serial No. 521,040. Term of patent 3½ years.

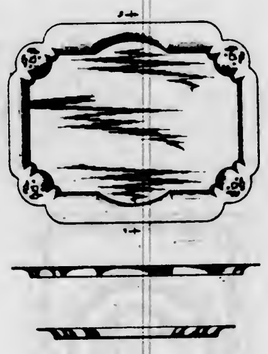
The ornamental design for a light fixture, as shown.

61,378. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 2,162. Term of patent 7 years.



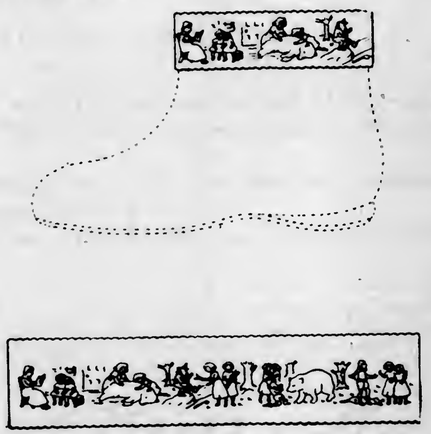
The ornamental design for fringe, as shown.

61,379. FRINGE. FRANKLIN W. OEHRLE, Philadelphia, Pa., assignor to Oehrle Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1922. Serial No. 2,163. Term of patent 7 years.



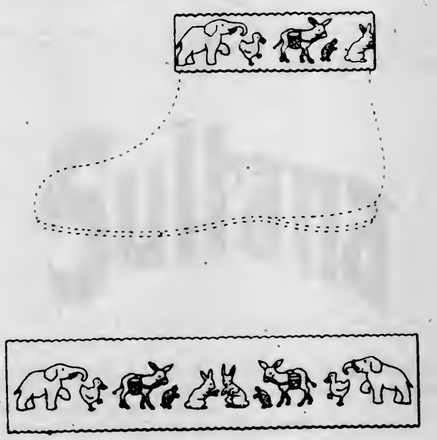
The ornamental design for fringe, as shown.

61,380. OLIVE-OIL BOTTLE. ALOYSIUS RITTERBECK, West Hoboken, N. J., assignor to Park & Tilford, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,401. Term of patent 7 years.



The ornamental design for an olive oil bottle as shown.

61,381. TRAY. LOUIS M. SCHNITZER and LEON GARROWAY, Brooklyn, and NATHAN GELFMAN, New York, N. Y. Filed Dec. 3, 1921. Serial No. 519,775. Term of patent 3½ years.



The ornamental design for a tray, as shown.

61,382. FOOTWEAR. HARRY SCHWERIN, Brooklyn, N. Y. Filed July 23, 1921. Serial No. 487,195. Term of patent 3½ years.

The ornamental design for footwear as shown.

61,383. FOOTWEAR. HARRY SCHWERIN, Brooklyn, N. Y. Filed July 23, 1921. Serial No. 487,197. Term of patent 3½ years.

The ornamental design for footwear as shown.

TRADE-MARKS

Ser. No. 135,320. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EDSON BROTHERS, Philadelphia, Pa. Filed July 23, 1920.

All reading matter on said drawing except the words "Italian Glory" being disclaimed.
Particular description of goods.—Olive Oil.
Claims use since about Aug. 26, 1919.

Ser. No. 139,457. (CLASS 39. CLOTHING.) FRIEDMAN BROTHERS INC., Council Bluffs, Iowa. Filed Nov. 10, 1920.

In trade-mark the portion of the rainbow shown is lined for blue on outer portion and red in the inner portion.
Particular description of goods.—Overalls and Jackets, Work Shirts, Work Caps, Dust Coats, Auto Coats, Hunting Coats; Sportsmen's Garments—Namely, Hunting Caps, Pants, Vests, and Belts.
Claims use since May, 1920.

Ser. No. 139,768. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920.

AMBER

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1900.

Ser. No. 139,836. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1920.

INVINCIBLE

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping, and for Toilet Use—Namely, Hairbrushes.
Claims use since on or about Jan. 1, 1895.

Ser. No. 140,282. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1920.

269

Particular description of goods.—Brushes for Toilet Use—Namely, Hairbrushes.
Claims use since on or about Nov. 1, 1884.

Ser. No. 140,368. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 27, 1920. Under ten-year proviso.

WHITING'S

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Jan. 1, 1868.

Ser. No. 140,431. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) DURKEE-ATWOOD CO., Minneapolis, Minn. Filed Nov. 30, 1920.

Vee-Round

Particular description of goods.—Power-Transmitting Belts of Fabric, Rubberized Fabric, or Leather Composition
Claims use since about Sept. 15, 1920.

Ser. No. 141,504. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) REITMAN MFG. CO., Chicago, Ill. Filed Dec. 24, 1920.

POLLYANNA

Particular description of goods.—Ready-to-Make Doll Clothes Sets in Which Pieces of Cloth are Provided Cut to the Desired Design and Arranged in Proper Relation with Each Other, so as to be Ready to be Sewed Together.
Claims use since Nov. 23, 1920.

Ser. No. 142,002. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALBERS BROS. MILLING CO., San Francisco, Calif. Filed Jan. 10, 1921.

MOLAS-O-MEAL

Particular description of goods.—Stock Feed.
Claims use since Apr. 1, 1920.

Ser. No. 142,157. (CLASS 32. FURNITURE AND UPHOLSTERY.) M. & M. WOOD WORKING CO., Portland, Oreg. Filed Jan. 12, 1921.

No claim is made to the picture of the stool appearing in drawing.
Particular description of goods.—Stools.
Claims use since Aug. 12, 1920.

Ser. No. 142,265. (CLASS 10. FERTILIZERS.) NITRO-BACTER SOIL VACCINE CORPORATION, Chicago, Ill. Filed Jan. 14, 1921.

No claim is made to the exclusive use of the words "Nitro-Bacter" and "Soil Vaccine" apart from the mark shown in the drawing.

Particular description of goods.—Liquid Cultures of Nitrifying Bacteria.

Claims use since Oct. 7, 1920.

Ser. No. 142,295. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) F. O. PIERCE COMPANY, New York, N. Y. Filed Jan. 15, 1921.

No claim is made to the word "Paint" apart from the mark shown in drawing.

Particular description of goods.—Varnishes, Furniture and Automobile Polishes, Paint-Pigment Colors, Dry Colors, Wood Stains, Metal-Coating Preparations in the Nature of Paints; Wood Fillers, Japans, Paint and Varnish Driers, Paint and Varnish Asphaltums, Bronze Liquid, Prepared Paint and Varnish Reducing Liquid, Colors in Oil, Varnish and Water Enamels in the Nature of Paint, Acid-Proof Paint and Coating, Flat Wall Finish in the Nature of Paint, Liquid Concrete Coating in the Natnre of a Paint, Deck Paint, Ready Mixed and Prepared Paints, Floor Wax, Paste Paints, Paints in Powdered Form, Floor Oil and Paint, Prepared Shellac, Japan and Liquid Driers, Color Varnishes, Auto-Top Dressings in the Nature of a Paint, Varnish Stains, and Liquid and Paste Putty.

Claims use since Jan. 13, 1921.

Ser. No. 142,315. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ARTHUR MÜLLER BAUTEN UND INDUSTRIEWERKE, Johannisthal, near Berlin, Germany. Filed Jan. 17, 1921.

Ambi

Particular description of goods.—Internal-Combustion Engines, Steam Engines; All Kinds of Agricultural Machines, Such as Sowing and Harvesting Machines, Plows, Plowing Machines, and Their Parts; Tile and Brick Making Machines and Parts thereof, and Brick Molds.

Claims use since Oct. 18, 1918.

Ser. No. 142,759. (CLASS 15. OILS AND GREASES.) LINCOLN MOTOR COMPANY, Detroit, Mich. Filed Jan. 25, 1921.

Particular description of goods.—Lubricating Oils and Greases.

Claims use since Nov. 20, 1920.

Ser. No. 143,305. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WORCESTER PRESSED ALUMINUM COMPANY, Worcester, Mass. Filed Feb. 7, 1921.

PALCO

Particular description of goods.—Hot-Water Bottles, Fountain Syringes, and Combination Water Bottles and Fountain Syringes.

Claims use since and during 1915.

Ser. No. 143,500. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) KEYSTONE FRUIT PRODUCTS COMPANY, Cincinnati, Ohio. Filed Feb. 12, 1921.

Particular description of goods.—Nonalcoholic, Maltless Beverages Sold as Soft Drinks and Flavors and Extracts for Making Same.

Claims use since June 1, 1915.

Ser. No. 143,628. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) UNITED STATES TIRE COMPANY, New York, N. Y. Filed Feb. 15, 1921.

Particular description of goods.—Tubes for Tires.

Claims use since Mar. 1, 1916.

Ser. No. 143,963. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JOHN SALM, doing business as Salm Manufacturing Company, Torrance, Calif. Filed Feb. 23, 1921.

IV-A-LONE

Particular description of goods.—Toilet Articles Showing Mother-of-Pearl Handles for Manicure Articles—viz, Nail Files, Nail Cleaners, Nail Buffers, Cuticle Knives, Cuticle Shears, Cuticle Buffers, Cuticle Scrapers, Corn Knives, Blackhead Removers, Also Tweezers and Surgical Mirrors.

Claims use since Jan. 20, 1921.

Ser. No. 144,064. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JOHN SALM, doing business as Salm Manufacturing Company, Torrance, Calif. Filed Feb. 23, 1921.

IV-OR-LONE

Particular description of goods.—Toilet Articles Showing Mother-of-Pearl Handles for Manicure Articles—viz, Nail Files, Nail Cleaners, Nail Buffers, Cuticle Knives, Cuticle Shears, Cuticle Buffers, Cuticle Scrapers, Corn Knives, Blackhead Removers, Also Tweezers and Surgical Mirrors.

Claims use since Jan. 20, 1921.

Ser. No. 144,059. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) R. AVENARIUS & CO., Stuttgart, Germany. Filed Feb. 26, 1921.

Avenarius Carbolineum

Trade-mark consists of the words "Avenarius Carbolineum."

Particular description of goods.—Preserving Paint.

Claims use since 1898.

Ser. No. 145,297. (CLASS 39. CLOTHING.) JESSE WOOLF CO., New York, N. Y. Filed Mar. 26, 1921.

JESSCO

Particular description of goods.—Frocks.

Claims use since Mar. 1, 1921.

Ser. No. 145,382. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) W. WM. WINBERG, trading as The Winberg Druggists' Supply Co., Wilmette, Ill. Filed Mar. 28, 1921.

Boro-Eucol

Particular description of goods.—Nasal Douche.

Claims use since 1904.

Ser. No. 145,896. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) HUNTY-PECK & COMPANY, Indianapolis, Ind. Filed Apr. 8, 1921.

Orange Quench

The word "Orange" is hereby disclaimed apart from the mark as shown.

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverage Sold as a Soft Drink and Sirups for Making the Same.

Claims use since February, 1920.

Ser. No. 145,934. (CLASS 39. CLOTHING.) BERNSTEIN & SHULMAN, New York, N. Y. Filed Apr. 9, 1921.

Young-Mode

Particular description of goods.—Misses' Suits and Dresses.

Claims use since Feb. 1, 1921.

Ser. No. 146,432. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) ELI F. GOLDBERG, Rochester, N. Y. Filed Apr. 20, 1921.

LEWGOLD

Particular description of goods.—Dental Syringes.
Claims use since Aug. 1, 1920.

Ser. No. 146,446. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) LUPORINI BROS., New York, N. Y. Filed Apr. 20, 1921.

Particular description of goods.—Photographic Films.
Claims use since Mar. 15, 1921.

Ser. No. 146,652. (CLASS 15. OILS AND GREASES.) THE PURITAN DRUG MFG. CO., Columbus, Ohio. Filed Apr. 23, 1921.

Aster

Particular description of goods.—Sewing-Machine Oil.
Claims use since December, 1913.

Ser. No. 146,680. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALPINE CHOCOLATES COMPANY, Boston, Mass. Filed Apr. 25, 1921.

HEIGHT OF DELIGHT

Trade-mark "Height of Delight."
Particular description of goods.—Candy.
Claims use since Jan. 15, 1920.

Ser. No. 147,715. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) DOUGHTEN SEED COMPANY, Jersey City, N. J. Filed May 14, 1921.

FREEDOM BRAND

No claim made to the exclusive use of the word "Brand" apart from the mark shown in drawing.
Particular description of goods.—Field and Grass Seeds.
Claims use since about Feb. 1, 1920.

Ser. No. 147,745. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) F. & H. TURNER LIMITED, Wallington, England, and Helmond, Netherlands. Filed May 14, 1921.

HELM ROYAL CHOCOLATES

The word "Chocolates" is hereby disclaimed apart from the other features of the mark.
Particular description of goods.—Cocoa and Chocolate.
Claims use since Nov. 16, 1920.

Perfection

Particular description of goods.—Hairpins, Combs, Barrettes, and Hair Ornaments, All of Said Articles Being Made of a Composition Similar to Celluloid.
Claims use since Aug. 10, 1910.

157,829. (CLASS 39. CLOTHING.) PAIGE HAT CO., INC., New York, N. Y. Filed Nov. 22, 1921. Serial No. 155,770.

Paige

Particular description of goods.—Ladies' Hats.
Claims use since July 1, 1920.

157,830. (CLASS 39. CLOTHING.) G. M. POIX, INC., Brooklyn, N. Y. Filed Oct. 31, 1921. Serial No. 154,844.

GIRLISH FORM

Particular description of goods.—Brassières.
Claims use since Oct. 7, 1919.

157,831. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) QUAKER LACE COMPANY, Philadelphia, Pa. Filed June 8, 1922. Serial No. 165,206.

TUSCAN

Particular description of goods.—Lace Curtains and Nets or Curtain Lace in Piece Goods.
Claims use since Oct. 1, 1920.

157,832. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) LOUIS ROESSEL & CO. INC., New York, N. Y. Filed May 20, 1921. Serial No. 147,992.

ROESSEL

Particular description of goods.—Crêpe in the Piece.
Claims use since May 11, 1921.

157,833. (CLASS 39. CLOTHING.) SAMUEL RUBIN, Mount Vernon, N. Y. Filed June 6, 1921. Serial No. 148,765.

MANYSHFORM

Particular description of goods.—Brassières.
Claims use since Jan. 2, 1909.

157,834. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE M. SHAFFER COMPANY, Philadelphia, Pa. Filed Mar. 24, 1922. Serial No. 161,209.

FRENCH QUININE

Particular description of goods.—Tonic for the Scalp and Hair.
Claims use since on or about July 8, 1918.

157,835. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE M. SHAFFER COMPANY, Philadelphia, Pa. Filed Mar. 24, 1922. Serial No. 161,210.

FRENCH LILAC

Particular description of goods.—Toilet Water.
Claims use since on or about Nov. 29, 1919.

157,836. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) G. S. STODDARD & CO., INC., New York, N. Y. Filed Mar. 3, 1922. Serial No. 160,162.

STODDARD'S GLYCO-HYDRASTIN

Particular description of goods.—A Medicine for the Treatment of Dyspepsia.
Claims use since June 23, 1904.

157,837. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) G. S. STODDARD & CO., INC., New York, N. Y. Filed Mar. 3, 1922. Serial No. 160,163.

STODDARD'S PINUS-CODEIA

Particular description of goods.—A Medicine for the Treatment of Coughs and All Irritating and Inflammatory Conditions of the Respiratory Tract.
Claims use since June 23, 1904.

157,838. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) G. S. STODDARD & CO., INC., New York, N. Y. Filed Mar. 3, 1922. Serial No. 160,164.

PEPTO-PAPAYA

STODDARD

Particular description of goods.—A Medicine for the Treatment of Peptic and Intestinal Indigestion, Nausea, Flatulence, Palpitation, Acidity, and Vertigo.
Claims use since June 23, 1904.

157,839. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BENGT WALLGREN, Dover, N. J. Filed June 1, 1921. Serial No. 148,519.

EVERLASTING

Particular description of goods.—Stove Polish.
Claims use since Apr. 12, 1921.

157,840. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH WEBER, Jr., Philadelphia, Pa., and Jackson, N. H. Filed Mar. 4, 1922. Serial No. 160,219.

RED OIL

Particular description of goods.—A Certain Named Medicinal Preparation.
Claims use since on or about Nov. 1, 1919.

157,841. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ALBERT G. WISWELL, Wilmington, Del. Filed Nov. 3, 1921. Serial No. 155,002.

MEDICUS SOAP

Particular description of goods.—Soap.
Claims use since Nov. 1, 1920.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

THE DECO CO. *v.* THE DAYTON IGNITION COMPANY.

1. TRADE-MARKS—OPPOSITION—RIGHTS AS TO FIRM NAME.

The right of a firm to oppose the registration of its name by others on the ground that it would be an appropriation of its name extends only to the exact words of the name and not to words that bear some resemblance thereto.

2. SAME—SAME—THE WORD "DICO" NOT AN INFRINGEMENT OF THE NAME DECO COMPANY.

The Deco Company opposed the registration of the word "Dico," for spark plugs, on the ground that it would be an appropriation of the firm name. *Held* that the opposition was properly dismissed.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR SPARK PLUGS.

Messrs. Munn & Co. for The Deco Co.

Mr. F. L. Walker for The Dayton Ignition Company.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiner of Interferences dismissing an opposition brought by the Deco Co., a firm, against the registration of "Dico" as a trade-mark for spark plugs. The Deco Co. has registered its trade-mark "Deco" for several classes of goods which do not include spark plugs, and none of which "are identical or even similar in their physical characteristics or properties." The substantial question, therefore, is whether the mark for which registration is now asked is merely the name of the opposing firm. Opposer relies upon the *The Asbestone Company* v. *The Philip Carey Mfg. Co.* (200 O. G., 857; 41 App. D. C., 507; 1914, C. D., 146.) In that case and in all cases which I find the mark the registration of which was refused was identical with the name of the opposing company. In the present instance the registrant's mark includes the letter "i" in place of the letter "e" in opposer's name. This may be a slight difference, but I am constrained to hold that it is a sufficient difference to warrant the dismissal of the opposition.

The Examiner of Interferences is affirmed and the opposition dismissed.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—First Circuit.

O'SULLIVAN RUBBER CO., INC., *v.* GENUINE RUBBER CO. ET AL.

Decided April 11, 1922.

[279 Fed. Rep., 972.]

1. TRADE-MARKS AND TRADE-NAMES AND UNFAIR COMPETITION—EXCLUSIVE RIGHT TO USE TRADE-MARK OF PATENTED ARTICLE EXPIRES WITH PATENT.

On expiration of a patent the exclusive right to use the generic name by which the patented article has been designated, in the nature of a trade-mark, also expires.

2. SAME—IMITATION OF DRESS HELD TO CONSTITUTE UNFAIR COMPETITION.

For 25 years complainant has made and sold rubber heels for shoes and has built up an extensive trade. During that time it obtained a patent on its product, which has expired. Before, during the life of, and since the expiration of the patent it has impressed on its heels in raised letters and in a peculiar design the words "O'Sullivan's Safety Cushion Heel," and such words and design have come to designate to the purchasing public complainant's product, which for much the greater part is sold through jobbers to cobblers, who sell to the users. Since expiration of the patent defendant has commenced the manufacture of similar heels sold in the same manner, but at a lower price, on which are impressed in similar design and style of letters the words "The Genuine Safety Cushion Heel." It also uses cartons, each containing one pair of heels, very similar in general appearance to those of complainant. *Held* that defendant was chargeable with unfair competition.

APPEAL from the District Court of the United States for the District of Massachusetts; George W. Anderson, judge.

Suit in equity by the O'Sullivan Rubber Company, Inc., against the Genuine Rubber Company and others. Decree for defendants, and complainant appeals. Reversed.

Mr. Frederick P. Fish (*Mr. Alfred H. Hildreth* and *Mr. Clinton H. Blake, jr.*, on the brief) for appellant.

Mr. Arthur P. French (*Mr. Timothy A. O'Leary* on the brief) for appellees.

Before BINGHAM and JOHNSON, Circuit Judges, and MORRIS, District Judge.

BINGHAM, *Cir. J.:*

This is a proceeding in equity brought by the complainant, appellant, against the defendants, appellees, asking an injunction restraining the defendants from putting on the market a suction recess heel and employing in connection therewith certain features as to structure, words, letters, and the arrangement thereof, similar to those employed by the plaintiff in the marketing of its heel, Exhibit A, and for an accounting.

In the court below it was found and ruled: (1) that the plaintiff's good will in the sale of Exhibit A centered "around the term 'O'Sullivan's Heel,'" and that the words "Safety Cushion" are both descriptive words, in which the plaintiff has no monopoly or exclusive rights; (2) that the cartons used by the respective parties played no part in marketing the goods by cobblers to their patrons; that, in so far as there was a resemblance between the cartons of the defendants and those of the plaintiff, it was not calculated to facilitate palming off the defendants' goods for the plaintiff's to the deception of the public; (3) that the evidence as to alleged palming off had no "tendency to show any palming off or substitution of defendants' heels for the plaintiff's, within the meaning of those phrases as employed in unfair competition law"; and (4) that the defendants were seasonably notified by the

plaintiff of its contention that the defendants' heel unfairly resembled the plaintiff's. Having made these findings, a decree was entered dismissing the bill, and the plaintiff appealed.

The main facts in the case are not in dispute. The principal questions relate to the legitimate deductions to be made from those facts and whether the deductions present a case of unfair competition.

The plaintiff and its predecessors in title have been engaged in the sale or manufacture and sale of rubber heels for more than 25 years. The principal method of marketing its product is and has been by sales to jobbers, who sell to cobblers, who supply them to their customers, the ultimate consumers. Ninety-eight per cent of the plaintiff's sales are made in this way; only two per cent being to manufacturers of shoes. Since 1911 the plaintiff and its predecessors have sold nearly 50,000,000 pairs of heels like Exhibit A, and more than 10,000,000 pairs in each of the years 1919 and 1920; the receipts during the 10 years from 1911 to 1920 from this heel (Exhibit A) being nearly $11,000,000, and in 1920 nearly $2,500,000. Its sales of heels like Exhibit A represent 60 per cent of its entire business, and this amount is ultimately supplied to the public through cobblers, except as to the two per cent supplied to shoe manufacturers. In marketing the heels through jobbers to cobblers, the plaintiff packs them in boxes or cartons like Exhibit D; each box containing a pair of heels. It markets its goods throughout the United States, but largely in New York, Boston, Philadelphia, Chicago, Buffalo, Washington, Pittsburgh, and Baltimore. In the last 23 years the plaintiff and its predecessors have spent more than $5,000,000 in advertising their heels, and in 1920 something rising $700,000 for that year. A special feature of the advertisements has been a picture of the heel (Exhibit A), and on the face of the heel, as presented in the picture, has appeared, since as far back as 1898, the words "O'Sullivan's Safety Cushion Heel," occupying the same places, displayed in type of the same general character, with the word "O'Sullivan's" in a downward curvature, and the word "Safety" in an upward curvature; and since 1905 or 1906 the heel itself, as sold to jobbers and marketed to cobblers, has borne upon its face the words "O'Sullivan's Safety Cushion Heel," displayed in the same manner as upon Exhibit A and in the picture.

The defendants pursue the same method of marketing their goods through jobbers to cobblers, and in so doing pack their heels in boxes or cartons like Exhibit G, one pair of heels in a box. Their heel is in direct competition with the plaintiff's in the territories of Philadelphia and New York. The plaintiff's heel is sold to cobblers for a greater price than the defendants', and the cobblers usually receive from 15 to 25 cents more per pair for putting them on than for those of the defendants.

The extent to which the customers of cobblers specify the particular kind or make of rubber heel desired when having shoes repaired is not shown, but it does appear that customers call for the O'Sullivan heel, and it is a reasonable inference, in view of the amount of plaintiff's sales and its extensive advertising, that they do to a considerable extent.

In this connection, and as bearing upon the liability of the customer in the cobbler shop being misled through the similarity of the defendants' heel in conjunction with the inscription upon it, there was evidence that customers, having left their shoes with a cobbler, requesting O'Sullivan's heels, were, where the cobbler had substituted defendants' heels, led to believe, on calling for their shoes, that they had received the plaintiff's heels, and this after examining the substituted heel, and that they were customers exercising the care of the ordinary purchaser.

In August, 1921, the defendants began putting on the market the heel shown in Exhibit F, bearing the words "The Genuine Safety Cushion Heel," making use of the carton Exhibit G.

[1] The trial in this case was had in November, 1921. The testimony of Mr. H. O'Sullivan, the inscription upon plaintiff's Exhibit 2, and upon other exhibits of its heel, and the advertisements carrying the picture of the heel, show that the plaintiff's predecessors obtained a patent on a heel like Exhibit A, January 24, 1899. There was also direct evidence that this patent had expired more than two years before the trial, but the exact date was not given. It is probable that its expiration was in January, 1916. As above stated, this patented heel was sold and put upon the market with the words "O'Sullivan's Safety Cushion Heel" inscribed upon its face in the form and style appearing upon Exhibit A from a date (1895 or 1896) prior to the issuing of the patent and down to the time of the trial. Such being the situation, it is apparent that since the expiration of the patent in 1916 the plaintiff has had no exclusive right in the manufacture and sale of a suction heel like Exhibit A, nor an exclusive right in the nature of a trade-mark in the words "O'Sullivan's Safety Cushion Heel," as applied to such heel, even though the words "Safety Cushion Heel" may have been descriptive of character when first adopted, and by subsequent use through a long series of years has come to denote origin. (*Yale & Towne Mfg. Co.* v. *Worcester Mfg. Co.*, 195 Fed., 528; 115 C. C. A., 491; *Id*, (D. C.), 205 Fed, 952; *G. & C. Merriam Co.* v. *Ogilvie*, 159 Fed., 638; 88 C. C. A., 596; 16 L. R. A. (N. S.), 549; 14 Ann. Cas., 796; *National Lock Washer Co.* v. *Hobbs Mfg. Co.* (D. C.), 210 Fed., 516; *Merriam Co.* v. *Syndicate Publishing Co.*, 237 U. S., 618, 623; 35 Sup. Ct., 708; 59 L. Ed., 1148.) As stated by Mr. Justice Day in *Merriam Co.* v. *Syndicate Publishing Co.*, supra:

> On the expiration of [the] patent there passed to the public, not only the right to make the machine in the form covered by the Letters Patent, but along with the public ownership of the device described there necessarily passed to the public the generic designation of the thing which had arisen during the life of the monopoly.

[2] But from the fact that the plaintiff has no exclusive right to the manufacture and sale of a suction recess heel like Exhibit A, or to the use of the words "O'Sullivan's Safety Cushion Heel," as used in connection with such a heel, it does not follow that the defendants may use these words in connection with the sale of a heel like Exhibit A in a way calculated to lead the public into believing that their goods are the plaintiff's and to infringe upon the plaintiff's good will. These words as displayed upon plaintiff's heel through a long series of years have unquestionably come to denote to the public the source of origin of the article, and, if the defendants desire to make use of them, they must do so in a way not to mislead and deceive the public into believing that their goods are the plaintiff's.

The evidence shows that no one else has used these words in the sale of such a heel until very recently, and that these people have either been sued by the plaintiff for doing so or have agreed to desist. There is nothing to show that the plaintiff has slept upon its rights in this regard.

It is claimed by the defendants that the plaintiff has used the words "O'Sullivan's Safety Cushion Heel" in different ways upon its heels, sometimes placing the words "Safety Cushion Heel" on the edge of the outer bow of the heel, and the word "O'Sullivan's" across the breast of the heel. It is true that in making women's and youths' heels it has used these words in different positions than they

appear on Exhibit A; but the evidence shows that on its men's heel, Exhibit A, which is sold to cobblers, these words have appeared on the face of the heel since 1905 or 1906 in the same place and displayed in the same manner, and that what is true of the heel is true of the advertisements displaying a picture of the heel. It has sold to manufacturers for use on new shoes men's heels like Exhibit A, bearing the same inscription and displaying the word "Safety" in a straight line and not in an upward curve; but such sales have been to manufacturers only, and represent but 2 per cent of the plaintiff's business, whereas those sold to the public through cobblers represent 58 or 60 per cent.

We therefore think there can be no doubt but that these words, as used on plaintiff's heel, Exhibit A, have come to mean to the mind of the purchasing public that the heel bearing them is manufactured by the plaintiff.

The remaining question is: Have the defendants, in the use they make of the words "The Genuine Safety Cushion Heel," as they appear upon the face of Exhibit F, the heel which they make and sell, so imitated the plaintiff's article as to mislead the public. In comparing the two heels, it will be seen that, while the defendants do not use every word inscribed on the face of plaintiff's heel, they use every word but one—the word "O'Sullivan's"—and substitute for that the words "The Genuine," comprising 10 letters, the same as the word "O'Sullivan's." This enables them to give the same appearance to these words when displayed upon their heel as that possessed by the inscription upon the plaintiff's heel, for they have printed the words "The Genuine" in a downward curve in the same place and in the same character of type as presented by the downward curve of the word "O'Sullivan's" on the plaintiff's heel. Then again the word "Safety" on the defendants' heel is displayed in a type of substantially the same size and character and in the form of an upward curve at the center of the heel as on the plaintiff's; and the words "Cushion Heel" on both heels are printed in the same general type and in the same location and manner. The type on both heels is raised and the structure of the heels is identical. The similarity is so marked as to lead one to believe that the defendants in designing and draping their article had before them Exhibit A; and it appears that the defendant Clapp, who participated with the defendant company in the selection of the inscription upon defendants' heel, and who has had charge of the disposition of their product, knew of and had seen the plaintiff's heel prior to the defendants putting their heel upon the market. Clapp's only explanation for making use of the words "The Genuine Safety Cushion Heel" is that they adopted the words "The Genuine" to indicate genuine rubber heels and the words "Safety Cushion Heel" as they were merely descriptive of the article.

But we think the only reasonable conclusion is that the words as used on defendants' heel present such a similarity to those of the plaintiff as to indicate to the ordinary purchaser that the defendants' heels are the plaintiff's, and that the defendants adopted the words "The Genuine Safety Cushion Heel" and displayed them upon their product with the intent and purpose of leading the public to believe that their heel was that of the plaintiff.

We are also of the opinion that the reduced price at which a cobbler can procure the defendants' heels offers an inducement to him to produce them, and, being aware of the similarity of structure and inscription, to palm them off on the public as the goods of the plaintiff, thereby increasing his return.

Although there was no direct evidence that the cartons, in which each pair of heels was packed and shipped to the cobblers, were displayed by them in their windows or on their shelves, it is evident from the advertising matter displayed upon the cartons that they were intended for this purpose by both the plaintiff and the defendants, and it is inconceivable that such use has not been made of them.

The background of the cartons, both of the plaintiff and of the defendants, is yellow, and across the broad face of each is a slanting bar. On the plaintiff's the bar is white and bears the word "O'Sullivan's" in red letters. On the defendants' the bar is black and bears the words "The Genuine" in yellow letters. In the plaintiff's, below the slanting bar and to the right, is a picture of a suction recess heel, which bears the inscription "O'Sullivan's Safety Cushion Heel," printed in exactly the same way as upon its Exhibit A. In the defendants', below the slanting bar and at the right, is a picture of a suction recess heel bearing the inscription, "The Genuine Safety Cushion Heel," printed in exactly the same way as upon Exhibit F. At the left of the heel on both cartons are the words "Safety Cushion Heel," and below these are the words, on the plaintiff's, "Manufactured by O'Sullivan Rubber Co., Inc., New York, U. S. A.," and on the defendants', "Manufactured by the Genuine Rubber Co., Saugus, Mass." It may be that the average purchaser, if he had these cartons before him side by side, would detect the difference and not be misled by the labels which they bear. But that is not the test. The test is whether an ordinarily prudent purchaser would be misled in the purchase of the goods due to the similarity in the make-up of the cartons when they are not displayed side by side. We think the fair inference is that such would be the result, and that the defendants should be required to remove the picture of the heel upon their cartons and do away with the slanting bar. This being done and the color of their cartons changed, it seems to us that the points of similarity would be sufficiently removed.

As to the defendants' heels, we think the language should be changed to read "The Genuine Co.'s Safety Cushion Heel," in that none of the words should be arranged in curves as on plaintiff's heel; and that the character of the type should be changed, so as to bear no resemblance to that used by the plaintiff.

It follows from what we have said that the decree of the district court dismissing the bill must be reversed, and that an injunction should issue against the defendants, enjoining them from putting upon the market their heel and cartons, except as modified in the particulars above enumerated. All questions of accounting, including the question whether the plaintiff is entitled to any accounting, are left open for the district court to pass upon. (See *G. & C. Merriam Co.* v. *Ogilvie*, 170 Fed., 167; 95 C. C. A., 423.)

The decree of the district court is reversed, and the cause is remanded to that court for further proceedings not inconsistent with this opinion, with costs to the appellant.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Conner patent, No. 932,965, for a solid bifocal lens. *Held* not infringed. *One Piece Bifocal Lens Co.* v. *Stead*, 280 Fed. Rep., 382.

(U. S. C. C. A. N. Y.) The Harris patent, No. 1,112,609, for press feeding mechanism. *Held* valid, but not infringed. *Harris Automatic Press Co.* v. *Hall Printing Press Co.*, 280 Fed. Rep., 329.

(U. S. C. C. A. N. Y.) The Kurtz patent, No. 1,216,140, for hat lining, *Held* to disclose invention. *Kurtz* v. *Belle Hat Lining Co.*, 280 Fed. Rep., 277.

(U. S. C. C. A. Md.) The Wennagel patent, No. 1,307,070, for device for dissipating heat in underground conduits, *Held* void for lack of invention. *Wennagel* v. *Consolidated Gas, Electric Light & Power Co. of Baltimore*, 280 Fed. Rep., 370.

Trade-Mark Rules Revised.

The trade-mark rules and forms have been amended in several respects. A reprint of the laws and rules as now in effect is available for distribution.

Amendments to Trade-Mark Rules.

(ORDER No. 2,774.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 8, 1922.

Acting under the provisions of section 26 of the act approved February 20, 1905, the rules of the Patent Office governing the registration of trade-marks are amended as follows:

Rule 15, cancel the last twelve words, so that the rule as amended will read:

15. For gross misconduct the commissioner may refuse to recognize any person as an attorney, either generally or in any particular case; but the reasons for such refusal will be duly recorded.

At the beginning of rule 19, insert:

"A trade-mark must have been actually used in commerce before an application for its registration can be filed in the Patent Office;"

in the sixth from the last line of rule 19 substitute "is" for "has been;" in the next to the last line, after "use," insert "as a trade-mark," so that the rule will read:

19. A trade-mark must have been actually used in commerce before an application for its registration can be filed in the Patent Office. No trade-mark will be registered to an owner domiciled within the territory of the United States unless it shall be made to appear that the same is used as such by said owner in commerce among the several States, or between the United States and some foreign nation or Indian tribe; no trade-mark except as provided by section 3 of the act of May 4, 1906, and the act of March 19, 1920, will be registered to an owner residing in or located in a foreign country unless said country, by treaty, convention, or law, affords similar privileges to the citizens of the United States; no trade-mark will be registered which consists of or comprises immoral or scandalous matter, or which consists of or comprises the flag or coat of arms or other insignia of the United States, or any simulation thereof, or of any State or municipality, or of any foreign nation, or which consists of or comprises any design or picture that has been adopted by any fraternal society as its emblem, unless it shall be shown to the satisfaction of the Commissioner of Patents that the mark was adopted and used as a trade-mark by the applicant or applicant's predecessors, from whom title is derived, at a date prior to the date of its adoption by such fraternal society as its emblem; and no mark will be registered which is identical with a registered or known trade-mark owned and in use by another, and appropriated to merchandise of the same descriptive properties, or which so nearly resembles a registered or known trade-mark owned and in use by another, and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public, or to deceive purchasers, or, under the act of February 20, 1905, which consists merely in the name of an individual, firm, corporation, or association, not written, printed, impressed, or woven in some particular or distinctive manner or in association with a portrait of the individual, or merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods, or merely a geographical name or term; no portrait of a living individual will be registered as a trade-mark, except by consent of such individual evidenced by an instrument in writing; and no trade-mark will be registered which is used in unlawful business, or upon any article injurious in itself, or which has been used with the design of deceiving the public in the purchase of merchandise, or which is abandoned. No trade-mark will be registered under section 1 (*b*) act of March 19, 1920, which is registrable under the act of February 20, 1905, as amended, or which has not been in bona fide use as a trade-mark for one year in international or interstate commerce or commerce with Indian tribes.

Rule 20, last line, cancel "as provided in section 9 of the act of March 19, 1920."

In rule 22, at the end of paragraph (*b*) insert: "The petition and statement may be incorporated in a single paper," so that the paragraph will read:

(*b*) A statement specifying the name, domicile, location, and citizenship of the party applying, and if the applicant be a corporation or association, the State or nation under the laws of which organized; the class of merchandise (according to the official classification), and the particular description of goods comprised in such class upon which the trade-mark has actually been used; a statement of the mode in which the same is applied and affixed to the goods, and the length of time during which the trade-mark has been used upon the goods specified. A description of the trade-mark itself shall be included, if desired by the applicant or required by the commissioner, provided such description is of a character to meet the approval of the commissioner. The petition and statement may be incorporated in a single paper.

Rule 25, line 1, after "given," insert "prior to publication under rule 40," so that the rule will read:

25. No information will be given, prior to publication under rule 40, without authority of the applicant, respecting the filing of an application for the registration of a trade-mark by any person, or the subject matter thereof, unless it shall, in the opinion of the commissioner, be necessary to the proper conduct of business before the office.

Cancel first paragraph of rule 26.

In rule 28, line 3, after "shall" insert "in the statement," and cancel in lines 4 and 5 "by a notice in writing, filed in the Patent Office," so that the rule will read:

28. Every applicant for registration of a trade-mark, or for renewal of registration of a trade-mark, who is not domiciled within the United States, shall, in the statement, before the issuance of the certificate of registration, designate some person residing within the United States on whom process or notice of proceedings affecting the right of ownership of the trade-mark of which such applicant may claim to be the owner may be served. This notice shall be indorsed upon the file wrapper of the application.

In rule 32, lines 6 and 7, cancel "in addition to the requirements of section 2 of said act, make oath to," and insert "allege in the statement;" cancel the last sentence and insert: "If the application is made under the last paragraph of section 5 of the act of February 20, 1905, the statement shall identify the registered mark and allege use of the mark on the goods of the application for at least one year," so that the rule will read:

32. Where application is made under section 5 of the act of February 20, 1905, on the ground that the mark has been in actual and exclusive use as a trade-mark by the applicant, or his predecessors from whom he derived title, for 10 years next preceding February 20, 1905, the applicant shall allege in the statement such actual use of the mark as a trade-mark by himself or his predecessors, or by those from whom title to the same is derived, for the period specified, and that, to the best of his knowledge and belief, such use has been exclusive. If the application is made under the last paragraph of section 5 of the act of February 20, 1905, the statement shall identify the registered mark and allege use of the mark on the goods of the application for at least one year.

In rule 33, line 3, cancel "declaration" and substitute "statement;" line 8, cancel "or" and substitute "and;" line 9, cancel "as the case may be;" line 13, cancel "declaration, in addition to the requirements of rule 31," and substitute "statement," so that the rule will read:

33. If the applicant for registration under the act of February 20, 1905, as amended, resides or is located in a foreign country, the statement required, unless the application be presented under the provisions of section 3 of the act of May 4, 1906, shall also set forth that the trade-mark has been registered by the applicant, or that an application for the registration thereof has been filed by him in the foreign country in which he resides or is located, and shall give the date of such registration, and of the application therefor. In such cases it shall not be necessary to state that the mark has been used in commerce with the United States or among the States thereof.

If the application be presented under the provisions of section 3 of the act of May 4, 1906, the statement must state that the applicant has a manufacturing establishment within the territory of the United States and that the goods upon which the trade-mark is used are the product of such establishment.

Rule 36 (2), line 5, after "sheet" cancel "is" and substitute "should be" and cancel all the words after "top;" in rule 36 (4), lines 2 and 3, cancel "placed at the lower right-hand corner of the sheet," so that (4) will read:

(4) The name of the proprietor of the trade-mark, signed by himself or by his attorney of record, must be within the marginal lines, but in no instance should it encroach upon the drawing.

Rule 36(5) cancel all the words after "side" in line 2.

Rule 40, line 11, change "58" to "69."

Rule 41, line 4, after "trade mark" insert "or to the description of the goods." At the end of the rule add: "or supported by additional specimens (or facsimiles) and a supplemental declaration," so that the rule will read:

41. The statement may be amended to correct informalities, or to avoid objections made by the office, or for other reasons arising in the course of examination, but no amendments to the description or drawing of the trade-mark or to the description of the goods will be permitted unless warranted by something in the specimens (or facsimiles) as originally filed, or supported by additional specimens (or facsimiles) and a supplemental declaration.

Rule 45*a*, line 2, cancel "prior to November 1, 1911, or for one year," at the end change "57*a*" to "65." so that the rule will read:

45*a*. If an applicant fail to prosecute his application within one year after the date when the last official notice of any action by the office was mailed to him, the application will be held to be abandoned, as set forth in rule 65.

Rule 46, line 1, after "made" insert "under the act of February 20, 1905;" lines 6 and 7, cancel "or a known trade-mark owned and used by another;" at the end of line 8 add: "No interference will be declared with respect to applications filed under the act of March 19, 1920," so that the rule will read:

46. Whenever application is made under the act of February 20, 1905, for the registration of a trade-mark which is substantially identical with a trade-mark appropriated to goods of the same descriptive properties, for which a certificate of registration has been previously issued to another, or for registration of which another had previously made application, or which so nearly resembles such trade-mark as, in the opinion of the commissioner, to be likely to be mistaken therefor by the public, an interference will be declared. No interference will be declared with respect to applications filed under the act of March 19, 1920.

Rule 48, lines 6 and 7, cancel "or which amounts to a statutory bar to registration of the mark to any or all of the parties," so that the rule will read:

48. The examiner in charge of interferences may, either before or in his final decision in an interference or opposition, direct the attention of the commissioner to any matter which may have come to his notice which can not be acted upon by him, which in his opinion precludes a proper determination of questions raised by the proceeding. The commissioner may, before judgment, suspend the interference or opposition and remand the same to the examiner in charge of trade-marks for his consideration of the matters to which attention has been directed. If the case be not so remanded, the examiner in charge of trade-marks will, after judgment, consider any matter affecting right to registration which may have been brought to his attention, unless the same shall have been previously disposed of in the proceeding. From the decision of the examiner in charge of trade-marks appeals may be taken as in other cases.

Rule 51, at the end of the first sentence add: "Two specimens (or facsimiles) of the mark actually used by the opposer, if there be such, should be filed," so that the rule will read:

51. Any person who believes he would be damaged by the registration of a mark applied for under the act of February 20, 1905, as amended, may oppose the same by filing a written notice of opposition stating the grounds therefor, within 30 days after the publication of the mark sought to be registered, which notice of opposition shall be accompanied by the fee required by law and shall be verified by the person filing the same before one of the officers mentioned in section 2 of the act of February 20, 1905. Two specimens (or facsimiles) of the mark actually used by the opposer, if there be such, should be filed. An opposition may be filed by a duly authorized attorney, but such opposition shall be null and void unless duly verified by the opposer, within a reasonable time after such filing. A duplicate copy of the notice of opposition must be filed, either with the notice of opposition or within a reasonable time after the filing of the same.

Rule 52, at the end of the rule add:

"such application shall be accompanied by two specimens or facsimiles of the mark actually used by the applicant for cancellation, if there be such. Such application shall be accompanied by a title abstract of the mark to be canceled and shall indicate the respondent party to whom notice shall be sent by the Commissioner of Patents."

so that the rule will read:

52. Any person, deeming himself to be injured by the registration of a trade-mark in the Patent Office, may, at any time, make application to the commissioner to cancel the registration thereof. Such application shall be filed in duplicate, shall state the grounds for cancellation, and shall be verified by the person filing the same, before one of the officers mentioned in section 2 of the act of February 20, 1905. Such application shall be accompanied by two specimens or facsimiles of the mark actually used by the applicant for cancellation, if there be such. Such application shall be accompanied by a title abstract of the mark canceled and shall indicate the respondent party to whom notice shall be sent by the Commissioner of Patents.

Rule 54, line 1, cancel "and all applications for cancellation," so that the rule will read:

54. In cases of opposition, the examiner in charge of trade-marks shall forward the files and papers to the examiner in charge of interferences, who shall give notice thereof to the applicant or registrant. The applicant or registrant must make answer at such time, no less than 30 days from the date of the notice, as shall be fixed by the examiner in charge of interferences.

Rule 55, add: "Pleadings and procedure with respect thereto shall be governed by the rules in equity suits in the United States courts," so that the rule will read:

55. The proceedings, on oppositions, and on applications for cancellation, shall follow, as nearly as practicable, the practice in interferences between applications for patent. Pleadings and procedure with respect thereto shall be governed by the rules in equity suits in the United States courts.

Rule 56*a*, line 2, after "been" insert "twice," so that the rule will read:

56*a*. Upon receiving a petition stating concisely and clearly any proper question which has been twice acted upon by the examiner in charge of trade-marks which does not involve the merits of a trade-mark claimed under the act of February 20, 1905, as amended, the refusal of registration of such trade-mark, or a requirement for division, and also stating the facts involved and the point or points to be reviewed, an order will be made fixing a time for hearing such petition by the commissioner, and directing the examiner to furnish a written statement of the grounds of his decision upon the matters averred in such petition within five days after being notified of the order fixing the day of hearing. The examiner shall, at the time of making such statement, furnish a copy thereof to the petitioner. No fee is required for such a petition.

Rule 58, line 11, cancel "photolithographed;" cancel the last four words, so that the rule will read:

58. When the requirements of the law and of the rules have been complied with, and the office has adjudged a trade-mark registrable under the act of February 20, 1905, as amended, and section 1 (*b*) of the act of March 19, 1920, a certificate will be issued, signed by the commissioner, under the seal of the Patent Office, to the effect that the applicant has complied with the law and that he is entitled to registration of his trade-mark. The certificate shall state the date on which the application for registration was received in the Patent Office and the act under which the mark is registered. Attached to the certificate will be a copy of the drawing of the trade-mark and a printed copy of the statement.

At the end of rule 65 add: "as of a date not later than the fourth Thursday before the date the certificate of registration is to bear," so that the rule will read:

65. The certificate of registration may be issued to the assignee of the applicant, but the assignment must first be entered of record in the Patent Office, as of a date not later than the fourth Thursday before the date the certificate of registration is to bear.

Rule 69, after line 2, insert:

"On filing each application for a communication to the International Bureau, Habana..... 5.00"

line 5, after "patents" insert "Under the act of February 20, 1905," after line 12, insert:

"For photostat copies of records:
Size 10 by 15 inches, per copy..... .25
Size 8 by 12½ inches, per copy..... .15
If certified, for the certificate additional..... .25"

after line 16, insert:

"For each additional trade-mark or application included or involved in one writing, when more than one is so included or involved, additional.. .25"

line 18, change "1.00" to "2.00;" lines 19, 22, and 23, change ".50" to "1.00."

Change the numbers of rules 45*a*, 45*b*, 45*c*, 45*d*, 46, to 47, 48, 49, 50, respectively; renumber the first paragraph of rule 47 as 51; number the second paragraph of rule 47 as 52; change the numbers of rules 48 to 62, inclusive, to 53 to 73, inclusive, insert the following rules as 74 and 75:

74. An application for the renewal of a trade-mark registration may be made by the owner or his duly authorized attorney and should consist of a request addressed to the Commissioner of Patents to renew such certificate of registration, accompanied by the proper fee, and if the applicant for renewal is other than the owner of record in the Patent Office, by a showing of title to the certificate to be renewed.

75. Under the Convention adopted for the establishment of an International Bureau at Habana, and the regulations of such bureau provided to carry into effect the Convention for the Protection of Trade-Marks, the Commissioner of Patents will communicate to the International Bureau the claim of the owner of the mark on the written request of the owner of the mark or his duly authorized agent, accompanied by a fee of $5.00, together with (*a*) an international money order for $50 to the order of "Director of the International Bureau, Habana;" (*b*) an electrotype of the trade-mark not larger than 10 centimeters in either dimension; (*c*) should the United States registration claim color as a distinctive element of the trade-mark, thirty copies of the mark printed on paper, reproduced in color; (*d*) a statement including (1) the name of the owner of the mark; (2) the address of the owner of the mark; (3) the number and the date of registration of the mark in the United States Patent Office; and (*d*) a translation into Spanish of the particular description of goods as stated in the certificate of registration.

Change the numbers of rules 63 to 75, inclusive, to 76 to 88, inclusive.

THOMAS E. ROBERTSON,
Commissioner.

Patents Nos. 1,426,340 to 1,427 081.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 301—No. 4. TUESDAY, AUGUST 22, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Librarian.

Mr. Miles O. Price, for eight years librarian of the University of Illinois, has been appointed librarian of the Patent Office and assumed his duties on August 15, 1922.

Adverse Decisions in Interference.

PATENT No. 1,314,102.

On January 4, 1922, a decision was rendered that Von Arco and Meissner were not the first inventors of the subject matter covered by claim 8 of their Patent No. 1,314,102, subject, "Connections for electric relays working with ionized gas gap," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,346,682.

On July 10, 1922, a decision was rendered that Harry K. Reinoehl was not the first inventor of the subject matter covered by claims 1, 2, 3, 4, and 5 of his Patent No. 1,346,682, subject, "Spring eye protectors for automobiles," and no appeal having been taken within the time allowed such decision has become final.

Renewal of Forfeited Cases.

A petition for the renewal of a forfeited application need not be signed by the inventor or assignee, but may be signed by the attorney.

A power of attorney in the original application authorizing an attorney to transact all business in the Patent Office in connection with the application construed to be of sufficient scope to include the signing of a petition for renewal and the subsequent prosecution of the application. (*Ex parte Apee*, 101 O. G., 1600.)

Drawings.

PRECAUTIONS TO BE OBSERVED IN FORWARDING DRAWINGS TO THE UNITED STATES PATENT OFFICE.

Where drawings are to be filed in connection with an application for Letters Patent in the United States Patent Office, each sheet, before it can be accepted by the Office as a part of the application, must be signed in the name of the inventor at the lower right-hand corner, either by him or by an attorney whose written authorization from the applicant is filed in connection with the application. The signatures should never be written on a line parallel with the longer edges of the sheet, one of the shorter edges being always regarded, for the purpose of locating the signatures, as the lower edge of the sheet. The signatures must all be within the margin-lines of the sheet and below the lines of the drawing. The title of the invention should be written with pencil on the back of each sheet of drawings.

When there are filed on the same day two or more applications by the same inventor, each of the documents and drawings belonging to the same application should have placed thereon the same letter or number, which should be different from the letter or number placed upon those of any other of the applications.

It is desirable that all parts of the complete application, including the drawings, be deposited in the Office at the same time. Should, however, the other parts of the application be filed before the drawings are sent, the latter when forwarded should be accompanied by a letter stating the number of sheets inclosed and that the drawings are to be filed with the other parts of the application, giving the date at which such other parts were filed in the Office, the name of the inventor, and title of the invention. If the application has received a serial number, that should also be given, and it should be indorsed with pencil on the back of each sheet of drawings. The letter should also state, if such be the case, that the new drawings are to be substituted for those previously filed.

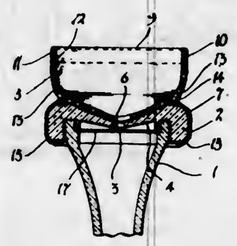
The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; from July 1, 1883, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1908, in bimonthly volumes; since January 1, 1909, in monthly volumes. Terms: Annual subscriptions, $5; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $5 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $5 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Examiners' Letters and Amendments.

Examiners are directed to recite in each letter in an application the date of the action by the applicant to which it is a reply, and applicants are requested to indicate in their actions on an application the date of the last Office letter.

Condition of Applications Under Examination at Close of Business August 12, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,977: Trade-Mark division, 7,989. Oldest new case, May 9, oldest amended, Apr. 18, 1921. The dates given are 1921. except where * indicates 1922.)

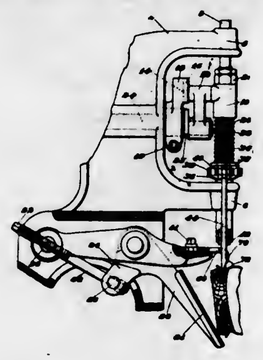
PATENTS

GRANTED AUGUST 22, 1922.

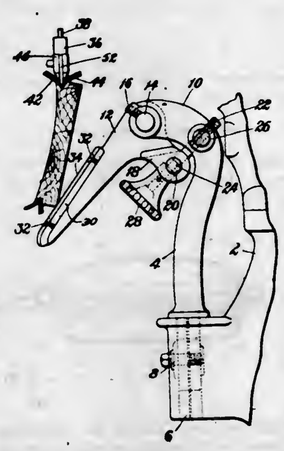
1,426,340. CUSHION FOR TELEPHONE RECEIVERS. OTTO W. AAGAARD, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,379. 3 Claims. (Cl. 179—182.)



1. A device of the character described comprising a substantially semi-spherical soft rubber shell, said shell having a hollow portion in its side walls immediately adjacent the rim thereof and extending around the entire circumference of said shell, said shell having an opening therethrough centrally located in the bottom wall thereof, and means integral with said shell for removably securing said shell to a telephone receiver so that its concave surface faces outwardly and the opening therethrough is adjacent the diaphragm of said receiver.

1,426,341. PROCESS FOR RECOVERING TIN. HARRY H. ALEXANDER, Westfield, N. J., assignor to American Smelting & Refining Company, a Corporation of New Jersey. Filed May 26, 1917, Serial No. 171,390. Renewed Nov. 17, 1921. Serial No. 515,974. 6 Claims. (Cl. 75—17.)

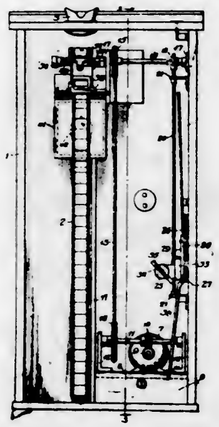
1. In the art of extracting metallic tin from the concentrates, the process which consists in mixing the tin concentrates with carbonaceous material, sintering the mixture until approximately 70% of the sulphur originally contained in the mixture has been removed, breaking the resulting sintered mass into pieces sufficiently large to minimise the possibility of blowing off the tin concentrates when the same is fed to a blast furnace, mixing the sintered broken pieces with carbonaceous material, subjecting this mixture to a smelting operation of a blast furnace and separating the resulting products.



1,426,342. UPPER-SHAPING MACHINE. ARTHUR BATES, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 4, 1917, Serial No. 194,721. Renewed Dec. 21, 1920. Serial No. 432,304. 26 Claims. (Cl. 12—51.)

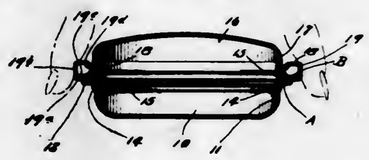
1. In a machine of the class described, in combination, a guide, a crease forming tool at one side of the guide and aligned therewith in the direction of feed of the

work, and means for operating the tool toward and from the work.



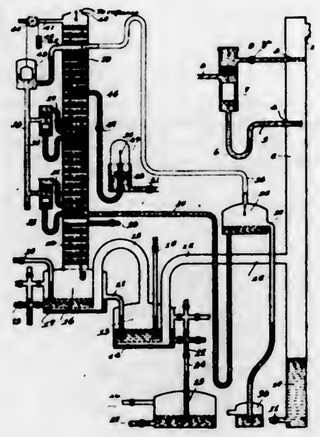
1,426,343. APPARATUS FOR ATTACHING UPPERS TO SOLES IN THE MANUFACTURE OF SHOES. ARTHUR BATES, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 25, 1917. Serial No. 198,406. 24 Claims. (Cl. 1—19.)

1. A machine of the class described comprising, in combination, mechanism for inserting fastenings through an upper into its sole constructed and arranged for engagement with the upper, a work supporting abutment spaced therefrom and constructed and positioned rela-



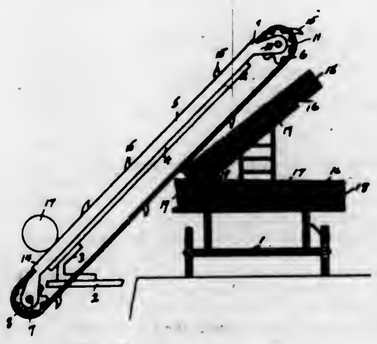
tively to the fastening inserting mechanism for engagement with the corner of the sole formed by the junction of the edge face of the sole and the tread face opposite to the point at which fastenings are being inserted and in substantially vertical alignment with the portion of the fastening inserting mechanism which engages the upper, said abutment being further constructed and arranged for fulcruming the sole for movement of the sole relatively to the upper at the point where the upper engages the fastening inserting mechanism.

1,426,344. MOVING-PICTURE-EXHIBITING MACHINE. GEORGE W. BENNETT, Oak Park, Ill., assignor to John F. Meyer, Chicago, Ill. Filed Jan. 2, 1920. Serial No. 348,875. 4 Claims. (Cl. 88—18.)



1. A moving picture exhibiting machine comprising a shaft and means for operating the same, a film actuating feed roll loosely mounted on the shaft, a ratchet device for temporarily locking the feed roll in stationary position, a cam rigid with the shaft for intermittently releasing the ratchet device, and a friction element between the said feed-roll and said cam, and a spring pressing against said feed-roll remote from the cam to produce frictional engagement between said friction element and the cam and feed-roll.

1,426,345. METALLIC CONTAINER. SAMUEL BERLOTTI, St. Louis, Mo. Filed Nov. 8, 1920. Serial No. 422,487. 4 Claims. (Cl. 220—43.)



1. A metallic container having an outwardly projecting annular flange and annular reinforcing beads pressed outwardly above and below said flange at the points of junction of said flange with the wall of the container, and a cover therefor provided with an annular groove adapted to engage the upper one of said beads and having oppositely disposed lugs formed integral with said cover and adapted to overhang the flange of said container.

1,426,346. METHOD AND APPARATUS FOR OBTAINING WOOD PRODUCTS. EDMOND BERTHELON, Aix-les-Thermes, France. Filed Dec. 31, 1919. Serial No. 348,711. 5 Claims. (Cl. 203—6.)

1. The method of recovering by-products from the gas arising from the destructive distillation of combustible material, consisting in discharging such gases at high temperature into a receiver from which air is extracted, cooling such gases in said receiver by injecting water therein to cause the condensable products to collect in the bottom of said receiver; passing such gases into another receiver containing substances capable of saturating the acids contained in such gases to form therewith soluble salts; passing such gas upwardly through a column, and washing such gases with water during such passage.

1,426,347. LOADER FOR CORN BINDERS. NATHAN BIEBER, Poland, Ohio. Filed Dec. 5, 1921. Serial No. 520,127. 1 Claim. (Cl. 198—178.)

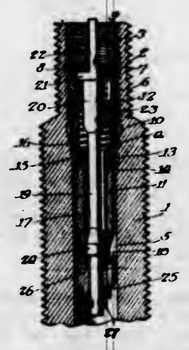
In a device of the class described, a platform, said platform being rectangular in form with the exception of having the rear outer corner of the same cut away, thereby forming an angle approximately 45 degrees from the front edge of said platform, a chain race secured to said platform in an adjustable manner near the front edge of said platform, a drive shaft provided with a slidably mounted sprocket carrying a chain, a chain passing over said sprocket and functioning in said chain race, a sprocket secured to the outer end of said chain race for the purpose of carrying said chain, a plurality of prongs formed on said chain, means for supporting said device in conjunction with a corn binder, substantially as described for the purpose set forth.

1,426,348. METHYL SULPHITES OF SECONDARY AROMATIC ALIPHATIC AMINES AND PROCESS OF MAKING SAME. MAX BOCKMÜHL and KURT WINDISCH, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed July 16, 1921. Serial No. 485,403. 2 Claims. (Cl. 260—130.)

1. As a new process, the manufacture of compounds of the general formula:

$$\begin{matrix} R \\ R_1 \end{matrix}\!\!>\!N\!-\!CH_2OSO_2Me$$

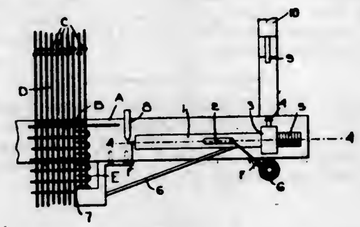
wherein R stands for a substituted aromatic residue, R_1 for an aliphatic residue, and Me for any alkali metal including ammonium, by condensing with formaldehyde bisulphites secondary aromatic aliphatic amines of the general formula:



$$\begin{matrix} R \\ R_1 \end{matrix}\!\!>\!N\!-\!H$$

wherein R stands for a substituted aromatic residue and R_1 for an aliphatic residue.

1,426,349. PROCESS OF TREATING BY-PRODUCT ZINC OXIDE. JAMES ELIOT BOOGE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,391. 5 Claims. (Cl. 23—13.)

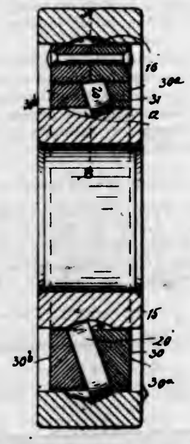


1. The process which comprises calcining by-product zinc oxide, thereby forming a product containing water-soluble compounds, and washing the calcined product with water to remove said soluble salts.

1,426,350. VALVE FOR PNEUMATIC TIRES. ADELBERT E. BRONSON, Cleveland, Ohio. Filed June 20, 1918. Serial No. 241,011. 2 Claims. (Cl. 152—12.)

1. In a valve construction for pneumatic tires, the combination of a valve stem having an internally screw-threaded nipple and a shoulder below the nipple, a barrel having screw threaded engagement with the nipple, the interior of the barrel being provided with a shoulder, a tube, the upper end of which is received in the barrel against the shoulder, a groove in the exterior of the tube at the lower edge of the barrel, the edge of the barrel being bent within the groove and co-operating with an end wall of the groove, a gasket bearing against the shoulder on the valve stem, and valve mechanism located within the barrel and the tube and adapted to close the lower end of the tube.

1,426,351. LOOM. JOHN C. BROOKS, Paterson, N. J. Filed Oct. 4, 1919. Serial No. 328,364. 5 Claims. (Cl. 139—18.)



1. In a loom, the combination with means to place separate picks of weft thread into the shed with the end of each pick projecting beyond the edge of the web or warp threads, of means, including pneumatic devices, to bend each projecting end of weft thread backwardly and insert it into the shed.

1,426,352. MUFFLER. ALANSON P. BRUSH, Detroit, Mich. Filed June 27, 1917. Serial No. 177,194. 5 Claims. (Cl. 137—160.)

1. A muffler, comprising a chamber having an unobstructed passageway therethrough and having alternately arranged portions of gradually increasing and gradually decreasing cross sectional areas but of substantially the same cross sectional shape.

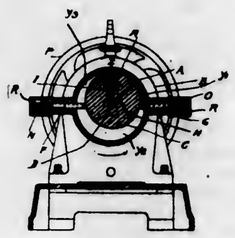
1,426,353. ANTIFRICTION BEARING. ALANSON P. BRUSH, Detroit, Mich. Filed Aug. 21, 1920. Serial No. 405,105. 5 Claims. (Cl. 64—62.)

1. An anti-friction ring bearing comprising, in combination, an outer bearing ring, and an inner bearing ring arranged coaxially within the outer bearing ring, which bearing rings have in their opposed cylindrical surfaces

continuous raceway grooves, a row of anti-friction rollers which extend across the annular space between the rings and have peripheral engagement with the raceways of both rings, said rollers being alternately inclined in opposite directions with respect to a plane normal to the axis of said rings, and means to maintain said rollers in spaced relation and in the inclined positions specified comprising a cage ring between said bearing rings and composed of two annular members provided on their adjacent faces with recesses in which the rollers are confined and loosely fitted, the recesses for successive rollers being oppositely inclined.

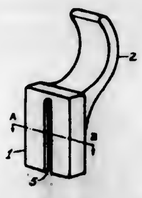
1,426,354. HEEL-BREASTING MACHINE. DARIUS W. BUNKER, Brookline, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1918. Serial No. 268,289. 20 Claims. (Cl. 12—47.)

1. In a machine of the class described, the combination of a rotary cutter, a shoe rest against which a shoe is held by the hand of the operator, means for relatively moving the cutter and the rest to cause operation of the cutter upon the breast of the heel of the shoe, and means arranged above the shoe between the operator's hand and the cutter and held from vertical movement relatively to the shoe and rest to prevent movement of the hand of the operator toward the cutter in case the shoe should be drawn toward the cutter.



6. In a machine of the class described, the combination of a rotary cutter, a rest for the tread face of the heel, means for relatively moving the cutter and rest to cause operation of the cutter upon the breast of the heel of a shoe, and means operated by said moving means for holding the shoe upon the rest.

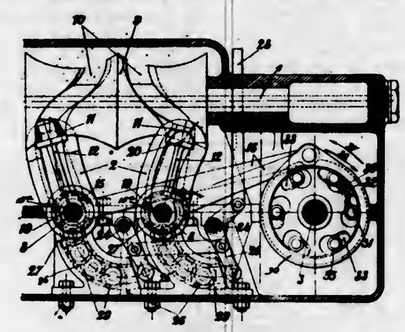
1,426,355. MEANS FOR SECURING CASKETS IN SHIPPING BOXES. JACOB R. BURKHARDT, Springfield, Ohio, assignor to The Springfield Metallic Casket Company, Springfield, Ohio, a Corporation of Ohio. Filed Nov. 21, 1921. Serial No. 516,616. 8 Claims. (Cl. 217—52.)



1. In a structure of the character described, the combination, with a shipping box, of a structure capable of being received therein and having a bottom formed with a recess, a plate secured in said recess, said plate having a threaded opening to receive a bolt extended through the bottom of said box.

1,426,356. PNEUMATIC ROTARY PUMP FOR RAREFYING AND COMPRESSING FLUIDS. ALFONSO CACCIARI, Milan, Italy. Filed Nov. 14, 1910. Serial No. 337,956. 3 Claims. (Cl. 230—30.)

1. A rotary pump for gases comprising a frame; a cylinder secured to said frame; a rotary piston eccentrically mounted in said cylinder and provided with a valve adapted to prevent back flow of compressed fluid; a vane mounted to slide in a socket provided in said frame and adapted to engage the surface of the piston; a tank containing a supply of oil and provided with a pipe which communicates with said frame and a port in the piston communicating with said tank.



1,426,357. GRIP HANDLE. JOHN MAX CHAMBERS, Baltimore, Md., assignor to Oliver P. Le Compte, Towson, Md. Filed Aug. 5, 1921, Serial No. 490,076. Renewed July 7, 1922. Serial No. 573,456. 1 Claim. (Cl. 16—110.)

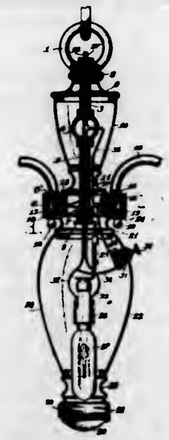
A grip-handle comprising a body having a socket with the internal face of the side walls converging towards a channel through front wall of body, all for purposes as described and a finger-grip, integral with aforesaid body, having a depression constructed as shown in the accompanying drawing.

1,426,358. VARIABLE-SPEED TRANSMISSION DEVICE. ANTOINE CHAPUY and LEON FRANCOIS MEUNIER, St. Etienne, France. Filed Dec. 12, 1918. Serial No. 266,405. 1 Claim. (Cl. 74—53.)

A power transmitting mechanism comprising in combination a driving shaft, an oscillating slotted link pivoted at a fixed point, means for operatively connecting the driving shaft to the slotted link, a driven shaft, an intermediate rotary member keyed on said driven shaft, an intermediate oscillating member arranged coaxially on said rotary intermediate member, clutch members for operatively connecting the intermediate members to each other, a connecting rod pivotally connected at one end to the oscillating intermediate member, the opposite end of said connecting rod being pivoted in the slotted link, a guide, a chain movable in said guide and having one end

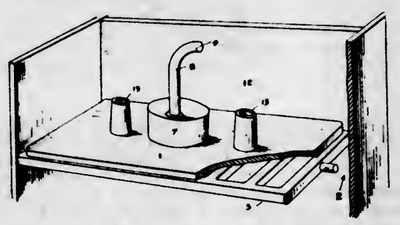
connected to said opposite end of the connecting rod and means for operating said chain.

1,426,359. ADJUSTABLE SHORE. WILLIAM LEE CHURCH, Newton Center, Mass., assignor to Uni-Form Company, a Corporation of Massachusetts. Filed Aug. 5, 1919. Serial No. 315,446. 8 Claims. (Cl. 248—2.)



4. A shore of the character described comprising in combination a supporting member, a detachable head, inter-engaging means on said support and head for relatively positioning said members, said means comprising a pair of spaced angles secured to the lower face of the head and a pair of plates secured to opposite faces of the supporting member and projecting thereabove, and means detachably securing the head to the support.

6. An adjustable shore of the character described comprising in combination one member provided with a plurality of holes equally spaced and a second member also provided with a plurality of holes equally spaced but the distance between holes being of a different dimension than on the first member, said members being relatively movable and the relation between the two sets of holes being in effect that of the markings on a vernier scale, and said members being of sufficient length to bring at least two pairs of holes in alignment in all positions of normal working adjustment between the members, and a supporting member adapted to be passed through the aligned holes.

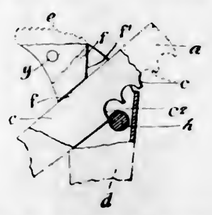


1,426,360. ELECTRIC-LIGHTING FIXTURE. LE ROY G. CLARK, Detroit, Mich. Filed Dec. 27, 1920. Serial No. 433,444. 3 Claims. (Cl. 240—78.)

1. An electric fixture comprising a support, a plurality of radially disposed ribs formed in the support, a plurality of blocks adapted to engage with the ribs, each block acting as a support for a lamp bracket, a casing arranged beneath the support and having a flange, and securing

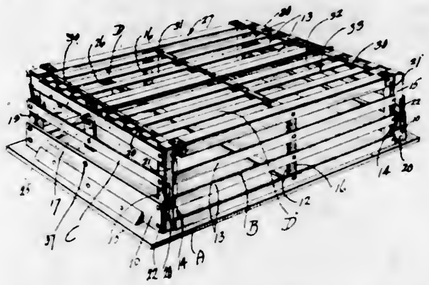
means for each block having a screwthreaded portion passing through an opening in the flange and an opening in the support and engaging a screwthreaded aperture in the block.

1,426,361. OIL BURNER. LEONARD CONOW, Corte Madera, Calif., assignor to John J. Mazza, San Francisco, Calif. Filed Nov. 26, 1920. Serial No. 426,372. 1 Claim. (Cl. 158—66.)



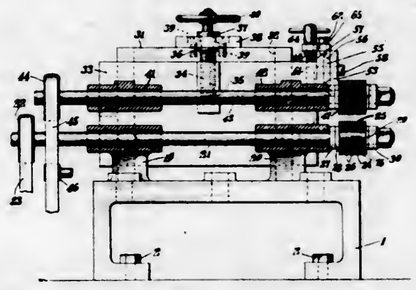
An oil burner of the character described embodying in its construction a large flat base adapted to rest upon the grating in the fire box of a cook stove and having an opening therein provided for connection thereof with a fuel feed supply pipe, said plate having air intake openings on the opposite sides of the first-named openings, tubular air intake members carried by the plate and extending upwardly from said air intake opening, a generating chamber supported by the plate and in communication with the first-named opening therein and a burner pipe extending upwardly from the top and near one side of said chamber and being curved outwardly and downwardly and terminating in a closed end spaced well above and over said generating chamber, said pipe being closed at its upper end and provided with an outlet orifice located immediately above and over said chamber, at a point spaced from said closed end, said orifice being located at the highest point in the curved portion of the pipe to prevent particles of foreign matter from clogging the orifice.

1,426,362. PIPE WRENCH. JOHN WILLIAM DONALD COOK, London, England. Filed Feb. 12, 1920. Serial No. 358,180. 2 Claims. (Cl. 81—79.)



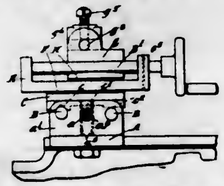
1. A wrench of the character described, comprising an inner member, an outer member, a pivot pin mounted in

said outer member, a square jaw upon said inner member, an arcuate jaw upon said outer member, a shank to said inner member, said shank adapted to slide freely through said outer member in one position, and said shank having a series of notches adapted to engage said



pivot pin as said jaws are closed from said position, and a shoulder upon said shank, said shoulder being formed upon the rear edge below said series of notches and projecting beyond the outermost portions of said notches, to engage said pivot pin for preventing complete withdrawal of said inner member from said outer member.

1,426,363. FOLDING CRATE. ROBERT F. DOLL, Chicago, and JOHN C. THIES, Barrington, Ill. Filed July 2, 1920. Serial No. 393,648. 4 Claims. (Cl. 217—47.)



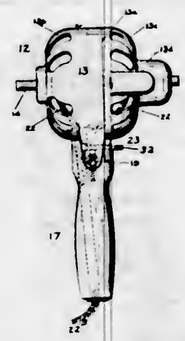
1. In a folding crate, the combination of a platform structure, foldable sides, ends, and a pair of top sections for said foldable crate, a rod for locking the sides, ends and one of the top sections in an upright position, and a second locking means for the other of the top sections, whereby the latter can be separately used to secure ingress into the crate.

1,426,364. GRAILING MACHINE. ALFRED S. DONALDSON, Newark, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 19, 1918. Serial No. 258,874. 8 Claims. (Cl. 144—26.)

1. In a grailing machine, in combination, a rotary disc cutter for grailing one side of a comb, a second cutter for grailing the other side of a comb, the two being arranged to receive the comb between them as fed from one side of the cutters, a comb stop comprising a tooth base and a substantially straight stop tooth therewith and located in the plane of the comb-receiving space between the cutters, and overhanging said base in a direction opposite to the direction of feed of the comb to the cutters for a distance at least as great as the length of the comb tooth to be grailed and of a width to pass between the comb teeth.

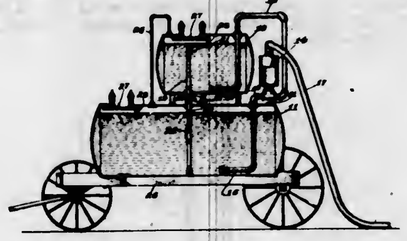
1,426,365. SLIDE REST OF LATHES. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,982. 7 Claims. (Cl. 82—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a lathe, a slide having underneath at one side a single groove and at the other side a flat bearing surface, a carrying member, and a pair of round guide rods fitted to the said carrying member, one of said rods adapted to enter loosely the said groove of the sliding member, and the other rod adapted to support the said flat bearing surface.



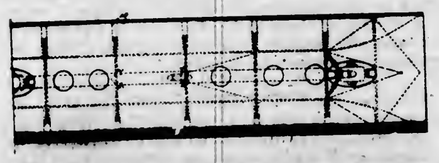
1,426,366. REENFORCEMENT FOR PICK HANDLES. GEORGE GRANTFORD DUPLER, Monday, Ohio. Filed Jan. 6, 1922. Serial No. 527,476. 11 Claims. (Cl. 145—61.)

1. In combination, a handle, a reenforcement therefor comprising a continuous strand of wire extending through an opening in the handle so that equal portions of the strand of wire extend from each side of the handle and said portions wound about the handle contiguously and in the same direction and the ends thereof extended through another opening adjacent where they terminate in the opposite directions and said ends each secured to the convolution of wire in which it terminates.



1,426,367. PORTABLE ELECTRIC MOTOR. OSCAR P. EBHARDT, West Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Feb. 26, 1918. Serial No. 219,258. 11 Claims. (Cl. 172—36.)

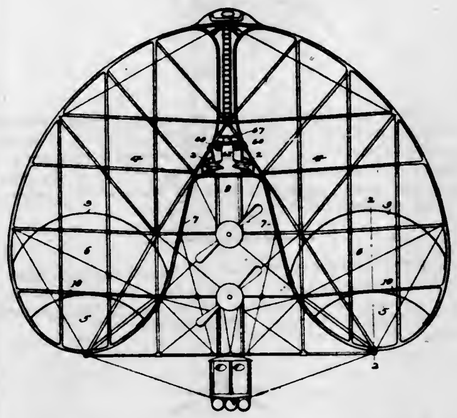
1. In an electric motor, a motor member having a casing with spaced lugs formed thereupon and extending therefrom in substantial parallelism, a handle member interposed between said lugs and secured to the same, said



handle member having an end face spaced from said casing by said lugs, and an electric switch mounted upon said end face.

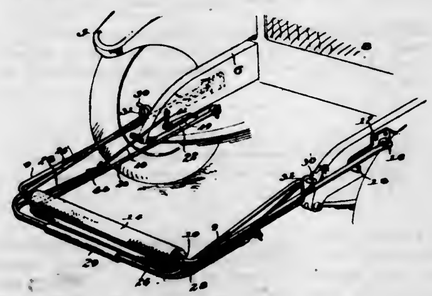
1,426,368. FIRE-EXTINGUISHING APPARATUS. ORLANDO R. EDWIN and CURTIS B. FLORY, New York, N. Y., assignors to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed June 3, 1920. Serial No. 386,200. 19 Claims. (Cl. 169—14.)

1. Fire extinguishing apparatus, including a plurality of containers adapted for the separate storage of solutions which when mixed produce fire extinguishing foam, a separate delivery outlet for each container adapted to be connected to a mixing station, and means for applying delivery pressure to the contents of each container including means for intermingling in one of the containers portions of the different solutions.



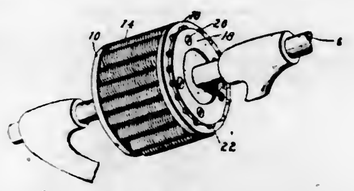
1,426,369. FLYING MACHINE. THOMAS M. FINLEY, St. Louis, Mo. Filed July 20, 1918. Serial No. 245,885. 75 Claims. (Cl. 244—3.)

1. A flying machine of the class described including a body provided at opposite sides with depending wings forming a longitudinal passage or channel open at the bottom, said passage or channel being interiorly tapered at its front end and the taper being extended to substantially



the top and sides of the body at the front end of the same for causing the air displaced by the body to be pressed rearwardly beneath the front end of the body into the channel or passage, gas bags located within the wings, and a frame disposed between the gas bags and having ribs or members extending beneath the said bags.

1,426,370. GAS CONTROL FOR FLYING MACHINES. THOMAS M. FINLEY, St. Louis, Mo. Filed Aug. 26, 1918. Serial No. 251,586. 53 Claims. (Cl. 244—3.)



1. A gas control of the class described including a gas bag or container, a compression chamber, means for removing the gas from the gas bag or container and compressing the same within the said chamber and for returning the gas to the gas bag or container, and means for automatically controlling the gas for maintaining the flying machine at a predetermined altitude.

1,426,371. AUTOMOBILE FENDER. SAMUEL G. FITE SIMONS, Charleston, S. C. Filed Mar. 9, 1922. Serial No. 542,396. 11 Claims. (Cl. 293—46.)

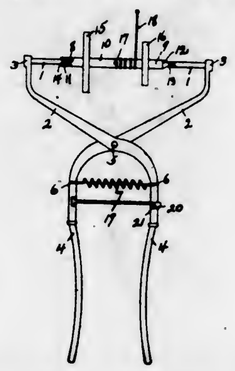
3. A fender for motor vehicles comprising a pair of curtain supporting arms having means whereby the same may be pivotally connected to a motor vehicle, a roller connected to said arms, a curtain connected to said roller, a U-shaped curtain attaching arms connected to said curtain and having means whereby the same may be movably and pivotally connected to a motor vehicle, and a bumper member normally arranged in advance of said first and second named arms and connected to the same whereby to move the arms in opposite directions when the bumper member encounters an obstacle.

1,426,372. SHOE-BEATING MACHINE. CYRUS D. FOYE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 15, 1919. Serial No. 323,892. 9 Claims. (Cl. 12—51.)

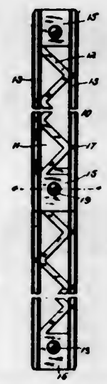
1. In a machine of the class described, a rotary beater comprising an annular series of rods supported at their ends by a carrier and beating members loosely mounted on said rods, the co-operating supporting surfaces of the rods and the carrier being shaped to prevent relative rotation of the rods and the carrier.

1,426,373. SHIELD. ERNEST O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 2, 1921. Serial No. 489,209. 1 Claim. (Cl. 132—36.)

A protective shield comprising an annular piece of fibrous material having a plurality of independent members spaced apart and projecting radially from the inner margin thereof, the ends of said members being formed so as to bound a substantially circular aperture, said members being flexible so as to permit of a flexure out of the plane of said shield whereby to permit the introduction through said aperture of a strand of hair of greater diameter than said aperture, and said ends being adapted to bear firmly against said strand when said members are in flexed position, whereby to hold said shield against movement relative to said strand.



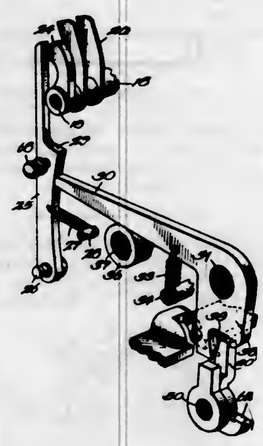
1,426,374. PANEL. LESLIE H. GARLINGHOUSE, Aspinwall, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Oct. 13, 1919. Serial No. 330,345. 1 Claim. (Cl. 25—131.)



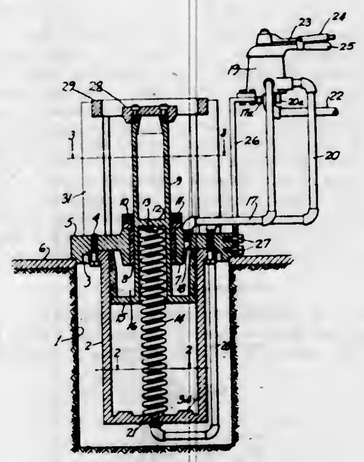
A panel for concrete work comprising in combination a sheet metal plate having opposite edge portions thereof bent into channel-like form at least one of the web portions of the bent over edges having a longitudinally extending bead or rib member, and a plurality of reinforcing members extending transversely of the panel, said reinforcing members having a fillet fitting into said bead.

1,426,375. TOY. PASQUALE GENTILE and ANGELO DEL GINDICE, Youngstown, Ohio. Filed Mar. 21, 1921. Serial No. 453,995. 1 Claim. (Cl. 46—32.)

In a device of the class described, two jaw members, said jaw members secured at right angles to two arm members for the purpose of supporting a shaft, two arm members pivotally secured, two handle members being a continuation of said arm members, one of said jaw members having a cone shaped gripping point, the other jaw member having an inverted cone shaped gripping part, a spring secured between said handles below a pivot member, a revolving shaft provided at one end with a cone and at the other end with an inverted cone, a plurality of discs secured to said shaft, means for attaching a cord to said shaft, substantially as described for the purpose set forth.



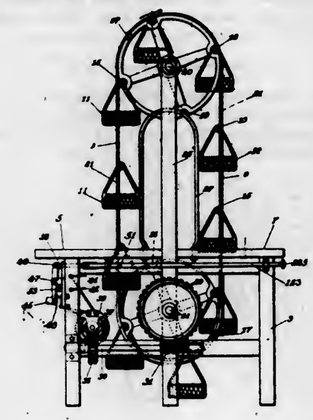
1,426,376. TOY BUILDING CONSTRUCTION. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 30, 1915. Serial No. 24,074. Renewed Feb. 8, 1922. Serial No. 535,093. 9 Claims. (Cl. 189—34.)



1. In toy building construction, two miniature box girder or column sections, each formed of a plurality of strips of light flexible sheet metal assembled separably into a box-like structure, the ends of the strips of one section overlapping those of the other section, and means for fastening the sections detachably together where they overlap; substantially as described.

1,426,377. TOTALIZER CLEAR SIGNAL. HYMAN GOLBER, Chicago, and ARTHUR F. POOLE, Kenilworth, Ill., assignors, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1919. Serial No. 276,172. 11 Claims. (Cl. 235—59.)

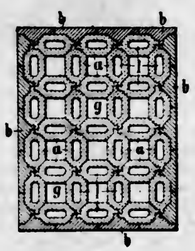
3. In a calculating machine, the combination of a key adapted to print a characteristic mark, means to compel a complete stroke of said key when once a stroke has been initiated, a totalizer, and means connecting said key and said totalizer to prevent a complete stroke of said key in the event that said totalizer does not stand at zero.



1,426,378. COMPRESSED-AIR DRAW MOLDING MACHINE. GUSTAF F. GUSTAFSON, Chicago, Ill. Filed Aug. 8, 1921. Serial No. 490,761. 2 Claims. (Cl. 22—47.)

1. In a compressed air draw molding machine, a piston chamber adapted for disposal in a foundry pit, a table supporting said piston chamber and adapted to rest upon the mouth of the pit, a piston operatively associated with said piston chamber and working through said table, a partition within said piston, a spring connecting said partition and the base of the piston chamber, a draw table carried by said piston, flask supports carried by the first named table, and means for alternately applying compressed air to opposite sides of the head of said piston whereby reciprocation of the same is effected.

1,426,379. DRYING APPARATUS. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 11, 1918. Serial No. 266,276. 12 Claims. (Cl. 198—20.)

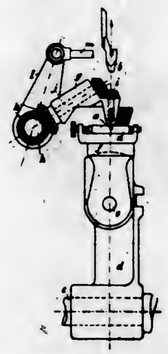


1. The combination with a conveyor, of a source of power, means for connecting the conveyor with the source of power, and means engaging the conveyor to maintain the connection for a predetermined interval.

12. The combination with a bench adapted for the performance of two operations in spaced localities, of a conveyer having opposite runs located to pass near the localities and extending through the top of the bench, said conveyor comprising an endless carrier and spaced receptacles carried thereby, means for driving the conveyor, and means for automatically stopping it, said last-named means being constructed and arranged to cause the conveyor to come to rest with one of the receptacles near one locality and another near the other locality.

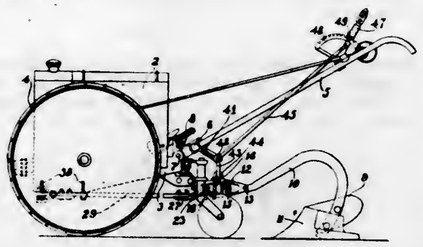
1,426,380. MANUFACTURE OF AROMATIC ALKYLAMINO COMPOUNDS. WALTER NORMAN HAWORTH, Fifeshire, Scotland, and FREDERICK WILLIAM ATACK, Manchester, England. Filed Jan. 19, 1920. Serial No. 352,538. 8 Claims. (Cl. 260—60.)

7. The process of alkylating amino-anthroquinone which consists in heating it with an alkyl sulphate in presence of nitrobenzene and a mild alkaline reagent at temperatures above 120° C.



1,426,381. RECUPERATOR. HEINRICH HECKER, Hagen, Germany. Filed Apr. 12, 1920. Serial No. 373,463. 3 Claims. (Cl. 72—15.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A recuperator with air ducts, running parallel to the gas ducts, built up of bricks with a flattened rectangular

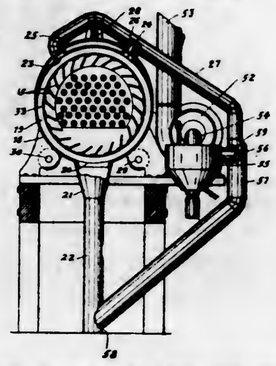


channel, said bricks having a cross section of hexagonal shape with two opposite and parallel longer sides and four equal shorter sides, the said bricks forming with their longer sides the gas ducts, each of which being surrounded on all four sides by the channels in said bricks, which form with their shorter sides of the hexagonal cross section pointed ends, that four of such bricks may be placed together to form the brick work structure.

1,426,382. BORING AND STUFFING MACHINE FOR BROOM AND BRUSH HEADS. GEORG HENNING, Bergedorf, near Hamburg, Germany. Filed Sept. 28, 1920. Serial No. 413,380. 2 Claims. (Cl. 300—3.)

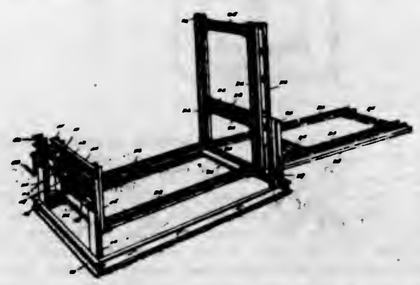
1. In a brush boring and bristle setting machine, the combination with a machine frame of a support for the brush back; a boring tool and a stuffing tool; a swinging carrier arm for one of the tools pivoted to the machine frame in the plane of the brush back, said tool adapted to engage the brush back at right angles to its surface when in working position; and said second tool adapted to reciprocate relatively to the brush back support in a line tangential to the arc described by the first-named tool at the point where said first-named tool is adapted to engage the brush back.

1,426,383. PLOWHITCH. GEORGE ORVIL HODGE, Bristol, Conn., assignor to The New Britain Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 19, 1920. Serial No. 418,068. 1 Claim. (Cl. 97—30.)



The combination of a power-operated frame having rearwardly-extending controlling handles connected therewith said frame also having a wheeled axle and also having an angular bracket connected therewith at one side thereof forward of the axle, a farming implement located below the handles, at the rear of the frame, an operative connection between the forward end of the farming implement and the bracket, and means whereby the farming implement can be moved through the action of the controlling handles.

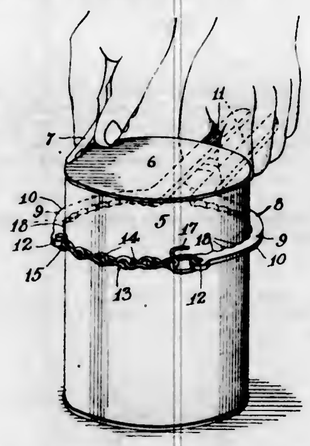
1,426,384. METHOD OF AND MEANS FOR DETECTING DEFECTS IN PARAMAGNETIC MATERIAL. WILLIAM E. HOKE, Washington, D. C. Filed June 23, 1919. Serial No. 305,955. 6 Claims. (Cl. 175—183.)



1. The method of testing an object of paramagnetic material, which consists in subjecting the object to the action of a magnetic field while in proximity to mobile finely divided paramagnetic material.

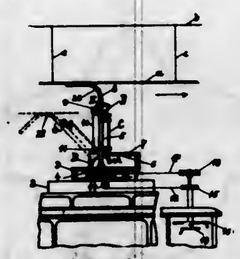
1,426,385. APPARATUS FOR DRYING AND STERILIZING CEREALS. ANTON HUHN, Minneapolis, Minn. Filed Aug. 13, 1917, Serial No. 185,828. Renewed Jan. 14, 1922. Serial No. 529,371. 9 Claims. (Cl. 34—6.)

1. Apparatus for drying and sterilizing cereals comprising a casing, means for feeding the cereals into the casing, means for progressively moving the particles of the cereals in a state of separation about and through said casing to the discharge end thereof, means for heating the cereal as it is moved, means for subjecting the cereal so moved to regulated currents of air during the entire period of moving and heating, means for acting upon the air of said currents immediately after it leaves the casing to cause the dust and solid ingredients carried in the air to be separated therefrom, and means for lowering the temperature of said dust separating means to cause a precipitation of a portion of the moisture content of the air.



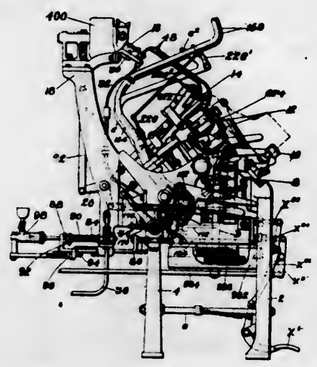
1,426,386. AUTOMOBILE REPAIR DERRICK. JOHN IMBLER and SAMUEL IMBLER, Carmel, Ind. Filed Oct. 18, 1920. Serial No. 417,808. 5 Claims. (Cl. 214—1.)

1. The combination with a suitable support, of a swinging cradle for vehicles, comprising a runway, a pair of



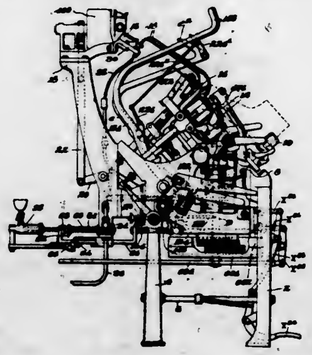
depending trunnion supported members by which the runway is supported on said support, one of said depending members being hinged to the runway upon an axis substantially at right angles to the trunnions, and means connected to the trunnion of the non-hinged depending support for swinging the cradle upon its trunnions.

1,426,387. PRESERVE-CAN HOLDER. CHARLES A. IVES, Brooklyn, N. Y. Filed Dec. 19, 1921. Serial No. 523,385. 3 Claims. (Cl. 81—32.)



1. A can holding device of the class described comprising two similar sheet metal jaw members, said jaw members comprising semi-circular portions provided at one end with handle members projecting at an angle thereto and the other ends of said semi-circular portions being provided with apertures, a chain the ends of which are passed through the apertures of said jaw members for securing said jaw members together, and a hook-shaped device at one end of the chain and adapted to be detachably connected with the separate links of the chain for adjusting the relative position of said jaw members.

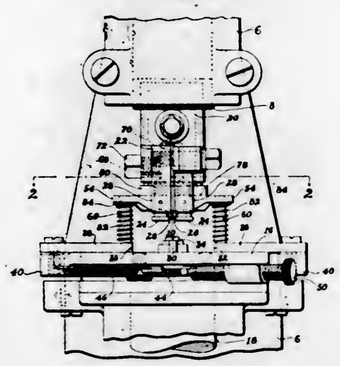
1,426,388. CURRENT-COLLECTOR CONTRIVANCE. KARL JACQUET, Zurich, Switzerland. Filed May 2, 1921. Serial No. 466,374. 5 Claims. (Cl. 191—55.)



1. In a current collector for electrically operated railway cars, the combination with a yieldably supported upright frame, of a contact member carried by and pivoted at one end thereof to said frame, operating means between the pivotal connection of the contact member and a fixed point in said collector to move the former relatively to said frame and against a pole line wire, and means for rotating said frame to reverse the position of said contact member with respect to the pole line wire.

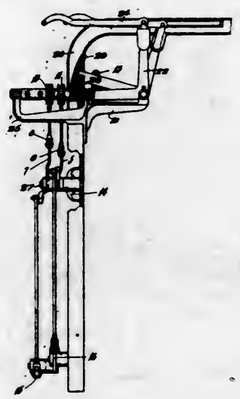
1,426,389. FASTENER-INSERTING MACHINE. ARTHUR ERNEST JERRAM, JOSEPH GOULDBOURN, and FRED RICKS, Leicester, England, assignors, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 28, 1916. Serial No. 122,631. 53 Claims. (Cl. 1—6.)

29. In a machine of the class described, the combination with means for supporting a fastener point downward and means for driving the fastener upward, of means for conducting said fastener from its supporting means to a point of delivery, said conducting means comprising a conduit extending upwardly over the fastener and curved to cause the fastener to arrive at its delivery point in an inverted position, and means for directing a blast of air upwardly beneath the fastener to force it through said conduit.



1,426,390. PULLING OVER MACHINE. ARTHUR ERNEST JERRAM, JOSEPH GOULDBOURN, and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 28, 1916, Serial No. 122,631. Divided and this application filed Mar. 15, 1920, Serial No. 366,030. Renewed Feb. 16, 1922. Serial No. 537,134. 22 Claims. (Cl. 12—4.)

1. In a machine of the class described, the combination with means for pulling an upper over a last positioned bottom downward, of upwardly movable drivers for inserting fasteners on the bottom of the last to retain the upper in its pulled-over position, a source of supply for fasteners comprising means for suspending the fasteners point downward, and means for transferring the fasteners into position to be inserted by said drivers comprising pneu-



matic means dependent for its operation upon a movement of the upper pulling means for inverting the fasteners to present them with their points directed upward.

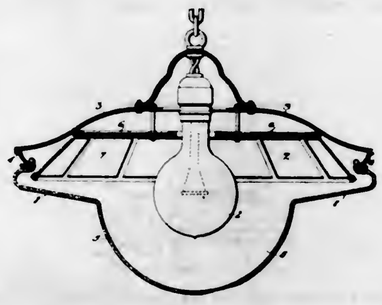
1,426,391. SOLE-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 24, 1920. Serial No. 398,632. 12 Claims. (Cl. 12—40.)

1. A sole fitting machine having, in combination, a work-supporting table, a plurality of slashing knives spaced apart above the table for making a plurality of incisions in the unattached sole, wholly automatic means for varying the spacing of said knives in accordance with the size or style of the sole to be operated upon, and means for reciprocating said knives toward and from the table.

1,426,392. SHUTTLE-BOX-OPERATING MECHANISM. EDWARD W. KEOUGH, Middleboro, Mass. Filed Apr. 17, 1922. Serial No. 554,260. 2 Claims. (Cl. 139—28.)

1. In a loom, the combination with a vibratory gear mechanism of the loom, of shafts extending laterally therefrom, rollers secured on said shafts, chains on said rollers, a connection between said chains and the shuttle box operating mechanism of the loom, whereby on rotation of the roller movement will be imparted to the shuttle box operating mechanism.

1,426,393. V-BEARING FOR WEIGHING SCALES. BERT W. KING, Detroit, Mich., assignor to Barnes Scale Company, Detroit, Mich., a Corporation of Michigan. Filed May 18, 1921. Serial No. 470,621. 5 Claims. (Cl. 74—104.)

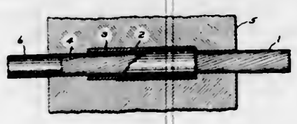


3. In a bearing for the purpose specified, the combination of a double knife edge with aligned downwardly and upwardly-pointed knife edges so that the two knife edges have a common axis of rotation, a fixed member on the scale engaging against the upwardly-pointing knife edge to lock the downwardly-directed knife edge in its bearing, a V groove block acting as the bearing for the downwardly-directed knife edge, and means for supporting said V groove block to float.

1,426,394. BOX CLAMP. MICHAEL KUNKEL, Grand Rapids, Mich. Filed Apr. 1, 1921. Serial No. 457,579. 5 Claims. (Cl. 229—47.)

1. In an implement for securing a match box cover upon the match container, two parallel arms bent oppositely at right angles at each end and then bent to form a continuous rectangular loop at each end of the implement of a proper size to exactly fit around the box and cover.

1,426,395. DAYLIGHT LAMP. NIELS LANG, Vancouver, British Columbia, Canada. Filed Apr. 21, 1921. Serial No. 463,131. 2 Claims. (Cl. 240—1.)

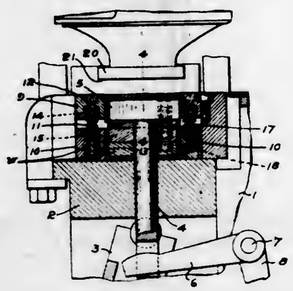


1. An electric lighting fixture, the combination with an incandescent lamp, a supporting canopy, a bowl of translucent obscured glass removably connected thereto, a circular reflector supported within the canopy and above the lamp, said reflector being of silvered glass, which is color tinted to modify the character of the light passing through it to and from the reflecting surface.

1,426,396. MILK-BOTTLE COVER AND CAP REMOVER. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Mar. 28, 1921. Serial No. 456,462. 4 Claims. (Cl. 215—55.)

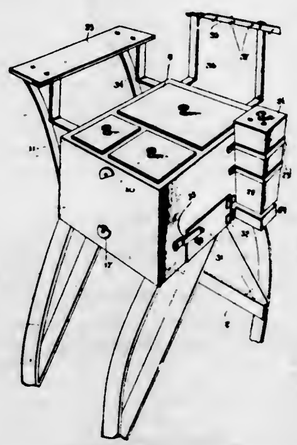
1. In a device of the character described, a cover; cap-engaging prongs struck therefrom and disposed at an acute angle relatively to the under surface thereof; a plate normally covering the openings made in said cover by the formation of said prongs; and means at the outer edge of said cover whereby it may be rotated about its center.

1,426,397. METHOD OF MANUFACTURING RAIL BONDS. HARRY V. LINDERMAN, Mansfield, Ohio. Filed Apr. 19, 1921. Serial No. 462,755. 8 Claims. (Cl. 29—169.)



1. The method of forming an article of manufacture comprising the steps of inserting the end of a copper body composed of a plurality of units within a ferrous casing with an interposed layer of brazing metal and permitting the end of the copper body to project beyond the outer end of the ferrous casing, then gripping the parts in a die to hold the casing, body and brazing metal relative to each other, then compacting the body within the casing by crowding the projecting portion of the body into the casing thereby excluding the air from the interior of the casing and body, then heating the parts to a temperature at least equal to the melting point of the brazing metal and then subjecting the heated parts to pressure from without to compact, unite and shape the same.

1,426,398. LOCKING MECHANISM. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 27, 1918. Serial No. 236,815. 4 Claims. (Cl. 74—27.)



1. In a mechanism for transmitting power from one machine element to another, a member for locking the power transmitting mechanism against accidental engagement, and operating means for moving the member to and from locking position, said operating means being retained in operative position by engagement with said member.

1,426,399. COMPRESSING MACHINE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 3, 1919. Serial No. 308,528. 10 Claims. (Cl. 12—48.)

1. In a machine of the class described, the combination of a reciprocable cross head, and a mold, the bottom and contour portions of the mold being carried upon the cross head and the contour portions of the mold being movable up and down relatively thereto.

1,426,400. WATCH AND JEWELRY CLEANER. BERT MCCARTY, Tampa, Fla. Filed Sept. 24, 1920. Serial No. 412,579. 3 Claims. (Cl. 141—1.)

1. An apparatus for use in cleaning jewelry comprising a casing having a horizontal partition defining upper and lower chambers, receptacles for cleaning mediums received in said upper chamber and having closures arranged above said casing, a heating member in said lower chamber, and a second partition engaging said first named partition and one side of said casing thereby defining an intermediate chamber beneath one of said receptacles, said first named partition having openings establishing communication between said lower and intermediate chambers.

1,426,401. REPLACEMENT VALVE. CHRISTIAN J. MÜLLER, Prince Bay, N. Y. Filed Apr. 6, 1921. Serial No. 459,189. 2 Claims. (Cl. 152—12.)

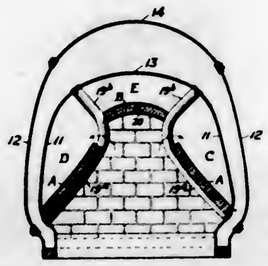
1. A valve of the kind described, comprising a screw-threaded stem flattened upon opposite sides, a thin flat

head semi-circular at one end and extending angularly outward to a rounded point at its other end, said semi-

circular portion being fixed to said stem, and means for securing said stem in operative position.

1,426,402. PNEUMATIC CAP. Claude Moore, Cedar Rapids, Iowa, assignor to F. L. Vernon, Newton, Iowa. Filed Oct. 10, 1919. Serial No. 329,746. Renewed Nov. 3, 1921. Serial No. 512,570. 4 Claims. (Cl. 9—20.)

1. A pneumatic cap of waterproof elastic material, comprising a skull-cap shaped to firmly hold it on the head of the wearer and an inflatable enclosing cover spaced therefrom.

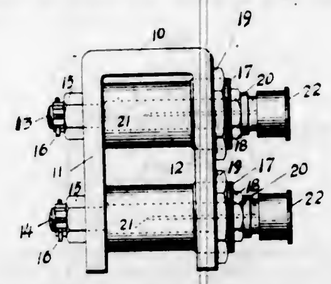


1,426,403. PISTON RING. Samuel Wilson Morrow and John Schlutter, Baltimore, Md., assignors to The Reus Bros. Co., Baltimore, Md., a Corporation of Maryland. Filed Nov. 9, 1921. Serial No. 513,966. 3 Claims. (Cl. 74—109.)

1. A multiple part piston ring including a drawn bronze outer member contacting with the wall of the cylinder and a side wall of the piston ring groove, and a separate resilient expander member cooperating therewith.

1,426,404. FIRE-BOX STRUCTURE. John P. Neff, East Orange, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 17, 1919. Serial No. 283,034. 10 Claims. (Cl. 122—71.)

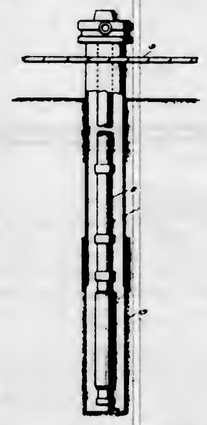
1. The combination in a locomotive fire box having side water legs and a cross wall in the forward part thereof, of a plurality of circulation tubes at each side of the box arranged in substantially vertical planes in the box and bent so as to connect the upper and lower ends of



the same water leg, and side and top arch walls supported on the tubes and extending rearwardly of the cross wall.

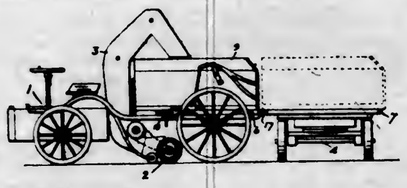
1,426,405. CONVERTIBLE PORCH SWING AND COUCH. Charles A. Neiswender, Topeka, Kans. Filed Aug. 13, 1920. Serial No. 403,285. 2 Claims. (Cl. 155—58.)

1. In a convertible porch swing and couch, the combination of a seat including longitudinally extending side rails and transverse end rails, the terminals of the side rails being extended beyond the end rails, spaced longitudinally extending seat slats carried by the end rails and having their terminals extending beyond said end rails; and end sections including relatively short uprights arranged between the terminals of the side rails, said uprights being adapted to extend in the spaces between the terminals of the seat slats, when the end sections are in their upright positions, the uprights and end rails having aligned openings formed therein, and hinge rods extending through said aligned openings.



1,426,406. SPRING SHACKLE. Lucian Herbert Parcher, Gardner, Mass. Filed Feb. 24, 1920. Serial No. 360,944. 1 Claim. (Cl. 267—54.)

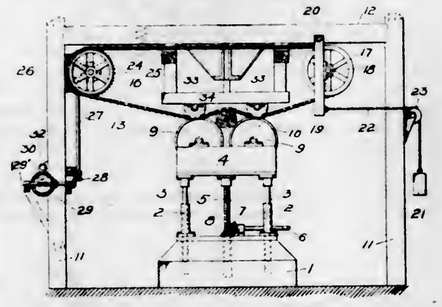
A spring shackle comprising side members rigidly spaced apart, a bushing threaded in one side member, means to lock said bushing in position, a spring support stud extending through said bushing and having a shoulder engaging the outer end thereof, said stud also fitting an opening in the opposite side member of



said shackle, and means to draw said shoulder against said bushing and to preserve the longitudinal adjustment of said stud.

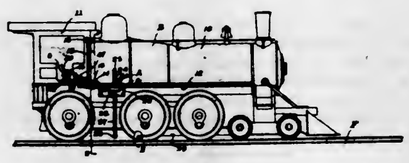
1,426,407. OIL-WELL HEATER. Harry Pennington, Wichita Falls, Tex. Filed Oct. 29, 1920. Serial No. 420,498. 6 Claims. (Cl. 219—53.)

5. In an electric heater for oil wells, a casing arranged adjacent the bottom of the well, electrical heating means arranged therein, a pair of electrical conductors connected to said heater and adapted to transmit current thereto, a thermostat arranged in said casing, said thermostat being connected to one of said conductors and to a ground, a relay coil arranged in circuit with said thermostat, and a switch arranged in the other conductor and adapted to be opened when said relay is energized.



1,426,408. STREET-CLEANING EQUIPMENT. Henry Pezzetti, Philadelphia, Pa. Filed Mar. 17, 1920. Serial No. 366,631. 2 Claims. (Cl. 214—38.)

1. In street cleaning equipment the combination of the chassis of a self-loading sweeper, the chassis of a

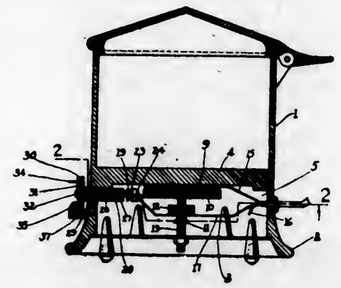


lorry, a plurality of carriages each provided with wheels and with a joint, provisions on each of the chassis for receiving and holding said carriages singly, a truck adapted to receive said carriages in multiple, means on each chassis for transferring said carriages to and from the truck, bodies carried by said carriages and attached to the carriages to one side of the joint, and devices on the lorry chassis for working the joint of a carriage to dump its body, substantially as described.

1,426,409. LOG-TURNING MECHANISM. Mybon R. Rawson, Spokane, Wash. Filed June 7, 1921. Serial No. 475,812. 4 Claims. (Cl. 144—242.)

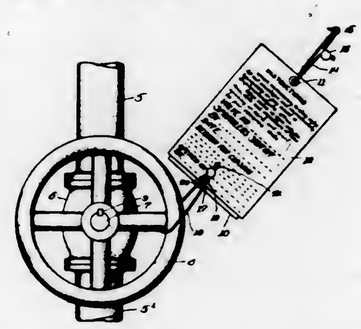
1. The combination in a pole turning device with rotatable means for supporting a pole, of an endless chain and means carried thereon to engage and rotate the pole, a driving suspending wheel and a supporting pulley for the chain, means co-acting with the pole for flexing the working flight of the chain and means for compensating for the flexure in the chain.

1,426,410. AUTOMATIC RAILROAD SIGNAL AND STOP. George Ridley, Highland Park, Mich. Filed Aug. 8, 1921. Serial No. 490,654. 5 Claims. (Cl. 246—200.)



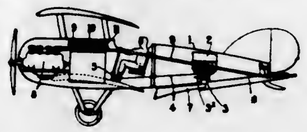
1. In a safety appliance for railroad trains, the combination with a locomotive including a cab and an air brake train line pipe, a release valve disposed in said pipe, a branch pipe, means for bringing the branch pipe into communication with the air train pipe upon operation of said valve, a signal whistle carried by the branch pipe and disposed in said cab, a pendant lever pivotally carried by the locomotive adapted to be operated by a track trip, a sliding operating rod carried by the locomotive and disposed in the path of said lever, a handle for said valve disposed in the path of said rod, and a second sliding rod arranged to engage the handle and to operate the same when moved in one direction, and a manually operated lever disposed in the cab for operating said second mentioned rod as and for the purpose specified.

1,426,411. ELECTRIC HEATING UNIT. Clarence B. Rogers, Seattle, Wash. Filed Aug. 16, 1920. Serial No. 403,795. 10 Claims. (Cl. 219—20.)



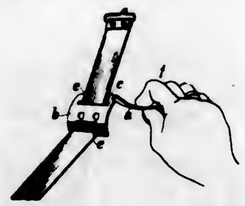
1. An electric heating unit including a heating coil, means tapped in the coil at an intermediate point there-

of automatically to control current flow through said coil whereby flow is directed through the whole coil or



directed through only a portion thereof, and a signal means in circuit with the coil whereby flow is continuously signaled.

1,426,412. VALVE SEAL. WILLIAM G. SANDERSON, Chicago, Ill. Filed July 14, 1921. Serial No. 484,611. 6 Claims. (Cl. 292—307.)

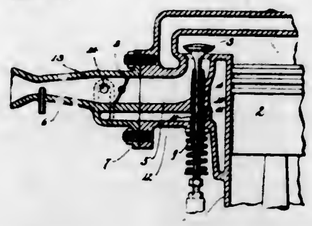


1. A device of the character described comprising a cover part sealed to a relatively stationary object and a display part connected thereto, normally invisible, sealed to a movable object, arranged to be disconnected from the cover part by movement of said movable object from sealed position, and made visible when disconnected from the cover part.

1,426,413. AERIAL CRAFT. JOHN C. SAVAGE, Ryde, Isle of Wight, England. Filed Dec. 21, 1920. Serial No. 432,237. 6 Claims. (Cl. 244—31.)

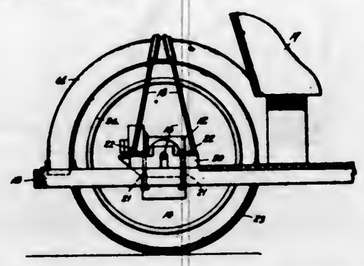
1. Means for producing smoke effects in midair by means of an aircraft, comprising the combination with the aircraft, of a plurality of separate receptacles carried thereby, different materials therein capable by admixture or chemical reaction of producing a dense smoke effect, and means governable at the will of an occupant for regulating the emission of said materials, the aircraft being manœuvered to enable signs, letters, advertising and other effects to be produced in mid air by the regulated smoke.

1,426,414. RAZOR STROP. EDGARD SCHUMANN, Berlin-Wilmersdorf, Germany. Filed July 31, 1920, Serial No. 400,566. Renewed July 10, 1922. Serial No. 573,922. 1 Claim. (Cl. 51—153.)



A stropping device for flexible safety razor blades, comprising a curved sheet having a handle, and also having a pair of spaced slots to receive and expose the cutting edges of the blade, and means on the concave side of the sheet to engage and hold the intermediate portion of the blade in spaced relation to the sheet, the width of said slots being sufficient to permit the passage of a strop therethrough, in contact with the blade.

1,426,415. CASEMENT-WINDOW ADJUSTER. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed June 1, 1920. Serial No. 385,675. 11 Claims. (Cl. 292—275.)

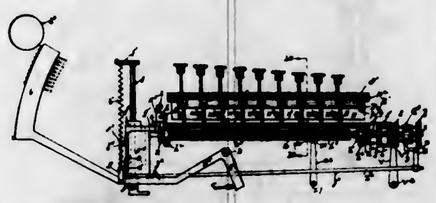


9. In an extensible member, an outer tube portion, an inner portion frictionally held against sliding movement within the outer portion, and means for varying the frictional engagement between said portions, said means including a plug cooperating with the inner portion and held against rotation within the outer portion.

1,426,416. MEANS FOR CONTROLLING FLUID LEAKAGE THROUGH JOINTS AND BEARINGS. LOUIS E. SHAW, East Orange, N. J., assignor to Williams Motors Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 16, 1920. Serial No. 410,731. 2 Claims. (Cl. 286—1.)

1. Means for preventing in internal combustion engines, air leakage through joints into space carrying combustible mixture of pressure lower than atmospheric, comprising a tubular member extending from the outside into the low pressure mixture space, an element disposed within the tubular member and forming the joint therewith to be protected from leakage, said tubular member having an annular space midway between its ends which surrounds said inner element, means for producing combustible mixture at or near atmospheric pressure and means for connecting said annular space with said source of combustible mixture.

1,426,417. WHEEL MOUNTING FOR LIGHT MOTOR VEHICLES. LOUIS E. SHAW, East Orange, N. J., assignor to Williams Motors, Inc., New York, N. Y., a Corporation of Delaware. Filed June 24, 1921. Serial No. 480,131. 2 Claims. (Cl. 180—1.)



1. In a motor vehicle of the character described the combination of a vehicle wheel and its axle, with a vehicle frame surrounding said wheel and being suspended from said axle, one end of said axle being pivotally attached to one side of said frame, and means for removably attaching the other, free, end of said axle to the other side of said frame to permit the insertion of a wheel tire between the free axle end and the frame when said axle end is detached and elevated from the frame.

1,426,418. AMUSEMENT-PARK DEVICE. PAUL SIMON, Classon Point Park, N. Y. Filed Aug. 13, 1921. Serial No. 491,957. 1 Claim. (Cl. 46—27.)

A device of the class described comprising a power unit, an upright shaft actuated by said power unit, a hexagonal sided wheel secured to the upper end of said shaft, each side adapted to have one end of extensible bar members pivotally secured thereto, passenger cars pivotally secured to the opposite ends of the said bar members and adapted to tractionally ride on the surface of an annular track, a collar fixed to the axle of the traction trucks, oppositely disposed springs mounted in a housing, said housing having a pivoting member adapted to swivel in a member fixed to the floor of the passenger car and a means for allowing side slip of the passenger car substantially as shown.

1,426,419. COMPUTING AND RECORDING MACHINE. ABRAHAM SMITH, Erie, Pa. Filed May 17, 1920. Serial No. 381,875. 51 Claims. (Cl. 235—60.)

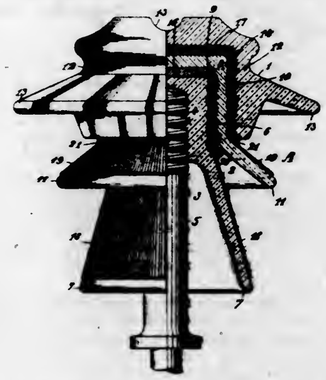
4. In a machine of the class described, comprising independently actuated type carriers and accumulator mechanisms, rotatable members mounted in the machine frame, means to rotate said members in either direction, two series of radial detents on each of said rotatable members, and manually manipulated mechanism adapted to engage detents in either series on said rotatable members and limit either the right or left rotation of the same and thereby control the action of said printing and accumulating mechanism, and actuating mechanism adapted to impart motion to said mechanism, substantially as set forth.

15. In a machine of the class described, a plurality of type-levers each carrying a series of types from "0" to "9" inclusive, individual spring actuated mechanism connected to each of said type-levers, actuating mechanism adapted to release said type-levers to the action of said individual spring-actuated mechanisms or operate them against the same, key-controlled rotatable mechanisms adapted to limit the upward movement of said individual spring actuated mechanisms for the printing of numerals, and mechanism operatable by said actuating mechanism to cause the type-levers to raise the zero type at the right of the numerals to the printing line, and prevent the raising of the type-levers at the left of the numerals, substantially as set forth.

30. In a machine of the class described, a recording mechanism comprising independently actuated type-carriers, accumulator mechanism, a rotatable member adapted to be returned to its initial position after each operation and to control said recording and accumulator mechanism, and means to transfer the amount of an accumulation to the recording mechanism to be recorded.

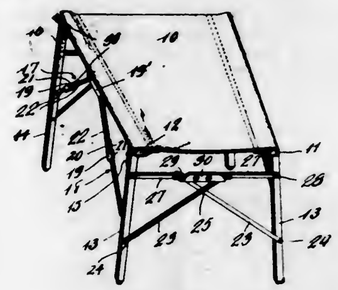
35. In a calculating machine, a gear member, means to rotate said gear member in either direction, an accumulator, means for engaging or disengaging said accumulator to and from said gear member during each operation, means for holding said accumulator at rest during a semi-rotation of said gear member, and means on the accumulator to limit the rotative movement of said gear member.

1,426,420. ROAD MARKER. LLOYD HUDSON SMITH, Waco, Tex., assignor to Texas Steel Highway Marker Association, Waco, Tex. Filed Apr. 21, 1922. Serial No. 555,929. 2 Claims. (Cl. 40—145.)



1. In a device of the class described, a standard cut away at its upper end to form a reduced arm and to form a transverse shoulder at the lower end of the arm, the shoulder having a seat: a plate abutting against the arm and received in the seat; and means for securing the plate to the standard.

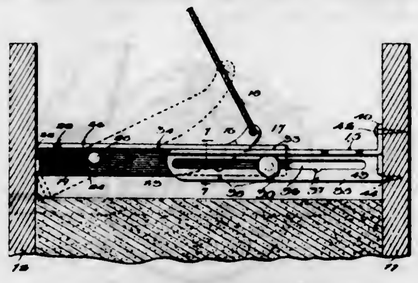
1,426,421. CONDENSER CEMENTED SECTIONAL INSULATOR. SOL. S. SONNEBORN, Brooklyn, N. Y., assignor to Hopewell Insulation & Mfg. Co., Incorporated, a Corporation of Virginia. Filed Feb. 27, 1917. Serial No. 151,364. 2 Claims. (Cl. 173—318.)



1. A high-potential insulator of the condenser type comprising a plurality of insulating sections, each section

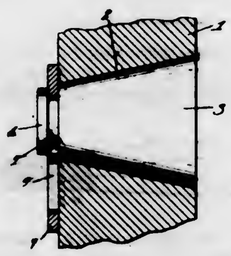
comprising a cup-shaped portion, the cup-shaped portions being nested one within the other; one or more of the inner sections having a petticoat; a metallic filling covering the entire surface of a nested cup-shaped por-

tion of a section and mechanically uniting it with the next outer cup-shaped portion; and a metallic sheath covering the petticoat portion of said section and in electrical connection with said metallic filling.



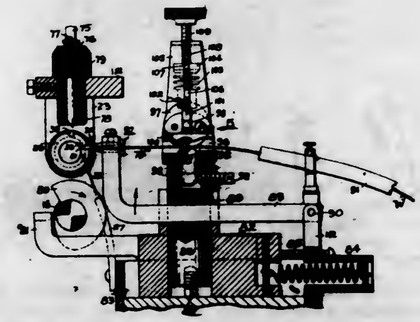
1,426,422. CHIROPRACTIC TABLE. HARRY F. STOWE, Elmira, N. Y. Filed May 18, 1921. Serial No. 470,517. 2 Claims. (Cl. 45—50.)

2. In a supporting member including side rails, opposite legs pivoted thereto at one end of the device, rods pivoted at corresponding ends adjacent the bottoms of the legs and pivotally connected together at points spaced from the upper ends of the rods, relatively shorter rods pivoted to the upper ends of the first named rods and to the adjacently positioned legs, links pivoted at their outer ends to the pivotal connections between said rods, and a locking plate pivoted between the inner ends of said links.



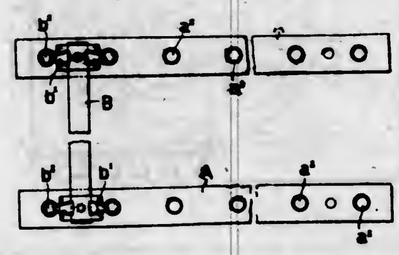
1,426,423. SPREADER. HORACE THOMPSON SWASEY, Trenton, N. J. Filed Jan. 12, 1921. Serial No. 436,854. 8 Claims. (Cl. 254—100.)

1. A spreader of the class described comprising a bar section having an upwardly curved apertured end and a top wall provided with a transverse abutment shoulder, an end wall at one end of the bar to engage an element to be braced, a section pivoted adjacent one end to said bar in juxta-position to the shoulder and having a transverse end wall designed to abut said transverse shoulder at the top, the opposite end of the second section being apertured, a third section slidably fitting against the second section in fixed alignment therewith and having an end wall at the opposite end of the spreader, a clamping bolt engaged through said aperture, and means whereby



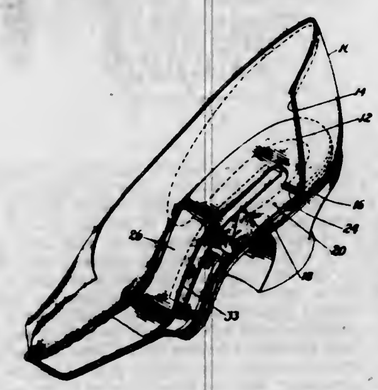
the third section is adapted to be engaged by said bolt, at a plurality of points for extension thereof and holding the same in adjusted position.

1,426,424. DOOR. SHERMAN TAYLOR, Wymore, Nebr. Filed Mar. 14, 1921. Serial No. 452,054. 2 Claims. (Cl. 109—1.)



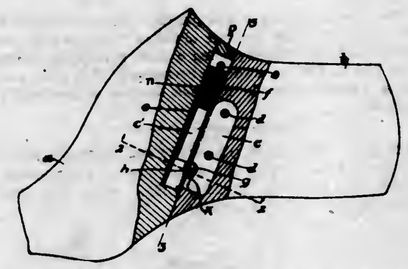
1. The combination with a door having an inwardly tapered opening therein, of a tapered plug normally seated in the opening and having an extension at its small end projecting from the back or inner face of the door, and means engaging said extension for holding the plug against withdrawal from the opening.

1,426,425. MACHINE FOR FORMING WIRE. NAPOLEON R. THIBERT, Worcester, Mass. Filed Mar. 23, 1921. Serial No. 454,654. 48 Claims. (Cl. 153—67.)



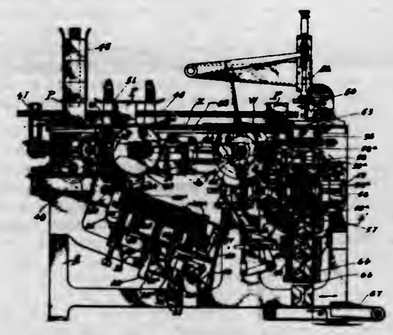
1. In a wire working machine, the combination of a driving shaft, a pair of operating shafts, means connected with the driving shaft for first driving one of the operating shafts through exactly a complete revolution and then driving the other operating shaft through exactly a complete revolution, and wire working devices connected with each of said operating shafts to be operated thereby.

1,426,426. SURFACE-MEASURING APPARATUS. HERMANN THUN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 9, 1921. Serial No. 443,694. 2 Claims. (Cl. 33—109.)



1. In a surface measuring machine, a plurality of parallel track bars, having distancing formations along said bars and a displaceable transversely arranged rod member cooperating with said bars, said rod member having a plurality of star shaped revoluble pedimental extremities engaging supportably with said distancing formations in a plural mating relationship.

1,426,427. SHOE AND SHOE-SHANK STIFFENER. FRED E. TOOTHAKER, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 15, 1919. Serial No. 345,004. 14 Claims. (Cl. 36—76.)

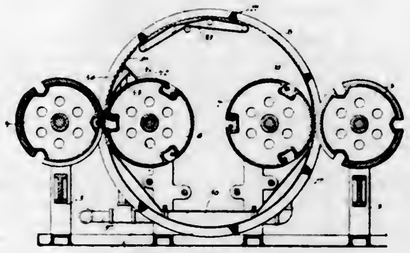


1. A turn shoe having an upper provided with a lining, a counter disposed between the upper and the lining and having a bottom piece, and a shank member fitting within said counter, overlying an inturned edge of the lining, and having a portion extending forwardly into the shank of the shoe, the portion of said shank member fitting within the said counter being reduced in thickness as compared to its forward portion an amount corresponding to the thickness of said bottom piece.

1,426,428. SELF-LOCKING LAST. RALPH C. WEBSTER, Haverhill, Mass., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Jan. 29, 1919. Serial No. 273,745. 21 Claims. (Cl. 12—135.)

9. A last comprising fore and heel parts connected together with provisions for relative movement in a manner to permit collapsing and extending the last, and a locking member to hold the last in extended position, said member being constructed and arranged to roll into and out of operative position under the action of gravity.

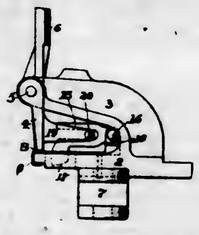
1,426,429. APPARATUS FOR PRODUCING SEALED WRAPPED PACKAGES. WILLIAM A. WEIGHTMAN and CHARLES H. NITSCH, Philadelphia, Pa., assignors to Stokes & Smith Company, Summerdale, Pa., a Corporation of Pennsylvania. Filed July 28, 1917. Serial No. 183,212. 18 Claims. (Cl. 93—7.)



7. In a machine for adherently affixing adhesively-coated wrapper blanks to the exterior walls of a packet in the manufacture of sealed wrapped packages and in combination, means for advancing a packet to position a wall thereof in contact with a selected section of the wrapper blank to adherently affix said section of the blank to said wall and produce an assembly, devices for adherently affixing the remaining sections of the blank to complemental walls of the packet in succession and in regular progression in the direction of length of the blank, and devices for adherently affixing section end wings successively to the packet ends in an irregular progression.

13. A machine for enclosing articles or packages in sealed wrappers, comprising means for advancing an article and concurrently advancing a wrapper and bringing them into definitely registered engagement with portions of the wrapper extending laterally beyond the ends of the package and a relatively long portion of the wrapper extending beyond the package in the line of package advance, means for adhesively conditioning the wrapper before engagement with the article, means for advancing the assembly after registered engagement to an initial wrapping position, and means for folding the wrapper about the package and pressing it in position to produce a sealed wrapped package.

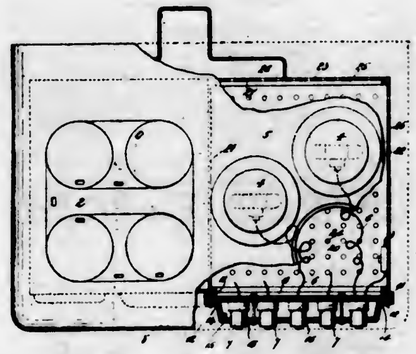
1,426,430. PHARMACEUTICAL PRODUCT. HERMANN WEYLAND, HANS HAHL, and RUDOLF BERENDES, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Aug. 8, 1921. Serial No. 490,699. 1 Claim. (Cl. 167—9.)



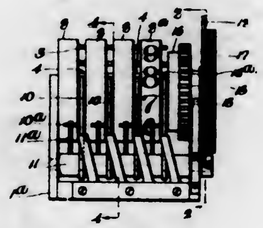
The herein-described new pharmaceutical compound being a condensation product obtained from xylent, sulfur and aluminium chlorid; being a dark yellow oil boiling at from 150 to 230° C. under a pressure of 3–5 mm., and being a valuable remedy against scabies, substantially as described.

1,426,431. MULTICOLOR-PRINTING PRESS. BRUCE C. WHITE, New York, N. Y. Filed Aug. 3, 1920. Serial No. 401,911. Renewed Nov. 29, 1921. Serial No. 518,713. 10 Claims. (Cl. 101—183.)

1. In a printing press of the type described, co-operating type and impression cylinders, an annular carrier device enclosing the impression cylinder, and a wedge shaped suction box located between said impression cylinder and carrier device, the adjacent edges of the converging side walls of said suction box being spaced apart and forming an air inlet to exhaust the air from the converging space between said impression cylinder and carrier device.



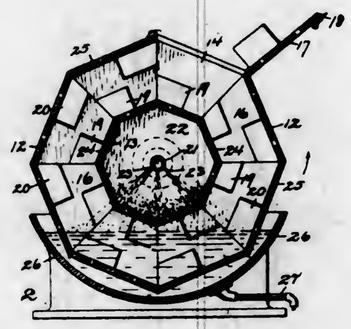
1,426,432. CLOTH CLAMP FOR TEXTILE MACHINERY. HUGO OSCAR WIEGAND, Philadelphia, Pa., assignor to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Filed May 3, 1922. Serial No. 558,133. 6 Claims. (Cl. 26—8.)



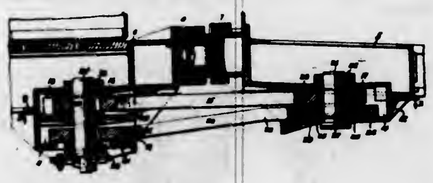
4. In a cloth clamp, a jaw formed of an extended plate provided with a slot and having its rear end formed with two upwardly bent arms to provide a hinge socket extending above the level of the plate and integral therewith, combined with a pivoted arm hingedly connected to the hinged socket and having a downwardly extending foot portion adapted to pass through the slot in the plate when not sustained by the cloth.

1,426,433. STOVE. CLARENCE F. WILEY, Taunton, Mass., assignor to Magee Furnace Company, Boston, Mass., a Corporation of Massachusetts. Filed July 8, 1921. Serial No. 483,134. 7 Claims. (Cl. 219—35.)

1. In a stove having electrically heated parts with circuit-forming connections and switches for controlling the application of the electric current, a board on which the switches are mounted occupying a position upon and spaced from the body of the stove whereby air may circulate around the board, a face plate to said board occupying a position spaced in part therefrom whereby air may pass between the plate and board, said spaced portion of the face plate having in it openings through which the switches extend out of contact with the face plate.



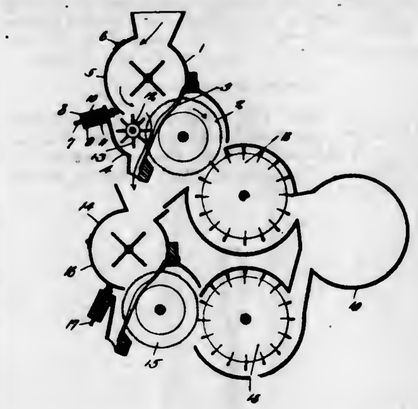
1,426,434. COUNTER. WALTER WILLIAMSON, New York, N. Y., assignor to Crosby Steam Gage & Valve Company, Boston, Mass., a Corporation of Massachusetts. Filed July 18, 1918. Serial No. 245,487. 2 Claims. (Cl. 235—142.)



1. In a counter of the character described, in combination, a main shaft; means for rotating the shaft and means for preventing the rotation thereof, each of said means being under the control of the operator; a plurality of wheels rotatably mounted on said shaft alternately with cams fixedly mounted thereon; each wheel having on one side annularly disposed studs and on the other side a spring-controlled driving pawl; a rocking shaft disposed parallel to the main shaft; and a plurality of spring-pressed locking pawls vibratively mounted thereon and severally engaging each a stud on the oppositely disposed wheels; the driving pawls engaging and co-acting severally with the adjacent cams to successively disengage the locking pawls from the studs and themselves engage the studs and drive the wheels a predetermined distance and then release them.

1,426,435. POLISHING AND TUMBLING BARREL. FREDERICK WINKLER, Bloomfield, N. J. Filed Nov. 12, 1919. Serial No. 337,460. 2 Claims. (Cl. 51—164.)

1. A tumbling barrel comprising a polygonal inner shell, a polygonal outer shell, end walls, all combining to form a polygonal annular chamber, vanes extending from the end walls along the inner shell and part way across, these vanes being inclined circumferentially in the same direction, and vanes extending from the end walls along the outer shell and inclined circumferentially in the same direction, but opposite to the direction of inclination of the first mentioned vanes.



1,426,436. DRAFT CONNECTION. WILLIAM E. WOODARD, Forest Hills, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed June 27, 1921. Serial No. 480,539. 4 Claims. (Cl. 213—42.)

1. In a locomotive and tender connection the combination of a pair of draw bar pockets on the tender one above the other, a single draw bar pocket on the locomotive, a hub extending upwardly from the lower portion of the locomotive pocket, a draw bar extending at one end into the upper pocket on the tender and at the other end into the pocket on the locomotive, the locomotive end being adapted to rest upon said hub, a safety bar extending at one end into the lower pocket on the tender, said safety bar being bent upwardly from said end so as to enter the pocket on the locomotive at the other end and being adapted at the locomotive end to embrace the hub, a pin on the tender for the ends of both bars and a pin on the locomotive for the end of the draw bar only.

1,426,437. COTTON GIN. JOHN WOOLDRIDGE, Temple, Tex., assignor of one-half to Marco Marks, Crawford, Tex. Filed Dec. 17, 1918. Serial No. 267,108. 1 Claim. (Cl. 19—61.)

In a gin, a roll box having a downwardly curved upwardly and outwardly opening hinged front board, a hopper arranged below said box into the upper end of which the free end of said board projects, ribs constituting one wall of said hopper, gin saws extending between said ribs into said hopper and into said roll box, a rotatable roll in said hopper having fingers extending between the saws and adjacent the ribs, and adjustable, yieldable means slidably mounted in one wall of said hopper and

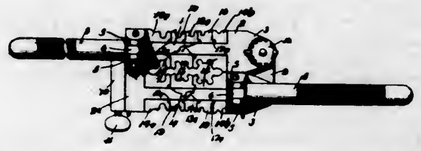
pivotally engaged with the front board for holding said board yieldably pressed inward to position over the roll.

1,426,438. LEAD PENCIL. DAVID ZAKIM, New York, N. Y., assignor to Sterling Metal Novelty M'f'g Co., Inc., New York, N. Y., a Corporation of New York. Filed May 31, 1921. Serial No. 473,599. 3 Claims. (Cl. 120—21.)

3. A clutch pencil comprising an exterior tubular casing formed integrally therewith with a forward tapered tip member, a central clutch tube extending longitudinally through said casing and adapted at its forward end to said tip-member, and at its rear end having rigidly secured thereto an exposed head carrying a nut in threaded engagement with the rear end of said exterior casing, said head closing the rear end of said casing and being detachable with said tube from said end of said casing, and an elongated tube through which said clutch-tube extends and by which it is guided in its longitudinal movements and which elongated tube has at its forward end a laterally extending cup-shaped head closely engaging the interior walls of said casing and at its rear end laterally extending spaced-apart arms whose extremities are bent longitudinally to engage the inner walls of said casing, a chamber for reserve leads being formed between said elongated tube and said casing and said leads being introducible into said chamber through the rear end of said casing and between said spaced-apart arms, and said head serving as a support for said leads.

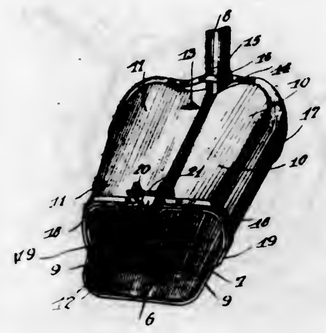
1,426,439. CONTAINER. PHILIP ZALKIND, New York, N. Y. Filed Apr. 23, 1918. Serial No. 230,203. 5 Claims. (Cl. 229—17.)

1. A container comprising enclosing walls, a member provided in an exposed wall of the container normally



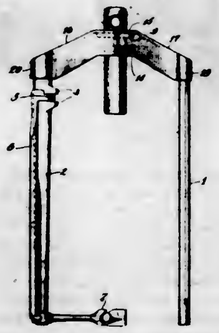
closing the same and adapted to be separated therefrom along a predetermined line to provide an aperture therein, and a member formed in an unexposed wall of the container and adapted to be secured to the aforesaid member and to form a trough which is operated by the first aforesaid member to open and close the said aperture.

1,426,440. MOP AND WRINGING ATTACHMENT THEREFOR. RICHARD ZIESCHANG, London, England, assignor of one-half to Wilbert Edward Stratton, London, England. Filed May 29, 1920. Serial No. 385,261. 6 Claims. (Cl. 15—119.)



1. The combination of a stem and a mop head thereon with a sleeve sliding on said stem, a casing carried by said sleeve into which casing the mop head can be drawn, flaps carried by said casing and adapted to close over the open lower end thereof, a second sleeve sliding over the first sleeve, and connections from said second sleeve to said flaps whereby movement of the second sleeve over the first sleeve is caused to close together or open out said flaps.

1,426,441. THREAD-CUTTING TOOL. JOHN H. ZOERMAN, Chicago, Ill. Filed June 14, 1920. Serial No. 388,725. 2 Claims. (Cl. 10—114.)

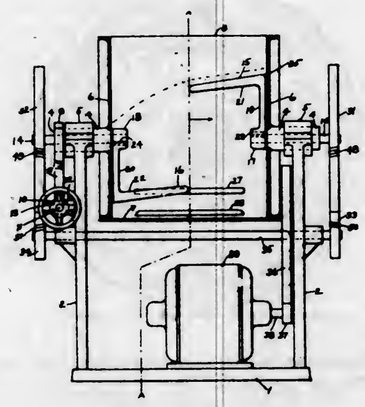


2. A device of the character described comprising a pair of members adapted to lie substantially parallel to each other and having coacting die faces on adjacent sides, a pair of ears projecting laterally from each member adjacent an end thereof, said ears projecting from opposite ends of the members, a member having a threaded shank pivotally mounted between the ears of each pair of ears, and a handle threaded on to each of said shanks, substantially as and for the purposes described.

1,426,442. ATTACHMENT FOR SHOVELS. JOSEPH FERDINAND ADAM, Marengo, Saskatchewan, Canada. Filed Mar. 3, 1921. Serial No. 449,758. 4 Claims. (Cl. 294—49.)

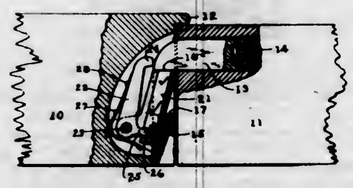
1. The combination with a shovel, such as above described, of an attachment therefor, including a pair of sections, means for connecting said sections, and clips attached to the sides of said sections, for engaging the shovel and preventing the displacement of said attachment.

1,426,443. FLIER. WILLIAM O. ALDRICH, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Aug. 26, 1920. Serial No. 406,165. 8 Claims. (Cl. 118—57.)



4. A flier comprising a crown formed from sheet metal and having a yarn slot at one end thereof, a separately formed, hollow leg having a yarn slot secured to the said slotted end of the crown and having its interior passage opening through the crown, a solid leg secured to the other end of the crown and a hub secured in a central perforation in said sheet metal crown.

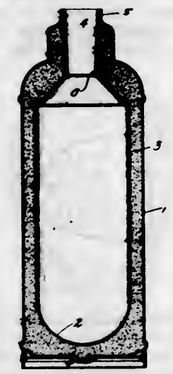
1,426,444. MACHINE FOR MIXING DOUGH. DANIEL K. ALLISON, Milwaukee, Wis. Filed Mar. 26, 1920. Serial No. 368,828. 10 Claims. (Cl. 259—109.)



1. In a machine for mixing dough the combination of a tank or receptacle for containing the dough mass, mixing blades of cylindrical cross sections mounted independent

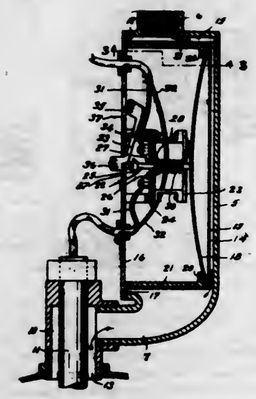
of each other and projecting inwardly from the ends of the tank and rotating in the same direction, a common

shaft outside the tank, drive means connecting the mixing blades to said common shaft and power means for rotating said shaft.



1,426,445. DOOR LATCH. OLAF A. ANDERSON, Hamilton, Ohio. Filed July 20, 1921. Serial No. 486,047. 5 Claims. (Cl. 292—340.)

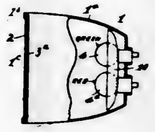
1. In a device of the class described, the combination of a strike plate for door latches, a member carried thereby and movable transversely of the direction of movement of the latch, into engagement with the latter, and a pivoted lever having one arm in position to be actunted by said latch and another arm operatively connected with said member to actuate same.



1,426,446. HEAT-INSULATED RECEPTACLE. GEORGE C. ANTHON, New York, N. Y., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Nov. 1, 1919. Serial No. 335,126. 3 Claims. (Cl. 215—13.)

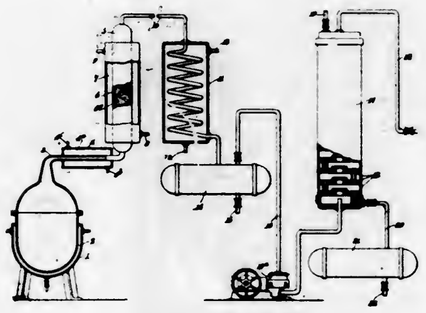
1. The method of constructing a vacuum receptacle, which comprises providing an outside shell having a bottom and a mouth portion, the mouth portion being of metal, placing within and in spaced relation to the outer shell, a second but shorter shell with a metallic mouth portion and a closed bottom, connecting the neck portions of the two shells by welding to the mouth portions thereof respectively the ends of a tubular connecting member made of a metal different from the metal of the mouth portions of the two shells and of higher thermal resistivity, but less adherent to an enamel or vitreous coat, whereby the connecting member is an integral part of the inner shell and holds the two shells in spaced rela-

tion, treating the interior surface of the connecting member to render it more adherent to an enamel or vitreous coat, and applying a continuous enamel or vitreous coat on the interior of the shell and connecting member.



1,426,447. THERMOSTATIC SWITCH. PHILIP F. APPEL, Seattle, Wash., assignor of one-half to Waldo E. Mather, Seattle, Wash. Filed Apr. 4, 1921. Serial No. 458,375. 1 Claim. (Cl. 200—138.)

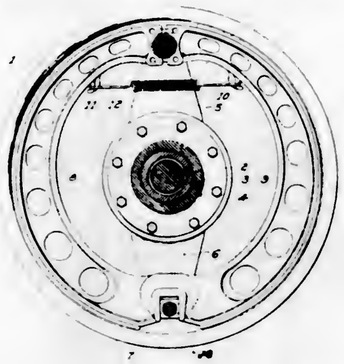
Apparatus of the character described, comprising a housing, a liquid tight receptacle formed of relatively thin heat conducting walls disposed within said housing and spaced from the walls thereof to afford narrow passageways for liquid, liquid inlet and outlet means connected with said housing, a thermostat plat disposed within said receptacle in close proximity to a wall thereof said plate being adapted to be bowed outwardly by a rise of temperature, a switch stem connected with the central portion of said plate, spaced switch terminals adjacent said stem, a contact member on said stem for



bridging the gap between said switch terminals, and means connected with the outer end of said switch stem for indicating the open and closed position of said switch.

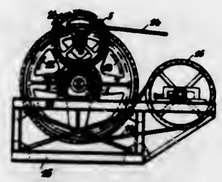
1,426,448. MOTOR-VEHICLE SIGNAL. ALBERT L. AUSTIN, Cleveland, Ohio, assignor to Victor Grande and Anthony J. Ferris, both of New York, N. Y. Filed Jan. 22, 1920. Serial No. 353,288. 7 Claims. (Cl. 177—329.)

1. In motor vehicle signaling means, including a panel provided with license indicating characters, means for normally illuminating said panel with light of one color to display the license and for changing the illumination to a light of another color to give a signal.



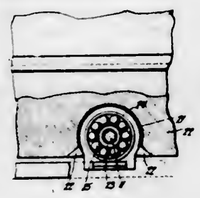
1,426,449. APPARATUS FOR MAKING ALDEHYDES AND SEPARATING THE SAME FROM THE OTHER PRODUCTS FORMED. ARTHUR A. BACKHAUS, Baltimore, and FRED B. ARENTZ, Curtis Bay, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 24, 1918. Serial No. 241,651. 2 Claims. (Cl. 260—173.)

1. In combination, a catalyzer, means for passing alcohol vapors through the same to form an aldehyde and hydrogen an alcohol condenser, and means for separating the resultant aldehyde and hydrogen comprising a scrubbing column for bringing acetic acid in contact therewith adapted to conduct the liquid and vapors into contact with each other on the counter-current principle.



1,426,450. BRAKE MECHANISM. WALTER C. BAKER, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 14, 1919. Serial No. 282,636. 8 Claims. (Cl. 188—78.)

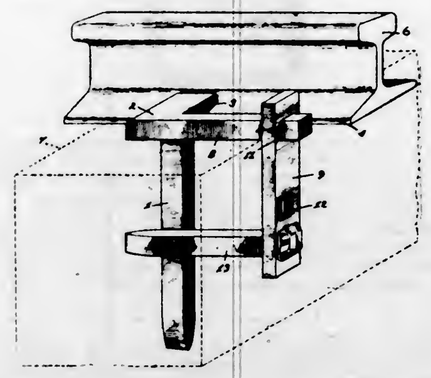
1. In brake mechanism, the combination of a brake drum, a brake shoe, means for resiliently holding said brake shoe against lateral movement relative to the central plane of rotation of said brake drum, and means



for releasing said holding means and holding said means in released position.

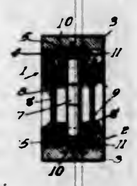
1,426,451. DRIVING MECHANISM FOR ROPE AND CHAIN RAILWAYS. CARL BAUM, Halle-on-the-Saale, Germany. Filed Mar. 31, 1921. Serial No. 457,550. 2 Claims. (Cl. 104—178.)

1. Driving mechanism for rope- and chain-railways comprising in combination two driving pulleys, a tensioning roller for double rope-winding and a planet gearing, of which said driving pulleys form parts, the driving force being applied through said planet gearing in such a manner as to equalize simultaneously the pulling force of the rope and to effect a transmission into slow speed.



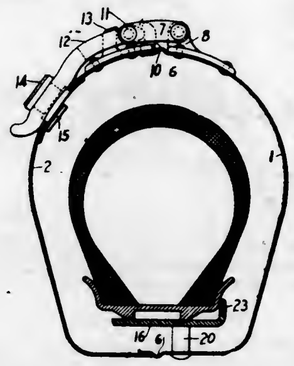
1,426,452. CASTER FOR SHOW CASES. SAM BERMAN, Chicago, Ill. Filed Nov. 8, 1920. Serial No. 422,567. 2 Claims. (Cl. 16—100.)

2. A device of the character described comprising a two part casing, a solid axle connecting and securing said casing parts together, said axle being provided with an integral enlarged central portion, providing shoulders for spacing said casing parts in definite relationship, a ring loosely mounted on said axle within said casing to



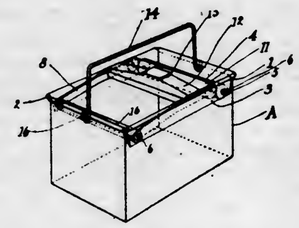
provide play between said ring and axle, a second ring mounted within said casing in spaced relation to said first mentioned ring and in alignment with said enlargement, and bearing balls mounted in said casing and between said rings, said casing substantially enclosing the movable parts of the device, the ends of said shaft being riveted over to secure the casing parts together, said casing being provided with depressed portions for receiving the rivet heads and with holding prongs diverging obliquely to the central plane of said device, said depressed portions forming inwardly extending portions engaging the shoulders on said axle to space said casing parts.

1,426,453. RAILROAD SPIKE. HENRY BLAIR, San Ardo, Calif., assignor of one-half to Henry M. Madson, San Lucas, Calif. Filed Dec. 3, 1921. Serial No. 519,589. 6 Claims. (Cl. 85—23.)



1. A railroad spike arranged to be driven into a tie and having a lip arranged to engage the flange of a rail; a laterally disposed extension from the lip arranged to extend over the edge of the tie; and means engaging said extension for anchoring said spike to the tie.

1,426,454. LEVEL. GUSTAVE BREDESON, Chicago, Ill., assignor to Edwards and Powell Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1921. Serial No. 439,506. 5 Claims. (Cl. 33—211.)

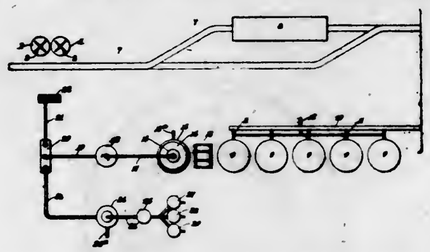


1. In a level of the kind described, a central body member having central longitudinal grooves in its edges, edge strips having longitudinal central tongues entering said grooves, the central member having an opening for receiving level glasses, the level body provided with level receiving pockets extending outwardly on each side from said opening in the central body portion and into the edge strips and hard cement in said pockets adapted to interlock the parts together and serve as mountings for the level glasses.

1,426,455. COMBINED TIRE CARRIER AND CASING. JOHN R. BROWNELL, Dayton, Ohio. Filed June 20, 1921. Serial No. 478,911. 11 Claims. (Cl. 224—29.)

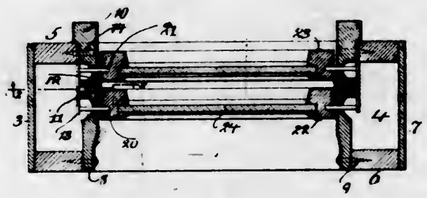
10. A casing for a tire or the like comprising two annular sections, the edge of one section being arranged to overlap the edge of the other section, said other section having a portion of its surface inclined and arranged to be engaged by the edge of the first mentioned section, and means for connecting said sections one to the other and causing the first mentioned section to engage the inclined surface of the other section with a wedging action.

1,426,456. MOP WRINGER. RALPH BROWNSON, Hastings, Minn. Filed Mar. 29, 1919. Serial No. 286,107. 1 Claim. (Cl. 15—232.)



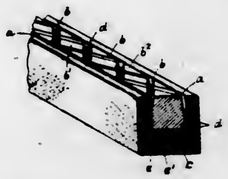
A mop wringer comprising a tank open at its top and having web-extensions along the upper side edges, a reinforcing wire secured along the upper edges by bending said web-extensions downwardly thereover, spindles extending transversely across the tank and having their opposite ends extending through the opposite sides of the tank and the overlying web-extensions, the outer ends of said spindles being headed to secure the spindles and web-extensions in place, a wringer roll supported on one spindle, and a wringer-roll-supporting frame journaled on the other spindle.

1,426,457. PROCESS OF RECOVERING VOLATILE ORGANIC ACIDS FROM DISTILLERY WASTE. LLOYD M. BURGHART, Govans, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 24, 1918. Serial No. 241,502. 2 Claims. (Cl. 260—119.)



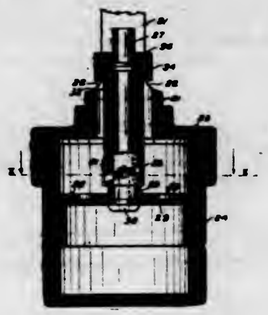
2. The process which comprises mixing a soluble caustic with a quantity of sugary materials, expoaing the mixture to furnace heat sufficient to form a clinker comprising a corresponding soluble oxalate, dissolving this oxalate and associated salts in acidified water, separating solids from the solution so formed, thereafter adding to the filtrate

lime sufficient to precipitate calcium oxalate, separating the precipitate from the liquid portion, evaporating the liquid



portion, and thereafter treating it with an excess of a non-volatile mineral acid and with an alcohol while collecting the esters evolved therefrom.

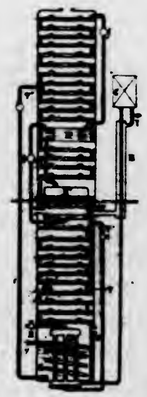
1,426,458. WINDOW FRAME AND SASH. HARRY E. CAMPBELL, New York, N. Y. Filed Nov. 30, 1921. Serial No. 518,756. 2 Claims. (Cl. 20—52.4.)



1. In combination, two sliding sashes having lateral extension plates on their side rails, a frame having hollow jambs, each jamb comprising a fixed wall, wherewith said extension plates cooperate, and an inner wall formed in four removable sections, to wit, an inner section, an outer section and two middle sections, one of said middle sections being secured to said fixed wall and the other of said middle sections being secured to said first-named middle section; there being gaps for the reception of said extension plates between the edges of said last-named middle section and the edges of the inner and outer sections adjacent thereto.

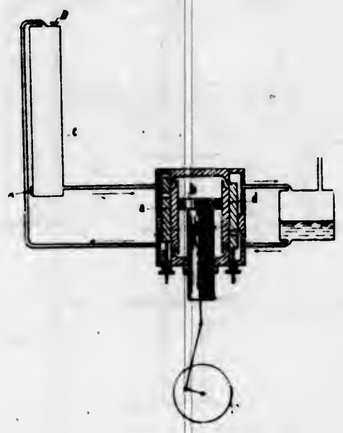
1,426,459. ENGINE PACKING. JOHN ARTHUR CANN, Harefield, near Uxbridge, and JAMES BURROWS, Harefield, England, assignors to Bell's United Asbestos Company, Limited, London, England. Filed Aug. 16, 1921. Serial No. 492,814. 2 Claims. (Cl. 288—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An engine-packing comprising a continuous metallic core, a canvas-like backing attached thereto by means of a yarn-like binding, and an outer wrapping of folded material, such as canvas, the several layers of canvas-like material being treated with india rubber solution and united by vulcanizing.



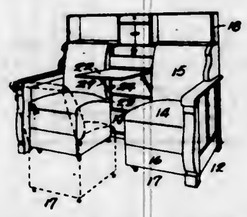
1,426,460. DASHPOT. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Original application filed Aug. 5, 1918, Serial No. 249,588. Divided and this application filed Mar. 29, 1920. Serial No. 370,289. 5 Claims. (Cl. 188—100.)

1. A dash-pot having a lid, a piston for said dash-pot, a tube fastened to said lid, a piston rod passing through said tube, a leak valve carried by said piston, and means extending into said tube for adjusting said leak valve.



5. A dash-pot having a piston and a rod therefor, an axial hole in said rod, a transverse hole communicating with said axial hole, and a tube fitting over said rod having a slanting transverse slot therein registerable in whole or part with said transverse hole in said rod.

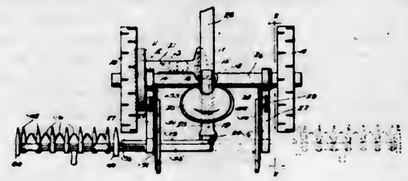
1,426,461. METHOD OF SEPARATING THE CONSTITUENTS OF GASEOUS MIXTURES. GEORGES CLAUDE, Boulogne-sur-Seine, France, assignor to L'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes, Georges Claude, Paris, France. Filed Dec. 6, 1917. Serial No. 205,708. 20 Claims. (Cl. 183—115.)



8. A method of recovering argon from air, which comprises rectifying a liquid enriched in oxygen and containing nitrogen and argon, and subjecting the effluent from the rectification to selective liquefaction to separate nitrogen therefrom, rejecting the nitrogen and returning the liquid formed for further rectification.

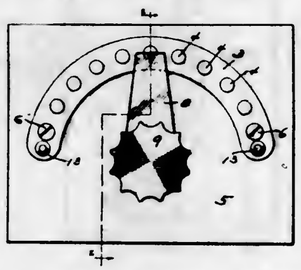
1,426,462. PRODUCTION OF HYDROGEN. GEORGES CLAUDE, Boulogne-sur-Seine, France, assignor to L'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes, Georges Claude, Paris, France. Filed May 31, 1918. Serial No. 237,542. 3 Claims. (Cl. 62—170.)

1. In the separation of the constituents of gaseous mixtures and particularly in the recovery of hydrogen by solution under pressure and at low temperature of the other constituents of the mixture, the method which comprises, disengaging and expanding the gas which is dissolved in a limited quantity of saturated liquid and thereby cooling the liquid, separating the gas from the liquid and directly utilizing the power produced by said expansion for returning an equal quantity of the unsaturated liquid for further absorption of gas under pressure.



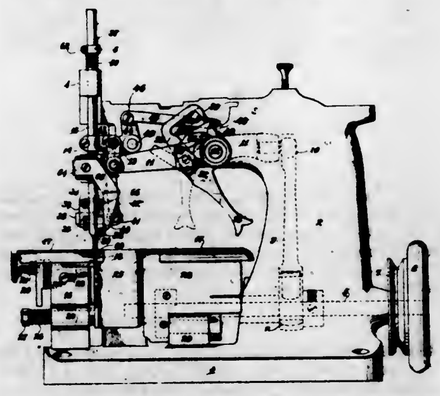
1,426,463. COMBINATION FURNITURE. RUDOLPH COOPERSMITH, Montreal, Quebec, Canada. Filed Nov. 8, 1920. Serial No. 422,705. 6 Claims. (Cl. 5—18.)

2. The combination in a single article of furniture of a frame, a folding bed mounted therein, a table hingedly attached to said bed and movable to operative position during folded condition of the bed, and a plurality of chair sections arrangeable to provide seating accommodation at three sides of said table and arrangeable in alignment within the frame during inoperative position of the table to form a divan seat and back within the frame, said sections being entirely separable from one another and the frame so as to be serviceable as independent chairs.



1,426,464. SIDEHILL-MOWING MACHINE. CHARLES A. CROSSLER, Dayton, Wash. Filed May 7, 1921. Serial No. 467,767. 3 Claims. (Cl. 56—266.)

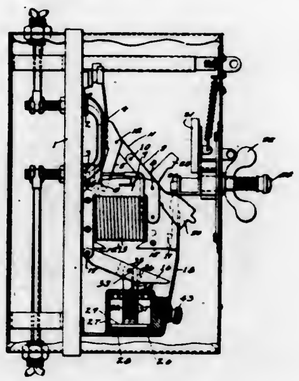
1. In a mowing machine, a finger bar pivotally supported at one end upon the frame of the machine at the middle of the machine and being thereby adapted to be shifted through an angle of 180° from one side of the machine to the other, a cutter bar reciprocable upon the finger bar and movable therewith, the finger bar being provided with fingers having opposed ground engaging



faces between which the cutter bar reciprocates, rollers carried upon the finger bar and bearing upon the cutter bar, and shoes mounted upon the finger bar and projecting above and below the finger bar whereby to engage the ground in either position of the finger bar.

1,426,465. VARIABLE RESISTANCE. ERNEST G. DANIELSON, San Francisco, Calif., assignor to Elmer T. Cunningham, San Francisco, Calif. Filed Feb. 14, 1921. Serial No. 444,997. 14 Claims. (Cl. 219—76.)

1. A resistance element, comprising a molded mixture of a finely divided conducting material and a synthetic gum which hardens in molding.



1,426,466. TRIMMING DEVICE FOR SEWING MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 7, 1919. Serial No. 302,475. 8 Claims. (Cl. 112—125.)

8. In a sewing machine, in combination, a work-support, an overhanging bracket-arm, a reciprocating needle-

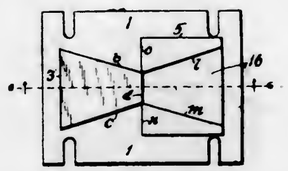
bar mounted in said bracket-arm, a needle-lever fulcrumed upon said bracket-arm and operatively connected with said needle-bar, means for actuating said needle-lever, a ledger-blade mounted below said work-support, a movable blade mounted above the work-support, connections between the needle-lever and movable blade for actuating the latter, and a controlling lever mounted upon the bracket-arm and disposed within reach of the hand of the operator without necessitating removal of the hand from work-directing position whereby the movable blade may be readily connected to or disconnected from its actuating means and said movable blade restored to operative position while the work is in progress.

1,426,467. CIRCUIT-BREAKER TRIPPING STRUCTURE. THOMAS B. EASTBURN, Philadelphia, Pa., assignor to The Cutter Electrical and Manufacturing Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 23, 1920. Serial No. 432,642. 7 Claims. (Cl. 200—97.)

6. The combination with a movable member, of a tube supported at one end on said movable member, a sucker device having a movable element, a spring connecting said movable sucker element with said movable member and disposed within said tube, said tube engaging said movable sucker element at its opposite end, said tube separating from said movable sucker element upon elongation of said spring by said movable member.

1,426,468. LOOSE-LEAF BINDER AND THE LIKE. ROBERT LYCERTWOOD ESSON, Johannesburg, Transvaal, South Africa. Filed Sept. 3, 1921. Serial No. 498,211. 5 Claims. (Cl. 129—1.)

1. In loose-leaf binders, a key comprising a portion which is adapted to fit over the end of the rod or spindle of the adjusting mechanism, and a spring-actuated piece which is yieldingly carried by said portion and is adapted to engage with that part of the rod or spindle over which said portion fits.

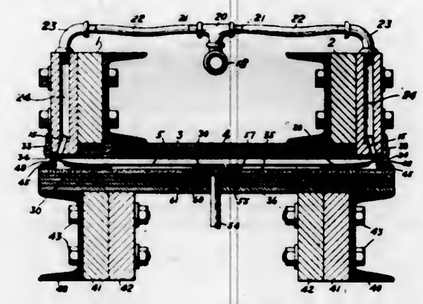


1,426,469. FENCEPOST. JASON A. FITCH and FRED C. SHEA, Youngstown, Ohio. Filed Feb. 16, 1921. Serial No. 445,331. 1 Claim. (Cl. 189—23.)

A fence-post formed from a tapering blank of sheet metal, and provided with a reinforcing bend along its longitudinal center substantially the full length of the post,—the extent or depth of the bend, however, being

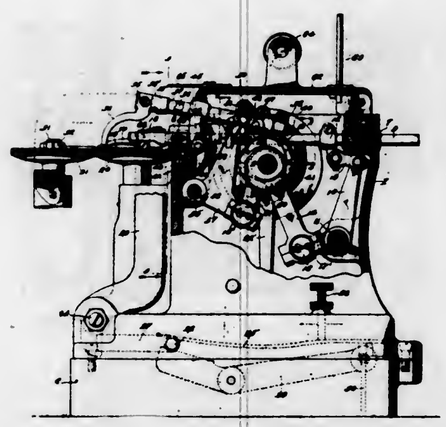
gradually diminished from bottom to substantially zero point at top,—each edge of said strip being provided with an engaging flange.

1,426,470. SHEARING DIES FOR SPRING PLATES. JAMES A. FRAY, Bridgeport, Conn., assignor to Coulter & McKenzie Machine Company, Bridgeport, Conn. Filed Mar. 29, 1921. Serial No. 456,567. 2 Claims. (Cl. 164—58.)



1. In a shearing die, an upper and a lower die each a counterport of the other, each die having an inwardly tapered punch and each having transverse cutting edges at their inner ends, said dies each having inwardly tapered shearing recesses for receiving the respective punches of the complementary die, said transverse cutting edges being substantially in register with each other so as to cut the stock on a single transverse line which latter forms an end of each of the severed parts of the stock.

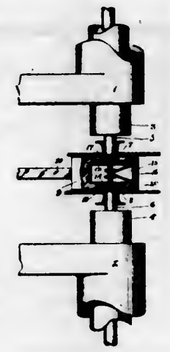
1,426,471. VACUUM MEANS FOR HOLDING TYPE AND MUSIC SHEETS UPON PRINTING PRESSES. GEORGE FUSSELL, Philadelphia, Pa. Filed Dec. 27, 1920. Serial No. 433,329. 17 Claims. (Cl. 101—316.)



1. In a printing press, the combination of a printing head having a type sheet supporting surface, abutments

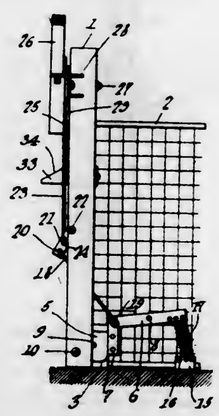
situated at the opposite lower edges of said head and projecting below the type sheet supporting surface, a

type sheet, and means for holding the said sheet against said surface with its opposite edges in abutting relation to said abutments.



1,426,472. GLOVE AND FUR SEWING MACHINE. ALFRED GRIER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 1, 1919. Serial No. 335,087. 20 Claims. (Cl. 112—16.)

1. In a sewing machine, in combination, stitch-forming mechanism comprising a needle and looper, a looper-bar, a pivoted yoke for supporting the looper-bar, means for oscillating the looper-bar about its axis, toggle means connected to the looper-bar and adapted to reciprocate said bar and with the yoke to impart up and down movements to the looper, and means for operating said toggle means.

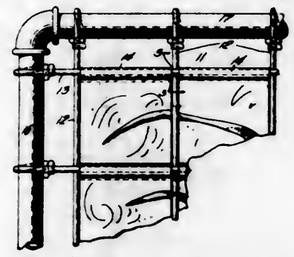


1,426,473. DUPLEX FASTENER-SETTING MACHINE. FRANK L. HARMON, Beverly, Mass., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 9, 1920. Serial No. 387,549. 10 Claims. (Cl. 218—152.2.)

6. In combination, a block having opposed punch elements and fastener setting surfaces, means for pressing work against said punch elements to punch the same, setting means telescopically related to said pressing means and co-operating with said setting surfaces to set fasteners in the holes punched, and oppositely acting ejector

means for freeing the punchings from said punch elements on the retraction of said pressing means.

1,426,474. GATE. WALTER V. HART, Jacksonville, Fla., assignor to Simon F. Williams, Jacksonville, Fla. Filed Sept. 25, 1920. Serial No. 412,842. Renewed July 13, 1922. Serial No. 574,783. 4 Claims. (Cl. 39—43.)



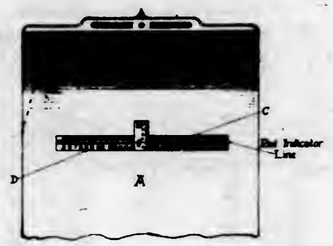
1. In a device of the class described, a support; a pivot element carried by the support; a gate mounted at its lower inner corner to swing vertically on the pivot element; a lever fulcrumed on the pivot element; an operating member connected to the lever and constituting means for swinging the gate on the pivot element; and a retractile spring connected with the lever and with the gate and serving as a cushioning means at the inception of the swinging of the gate by the operating member.

1,426,475. SIGN AND THE LIKE. CHARLES W. HAWTHORNE, Buffalo, N. Y. Filed Apr. 21, 1922. Serial No. 555,835. 4 Claims. (Cl. 40—138.)

1. In a sign or the like, the combination with a supporting structure comprising a wire fabric composed of a plurality of cross wires running two ways of the fabric and forming intervening openings, of a plurality of sign

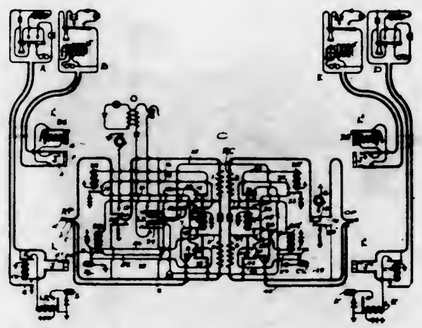
elements hung on said fabric to swing independently each in one of said openings, said elements practically filling

said openings and forming a practically continuous sign surface for a representation, different component portions of which are formed by different elements.



1,426,476. COLLAPSIBLE JOIST-BORING MACHINE. ROBERT HALSEY HENDERSON, East Orange, N. J. Filed Mar. 13, 1920. Serial No. 365,413. 1 Claim. (Cl. 144—165.)

In a joist boring machine, a collapsible standard comprising a plurality of telescopically associated tubular sections of circular cross sectional shape, the upper section carrying a rotatable boring bit head having a driving sprocket, the lower section carrying an idler pulley, an endless drive chain running over and between said sprocket and idler pulley, and means for interlocking said sections in predetermined extended relation whereby said sprocket and idler pulley are vertically alined in proper spaced relation to establish the straight running of said drive chain at proper tension, said means comprising a thumb screw in transverse threaded relation to the end of one section, the engaging end of the adjoining section having an aligning eye in its wall through which the biting end of said thumb screw is passed to binding engagement with the opposite inner surface of said section, to force said section in clamped relation to the other section and securely held against wabbling.

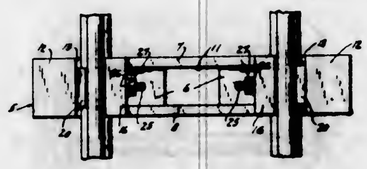


1,426,477. COMPUTING SCALE. ARTHUR HOWARD HEATZMAN, Baltimore, Md. Filed Dec. 31, 1920. Serial No. 434,302. 4 Claims. (Cl. 235—87.)

1. In a registering device for computing scales, a case having transparently covered longitudinal openings, one on each side, a set indicator along each of the said openings, two revoluble cylinders within the said case each of the

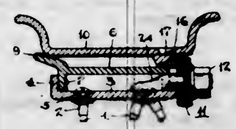
said cylinders having journal boxes mounted permitting up and down movement with means for preventing lateral displacement.

1,426,478. UNIVERSAL CORD CIRCUITS. JOHN E. HILDISH, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1919. Serial No. 273,970. 10 Claims. (Cl. 179—73.)



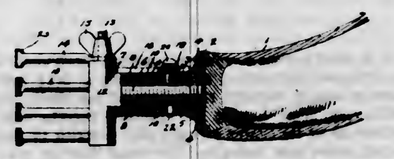
1. A telephone system including a subscriber's telephone line, a link circuit, a terminal for said link circuit for connecting said link circuit with said subscriber's line, a relay connected to a contact of said terminal and operable upon connection of said terminal to said line to connect itself to another contact of said terminal as well as to the first contact of said terminal through contacts controlled by said relay, and a supervisory relay normally disconnected from said terminal, the connection of said supervisory relay with said terminal controlled by said first relay.

1,426,479. RAILROAD TIE. ROBERT R. HYDE and JOHN C. HOOK, Shattuck, Okla. Filed Jan. 28, 1922. Serial No. 532,400. 2 Claims. (Cl. 238—62.)



2. A railroad tie of the character described comprising a body member including a bottom and side walls, said bottom having a relatively large opening in its central portion to permit the entrance of ballast, the ends and top portion of the tie being open, a stationary jaw member carried by the upper edges of the side walls adjacent each end of the tie, plates carried by the end portions of the tie in spaced relation to the stationary jaw members,

walls disposed beneath the stationary jaw members in spaced relation to the edge of the opening in the bottom



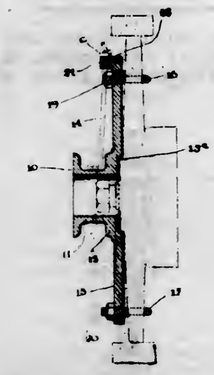
of the tie, and a movable jaw member slidable within each end portion of the tie between the wall and the extremity of said end portion.

1,426,480. WIRE-SPOKE WHEEL. OTTO H. JOSKI, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 19, 1920. Serial No. 397,492. 4 Claims. (Cl. 301—20.)

1. In a wheel, the combination with a fixed rim in the form of an annular channel having outwardly directed flanges, and a tire-carry rim; of a second, transversely split, annular channel having inwardly directed flanges adapted to laterally engage with the flanges in said fixed rim channel, said second channel being provided with an inclined face along its one edge adapted to receive and support said rim; and clamp plates movably attached to said fixed rim channel and adapted to retain said rim in place on said second channel.

1,426,481. ARTIFICIAL HAND. HENRY G. KNOBEL, New Canaan, Conn. Filed Mar. 25, 1922. Serial No. 546,728. 3 Claims. (Cl. 3—12.)

1. An artificial hand comprising a wrist member, a body member comprising finger claws mounted rotatably on the wrist member, an arm extending from the member toward the wrist member and terminating adjacent thereto, a spring pressed plunger carried in the terminal of the arm, said wrist member provided with a plurality of indentures for receiving said plungers.

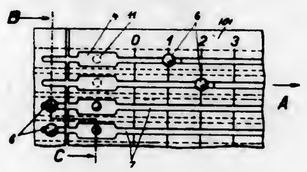


1,426,482. TOY. JOSEPH PETER KOLLAR, Chicago, Ill. Filed May 7, 1921. Serial No. 467,630. 2 Claims. (Cl. 46—14.)

1. A toy of the character described comprising a handle provided with a shank angularly bent at one end, a ring rotatably mounted upon the angular bent portion of the shank for rotation thereround, a second ring disposed within the first ring and normally extending in a plane at right angles thereto, the second ring being pivotally

mounted upon the first ring and being provided with a weight at one portion of its circumference, and figures attached to the second named ring.

1,426,483. PULLING DEVICE. CHARLES DAVID KRELL, Jacksonville, Fla. Filed Apr. 2, 1921. Serial No. 457,976. 3 Claims. (Cl. 242—95.)

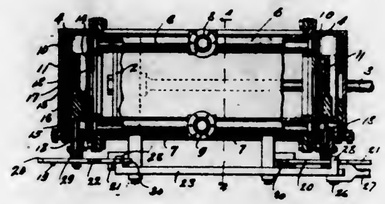


2. In a pulling device for use with automobiles or the like having a traction wheel, in combination with a cable having one end fixed, a winding drum including a hub and cheek plates, one of said cheek plates being arranged to abut the hub of the traction wheel, arms connected with said hub, securing means cooperating with the arms for securing the device in position on the wheel, and an eye carried by the outer end of one of said arms and having an opening receiving the free end of the cable, said cable being wound intermediate its ends on said winding drum.

1,426,484. INTEREST COMPUTER. OTTO KREMS, Innsbruck, Tirol, Austria. Original application filed Oct. 31, 1919, Serial No. 334,905. Divided and this application filed Sept. 14, 1920. Serial No. 410,274. 1 Claim. (Cl. 235—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In an interest computer the combination of a box having a base in the shape of an oblique parallelogram

and subdivided into compartments arranged in vertical and horizontal series, guides in such compartments parallel to the base and one side of the box, such guides being open at one of the other sides of the box, slides adapted to move in such guides, a slide frame, vertical guide blocks equal in number to the compartments in a vertical series in the box in such slide frame and guides in such guide blocks such guides being open at the end next to the side of the box where the guides in the latter are open and their number in each guide block being equal to the number of guides in each compartment



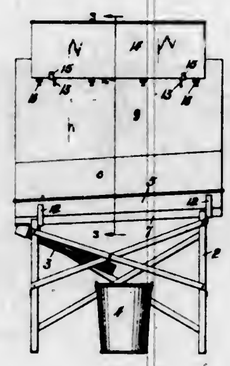
and the guides in the guide block being adapted to receive and guide the said slides, means for moving the slide frame along that side of the box where the guides in the compartments open whereby a guide block can be brought in front of any compartment of a horizontal series in the box, the guides in the compartment and in the guide block being in line with and opposite each other and means for pushing the slides in the compartments in the guides from the guides in the guide blocks and for adjusting them in the latter substantially as and for the purpose described.

1,426,485. MUSIC ROLL, PURSE, AND CARRYING BAG. JOSEPH P. LA ROCHE, Chicago, Ill. Filed Nov. 15, 1920. Serial No. 424,283. 1 Claim. (Cl. 190—44.)

In a music roll, purse and carrying bag, inner, outer and intermediate walls, the inner and intermediate walls being joined at their side and bottom edges, a U-shaped member corresponding in shape to the marginal edges of the walls and being stitched to the inner face of the outer wall adjacent its side and bottom edges, the inner marginal edge of the U-shaped member being stitched to the intermediate wall, thereby causing to be formed a plurality of widely distensible compartments, and at the same time providing bellows connections between the several walls, a plurality of sets of fastener members carried by the upper portion of the inner face of the inner wall, fastener members carried by the lower portion of the exterior face of the outer wall, a closure common for closing the several compartments and at the same time holding the lower half of the device folded when used as a music roll, said closure having fastener members common to both sets of fasteners carried by the inner and outer walls.

1,426,486. ENGINE VALVE MECHANISM. PETER LASSEN, Ocean Falls, British Columbia, Canada. Filed Jan. 14, 1919. Serial No. 271,093. 2 Claims. (Cl. 121—168.)

1. In a reciprocatory engine, the combination with an engine cylinder and crank shaft, of valve cylinders, hollow cylindrical valves mounted for oscillatory movement in said valve cylinders, cross arms fast on the stems of said valves, a reciprocatory valve operating rod driven by the engine shaft, springs for turning said valves in one direction, and triggers co-operating with said cross arms to hold the respective valves in one position, said triggers being adapted to be shifted by said operating rod to release said cross arms.



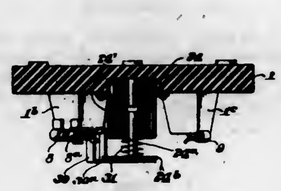
1,426,487. LAPEL BUTTON. RICHARD LAUX, Fort Wayne, Ind. Filed Apr. 29, 1922. Serial No. 557,457. 2 Claims. (Cl. 40—1.5.)

1. A lapel button comprising an open faced shell having an inturned perimeter; a pin having a bent end that extends loosely through the center of the shell; a plate, within the shell, having an aperture therein and fixed connection at its center on said pin; a series of portraits spaced apart and borne by the inner face of the shell, and adapted to be brought selectively into registration with said aperture so as to be exposed to view therethrough; and means in connection with the shell and plate tending to hold the shell in adjusted positions.

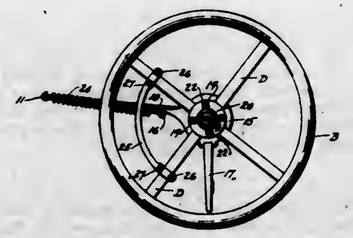
1,426,488. SANITARY WASHSTAND. DAVID A. LEINSETTER, Leipsic, Ohio. Filed Dec. 22, 1921. Serial No. 524,082. 2 Claims. (Cl. 45—38.)

1. A washstand of the class described, comprising a frame, a longitudinally inclined trough supported by the frame and having a drainage passage at the lower end of its incline, the bottom of the trough being slightly inclined downward and rearward from its front edge and the back of the trough being inclined upward and rearward from the rear edge of the trough bottom and a distance above and to the rear of the trough and then extending upright, the frame having rear upright members supporting the back, bracket-arms projecting from such members above the inclined back, a tank mounted

on the bracket-arms and having provision for discharging one or more streams of water therefrom down onto the inclined back of the trough near its lower edge.



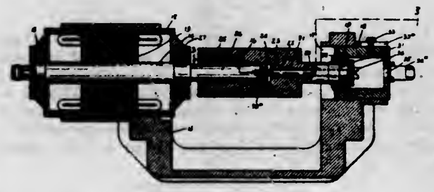
1,426,489. TRAFFIC SIGNAL. EUGENE LETOURNEAU, Springvale, Me. Filed Dec. 31, 1921. Serial No. 526,135. 13 Claims. (Cl. 116—47.)



1. In a traffic signal, an indicator mounted for swinging movement in a horizontal plane, a stem rotatably mounted in the cap plug of the radiator and carrying said indicator, tension means for holding said stem normally in a position, whereby the indicator extends laterally of the radiator for indicating stop, said tension means being mounted in the cap plug of the radiator, actuating means, means operatively connecting the actuating means and the tension means in the cap plug for rotating the same, a rear traffic signal mounted for swinging movement in a direction laterally of the automobile, and means connecting the rear signal and said operative connecting means between the actuator and said tension means, whereby the rear signal may swing to give a signal corresponding to certain of those given by the forward indicator.

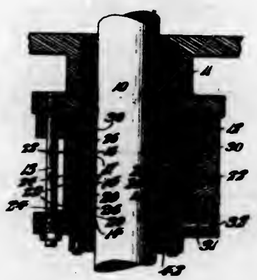
1,426,490. ELECTRIC-LIGHTING MECHANISM. HENRY G. LEWIS and WALTER S. MAYER, Philadelphia, Pa., assignors to Electric Service Supplies Company, a Corporation of Pennsylvania. Filed Mar. 12, 1920. Serial No. 365,148. 3 Claims. (Cl. 175—374.)

1. In an electric lighting mechanism, the combination of an insulating base provided with a pair of insulating projections, a lamp socket holder, a skeleton frame for fixing said holder to said base, a lamp socket carried by said holder, an electro-magnetic coil fixed to said base, an armature for said coil, a pair of conducting devices fixed to one of said projections, conductors connecting said devices through said socket and coil, a pair of conducting devices fixed to the other of said projections and adapted to be connected by said armature, and conductors for connecting said devices serially through said armature in parallel relation with said coil and socket.



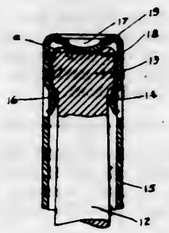
1,426,491. SELF-STEERING ATTACHMENT FOR TRACTORS. LESLIE J. MATHSON, Black River Falls, Wis. Filed Dec. 19, 1921. Serial No. 523,381. 6 Claims. (Cl. 74—33.)

1. In combination with the steering wheel of a tractor, a member rotatable with respect to the wheel and provided with a hook and a pivoted pawl, a notched segment carried by the wheel with which said pawl cooperates, and a spring having one end secured to a stationary element of the tractor and having its other end detachably connected with said hook.



1,426,492. REMOVABLE CUTTER HEAD FOR MOTOR-DRIVEN MOLDERS. GLENN H. MATTHEWS, Indianapolis, Ind., assignor to Anton Vonnegut, Indianapolis, Ind. Filed Mar. 17, 1922. Serial No. 544,524. 3 Claims. (Cl. 144—131.)

1. A bearing support, a cutter head, a spindle carried by said support and extending into said cutter head, a bearing support for said cutter head, and means extend-



ing through the opposite end of said cutter head from said spindle and through said latter bearing support for causing said spindle to be locked within said cutter head.

1,426,493. METALLIC PACKING. ALFRED DILLON MORRIS, Philadelphia, Pa., assignor to The Morris Metallic Packing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1920. Serial No. 393,439. 4 Claims. (Cl. 286—24.)

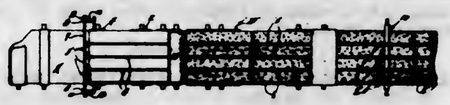
1. In a metallic packing, a segmental packing ring, means for yieldingly holding said ring assembled as a unit, a supplemental pressure breaking ring encircling and floating about said packing ring, and a case having a groove to receive both of said rings.

1,426,494. TOP-BEARING-CASTER SOCKET. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Sept. 9, 1921. Serial No. 499,428. 3 Claims. (Cl. 16—43.)

1. A caster, including a stem having a head portion provided with a spherical depression positioned centrally therein, and a caster socket for said stem provided with an integral inwardly extending spherical projection for receiving said stem and being seatable in said spherical depression, the radius of curvature of said socket spherical projection being greater than the radius of said tubular socket.

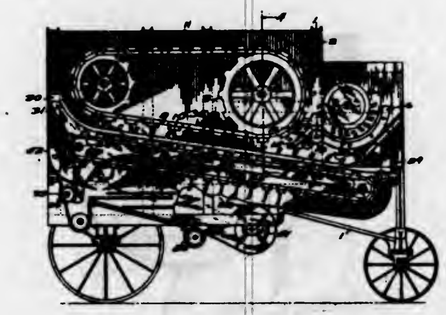
1,426,495. TOWEL HOLDER. WILLIAM NORMAN, Padroni, Colo. Filed Jan. 21, 1921. Serial No. 438,918. 2 Claims. (Cl. 45—32.)

1. A towel holder comprising a support, and a resilient spring grip member bent centrally of its ends to provide a pair of proximately positioned finger engaging loops, the planes of which are disposed in converging relation, the ends of said spring grip being affixed to the support at a



point remote from said loops, whereby the most proximate portions of said loop will be normally forced toward said support.

1,426,496. CENTER-DRAIN TURNTABLE. HENRY M. NORRIS, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 2, 1921. Serial No. 458,091. 6 Claims. (Cl. 77—63.)



1. A work-table comprehending individual drain-passages having the shape of conventional T-slots and converging toward a common point; and a single downward drain-passage located at said point, said drain-passage being enlarged at its upper end to communicate with the inner ends of said drain-passages and into which they may discharge the fluids.

1,426,497. METHOD OF MAKING STRIP SHINGLES. OSE K. OUTMAN, Richmond, Calif., assignor to Certain-Teed Products Corporation, St. Louis, Mo., a Corporation of Maryland. Filed Sept. 14, 1921. Serial No. 500,671. 4 Claims. (Cl. 91—67.9.)

1. The method of making strip shingle which comprises applying adhesive material to a sheet of roofing material, forming channels in the adhesive material, depositing granular material on the adhesive material and in the channels therein, embedding the granular material on the adhesive material between the channels, removing the loose granular material from the channels, and cutting the sheet transversely of the channels to form strip shingles.

1,426,498. THRASHER. FLETCHER OWEN, Toledo, Ohio, assignor to F. Newton Owen, Toledo, Ohio. Filed Feb. 10, 1921. Serial No. 443,769. 8 Claims. (Cl. 130—27.)

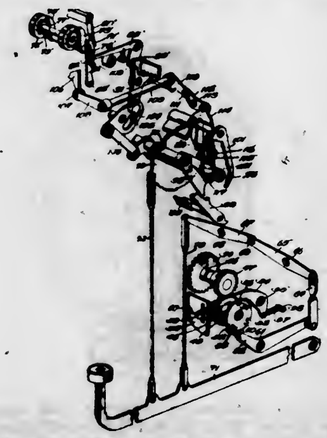
1. In a threshing machine, a pair of belts having prongs, a grid located between the belts and having spaces through which the prongs of one of the belts extend and move in operative relation to the prongs of the other belt.

1,426,499. SINGLE-COLUMN SELECTOR FOR CARD-SORTING MACHINES. RALPH EUGENE PAGE, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed June 11, 1921. Serial No. 476,961. Renewed Jan. 16, 1922. Serial No. 529,448. 10 Claims. (Cl. 83—92.)

1. In a single column selector for card sorting machines, the combination with two terminals adapted for connection with the sorting mechanism, of a movable brush connected with one terminal and adapted to complete one cycle of movement while a card is passing through the sorting machine, a series of evenly spaced contact blocks over which the brush passes, an overlying series of contacts electrically connected with the other terminal normally out of engagement with said blocks, and means for connecting up any or all of said contacts and blocks whereby circuit paths between the said terminals will be completed through the said connected contacts.

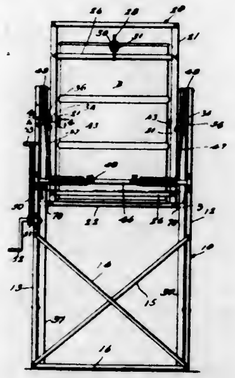
1,426,500. CONTAINER. LYNDON C. PALMER, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Buffalo, N. Y., a Corporation of Ontario, Canada. Filed Mar. 7, 1916, Serial No. 82,521. Renewed Dec. 31, 1921. Serial No. 526,414. 7 Claims. (Cl. 229—5.5.)

1. A container comprising, in combination, a paper body, a stiffening cap-supporting ring on the container adjacent its mouth, and a cover over said ring comprising a flexible strip thinner than the body material attached to the container above and below the ring and conforming to the peripheral face of said ring at the upper, lower, and inwardly presented faces of said ring.



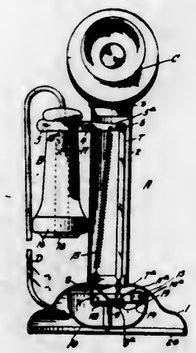
1,426,501. CAP FOR GASOLINE OR SIMILAR RECEPTACLES. FRANK PARIZEK, Chicago, Ill. Filed Mar. 24, 1921. Serial No. 454,993. 6 Claims. (Cl. 229—44.)

1. A cap of the character described comprising a cylindrical side wall portion screw-threaded for a portion of its length, and a closed end portion providing a hollow cross rib, said end portion being provided with a circuitous passage providing a vent for said cap.



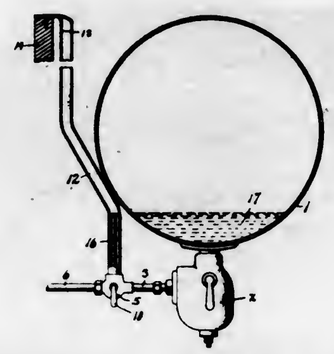
1,426,502. TOTALIZER CLEAR SIGNAL. ARTHUR F. POOLE, Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1919. Serial No. 338,442. 11 Claims. (Cl. 235—59.)

7. In a calculating machine, the combination of a traveling carriage, a series of numeral keys, a clearance



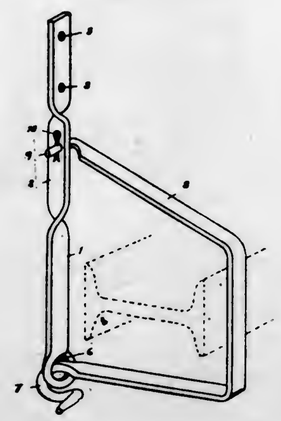
proof key, and means controlled by said carriage at a predetermined point in its travel to lock said numeral keys and to unlock said clearance proof key, said means normally maintaining said clearance proof key locked.

1,426,503. HOISTING DEVICE. MOLTON D. POTTER, Sioux Falls, S. Dak.; Albert M. Freeman Special Agent of the Estate of said Molton D. Potter, deceased, assignor to W. E. Dibble, Sioux Falls, S. Dak. Filed Jan. 11, 1921. Serial No. 436,520. 7 Claims. (Cl. 214—120.)



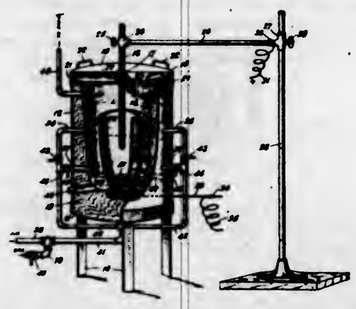
1. An apparatus of the class described comprising a frame inclusive of spaced parallel sides and means connecting the sides, a pair of upright guides secured to the sides of said frame, a cradle having trunnions provided with eyes slidable on said upright guides, pulleys connected to said sides, flexible elements connected to said trunnions and trained over said pulleys, a drum carried by said frame and constituting a stop element for limiting the swinging movement of said cradle, said flexible elements being connected to said drum, an operating device for said drum, and means whereby said drum may be held in a set position.

1,426,504. TOY TELEPHONE. JOSEPH RENTSCHER, Chicago, Ill. Filed Mar. 6, 1922. Serial No. 541,454. 9 Claims. (Cl. 46—46.)



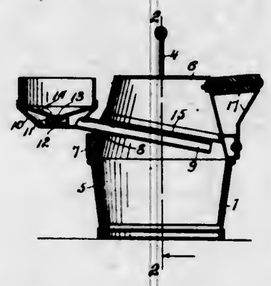
1. In a toy telephone, a columnar desk transmitter Stand, a receiver hook pivoted upon said stand, a receiver mountable on said hook, a bell within the stand, and means within the stand and actuated by the movement of said hook to ring the bell.

1,426,505. FUEL-TANK CONTROL VALVE. WILBERT C. REPLOGLE, Detroit, Mich. Filed Jan. 12, 1920, Serial No. 351,082. Renewed June 21, 1922. Serial No. 569,874. 4 Claims. (Cl. 158—46.5.)



1. A fuel tank control valve having inlet and outlet passages and a valve plug to connect and disconnect these passages, a stand pipe extending upwardly from the valve and a passage connecting the pipe to the inlet passage, and a control tube extending up within the stand pipe and a passage connecting the control tube to the outlet passage of the valve.

1,426,506. BRAKE-BEAM HANGER. CHRISTIAN F. RETZER and CHARLES LEGARD, Superior, Wis. Filed June 6, 1921. Serial No. 475,273. 3 Claims. (Cl. 188—210.)

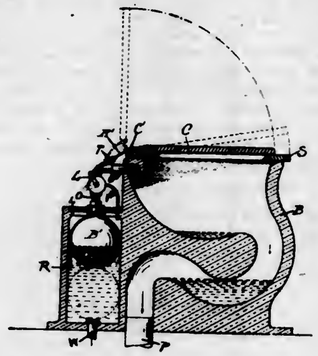


2. An auxiliary safety support for a brake beam of the character described comprising a depending rigidly fixed member disposed adjacent one side of the brake beam and having an eye formed in the lower end thereof, a stirrup like member surrounding the brake beam with a ramshorn or helical terminal at one end and engageable within said eye with the opposite end removably attached to the member, substantially as and for the purpose described.

1,426,507. SMELTING AND ELECTROLYZING PROCESS. RICHARD RODRIAN, New York, N. Y., assignor to Rodrian Electro-Metallurgical Co. Incorporated, a Corporation of Delaware. Filed Mar. 3, 1922. Serial No. 540,730. 3 Claims. (Cl. 204—19.)

1. The herein-described process which consists in first smelting a charge of metal-containing material above a body of suitable molten metal and then electrolyzing the molten charge by the passage of an electric current, the said body of molten metal being used as the cathode.

1,426,508. COMBINED MILK PAIL AND STOOL. GEORGE L. ROLLINS, Kansas City, Mo. Filed Aug. 9, 1920. Serial No. 402,402. 12 Claims. (Cl. 31—14.)



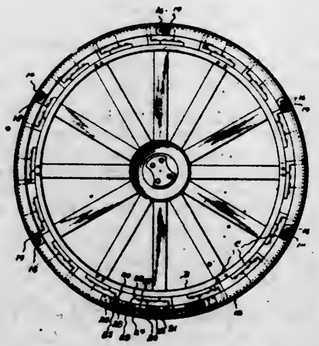
1. In a device of the kind described, a pail having two ears, a stool comprising an inverted bucket mounted in and arranged to cover the pail and having two slots adapted to respectively receive therethrough said ears, and a bail engaging said ears and releasable from the ears and arranged to hold the ears from passing out of said slots, substantially as set forth.

8. In a device of the kind described, a milk receiving vessel having a discharge opening, a false bottom above said opening, and a milk container, the false bottom having an opening which discharges into said container, and a float valve in said container adapted to close said last named opening, substantially as set forth.

11. In a device of the kind described, a milk receiving vessel having at one side a lateral opening, and a weighted counterbalancing handle at the opposite side thereof, and a milk receiving vessel having a discharge spout mounted in said opening, substantially as set forth.

1,426,509. FLUSHING TANK. FLETCHER C. ROOD, Walla Walla, Washington. Filed Dec. 30, 1918. Serial No. 268,892. 13 Claims. (Cl. 4—5.)

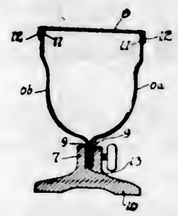
12. A closet bowl formed with a bowl portion and with a separate reservoir portion at one side thereof and below the top thereof and communicating at its top with the top of said bowl portion, means for supplying water



to said reservoir, a valve mechanism interposed to control the flow of water through said reservoir and to said bowl, and means for operating said valve mechanism.

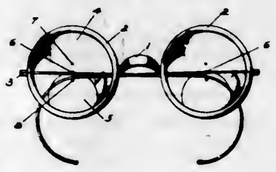
1,426,510. TIRE-CHAIN FASTENER. BERNHARD SANDBERG, French Lake, Minn. Filed Jan. 23, 1922. Serial No. 531,071. 3 Claims. (Cl. 24—68.)

1. A fastener consisting of a body member, including spaced plate portions integrally formed at one end, a lever pivoted between said plate portions, said body and lever having longitudinal slots and passages leading thereto adapted to receive a chain link when the lever is in open position and lock the link in the fastener when in closed position, said slot in the lever being slightly shorter at its fore end than the corresponding slot in the body member so as to bring the stress of said link primarily on the lever.



1,426,511. DEMOUNTABLE TRACTOR RIM FOR HARD SURFACES. MARTIN SANDERFIELD, Athens, Ill. Filed July 16, 1921. Serial No. 485,282. 3 Claims. (Cl. 301—39.)

2. A demountable rim for traction wheels formed of a plurality of transverse U-shaped sections, the sections having pivotal engagement with each other and each section having a smooth tractive tread surface, the sections



on each side of the joint of said rim and on each side wall thereof having attached thereto longitudinally extending plates, each plate at its end adjacent the joint being outwardly and rearwardly bent and formed with an elongated aperture, each plate rearward of this flange being formed with an apertured V-shaped flange and rearward of this flange being outwardly bent and then inclined inward toward the side wall of the section and then attached thereto, the outwardly bent portion being perforated, a curved bolt on each side of the rim passing through the perforations of all of said flanges, and nuts on said bolt engaging the V-shaped flanges.

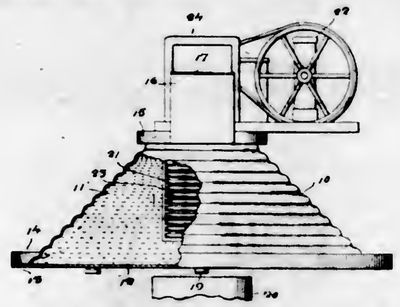
1,426,512. SECTIONAL MOLD. JOSEPH SCHIFFHAUER, Chicago, Ill. Filed Sept. 21, 1921. Serial No. 502,093. 5 Claims. (Cl. 18—34.)

1. A mold comprising sections, a stand arranged to clamp said sections together, and means for aligning said sections, said aligning means cooperating with the stand to prevent displacement of the sections therefrom.

1,426,513. OPHTHALMIC LENS. CHARLES SHEARD, Sturbridge, and EDGAR D. TILLYER, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts. Filed Dec. 15, 1920. Serial No. 430,913. 4 Claims. (Cl. 88—54.)

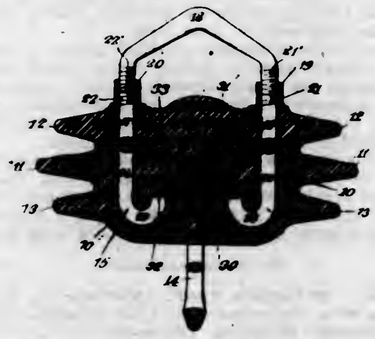
1. A bifocal lens having its centers disposed on opposite sides of the dividing line between the two vision portions and separated a distance slightly greater than the diameter of the pupil of the eye.

1,426,514. OVERHEAD SUPPORTING DEVICE FOR THE DRIVING SHAFTS OF GYRATING MACHINES. SIMON SNYDER, Muncy, Pa., assignor to Sprout, Waldron & Company, Muncy, Pa., a Corporation of Pennsylvania. Original application filed June 28, 1918. Serial No. 242,456. Divided and this application filed Oct. 28, 1919. Serial No. 333,918. 4 Claims. (Cl. 64—48.)



4. An overhead supporting device and anti-friction bearings associated therewith for suspending the driving shaft of a gyratory bolting machine so as to permit a universal rotary and swinging movement of the shaft about its axis, comprising a bracket having a pendant tubular portion of inverted cup-like form, a subjacent cup-like bracket member secured to said tubular portion and having an opening in its bottom larger than and through which the shaft extends, annular radial and end-thrust bearings on the shaft within said tubular portion supported upon said subjacent cup-like bracket member, and means on the shaft pressing on and serving to confine said bearings in separated relation between said means and said subjacent cup-like bracket member; said radial thrust bearing consisting of concentric rings and interposed balls with the outer ring slidably arranged in said tubular portion and the bearing surfaces of the two rings constructed to permit both rotary and a swinging movement

of the shaft and said end-thrust bearing consisting of upper and lower rings and interposed balls, and a base ring supported on said subjacent cup-like bracket member on which said lower ring rests; the under side of said lower ring being of spherical form and seated upon a correspondingly shaped spherical surface of said base ring

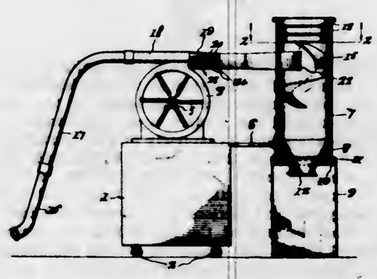


---

1,426,515. MILK-COOLING APPARATUS. HARRY M. SPERCHER, Ephrata, Pa. Filed June 14, 1919. Serial No. 304,214. Renewed Nov. 23, 1921. Serial No. 517,379. 2 Claims. (Cl. 257—179.)

2. A milk cooling apparatus comprising a fluid containing vessel, cooling means submerged in the fluid for maintaining the fluid at a low temperature, a hollow annulus surrounding said vessel adjacent one end, a milk reservoir supported by said annulus and communicating with the latter, and said annulus having openings for distributing the milk over the surface of said vessel to be cooled.

1,426,516. INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Apr. 29, 1918. Serial No. 231,386. 8 Claims. (Cl. 173—366.)

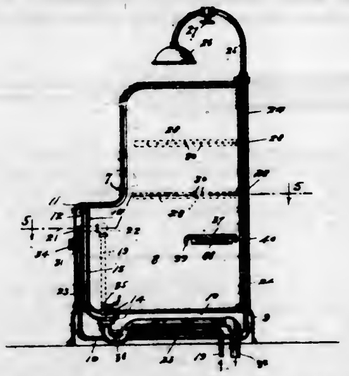


3. In a device of the kind described, an insulating member, strain members embedded therein, said strain

members each having leg portions and a bridge element therebetween embodying a ring shaped portion, the leg portions being offset from said ring shaped portion, each of the leg portions being provided with oppositely projecting arms in substantially the same horizontal plane with the ring portion of the adjacent strain member and extending in a curved line concentric with the ring portion, the distance between the extending arms and the ring portion being less than the distance between the ends of the extending arms and leg portions of the adjacent strain member.

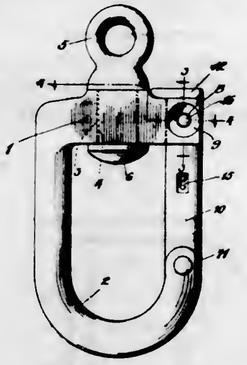
1,426,517. NONPYROPHORIC CATALYSTS AND PROCESS FOR EFFECTING CATALYTIC REACTIONS THEREWITH. NATHAN SULZBERGER, New York, N. Y. Filed Sept. 11, 1916. Serial No. 119,553. 3 Claims. (Cl. 87—12.)

1. In the art of effecting catalytic reactions, the step which comprises bringing together hydrogen and oil to be hydrogenated in the presence of a black non-pyrophoric magnetic catalytically active reduction product of a reducible nickel compound, reduced in a wet way and in the presence of a metal of the platinum group, said product containing the nickel and the metal of the platinum group in an intimate state of combination; substantially as described.



1,426,518. AIR-INDUCTION CLEANING APPARATUS. ROBERT P. SWEENY, Union, S. C. Filed Aug. 18, 1921. Serial No. 493,260. 5 Claims. (Cl. 230—35.)

1. In air induction cleaning apparatus, an elongated hollow member of substantially Venturi tube formation, said member having a partition in one end dividing said end into an upper induction chamber and a lower induction nozzle, said chamber and nozzle each being substantially cylindrical in cross section at their outer ends for attachment to pipes and the like, and gradually merging at their inner ends into substantially rectangular cross-section with the partition forming a common relatively broad wall whereby a column of air issuing from the induction nozzle into the member is adapted to contact with the column of air issuing from the induction chamber throughout a relatively wide area for effecting a rapid and forceful feeding of the air from the induction chamber, substantially as described.

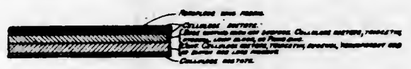


1,426,519. BATHTUB. THOMAS J. SWIFT, Minneapolis, Minn. Filed Mar. 14, 1921. Serial No. 452,272. 1 Claim. (Cl. 4—27.)

A self-contained, upright, cylindrical, monolithic bath tub having a radial extension of less width than the diameter of said tub and terminating below the top thereof to provide an entrance, said tub having a hollow base and said radial extension comprising spaced front and rear walls providing a compartment communicating with said hollow base for the installation of water supply fittings, whereby the controls for said fittings may be positioned

on said outer wall of said radial extension and adapted for operation outside of said tub, substantially as described.

1,426,520. COMBINATION SWIVEL AND BULL HOOK. LOUIS K. SYRSTAD, Shelton, Wash. Filed Feb. 1, 1922. Serial No. 533,436. 1 Claim. (Cl. 24—241.)



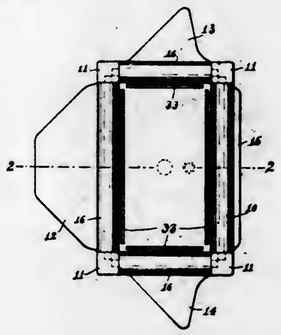
A hook including a base portion, an eye swiveled in the base portion, a hook portion extending from the base portion and integral therewith at one end, the free end of the base portion being bifurcated, an arm pivoted to the end of the hook portion and formed at its free end with a head, said arm fitting in the bifurcation in the base portion and the head thereon overlying substantially the whole of the free end of the base, and a spring pressed latch carried by the arm for engagement in an opening in the end portion of the base for locking the arm in cooperative relation with the base.

1,426,521. PROCESS FOR DIMINISHING THE VISIBILITY OF OBJECTS. THEODORE FRANÇOIS TESSE, St.-Ouen, France, assignor to Societe Nauton Freres & De Marsac, St.-Ouen, Seine, France, and Theodore François Tesse, Paris, France. Filed June 24, 1918. Serial No. 241,085. 13 Claims. (Cl. 91—68.)

2. A process for diminishing the visibility of objects and preventing their being picked up by an artificial beam of light, consisting in applying a ground coat composed of dark coloured opaque pigments, of blue to black shades, incorporated in a vehicle capable of producing a film-coating; and then applying a transparent coat carrying

a red lake, the colors of such two coats being such as to substantially lower the visibility of the object coated.

13. A coated aeroplane fabric comprising a fabric base, a coating composed of a dark colored, matte, opaque



coating composition; and a plurality of successive superposed coats of transparent to translucent monochromatic, differently colored coating compositions, which are capable of absorbing respectively the various rays of which a beam of light is composed.

1,426,522. STABLE, DRY, AND READILY-SOLUBLE VAT PREPARATIONS AND PROCESS OF MAKING SAME. KARL THIESS, Sindlingen, near Hochst-on-the-Main, and FRITZ MAENNCHEN, ADOLF STEINDORFF, and FRANZ GILOY, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 23, 1921. Serial No. 494,714. 6 Claims. (Cl. 8—6.)

1. As a new process, the herein described manufacture of stable, dry and readily soluble vat-preparations from quinone vat dyestuffs for wool and indigo, which comprises evaporating to dryness an aqueous mixture of an alkali leuco-salt of the quinone vat dyestuffs and an alkali salt of leuco indigo.

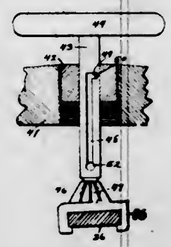
1,426,523. ART OF ENVELOPE MANUFACTURE. JOSEPH M. TOWNSEND, Worcester, Mass., assignor of one-half to Wallace E. Freeman, Worcester, Mass. Filed Jan. 6, 1922. Serial No. 527,399. 3 Claims. (Cl. 93—67.)

1. In an envelope folding device, a support, movable members adapted to act upon an envelope blank to fold the same, a movable suction member having suction apertures extending along the lines of proposed fold, said block being movable to a position to attach the blank by suction, then movable with the attached blank, to cause a wiping action on portions of the blank to initiate the folding operation.

1,426,524. ELEVATOR. SAMUEL JAMES TRITT, Carlisle, Pa. Filed Sept. 22, 1919. Serial No. 325,358. 2 Claims. (Cl. 198—154.)

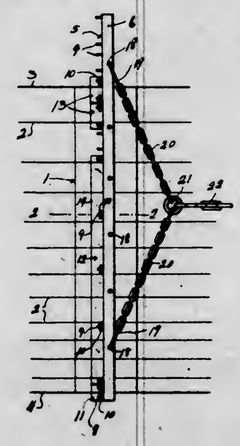
1. An elevator of the character described comprising an angular supporting frame having a vertical portion and a horizontal portion, a pair of sprocket wheels disposed at the lower end of the vertical portion, a pair of sprocket wheels disposed at the upper end of the vertical portion, a pair of sprocket wheels disposed at the outer end of the horizontal portion, oppositely disposed sprocket wheels mounted upon the frame inward of and below the upper sprocket wheel, a pair of connected sprocket chains passing around the first three pairs of sprocket wheels and over the last named pair of sprocket wheels, cross bars connecting said sprocket chains at intervals, carriers pivotally mounted upon said cross bars and including supporting bars mounted on the outer end of each carrier and extending at an acute angle thereto and abutting against the sprocket chains, said supporting bars bearing

against the chains and supporting the bodies of the carriers at an upward inclination as the carriers move upward and being longer than the bodies of the carriers whereby to support the carriers at an acute angle to the chains, rods extending transversely of and carried by the chains and disposed at close intervals behind said carriers to form a back therefor, side plates attached to the vertical and horizontal portions of the frame and between which side plates the carriers move upward and outward, corner plates disposed at the junction of the horizontal and vertical plates, and means for driving the lowermost sprocket wheel to thereby operate the sprocket chains.



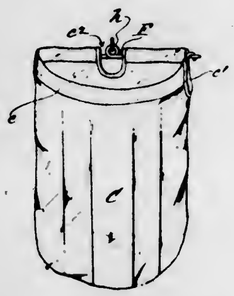
1,426,525. BLOOMERS. HATTIE MYRA WALSH, San Francisco, Calif. Filed Apr. 6, 1921. Serial No. 458,952. 2 Claims. (Cl. 2—122.)

1. A garment comprising a pair of bloomers having an opening in the crotch thereof; a separate strip arranged to cover said opening and having the ends only thereof secured to the front and rear portions of said garment whereby the intermediate portion of said strip may be



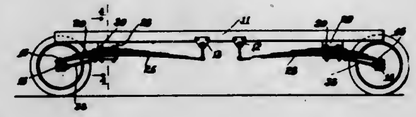
isolated from other portions of said garment and washed separately therefrom; and means for imparting sufficient rigidity laterally to said strip to tend to prevent creasing and folding thereof whereby said strip may be prevented from entering the inter-gluteal fold of a wearer.

1,426,526. WRINGER. ROY A. WATKINS, Clarinda, Iowa, assignor, by mesne assignments, to Edwin Lisle, Clarinda, Iowa. Filed Oct. 14, 1920. Serial No. 416,071. 2 Claims. (Cl. 68—32.)



2. In a wringer mechanism, a frame, rolls carried thereby, a tension member in said frame engaging said rolls, a member threaded in said frame, a stem adapted for sliding movement in said member and engaging said tension member, said stem being formed with a vertical groove having a seat extending laterally therefrom, and a connecting member in said threaded member adapted to traverse said groove and also adapted to enter said seat and form an operative connection between said stem and threaded member and also prevent sliding movement of said stem.

1,426,527. WIRE-FENCE CLAMP. LYNN E. WELLER, Macy, Ind. Filed Aug. 13, 1921. Serial No. 492,205. 2 Claims. (Cl. 254—83.)

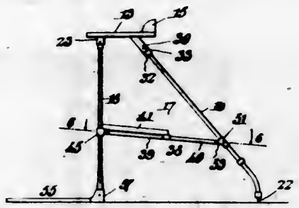


1. A clamp for wire fences comprising a pair of bars one of which is constructed of a plurality of independent sections and provided with a shoulder, the second bar having one edge arranged to force the fence wires against said shoulder, a stretcher member secured to the opposite edge of said second bar, and removable pivotal connections between the second bar and the sections of the first bar at a point intermediate the edges of the second bar.

1,426,528. BAG HOLDER. FRANK R. WHITE, Montclair, N. J. Filed Dec. 24, 1921. Serial No. 524,596. 1 Claim. (Cl. 83—26.)

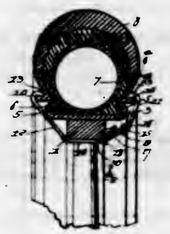
A bag holder consisting of a single piece of wire bent so as to form a straight back portion with a single central coil, and a curved front portion; said back and front portions each having a curved or hooked end portion adapted to interlock, and said central coil being adapted to aid in supporting said holder.

1,426,529. VEHICLE SUSPENSION. WILLIAM R. WILLIAMS, New York, N. Y. Filed Jan. 22, 1912. Serial No. 672,768. 6 Claims. (Cl. 267—19.)



2. A vehicle suspension including leaf springs composed each of two sections of unequal lengths arranged at opposite sides of the vehicle in cooperative relation with the body thereof and an axle, and means adapted to transmit stress from one to another of the shorter sections of said springs.

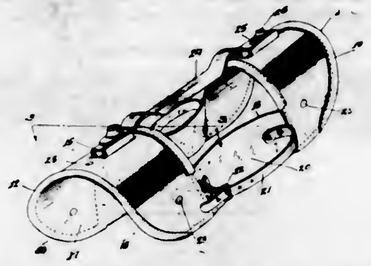
1,426,530. LOCK NUT. HERMAN J. ZOTTEL, Milwaukee, Wis. Filed Apr. 25, 1919. Serial No. 292,569. 2 Claims. (Cl. 151—21.)



1. A lock nut comprising a plate with a threaded bolt hole and locking pawls integral therewith, the locking pawls being formed by cutting from the plate a portion of the material adjacent the bolt hole and sharply depressing the same at the attached end thereof, so that the free end of the locking pawls is rendered readily compressible while the attached end thereof is comparatively incompressible.

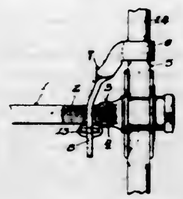
1,426,531. PIPE VISE STAND. James E. Allenson, Washington, D. C. Filed Mar. 31, 1921. Serial No. 457,405. 13 Claims. (Cl. 45—11.)

1. In a collapsible vise bench, a supporting frame including legs of unequal length pivotally connected at spaced points to said bench, the legs being so arranged and their connection with the bench being such that when the legs are moved into parallel planes their lower ends will be substantially even.



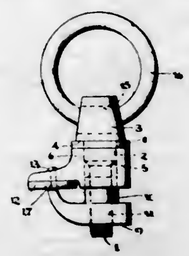
1,426,532. CLAMP FOR PROTECTING TIRES. Charles W. G. Allender, Denver, Colo. Filed Dec. 3, 1921. Serial No. 519,629. 2 Claims. (Cl. 152—17.)

1. As an article of manufacture, a clamp for tire protectors, comprising dominant and auxiliary clamp sections, the remote ends of which being provided with means for engagement with the opposite clincher flanges of the tire protector, the dominant clamp section being U-shaped and adapted to straddle the spoke of a wheel, a clasp having a portion of a width equal to the space between the sides of the U-shaped clamp section, said clasp having pintles, the sides of the U-shaped clamp section having bearings for the reception of said pintles, the auxiliary clamp section having spaced hooks, said clasp having a reduced portion of a width equal to the space between said hooks, said clasp having shoulders caused to be formed by the reduced portion and being engaged by said spaced hooks, whereby upon moving the clasp so that its reduced portion may engage the felly of the wheel, the shoulders with the hooks engaged therewith may assume positions between the fulcruming pintles and the felly, to draw the clamp sections tightly in position and hold the tire protector secured in place.



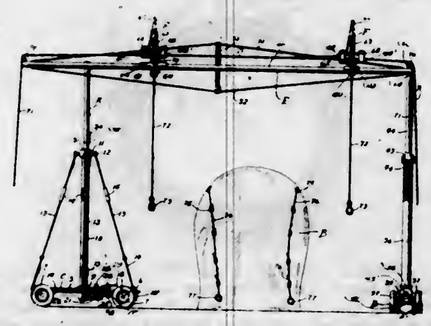
1,426,533. COLLAR SADDLE. Henry G. Anderson, Inwood, Iowa. Filed Sept. 6, 1921. Serial No. 498,636. 4 Claims. (Cl. 54—67.)

4. The combination with a harness having a collar, of a neck saddle for supporting said collar, said saddle comprising a pair of spaced saddle members of stiff material fitting over the neck of the animal, a lining of harness leather for the under side of said members provided with a central opening, an anchoring element of stiff material for each member rigidly attached thereto, a steel bar raised above said members and provided with slots adjacent its ends, said anchoring element having corresponding apertures and bolts being provided for engaging in said slots and apertures, a pair of flexibly united plates with suitably threaded holes for said bolts, and straps secured to said lining intermediary



of said saddle members, said straps being adapted to engage said collar to hold the collar and the neck saddle together.

1,426,534. WHEEL-LOCKING DEVICE. Howard A. Baker, El Paso, Tex. Filed May 2, 1921. Serial No. 466,066. 12 Claims. (Cl. 70—90.)



1. An automobile locking device comprising a bar having a shank portion, and a wheel engaging portion at one end, said shank portion being insertable between nonrotative parts of the axle, and the wheel engaging portion in locking connection with a wheel, and means for locking said bar in wheel locking position.

1,426,535. ROPE OR STRAP FASTENER. Edward Devere Barton, Canon City, Colo. Filed Dec. 8, 1921. Serial No. 521,004. 8 Claims. (Cl. 24—263.)

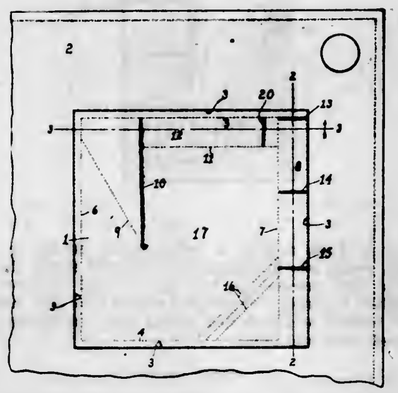
1. A device of the character described comprising an adjusting member having a shank provided with a head portion, a jaw member having a bore adapted to receive the shank and being disposed thereon adjacent to the head portion, a second jaw member threadedly engaging said shank adjacent to the end of the latter and being adapted to cooperate with said first named jaw member, and a locking device arranged between said head portion and said first named jaw member for holding the latter against movement away from said second named jaw member.

1,426,536. FUMIGATING APPARATUS. St. Elmo Bateman, Los Angeles, Calif. Filed July 29, 1920. Serial No. 399,640. 12 Claims. (Cl. 212—140.)

1. In a tree fumigating apparatus, a pair of spaced trucks, an overhead frame carried by the trucks, means rotatably connecting one end of the frame to one truck whereby the other truck can move around the first truck as a pivot, outwardly extending adjustable arms carried by the frame, and a hoisting and lowering apparatus carried by the adjustable arms.

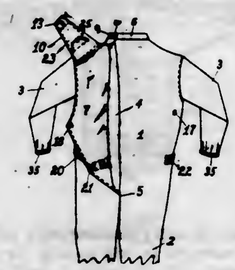
1,426,537. CORDAGE HITCHING DEVICE. Christopher W. Bauer, Brooklyn, N. Y. Filed Mar. 31, 1922. Serial No. 548,290. 2 Claims. (Cl. 24—130.)

1. As an article of manufacture, a cordage hitch plate with eyelet holes at one edge, oppositely extended slots at opposite edges, and a bight recess at an edge, one of said eyelet holes having an open-ended inlet thereinto to facilitate the insertion of the cordage.



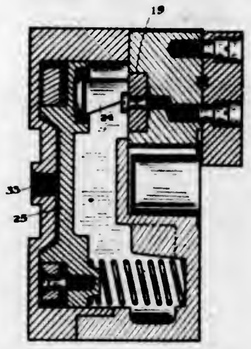
1,426,538. STIFFENING MATERIAL FOR SHOES. George W. Bernauer, St. Charles, Mo. Filed Nov. 8, 1920. Serial No. 422,448. 5 Claims. (Cl. 91—68.)

1. A stiffener for parts of shoes consisting of a suitably shaped blank of absorbent material impregnated with a stiffening composition, comprising resin, glue and white lead, which renders said blank substantially inflexible when dry and softens upon application of a degree of heat insufficient to injure the leather of the shoe.



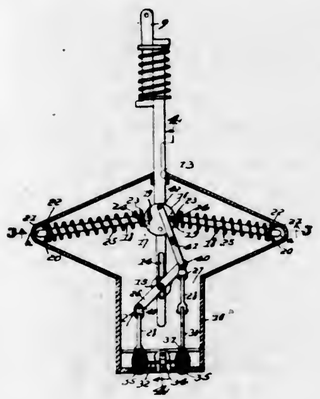
4. A stiffener for parts of shoes consisting of a suitably shaped blank of absorbent material impregnated with a stiffening composition, comprising shellac, glue and white lead, which renders said blank substantially inflexible when dry and softens upon application of a degree of heat insufficient to injure the leather of the shoe.

1,426,539. POCKET. Isaac Bernstein, Alameda, Calif. Filed Sept. 16, 1919. Serial No. 322,970. 2 Claims. (Cl. 2—15.)



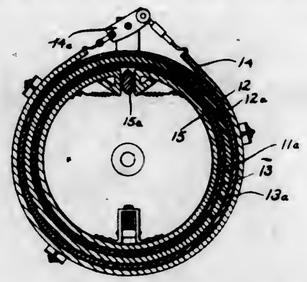
1. A pocket including a single piece of fabric sewed to a garment and forming a main pocket compartment, a horizontal compartment and a vertical compartment, said piece of fabric being formed with a single slit providing entrance to both the main compartment and the horizontal compartment, said piece of fabric having a plurality of slits forming entrances to said vertical compartment at different heights.

1,426,540. UNION OVERALLS. Isaac Bernstein, Alameda, Calif. Filed Sept. 18, 1919. Serial No. 324,531. 4 Claims. (Cl. 2—144.)



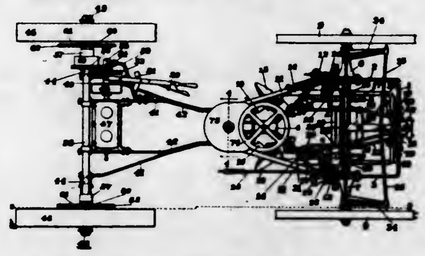
1. Overalls including a body, trousers, and sleeves, the body being formed with an entrance in the back extending from the crotch to the collar, a single flap for closing said entrance, a suspender strap at the upper corner of said flap extending over a shoulder of the wearer, and means for fastening said strap to the front of the garment.

1,426,541. CHUCK. DAVID LOGAN BISSET, Montreal, Quebec, Canada, assignor to P. Lyall & Sons Construction Company, Limited, Montreal, Quebec, Canada. Filed Nov. 22, 1920. Serial No. 425,891. 1 Claim. (Cl. 279—4.)



In a chuck, a body, a reciprocating member in said body, wedge pins extending forwardly and having flanged inner ends recessed in the face of said reciprocating member, a keeper ring screw-threaded into said recesses and holding said pins and sliding jaws operatively connected with said pins.

1,426,542. FOOT-OPERATED SWITCH-THROWING MECHANISM. JOHN W. BLIZNIK, Detroit, Mich. Filed Apr. 3, 1922. Serial No. 549,052. 5 Claims. (Cl. 246—318.)

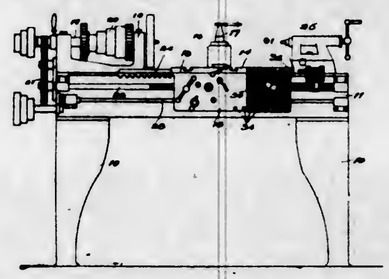


1. In a switch throwing mechanism, a switch point, a housing, a bar mounted in said housing for reciprocating movements therein and connected to said switch point, compound tensioning means cooperatively connecting with said bar and holding it at the limit of its movements in either direction, thereby holding the switch point open or closed, said bar having a slot therein, an oscillating bar having its pivot passing through said slot to guide the reciprocating bar, and means operatively connecting with each end of the oscillating bar, which in turn has means operatively connecting with the reciprocating bar for actuating the same to throw the switch point.

1,426,543. BRAKE. WILLIAM T. BONNER, Trenton, N. J., assignor to Max Brown, Boston, Mass. Filed Feb. 11, 1920. Serial No. 357,780. 5 Claims. (Cl. 188—218.)

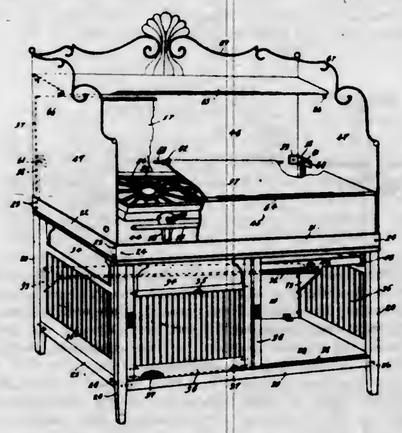
1. Braking apparatus, comprising a rotative braking element having an exterior face and an interior face of relatively low thermal conductivity and means adapted to be forced into and out of frictional contact with said faces of said rotative element.

1,426,544. LISTER-MOTOR CULTIVATOR. THEOPHILUS BROWN, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 23, 1917. Serial No. 156,996. 8 Claims. (Cl. 97—81.)



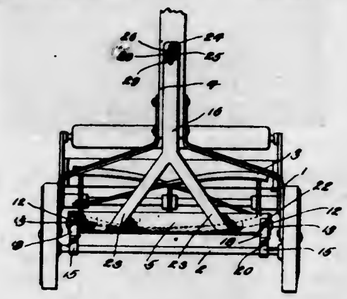
1. A power propelled tillage implement comprising a frame, dirigible wheels supporting the front of the frame, wheels supporting the rear of the frame, a motor on the frame having connections by which power is transmitted to the wheels, tillage devices connected to the frame, two vertically rotatable wheels adapted to be shifted bodily laterally relatively to the frame and to bear horizontally against the ground in two opposite directions simultaneously, and means connecting the last said wheels to the dirigible wheels for automatically oscillating the latter laterally and positively.

1,426,545. TYING TOOL. HARRY H. BURSON, Chicago, Ill., assignor to Simplex Steel Products Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1920. Serial No. 400,497. 3 Claims. (Cl. 81—15.)



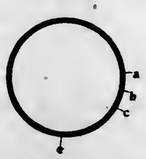
1. A tool of the kind described comprising a pair of pivoted levers each formed with a handle end, means for normally holding apart their handle ends, a jaw carried by each lever at its opposite end, both jaws being co-acting and disposed in a direction which is generally transverse to the medial line between the levers, the inside jaw being extended beyond the other, and a stop between the two jaws to limit the distance of entry of a tongue therebetween, the inside jaw having a length substantially equal to that of the tongue to be bent, substantially as described.

1,426,546. LATHE. WILLIAM BUTTRUM, Joplin, Mo. Filed Dec. 4, 1920. Serial No. 428,353. 9 Claims. (Cl. 82—5.)



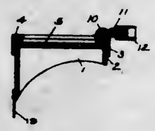
1. A thread cutting attachment for lathes including a bed, a carriage and a lead screw and comprising an extension, means for securing said extension to the carriage, a bracket having a depending portion provided with a bearing, means for adjustably securing said bracket to the bed, an auxiliary screw having its exterior provided with threads of a pitch corresponding to the threads to be cut and adapted to be arranged upon and constrained to rotate with the lead screw, said auxiliary screw having a shoulder abutting the bearing of the bracket and a reduced extension beyond the shoulder rotatably received in the bearing, means for maintaining the auxiliary screw in proper relation with respect to the bearing including a thrust collar secured to the auxiliary screw and engaging the bearing, and a nut for securing the thrust collar in position, and a split nut carried by the extension and engageable with the auxiliary screw.

1,426,547. SAFETY GAS STOVE WITH KITCHEN CABINET. HARRY CHILINGERIAN, Bridgeport, Conn. Filed Aug. 23, 1921. Serial No. 494,464. 8 Claims. (Cl. 126—37.)



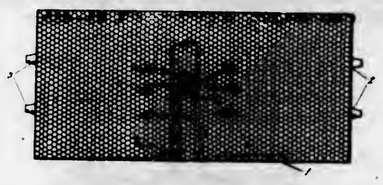
1. In a gas stove, a support, a gas plate including burners mounted on said support, back and end walls around said plate, and a retractable cover plate over the gas plate and burners adapted to be moved to a position to the rear of the burners and between the same and the rear wall.

1,426,548. LAWN-MOWER SHARPENER. THOMAS J. CONNOLLY, Cedar Rapids, Iowa. Filed Mar. 24, 1921. Serial No. 455,107. 5 Claims. (Cl. 51—250.)



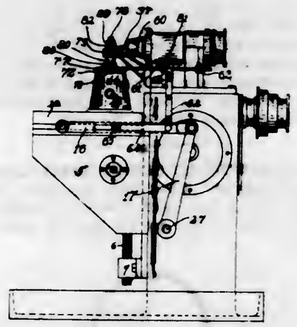
1. A lawn mower sharpener comprising a stone carrying strip for extending longitudinally of a set of cutting knives, stone engaging means at the side of said strip, a stone slidable longitudinally into and out of engagement with the stone engaging means of said strip, supporting means for said strip, and means carried by said supporting means for engaging the ends of said stone and holding the stone in engagement with the strip.

1,426,549. PRINTING SURFACE. JAMES ALBERT COREY, London, England. Filed Mar. 4, 1919. Serial No. 280,668. 13 Claims. (Cl. 204—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



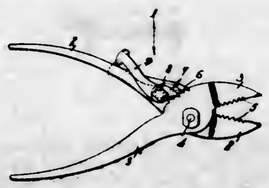
1. A method of producing a jointless cylindrical electrotype printing surface, comprising the production of a flexible cylindrical "mother" of relatively thin, hard and dense metal by electrotyping from a cylindrical original, splitting and stripping the "mother" from the original and using the "mother" as a mould, substantially as described.

1,426,550. EYE PROTECTOR. CHARLES O. COZZENS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 16, 1920. Serial No. 366,266. 6 Claims. (Cl. 2—149.)



1. A device of the character described comprising an open ring having a pair of integral inwardly extending tongues formed thereon, one of said tongues terminating in a bridging attaching eye and the other of said tongues terminating in a pair of eyes adapted to be bent to overlie each other and provide a temple-engaging endpiece.

1,426,551. COMB FOR BROOD CHAMBERS AND SHALLOW EXTRACTING SUPERS. HERVE L. CROSS, JR., Cincinnati, Ohio, assignor of one-third to Edgar W. Nouse, Columbus, Ohio, and one-third to Robert E. Wardlow, Cincinnati, Ohio. Filed Jan. 24, 1921. Serial No. 439,351. 1 Claim. (Cl. 6—11.)

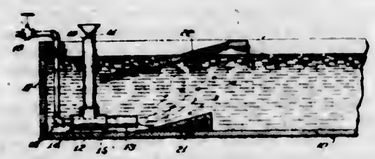


As an improved article of manufacture, an artificial honeycomb formed of celluloid.

1,426,552. GEAR-INDEXING MECHANISM. MILTON O. CROSS, Detroit, Mich. Filed Apr. 5, 1918. Serial No. 226,829. 10 Claims. (Cl. 90—56.)

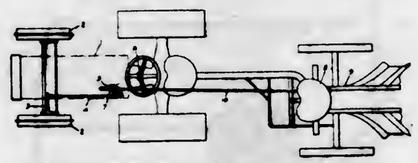
1. A gear indexing mechanism comprising in combination with a cutter for operating on the tooth of a gear and a holder for the gear movable toward and from the cutter, of an arbor rotatably mounted in the holder, frictional means yieldably holding the arbor from rotation, a rotatable clutch adapted to bindingly engage the arbor and turn the same when turned in one direction and to release from engagement therewith on turning in the opposite direction, means adapted to actuate the clutch on movement of the head in either direction, a gear carried by the arbor and rotatable therewith, and a sector having teeth complemental to the gear teeth engaged by the gear when brought to position for operation by the cutter.

1,426,553. PLIERS. ALEXANDER CRUICKSHANK, Clayburn, British Columbia, Canada. Filed July 11, 1921. Serial No. 483,884. 2 Claims. (Cl. 294—41.)



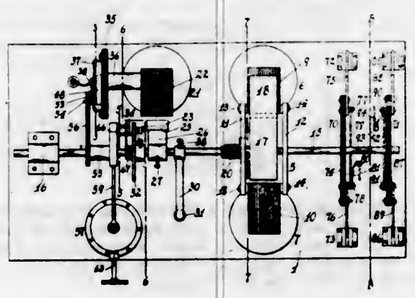
1. The combination with a pair of pliers, the handle and jaw members of which are pivotally connected together, a pawl pivotally mounted on one of the plier members the end of which pawl is designed to enter into engagement with one of a series of notches formed on the other plier member concentric with the pivot about which the plier members move, said pawl having a resilient arm provided with a grooved end adapted to spring over the edge of the handle of the plier member on which said pawl is pivotally mounted to hold said pawl out of engagement with said notches.

1,426,554. HOOK FOR CONVERTIBLE WATCHES. JOSEPH DAVING, New York, N. Y. Filed May 23, 1921. Serial No. 471,552. 2 Claims. (Cl. 24—237.)



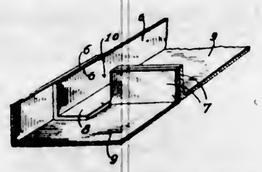
1. As an improved article of manufacture, a duplex coupling device for convertible watches formed of a single piece of material with resilient twin hooks with overlapping free ends, and a cross bar connecting the hook portions.

1,426,555. METHOD OF AND APPARATUS FOR CRYSTALLIZING OILS AND FATS. HENRY H. DOERING, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,024. 10 Claims. (Cl. 62—177.)



4. The method of crystallizing oils, fats and the like, which consists in introducing a stream of hot oil or fat at the bottom of a body of cold water, and discharging a jet of compressed air adjacent the point of oil introduction so as to cause the oils or fats to be broken up into small particles or crystals.

1,426,556. STEERING DEVICE FOR TRACTORS. EMERSON C. DUNLAP, Miami, Ind. Filed June 10, 1921. Serial No. 476,550. 2 Claims. (Cl. 180—77.)

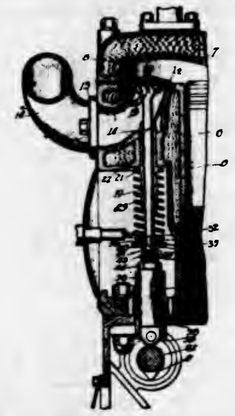


1. The combination with a steering mechanism of a tractor including a steering crank arm, of an angular shaped extension extending parallel with and a distance above said crank arm, said crank arm entering the hollow between the angular sections of the extension, clamping members for securing the extension to the crank arm, one of said members having a V-shaped notch for engagement with the apex of said extension, and a rod connected with the upper end of said extension and projecting a distance in the rear of the tractor whereby said crank arm may be operated for controlling the guiding mechanism for the tractor from a point distant from the tractor.

1,426,557. LIGHT CONTROL. ROBERT W. EBELING and HERMAN J. FANGER, Oakland, Calif., assignors to Standard Light Control Company, Oakland, Calif. Filed Jan. 24, 1921. Serial No. 439,463. 5 Claims. (Cl. 200—90.)

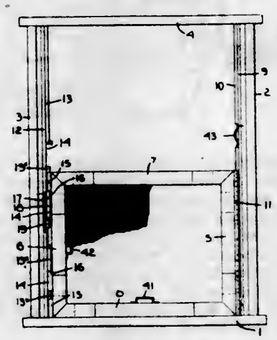
4. An automatic controlling switch including a shaft, two knife switches, the blade members of said knife switches being secured on said shaft, a shaft turning magnet, the armature of said magnet being secured to said shaft to turn the shaft in one direction when the magnet is energized, a spring for turning the shaft in the other direction, an arm on said shaft, a lock magnet, a latch on the armature of said lock magnet for engaging said arm when the shaft is turned by said shaft turning magnet to lock the shaft against turning in the other direction by said spring, a timing switch for controlling both of said magnets to enable said shaft turning magnet and said spring to oscillate said shaft and reverse said knife switches, a lever loosely mounted on said shaft for actuating said timing switch, a dash pot connected to said lever to retard its action, a disk secured to said shaft, a pin on said disk, a pin on said lever, and a spring coiled around said shaft with its ends engaging opposite sides of said pins whereby the lever is yieldingly driven by the shaft, said timing switch including a switch arm having a V-shaped notch at one end and a spring engaging said notch to close the switch quickly when said arm passes its dead center in either direction.

1,426,558. METALLIC ROOF. WILLIAM F. EDWARDS, Warren, Ohio. Filed Aug. 11, 1921. Serial No. 491,545. 1 Claim. (Cl. 108—13.)



A roof comprising body members having transverse flanges which are disposed in abutment, the body members having longitudinal flanges which are overlapped on each other, the transverse flanges being spaced inwardly from the ends of the body members to form projections which are joined to the longitudinal flanges and are overlapped on each other, the ends of the transverse flanges being spaced from the longitudinal flanges to permit the aforesaid overlapping of the longitudinal flanges and to permit the aforesaid overlapping of the projections of the body members.

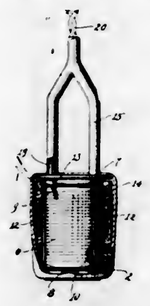
1,426,559. PRESERVED EGGS AND PROCESS THEREFOR. ALBERT K. EPSTEIN, Chicago, Ill. Filed Dec. 9, 1920. Serial No. 429,358. 4 Claims. (Cl. 99—1.)



1. The method of retaining the physical colloidal consistency of egg content after removal from the egg shell which consists in adding glycerine thereto, freezing the mixture and maintaining it frozen until desired for use, the amount of glycerine being sufficient to retain the physical consistency and colloidal condition of the egg substance when thawed.

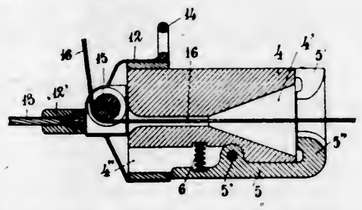
1,426,560. VALVE. JAMES B. FISHER, Waukesha, Wis. Filed Oct. 1, 1919. Serial No. 327,758. 5 Claims. (Cl. 251—129.)

3. In combination, a poppet valve for an internal combustion engine comprising a valve head, a valve stem and a tapering portion joining said head and said stem, and arcuate propeller flutes milled in said tapering portion, each of said propeller flutes comprising a wall extending relatively abruptly to the surface of said tapering portion and a wall extending relatively obtusely to the surface of the tapering portion.



1,426,561. WINDOW-SCREEN CONSTRUCTION. WILLIAM H. J. FITZGERALD, Braintree, Mass. Filed Aug. 17, 1921. Serial No. 493,093. 8 Claims. (Cl. 156—14.)

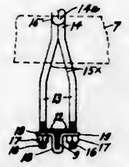
8. A window screen construction comprising a window frame and a sash, co-operating runs on said frame and sash having complementary interengaging tongued and grooved members, the tongue of one of said runs and one wall of the complementary grooved run being provided with recesses so placed and positioned as to permit the remaining portions of the tongue and recessed groove wall to pass through the said respective recesses when the sash is raised to a predetermined distance from closed position, a plate countersunk in one of said runs extend-



ing beneath the interengaging member of said run, a guide pivotally mounted on said plate having a wall normally forming a continuation of the wall of said run across the recess therein but adapted to be swung aside to permit detachment of the interengaging run member and the removal of said sash.

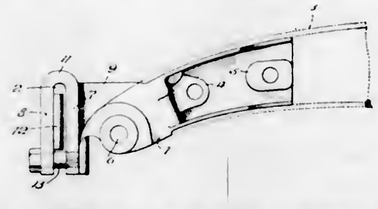
1,426,562. ELECTRIC HEATER. ERNEST O. FREDERICS, New York, N. Y., assignor to E. Frederics, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 2, 1921. Serial No. 489,211. 8 Claims. (Cl. 219—24.)

1. In an electric heater, in combination, a core member, a plurality of terminal members encircling said core, and insulated therefrom, one of said terminal members being positioned adjacent each end of said core, a resistance wire positioned about said core, each end of said resistance wire having several points of contact with one of said terminal members, and a pair of leading-in wires, each of which is connected with one of said terminal members.



1,426,563. AUTOMATIC COUPLING FOR ROPES, CABLES, AND THE LIKE. DONATO GARIGLIO, Turin, Italy. Filed Aug. 23, 1921. Serial No. 494,514. 4 Claims. (Cl. 24—201.)

1. A coupling for connecting the ends of ropes, cables and the like comprising a female member to which is connected one of said ends, a male member to which is connected another of said ends, said female member comprising a seat for receiving said male member, spring hooks for clamping said male member in position in said seat, said spring hooks being opened by their co-operation with an inclined portion of said male member, and means for pulling said male member toward and into engagement with said female member.



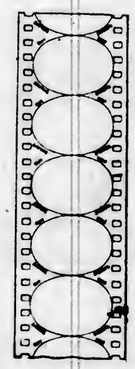
1,426,564. BRACE FOR AUTOMOBILE RUNNING BOARDS. WILLIAM HAGGLUND, Dassel, Minn. Filed Apr. 30, 1921. Serial No. 465,650. 1 Claim. (Cl. 280—163.)

The combination with the frame and the running board of an automobile, of a bar extending horizontally across the automobile and having upon its ends blocks supporting the running boards, said bar being T-shaped in cross section and arranged with its middle rib downward, two hangers supporting each one end of said bar, each of said hangers having its upper end formed with a hook engaging over some bar of the frame and being below the hook bifurcated into two threaded legs depending one

at each side of the T-bar, a clip crossing the under side of the T-bar and having a deep notch fitting the downward rib of same said clip having near each end a hole for the depending legs of the hanger, and nuts threaded on the legs below the clip to support it.

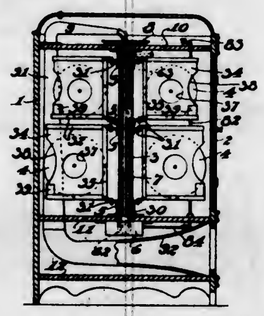
1,426,565. BUMPER SUPPORT. CHARLES H. HATHAWAY, West Allis, and WILLIAM A. STARCK, Milwaukee, Wis., assignors to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1921. Serial No. 494,646. 11 Claims. (Cl. 293—55.)

3. A bumper support for permanent attachment to an automobile channeled side bar and comprising an arm adapted to be received therein and rigidly fastened to the channeled side bar, an integral clamp projecting beyond the end of the side bar and having jaws for gripping a bumper bar positioned therebetween, one jaw having a depression in the face thereof, and a corresponding projection on the face of the other jaw.



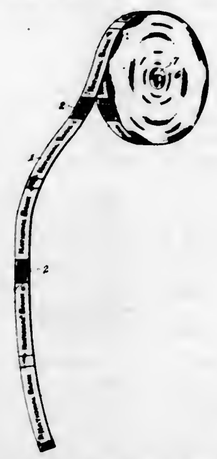
1,426,566. TELEPHONE DIRECTORY. CLARENCE RICHARD HILBERRY, Flint, Mich. Filed Jan. 10, 1922. Serial No. 528,269. 8 Claims. (Cl. 40—10.5.)

1. A telephone directory comprising a front plate having a hub projecting laterally of the rear face thereof, said front plate being provided with alined spaced apart openings therethrough, a plurality of disks rotatably mounted on the hub and each provided with alined openings therethrough respectively adapted to register with



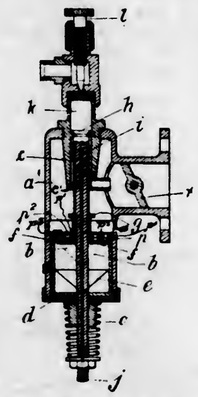
the corresponding openings of the front plate when the disks are in a certain position with respect to the front plate, each of said disks having desired data produced thereon in position to be observed through the said openings when the particular disk is rotated relatively to the front plate, and means carried by the hub for maintaining the disks on the hub and for permitting of the rotation of the said disks.

1,426,567. ADVERTISING FILM AND METHOD OF PRODUCING THE SAME. THOMAS HAYES HUNTER, Los Angeles, Calif. Filed Nov. 6, 1919. Serial No. 336,206. 1 Claim. (Cl. 88—19.5.)



The method of producing motion picture film which consists in printing a positive film from the usual negative film having its successive picture-bearing portions commensurate in area with the projection aperture of the projecting machine by which the positive is to be projected, said printing being effected through a mask having opaque portions obscuring the light from portions of the positive film which are in printing relation with the uniformly disposed successive portions of the picture-bearing sections of the negative film, and photographically printing on the positive film within the unexposed areas a succession of uniformly disposed advertising legends of a subject-matter entirely irrelevant to the subject of the pictures.

1,426,568. PHONOGRAPH CABINET. EDWIN E. HUTSHING, Seattle, Wash. Filed May 10, 1920. Serial No. 380,085. 2 Claims. (Cl. 211—16.)



2. A disk record storing means comprising a pair of vertically-spaced, laterally-extending channeled arms, supports for the inner ends thereof, a vertical channeled brace rigidly secured to each of said arms adjacent its inner end, the channels in said arms and brace being alined, and all facing the space included between the arms and brace, and an envelope received in said channels, and having its opening along the vertical side opposite said brace and having means to prevent a record rolling therefrom.

1,426,569. GUMMED TAPE. ALONZO P. INGRAM, Pittsburgh, Pa. Filed Feb. 26, 1921. Serial No. 448,207. 5 Claims. (Cl. 24—67.)

2. As an article of manufacture, a tape for packaging, gummed in spots on one side and free from gum on the other side, said tape being in the form of a roll, the spots of gum being widely separated and uniformly distributed along the same, to provide bands having a spot of gum at one end only and only on one side, substantially as described.

1,426,570. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. LEWIS FRANK KING, Poole, and FREDERICK GEORGE KING, Farnborough, England. Filed Dec. 28, 1921. Serial No. 525,381. 3 Claims. (Cl. 261—64.)

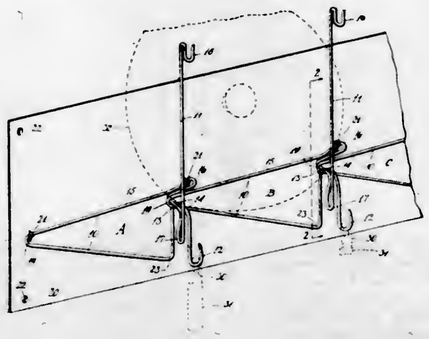
1. A carburetor of the kind set forth, comprising a cylindrical casing having a mixing chamber and an outlet therefrom for atomized mixture, a fuel inlet fitting at the top of said casing above said mixing chamber, a hollow piston valve mounted to move axially within the lower portion of said casing, a rod fixed to said piston and extending through the bottom of said casing, a valve at the upper end of said rod controlling the fuel admission to said mixing chamber, ports in the walls of said casing

co-operating with ports in the walls of the piston valve when said piston valve functions, and ports in the upper wall of said piston valve through which incoming air passes to the mixing chamber, for the purposes set forth.

1,426,571. CUFF FASTENER. OSCAR E. KOHL, Rochester, N. Y. Filed Mar. 25, 1921. Serial No. 455,408. 1 Claim. (Cl. 24—102.)

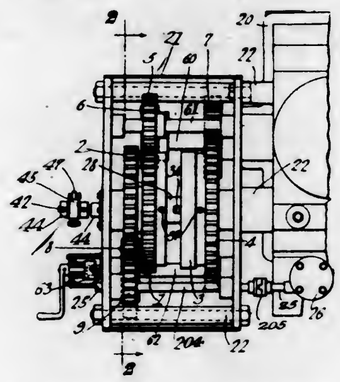
A cuff fastener comprising two heads, one of which is smaller than the other, and a shank connecting them, formed of a U shaped member having two arms of different lengths, the shorter arm proceeding from one edge of the larger member and the longer arm proceeding from one edge of the smaller member.

1,426,572. CUFF LINK. OSCAR E. KOHL, Rochester, N. Y. Filed Oct. 20, 1921. Serial No. 508,921. 4 Claims. (Cl. 24—102.)



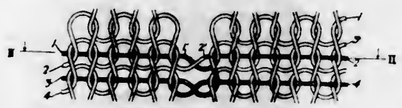
3. A one piece cuff button comprising two side members and a connector of less width than the side members, such connector being formed U-shape with its side arms abutting the opposed faces of the side members.

1,426,573. LOCK AND KEY. JOSEPH W. KOVACH and TONI MARKOVICH, Aurora, Minn. Filed Dec. 17, 1920. Serial No. 431,361. 2 Claims. (Cl. 70—75.)



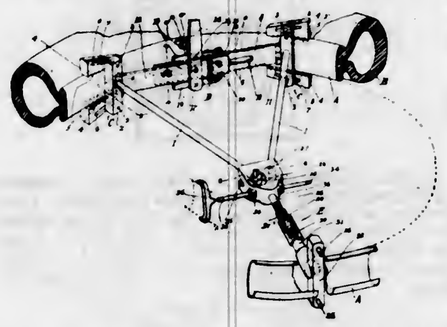
1. The combination with a lock of the character described having a reciprocal bolt therein and an automatically operated catch cooperatively engageable with the bolt, of a key therefor composed of an inner and outer telescopic portion both of said portions having bolt engaging arms thereupon, means for operating the inner portion both longitudinally and rotatably independently of the outer portion, and means whereby the bolt engaging arm on the inner member is normally housed within the bolt engaging arm of the outer portion.

1,426,574. WALL FIXTURE. CATHERINE M. LANGHORNE, Plainfield, N. J. Filed Jan. 11, 1922. Serial No. 528,403. 8 Claims. (Cl. 211—14.)



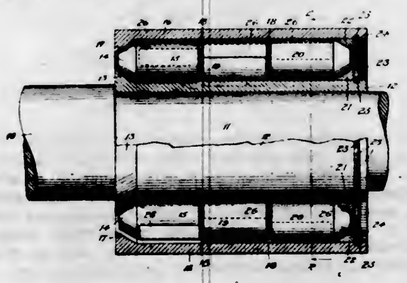
1. A well fixture, consisting of a series of interlocked units each comprising a substantially vertical rack member, a connecting member extending transversely from the rack member near the lower end thereof, and a spacing member extending from the inner end of the connecting member and in a plane transverse thereto and engaging the connecting member of the next unit.

1,426,575. REVERSING MECHANISM. ROBERT F. LANHAM and ALBERT V. SHULL, Laurel, Miss. Filed June 10, 1920. Serial No. 387,928. 2 Claims. (Cl. 123—41.)



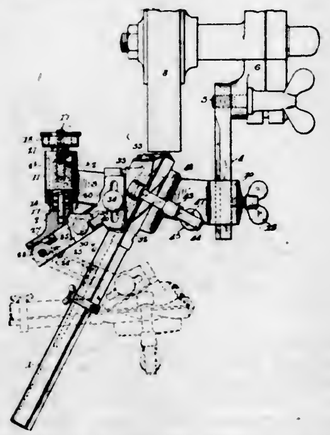
1. In a mechanism for converting a one-way internal combustion engine into a reversible engine, a housing comprising forward and rear members; means for securing the housing to the forward portion of an engine frame; a main sleeve journaled in the forward and rear members of the housing and adapted for the reception of the cam shaft of an engine; means for securing the main sleeve to the cam shaft of an engine; an auxiliary sleeve journaled in the forward and rear members of the housing and adapted for the reception of the crank shaft of an engine; means for securing the auxiliary sleeve to the crank shaft of an engine, a shaft mounted in the forward and rear members of the housing; a reversing pinion carried by the last-specified shaft; a first gear wheel rotatable on the main sleeve; a second gear wheel rotatable on the main sleeve and meshing with the reversing pinion; a first pinion fixed to the auxiliary sleeve and meshing with the first gear wheel; a second pinion fixed to the auxiliary sleeve and meshing with the reversing pinion, all of the aforesaid gear wheels and pinions being located between the forward and rear members of the housing; a clutch mounted movably on the main sleeve and cooperating with the first and second gear wheels to couple the same one at a time to the main sleeve; and means operating within the main sleeve, and accessible from a point in front of the forward member of the housing, for actuating the clutch.

1,426,576. KNITTED FABRIC. VINCENT LOMBARDI, Brooklyn, N. Y. Filed Mar. 26, 1921. Serial No. 455,894. 1 Claim. (Cl. 66—4.)



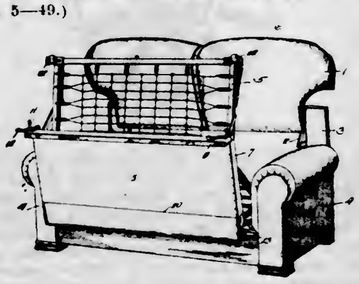
A knitted fabric comprising a plurality of independent yarns making certain portions of the front of said fabric one color and other portions another color, each of said yarns in turn forming a looped portion and a transversely extending unlooped portion, the looped portion in each instance determining the color of the front of the fabric, each of said yarns in its unlooped portion being interlocked in alternate wales between the two sides of a loop in one row and the two sides of a loop in an adjacent row of yarn of the other color, each unlooped portion in the remaining wales being carried entirely behind the looped yarn so that the resulting zigzag path for the unlooped portion insures positive interlocking in the said alternate wales, the unlooped portion being tightly drawn so that said unlooped yarn in its zigzag path lies close to the fabric and thereby prevents the formation of floats.

1,426,577. RIM-EXPANDING TOOL. ROBERT J. LOOMIS, St. Paul, Minn. Filed Feb. 2, 1921. Serial No. 441,951. 2 Claims. (Cl. 157—1.)



1. A rim expanding device, comprising a pair of oppositely disposed rim gripping elements, having converging rods extending in the plane of the rim a longitudinally adjustable arm pivotally connected at one end with said rods and extending away from said rim gripping elements to the opposite side of the rim and having means at the other end to embrace the latter, and spreading mechanism extending between said gripping elements and having pivotal connection with both, said spreading mechanism comprising a double rack-bar and a plain bar constructed so as to be longitudinally slidable upon one another, an operating lever having fulcrum support on said plain bar, and spring pressed dogs pivoted on said lever, one for each rack of said double rack-bar, said dogs being pivoted on opposite sides of said fulcrum so as to alternately engage said rack-bar to slide it on said plain bar when said lever is actuated.

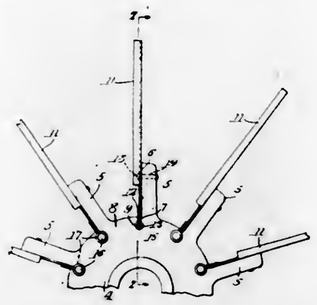
1,426,578. ROLLER BEARING. CHARLES I. LOTT, Pearson, Ga. Filed Mar. 16, 1920. Serial No. 366,222. 4 Claims. (Cl. 64—62.)



1. The combination with a sleeve adapted to be secured in place upon a shaft, of a plurality of distinct annular series of cylindrical rollers, the outer ends of the rollers of each terminal series being frusto-conical, a cage spacing the series and the rollers of each series, a second sleeve enclosing the rollers and cage, both said sleeves having at one end flanges fitting opposite sides of the frusto-conical ends of the rollers of one terminal series, bevelled rings fitting the inner and outer sides, respectively, of the frusto-conical ends of the rollers of the opposite terminal series, and readily releasable means for holding the rings in place between the sleeves.

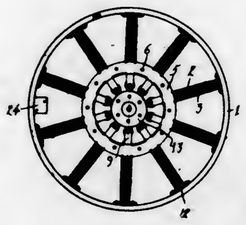
1,426,579. GRINDER ATTACHMENT FOR DRILLS. FRANK R. LUECK, Milwaukee, Wis. Filed Aug. 2, 1920. Serial No. 400,694. 10 Claims. (Cl. 51—219.)

1. In a grinder attachment for drills the combination of a support connected with the grinder frame, a drill holder, a swivel joint normally connecting the drill holder with said support at an oblique angle to said holder and to the working face of the grinding wheel and comprising members separably fitted to each other, one of the swivel members being pivotally connected transversely to its axis with said support to permit the drill holder to be swung into and out of operative position relative to the grinding wheel, means for locking the pivoted swivel member to said support in operative position, and means adapted to automatically lock the swivel members together in normal working relation to each other when the pivoted swivel member is swung into operative position and to unlock said members and permit the removal of the drill holder when said pivoted swivel member is swung out of operative position.



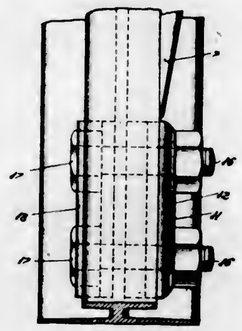
1,426,580. ATTACHMENT FOR DAVENPORTS. NELS J. LUNDEEN and HENRY F. RUSSELL, Tacoma, Wash. Filed Nov. 29, 1921. Serial No. 518,498. 5 Claims. (Cl. 5—49.)

1. A seat for davenports comprising a frame, means connecting the several sections of said frame and reinforcing the same, a canvas secured to said frame, and



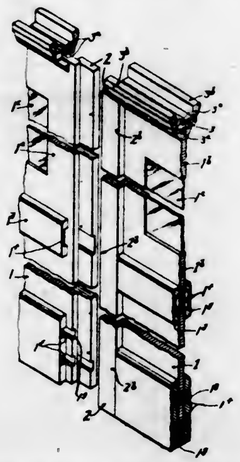
provided with a pocket extending the length thereof, a rod mounted in said pocket and secured to the frame, and resilient means secured to one of the above mentioned reinforcing elements and to said rod.

1,426,581. IMPELLER FOR CENTRIFUGAL COMPRESSORS. GARNET W. MCKEE, Rockford, Ill. Filed June 26, 1920. Serial No. 391,889. 2 Claims. (Cl. 170—141.)



1. An impeller of the character described, comprising a hub having a series of circumferentially arranged radially projecting arms and provided forwardly of and at the base of each arm with a key-hole shaped slot, a series of channel-shaped blades each tapering laterally toward the outer end and having its inner end reduced in width and bent backward upon itself to form an eye connected by a reduced shank with the body of the blade, the eye and shank of each blade being engaged in one of said key-hole slots with the back of the blade disposed against the front face of one of said arms, means for securing each blade intermediate its ends to its respective arm, and means extending through said eye and engaging with said hub at each side thereof for holding the inner end of the blade against displacement.

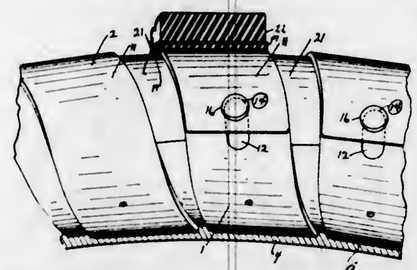
1,426,582. RESILIENT VEHICLE WHEEL. JOSEPH MCLAUGHLIN, Fordwich, Ontario, Canada. Filed Aug. 26, 1918. Serial No. 251,387. 3 Claims. (Cl. 152—53.)



1. In a vehicle wheel a rim, a plurality of V shaped brackets secured to the rim and extending inward therefrom, the legs of adjacent brackets lying in parallel relation, a pair of ring members secured to each side of the brackets at the inner ends, the said rings and said legs of adjacent V shaped members providing a substantially rectangular receptacle, a plunger mounted in each receptacle, means limiting the extent of inward movement of the plunger, a spring in the receptacle formed between the legs of the brackets engaging the plunger, a hub supported by the inner ends of the plungers, and driving connection between the rim and hub.

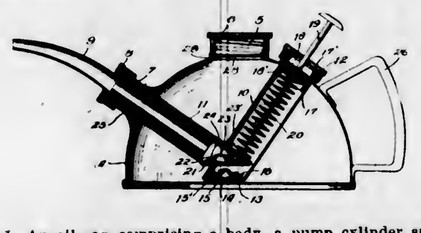
1,426,583. RAILWAY-SWITCH GUARD. MATTHEW J. MCNAMARA, Scranton, Pa., assignor of one-half to James R. Fleming, Scranton, Pa. Filed May 12, 1921. Serial No. 468,892. 3 Claims. (Cl. 246—441.)

1. The combination of a railway rail; a swinging switch rail having a reduced entry end; and a guard member secured in service on the side of the railway rail in advance of the switch rail, said member having an inclined surface for engaging the flange of a railway wheel to shift the same toward the center of a railway track.



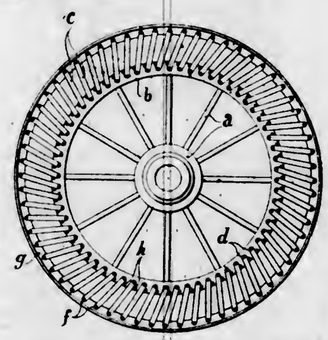
1,426,584. PARTITION STRUCTURE. GEORGE E. MCNEAL, Cleveland, Ohio. Filed Nov. 8, 1921. Serial No. 513,709. 8 Claims. (Cl. 20—4.)

1. A partition structure, comprising individually complete filling units including under channelled chair-rails and baseboards forming horizontal conductor receiving openings, overlapping vertical post forming unit connecting members abutting against said chair-rails and baseboards and spacing said filling units apart forming intervening vertical conductor receiving openings intersecting said horizontal conductor receiving openings.



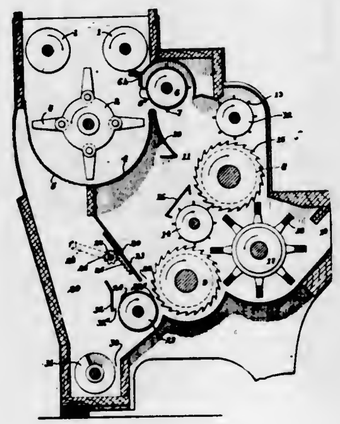
1,426,585. STEEL TIRE. ALOYSIUS PAUL MALLON, San Francisco, Calif. Filed Sept. 3, 1921. Serial No. 498,235. 4 Claims. (Cl. 152—8.)

3. The combination of a wheel rim and a steel tire, comprising a band of spring steel spirally wound into an annular ring and consisting of a plurality of longitudinal members yieldingly connected to each other and a plurality of side flaps secured internally to the longi-



tudinal members for covering the spaces between the same, and a spiral groove in the rim for receiving the band.

1,426,586. PUMP OIL CAN. MILTON MAYER, Burlington, Iowa. Filed May 28, 1920. Serial No. 384,826. 6 Claims. (Cl. 221—51.)



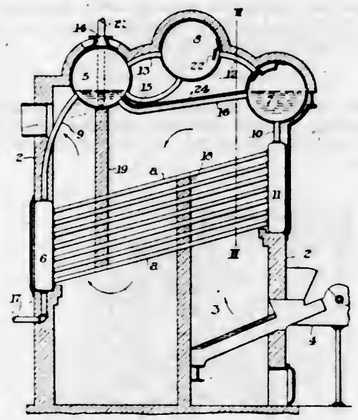
1. An oil can comprising a body, a pump cylinder supported in an angular position in the body and having at its lower end a flat valve seat parallel with the bottom of the body and located adjacent thereto, an intake valve on said seat, a spring pressed piston operating in said pump cylinder, a discharge cylinder supported in the body at substantially a right angle to the pump cylinder and having its lower end projected into the pump cylinder and provided with a flat valve seat adjacent to the intake valve and parallel with the bottom of the body, a discharge valve on said latter seat, and a spout communicating with said discharge cylinder.

1,426,587. ELASTIC WHEEL. LÉON MICHA, Antwerp, Belgium. Filed Nov. 27, 1914. Serial No. 374,277. 2 Claims. (Cl. 152—1.)

2. In an elastic wheel, an elastic tyre spaced from the felloe of the wheel, in combination with a plurality of inclinable frames extending between the said felloe and the said elastic tyre each at an angle to the corresponding radius, pivotal connections between the felloe and the rim portion of the tyre and the respectively adjacent ends of the inclinable frames, and abutment pins secured on the felloe and adapted to set the initial inclination of the said frames and to limit the amplitude of their movement, substantially as described.

1,426,588. COTTON EXTRACTING AND CLEANING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Aug. 26, 1920. Serial No. 406,117. 6 Claims. (Cl. 19—36.)

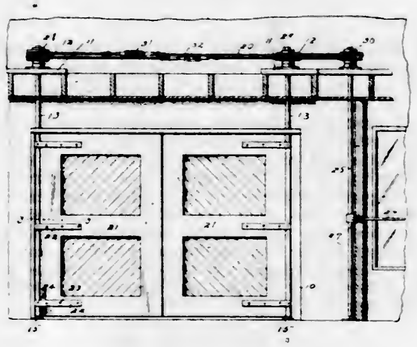
1. In a boll breaking and cotton separating machine, the combination of boll breaking means, an upper and a lower saw cylinder, the saws of which operate wholly in the clear as respects the cotton engaging side thereof, a hull board co-operating with each saw cylinder to direct mixed cotton and hulls falling by gravity over the same against the saws, and the lower edges of said hull boards defining the sizes of openings past the cylinders, the opening past the upper saw cylinder being larger than the opening past the lower saw cylinder, a kicker roll co-operating with each cylinder, means for feeding the cotton and broken bolls to the saw cylinders from the boll breaking means, and a rotary doffer common to both saw cylinders and co-operating therewith to simultaneously remove the cotton therefrom.



1,426,589. CLEANSING COMPOUND. RAYMOND MOORE, Bradford, and HARRY MOORE, Hippaholme, England. Filed Nov. 4, 1920. Serial No. 421,727. 1 Claim. (Cl. 87—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A cleansing paste of the kind aforesaid consisting of 2.50 per cent common crystallized soda, 70 per cent fine sand, 2.50 per cent pure sodium carbonate, 2.50 per cent sawdust, and 22.50 per cent of a liquid compound composed of 50.75 per cent water, 1.73 per cent free ammonia, 37.62 per cent mineral oil, 5.46 per cent ammonia soap, and 4.44 per cent glycerin, substantially as set forth.

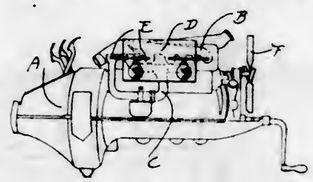
1,426,590. BOILER. DONALD M. NAISMITH, Pittsburgh, Pa. Filed Mar. 14, 1921. Serial No. 452,173. 6 Claims. (Cl. 122—297.)



1. In combination with a horizontal boiler having terminal headers; a water circulation drum for each header and

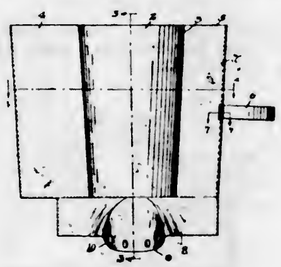
directly connected therewith, and an intervening steam separating drum having a steam receiving connection with

one of said drums and a steam supply connection with the other.



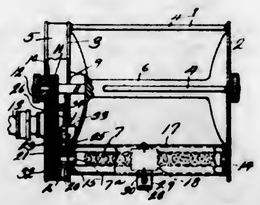
1,426,591. MECHANISM FOR OPERATING DOORS. ALVIN R. NEALE, Adel, Iowa. Filed Nov. 28, 1919. Serial No. 341,283. 3 Claims. (Cl. 268—9.)

1. A door opening device comprising door operating shafts and a manually operated shaft, means for operatively mounting said shafts, a double grooved sheave having a communicating groove on corresponding ends of each of said shafts, a cable for operatively connecting all of said shafts by passing part way around in one of the grooves of each sheave, thence through the communicating groove to the opposite groove, substantially as described and for the purpose stated.



1,426,592. MANIFOLD HEATER. HOLT NICHOLS, Rupert, Idaho. Filed Jan. 25, 1921. Serial No. 439,841. 5 Claims. (Cl. 263—5.)

1. In a manifold heater, the combination, with an internal combustion engine having exhaust and intake manifolds, of a casing enclosing said intake manifold and a portion of the exhaust manifold, auxiliary burners positioned within the casing for heating the intake manifold, a detachable lid for the front of said casing to permit access to the burners, said lid having apertures therein adjacent

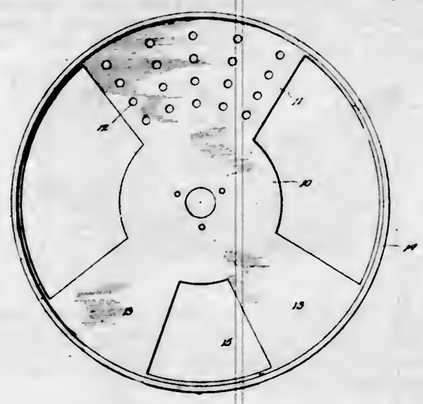


the detachable burners, and adjustable doors mounted upon said lid for regulation of the opening into said casing.

1,426,593. LEGGING. BUELL W. NUTT, Cleveland, Ohio, assignor to The Strong, Kennard and Nutt Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 11, 1919. Serial No. 344,049. 3 Claims. (Cl. 36—2.)

1. A legging comprising a longitudinally slit portion of solid resistant material adapted to fit about the leg of the wearer, a single cloth covering overlying such solid resistant material and extending beyond the slit therein in the form of flaps adapted to fold over each other, a rod secured to the lateral edge of the outer of such flaps, and a spring clip hingedly attached at one end to such rod and adapted to encircle such legging to hold the same in place.

1,426,594. FISHING REEL. GEORGE J. OLTSCH, South Bend, Ind. Filed Sept. 26, 1921. Serial No. 503,364. 11 Claims. (Cl. 242—84.7.)

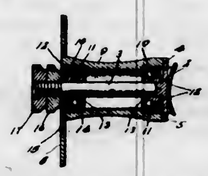


2. The combination with a reel having a simultaneously rotated line carriage shaft and a brake for the reel, of a housing rockably mounted on said line traversing shaft and provided with means whereby when the housing is rocked the brake will be released.

1,426,595. SHUTTER FOR MOTION-PICTURE MACHINES. ARTHUR M. PATUREAU, Beaumont, Tex. Filed Aug. 18, 1921. Serial No. 493,406. 1 Claim. (Cl. 88—19.3.)

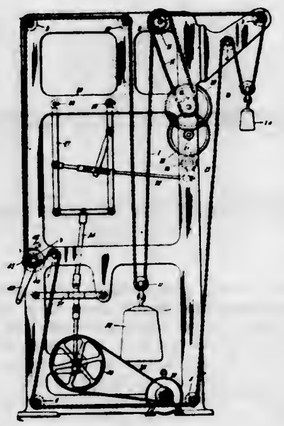
A shutter of the character described consisting of a central circular portion, a blade extending from one side of

said central circular portion and provided with perforations therethrough arranged in rows on radial lines and concentric arcs, equally spaced imperforate blades extending from the central circular portion at opposite sides of a diametric line bisecting the first blade, the spaced im-



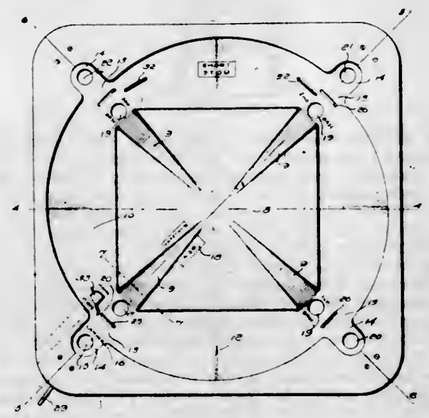
perforate blades being of equal area and being separated by an opening of like area and the first blade being of an area greater than the area of the respectively spaced blades and separated therefrom by spaces of greater area than any of the blades, and a rim connecting the outer edges of all the blades.

1,426,596. SELECTIVE REMOVAL OF ORGANIC MATERIAL FROM LIQUORS. CHARLES LEE PECK, New York, N. Y., assignor to The Dow Company, a Corporation of Delaware. Filed July 1, 1919. Serial No. 308,052. 2 Claims. (Cl. 83—85.)



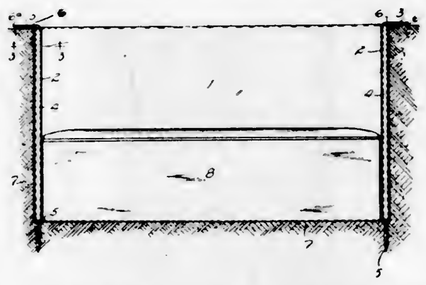
1. The method of effecting the selective separation and recovery of hair from tannery liquors or other liquors containing the same in a mixture with fleshings and the like, which comprises subjecting the liquor to a flotation operation and thereby selectively floating the hair without floating the fleshings and the like and recovering the hair thus floated; substantially as described.

1,426,597. REEL. ROBERT D. PETERS, Knox, Ind. Filed Apr. 3, 1920. Serial No. 371,052. 1 Claim. (Cl. 242—84.5.)



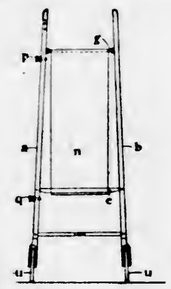
A combined line drying and casting reel, comprising in combination an anchor plate, a disk on one side thereof, a shaft projecting laterally from said disk, a second and relatively large disk having radial arms terminating in divergent fingers, a tubular hub projecting centrally from one side of said second disk, said shaft extending through said hub, ball raceways seated in said hub at the ends thereof, cooperating raceways carried on the shaft, and longitudinally slidable thereon, binding means mounted on the shaft and coacting with said longitudinally slidable raceways, and locking means for said raceway coacting means, also mounted on said shaft.

1,426,598. WEIGHT-MOTOR DEVICE. SALVATORE PICCIOTTO, New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,496. 1 Claim. (Cl. 185—27.)



A weight motor of the class described, comprising a frame support, a driving gear mounted therein, weight means operatively connected to said driving gear to actuate the same, a pendulum swingingly carried by said frame and operatively connected to the driving gear, a driven member, and a pitman connection intermediate the pendulum and the driven member whereby a single rotation of the driving gear will impart double rotation to the driven member.

1,426,599. GAME BOARD. FRED W. POPP and SAMUEL B. CLARK, Vallejo, Calif. Filed Mar. 10, 1921. Serial No. 451,226. 6 Claims. (Cl. 46—61.)

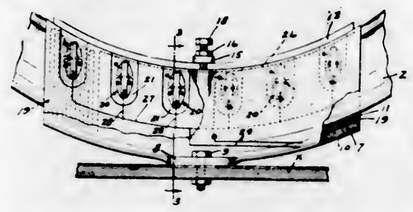


1. A base ball game board comprising a substantially rectangular portion formed of a plurality of inclined surfaces and a surrounding portion formed of a plurality of inclined surfaces, said board being provided with a pair of openings arranged adjacent each corner of the rectangular portion, the spaces between said pairs of openings being level to permit a sphere to remain thereon in a state of rest, and propelling devices adapted to simultaneously engage spheres located on said level portions.

1,426,600. GRAVE LINING. ANNA LOUISA RHEDANS and ANDULO MARIE HITZERT, St. Louis, Mo. Filed Feb. 9, 1922. Serial No. 535,188. 4 Claims. (Cl. 27—29.)

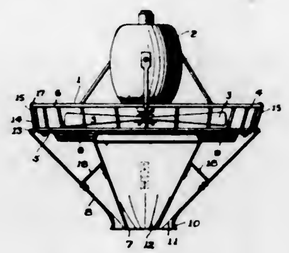
1. A grave lining, comprising a rectangular hollow body, and finishing-flaps at the upper sides and ends of said body adapted to be folded outwardly and cover the the earth adjacent the mouth of the grave; in combination with vertical rod-pockets at the corners of said hollow body, and holding and stretching rods adapted to be placed in said pockets and have their lower ends driven into the earth at the bottom of the grave.

1,426,601. COLLAPSIBLE CARRIAGE. CHARLES VICTOR RICHARDSON, Saffron Walden, England. Filed July 7, 1919. Serial No. 309,122. 7 Claims. (Cl. 280—36.)



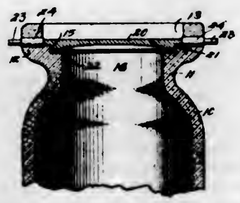
1. A collapsible carriage, comprising two oppositely disposed longitudinal frame members having a wheel at the respective lower ends and having their respective upper ends adapted to serve as handles, the said frame members having cavities on their oppositely disposed sides adapted on the said frames being brought together into coincidence to form a complete enclosure, transversely disposed bars adapted for connection to and between said longitudinal frame members in determined positions for maintaining the said frame members spaced apart for use and for the reception of the upper and lower ends of a flexible seat respectively, and means on the said longitudinal frame members for the connection of the said bars and for permitting of their withdrawal into and their disposition within the said cavities with the flexible seat rolled around one of the said bars, substantially as described.

1,426,602. PROCESS FOR OBTAINING VOLATILIZABLE METAL OXIDES. FREDERICK DUNCAN STRUAN ROBERTSON, Toronto, Ontario, Canada. Filed Dec. 16, 1918. Serial No. 266,984. 13 Claims. (Cl. 23—13.)



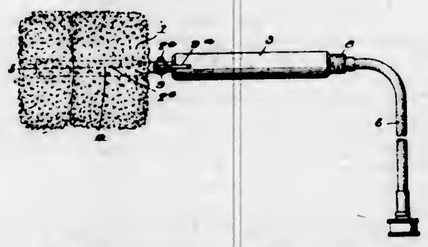
1. The process of obtaining volatilizable metal oxide from a substance capable of delivering the same, which comprises circulating a gaseous fluid in a circuit, heating to a sufficiently high temperature at one point in said circuit and in operative contact with said fluid a substance capable of delivering volatilizable metal oxide, and allowing such metal oxide to be deposited from said fluid at another point in said circuit.

1,426,603. ELECTRIC VULCANIZER. EVEN J. ROHNE, Minneapolis, Minn., assignor of one-half to Ole Kr. Boe, Minneapolis, Minn. Filed Nov. 21, 1919. Serial No. 339,668. 9 Claims. (Cl. 219—19.)



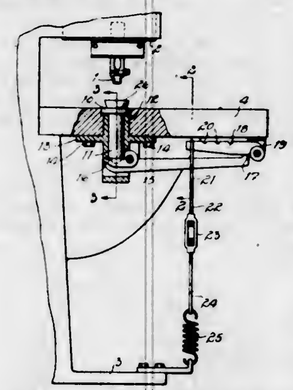
1. An electric vulcanizer including two circuit leads, a series of independent heating elements connected to one of said leads, and a corresponding series of normally closed thermostats independently connecting the several heating elements to the other of said leads.

1,426,604. ELECTRIC HEATER. HERMAN E. ROYS, New York, N. Y., assignor to Universal Interests, Inc., a Corporation of Delaware. Filed Oct. 1, 1920. Serial No. 413,994. 6 Claims. (Cl. 219—42.)



1. An air deflector for use with an electric fan, comprising means for attaching the same to the fan, and air guiding means for receiving the air from the fan, said guiding means having toward its outer end a converging cross sectional area, whereby the velocity of the air current delivered increases toward the point of emergence, and a heating unit positioned in the guiding means in the portion of greater cross sectional area, substantially as described.

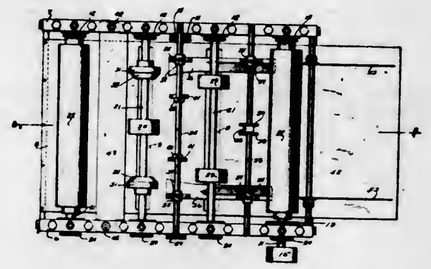
1,426,605. JAR-CLOSURE DEVICE. HARRY RUBINSON, Des Moines, Iowa. Filed Apr. 3, 1922. Serial No. 549,110. 3 Claims. (Cl. 215—31.)



1. In combination with a jar having a pair of oppositely spaced openings substantially the shape of an inverted T and a cover member for the jar having a circular body portion, a pair of oppositely spaced arms extended outwardly from said body portion of the cover member, said arms being designed to be received in said inverted T-shaped openings and to have a portion projected beyond the side of the jar for permitting them to be engaged for rotating the cover member for the purposes stated.

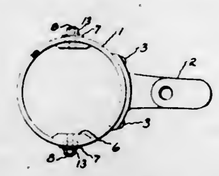
1,426,606. WASHING APPLIANCE. OSCAR NELSON SANDHOLM, Denver, Colo., assignor to The Never Scratch Auto Washer Company, Denver, Colo., a Corporation of Colorado. Filed June 16, 1921. Serial No. 478,047. 6 Claims. (Cl. 15—130.)

1. A washing appliance comprising a relatively stiff tube having a series of perforations therethrough, a relatively soft cleaner member mounted on said tube and covering the end thereof and said series of perforations, and fastening means engaging said cleaner member and passing through said perforations of said tube and securing said cleaner member on said tube.



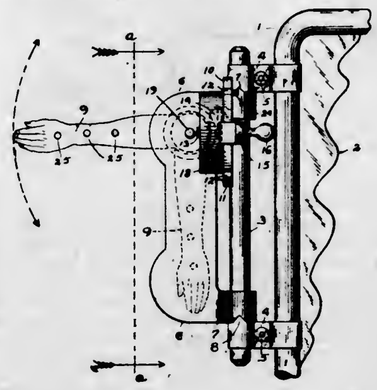
1,426,607. PRESS. OSWALD SCHLAUPITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 25, 1922. Serial No. 539,088. 6 Claims. (Cl. 101—3.)

1. In a press of the kind set forth, a seat for the work, a lever that has one arm formed into a support for said seat, a second lever disposed above the outer end of said first lever and engaged thereby means comprising a spring for depressing the end of said second lever, thereby holding said seat in its uppermost position, and means for adjusting the pull of said spring on said lever.



1,426,608. BOX-BLANK MACHINE. JACOB B. SCHMIDT, Milwaukee, Wis. Filed Jan. 17, 1921. Serial No. 437,835. 6 Claims. (Cl. 93—49.)

1. In a machine of the class described, fold forming means comprising a plate, means for feeding a blank past said plate with its adjacent edge portion engaging the same, a shoulder portion formed on said plate to fold the adjacent portion of the blank as it is fed past the



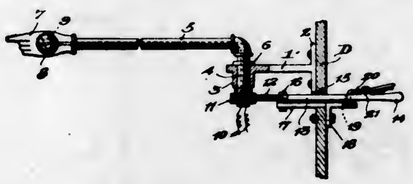
plate, and means comprising a substantially rigid transverse bar coacting with said plate to crease the blank at the fold.

1,426,609. ADJUSTABLE INTERRUPTER CAM. WOLFGANG E. SCHWARZMANN, Longmeadow, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Jan. 11, 1921. Serial No. 436,625. 4 Claims. (Cl. 200—30.)

2. In a timing mechanism for magnetos, the combination of a cam ring having a timing arm secured thereto, interrupter cams, said ring having elongated apertures, and securing means passing through and adjustable along said apertures for securing said cams in adjusted position.

1,426,610. AUTOMOBILE SIGNAL. YAICHIRO SHIBA, San Jose, Calif. Filed Feb. 24, 1920. Serial No. 360,948. 4 Claims. (Cl. 116—54.)

1. An automobile signal device, comprising, in combination, a bracket adjustably mounted upon the wind shield

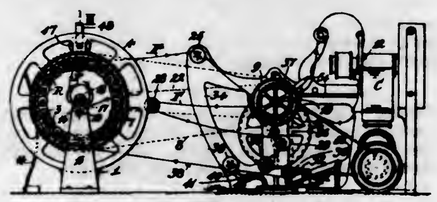


rail of the automobile, an arm pivotally connected to said bracket and adapted to swing upward and outward therefrom, means for operating said arm, consisting of a plate projecting from said bracket, intermeshing pinions secured upon said arm and plate, a lever connected to one of said pinions adapted to move said arm, means on said lever engaging said plate and adapted to retain said arm in a predeterminate position.

1,426,611. GARMENT CLASP. CURTIS A. SQUIRES, Lyndonville, Vt. Filed Mar. 31, 1921. Serial No. 457,190. 5 Claims. (Cl. 24—246.)

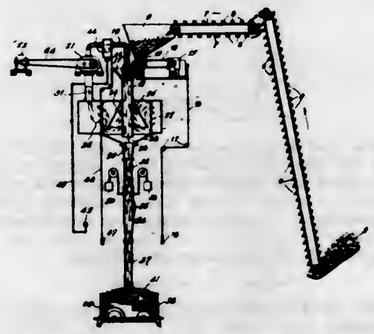
5. A clasp comprising a member having a shank having one end portion bent back upon itself to overlap another portion, the said overlapped portion being provided with spaced pivot bearings closed by the said end portion of the shank, and an attaching bail pivotally engaged in one of said pivot bearings, and a member comprising spaced arms and a portion connecting the arms and pivotally engaged with the other pivot bearing, the said shank having its other end portion turned back upon itself and provided with an opening, the said arms being normally spread apart at their free ends a distance greater than the width of the opening and being resilient, and the said arms at their said ends having gripping portions directed at an angle thereto and in the direction of the said shank and engageable through the opening when the arms are sprung toward each other.

1,426,612. AUTOMOBILE SIGNAL. ARTHUR ST. JEAN and ISAIE LAFLEUR, New Bedford, Mass. Filed May 4, 1922. Serial No. 558,432. 5 Claims. (Cl. 116—48.)



1. In an automobile signal, in combination with the automobile dashboard having a slot therein, a bracket above the slot secured to the front of the dashboard and having a vertical bearing, a hollow L-shaped arm having an indicator on its front end and having its opposite end journaled in the bearing, means to illuminate the indicator including wires extending through the arm and below the bracket, a second bracket secured to the dashboard and having a body extending through the dashboard slot, a pinion below the bearing secured to the said opposite end of the arm, a lever extending through the dashboard slot and pivoted to the front end of the body of the second bracket and meshed with said pinion, the rear end of the body of the second bracket having a series of spaced openings, and a latch on the rear end of the lever engageable in a selected one of the openings of the body of the second bracket.

1,426,613. SPRING SHIELD AND OILING DEVICE. GERHARD STOCKER, Minneapolis, Minn. Filed Aug. 29, 1921. Serial No. 496,359. 6 Claims. (Cl. 267—37.)

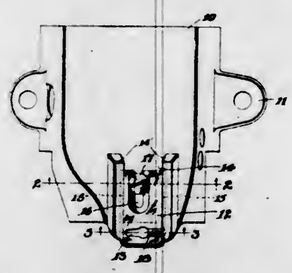


3. A device of the kind described comprising a casing applicable to a spring, an oil reservoir in the top of the casing, a plurality of transversely extended loops in the casing on the bottom of the reservoir, and wicks intermediately held by the loops and arranged to be held folded transversely aroung a spring by the casing, said reservoir having oil holes, certain of which are arranged over the loops and certain other of which are between said loops.

1,426,614. CINEMATOGRAPH MACHINE. ISAAC SUTHERLAND, Melbourne, Victoria, Australia. Filed May 14, 1920. Serial No. 381,429. 10 Claims. (Cl. 242—70.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. In a motion picture machine, using a film as picture carrier, the combination of a plurality of rollers on which the coiled film is supported and having their axes uniformly spaced on a circle, and a positively driven device contacting all of said rollers and adapted to rotate said rollers about their axes.

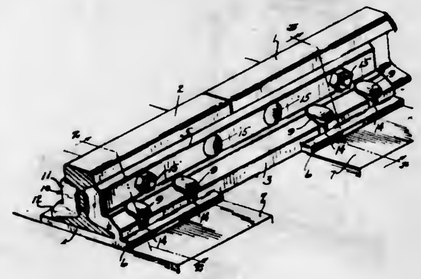
1,426,615. METHOD OF AND APPARATUS FOR RAMMING SAND INTO MOLDS. WILLIAM S. SUTTON, Rockford, Ill. Filed Feb. 21, 1921. Serial No. 446,708. 14 Claims. (Cl. 22—36.)



1. The herein described method which consists in flowing a stream of mingled pressure fluid and material through a conduit, positively withdrawing pressure fluid from the stream before it discharges from the conduit, and permitting the material free from pressure fluid to flow by momentum through the conduit and discharge therefrom.

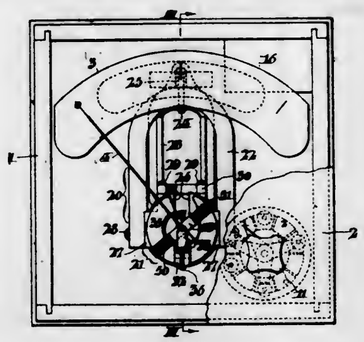
1,426,616. TRAVELING-SCREEN NOZZLE. MARTIN SWINTEK, Eddyville, Iowa. Filed Apr. 4, 1921. Serial No. 458,581. 4 Claims. (Cl. 37—36.)

1. In an apparatus of the class described, a nozzle head comprising a base member formed with an opening, a nozzle secured to and extending forwardly from said base member and communicating with said opening, and spaced parallel arcuate track members rigidly secured at their ends to upper and lower corners of said base member and having their curved portions secured to opposite sides of the forward end of said nozzle, said track members being adapted to support and guide a flexible screen in travel around the mouth of said nozzle.



1,426,617. SEWING MACHINE. WILLIAM E. TURNER, Tacoma, Wash. Filed Apr. 18, 1921. Serial No. 462,182. 6 Claims. (Cl. 112—45.)

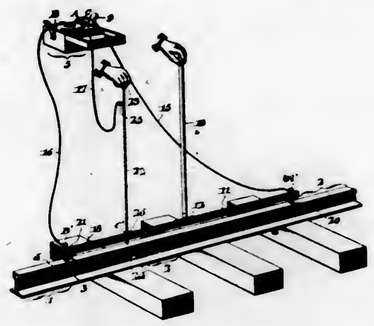
1. In combination, a needle plate cap, a needle plate on said cap, a removable cutter on said needle plate and a single means serving both to hold said needle plate against movement on said cap and to lock said cutter in position on the needle plate.



1,426,618. RAIL JOINT. JOHN A. TWEIT, Appleton, Minn. Filed Jan. 31, 1921. Serial No. 441,247. 1 Claim. (Cl. 238—195.)

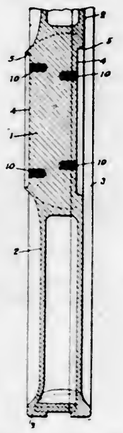
A rail joint structure having in combination a member having a plate portion upon which the rails are adapted to rest, said plate portion extending transversely beneath the rails and beyond the edge of the same, said member also comprising a portion extending over and contacting the top surface of the rail flanges and extending upwardly and contacting with the underpart of the rail heads, and provided with an intermediate longitudinally extending horisontal ledge, said member having spaced holes therethrough adapted to receive securing spikes, the heads of which are adapted to contact said ledge, a second member extending along the opposite side of the rails having a portion contacting with the top of the rail flanges and the underside of the rail heads and extending along the side of the rail flanges into proximity to said plate portion and also having an intermediate longitudinally extending ledge, said portion having openings in its outer edge adapted to receive securing spikes

the heads of which are adapted to contact with said ledge and said plate portion having apertures therethrough disposed in alignment with said openings through which said securing spikes also pass.



1,426,619. ELECTRICAL MEASURING INSTRUMENT. CHARLES E. VAWTER, Philadelphia, Pa. Filed July 30, 1919. Serial No. 314,273. 15 Claims. (Cl. 171—95.)

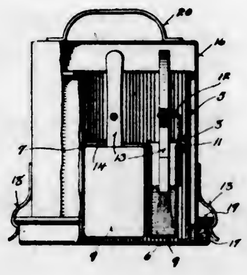
1. In an instrument of the class described, means for producing a magnetic field, a pair of rigidly united coils movable in said field, one of said coils being adapted to be connected in circuit with a resistance to be measured, a pointer secured to said coils, a scale with which said pointer co-operates, means for producing a predetermined distribution of the magnetic field, and means for adjusting the intensity of the magnetic flux along the path of movement of said coils, after the parts are assembled, whereby the instrument may be properly calibrated.



15. In an instrument of the class described, the combination with a magnet having curved pole pieces with their upper surfaces lying in a common horizontal plane, of an annular core having a gap, and conforming substantially to the curvature of said pole pieces, said core bridging the space between said pole pieces and serving to conduct the magnetic flux from one to the other, but itself being spaced from said pole pieces and disposed above the same in overlapping relation, and a coil surrounding said core and mounted to swing about an axis concentric therewith.

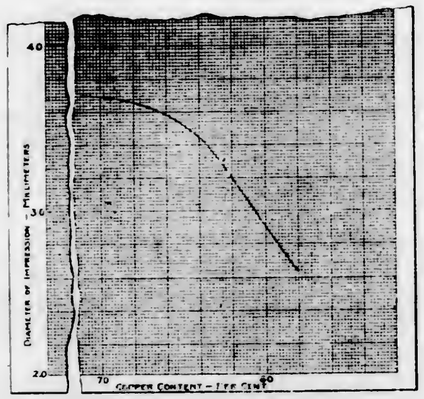
1,426,620. RAIL-BOND TESTER. CHARLES E. VAWTER, Philadelphia, Pa. Filed Oct. 10, 1919, Serial No. 329,743. Renewed July 10, 1922. Serial No. 573,920. 3 Claims. (Cl. 175—183.)

3. A rail-bond testing device comprising a bar with suitably spaced file edge contacts for engaging the rail, an additional electrical contact member vertically movable and manually adjustable for engagement with the rail, and means carried by said bar for locating and guiding said additional manually movable contact member in definite position relatively to said file edge contacts.



1,426,621. PATTERN FOR CAST-STEEL WHEELS. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 8, 1920. Serial No. 363,941. 5 Claims. (Cl. 22—158.)

1. In a composite pattern for a cast steel wheel, the combination of a master pattern, consisting of spokes, a rim and a hub body, a circular depression having an outwardly inclined edge formed in the master hub body, a detachable hub extension having beveled bases adapted to fit the depression in the master hub body, and means to secure said parts together.

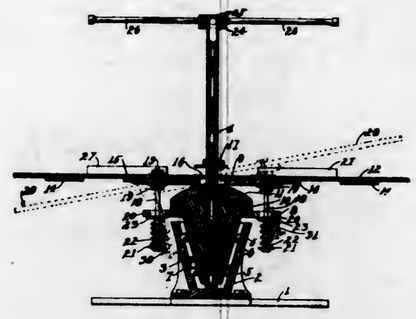


1,426,622. VARNISH-BRUSH CONTAINER. JAMES W. WARD, North Fond du Lac, Wis. Filed July 26, 1921. Serial No. 487,816. 5 Claims. (Cl. 91—63.)

1. In a device of the character described, a container having a supporting rail extending along its inner wall, a brush receptacle adapted to contain varnish, and having a hook secured thereto, in a position to engage said rail and

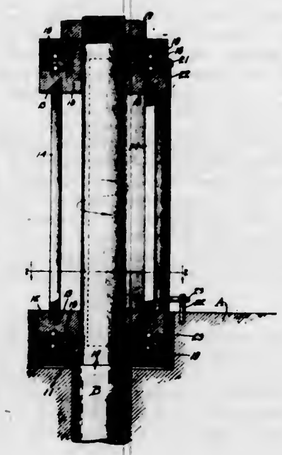
suspending the receptacle above the bottom of the container, a closure for said container, and a water seal for said closure.

1,426,623. METHOD OF MAKING BRASS AND SIMILAR ALLOYS. WILLIAM R. WEBSTER, Bridgeport, Conn. Filed Mar. 31, 1920. Serial No. 370,221. 25 Claims. (Cl. 75—1.)



1. The method of making brass from scrap, which comprises a determination of a value of a physical characteristic of each of a plurality of samples of brass having varying known proportions of copper and zinc, determining a comparable value of the same physical characteristic of a sample of brass drawn from a molten furnace charge containing scrap brass, comparing those values to determine the composition of the last mentioned sample, and then adding to the charge of metal in the furnace sufficient copper or zinc to bring the mixture to the composition desired.

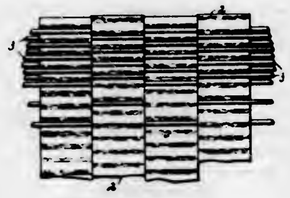
1,426,624. AMUSEMENT DEVICE. WINFIELD WILLIAMS, San Jose, Calif., assignor, by direct and mesne assignments, to J. F. Patterson and Hortense Bean, a Copartnership operating as Patterson-Williams Mfg. Co., San Jose, Calif. Filed June 30, 1920. Serial No. 393,010. 8 Claims. (Cl. 46—27.)



1. A device of the character indicated comprising a support, a member revolubly mounted on said support and presenting a convex upper surface, a member supported

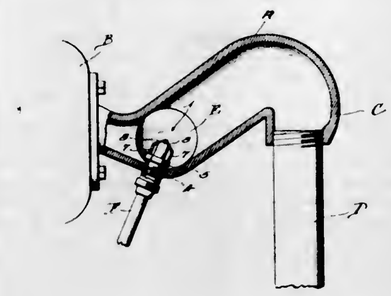
on said convex surface, a plurality of elements rigidly secured to one of said members and passing through the

other member, and a resilient connection between each of said elements and said last mentioned member.



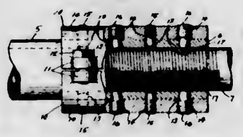
1,426,625. GUARD FOR WOODWORKING MACHINES. CHARLES YOUNG, Indianapolis, Ind. Filed May 2, 1919. Serial No. 294,201. 3 Claims. (Cl. 144—251.)

1. In combination, a work table, a vertical shaft, a cutter head on the shaft having blades extending down to the level of the table, a segmental guard for the blades extending over their entire length, said guard being adapted to be moved out of protecting position by frictional engagement of the work, and movable into protecting position by the rotation of the shaft, substantially as set forth.



1,426,626. FABRICATED COVERING FOR AEROPLANES. OSMOND THERON BELCHER, Los Angeles, Calif., assignor to Belcher Aerial Manufacturing Company, a Corporation of California. Filed July 19, 1921. Serial No. 485,938. 4 Claims. (Cl. 244—31.)

1. In a covering for aeroplanes and the like comprising two sheets of fabricated material having a corrugated filler glued between of the two fabric sheets forming the outside walls of the covering and a corrugated filler formed of narrow strips of a proper material inserted be-

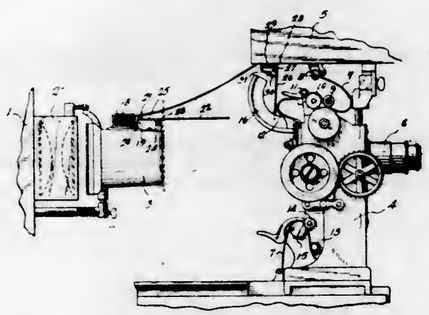


tween the two sheets with the ridges of some of the strips of corrugated filler in line with the grooves of other strips of the filler.

1,426,627. TRACK-SANDING DEVICE. TIMOTHY JOSEPH BURRELL, El Paso, Tex. Filed June 16, 1921. Serial No. 478,080. 5 Claims. (Cl. 291—13.)

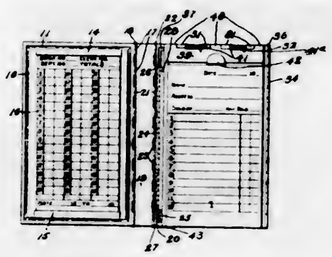
1. A fluid nozzle for disposition in the conduit of a track sanding device comprising a longitudinally bored body, and an exteriorly disposed valve normally closing the upper end of said bore to prevent the entrance of sand, said valve being opened by the pressure of the fluid exerted against it.

1,426,628. COUPLING. PETER DENISON, Racine, Wis. Filed Oct. 8, 1919. Serial No. 329,290. 4 Claims. (Cl. 287—111.)



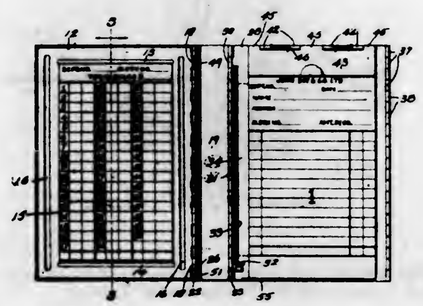
1. A coupling for securing the end of one shaft in the adjacent end of a tubular shaft comprising a sleeve member mounted on the end of the tubular shaft, and locking members carried by the sleeve member and extending radially through the tubular shaft and impinging against the side of the other shaft.

1,426,629. CATALYZER FOR HYDROGENATION AND THE PREPARATION THEREOF. CARLETON ELLIS, Montclair, N. J. Filed Dec. 23, 1913. Serial No. 808,461. Renewed Feb. 13, 1919. Serial No. 276,869. 8 Claims. (Cl. 29—28.)



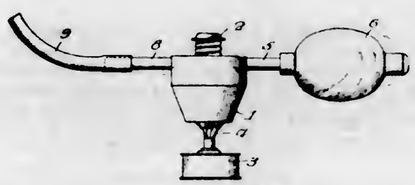
1. A process which comprises co-precipitating a nickel compound capable of being converted into a catalyst, and an insoluble sulfate capable of acting as an accelerator.

1,426,630. AUTOMATIC SAFETY SHUTTER FOR CINEMATOGRAPH MACHINES. JOSEPH J. GSCHWENDER, Dayton, Ohio. Filed July 18, 1917. Serial No. 181,212. 6 Claims. (Cl. 88—17.)



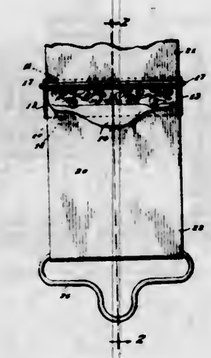
1. A cinematographic projecting machine, embodying a light box, an illuminating element therein, an interrupting element for the illuminating rays mounted on the light box, and film feeding means spaced away from the light box and interrupting element adapted to maintain a surplus bight of film at the supply side of the projecting position, characterized by a free swinging gravity-controlled pendulum like element suspended beyond the normal limits of said bight of surplus film and adapted to be oscillated by the abnormal distention of the bight to effect the operation of said interrupting element.

1,426,631. SALES-BOOK COVER. FREDERICK HACHMANN, St. Louis, Mo., assignor to William H. Gregg, St. Louis, Mo. Filed Jan. 29, 1921. Serial No. 440,914. 3 Claims. (Cl. 129—1.)



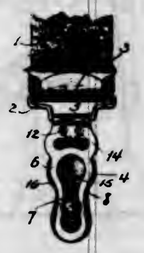
1. A sales book cover, comprising three metal sections hinged together, integral flanges formed on one section for securing in place a card for indicating each sale, a clamping means secured to one of the sections by means of which the sales record may be secured in place and removed, and the remaining section being provided with a spring clamping member for holding the sales slips in place.

1,426,632. SALES-BOOK COVER. FREDERICK HACHMANN, St. Louis, Mo., assignor to William H. Gregg, St. Louis, Mo. Filed Feb. 14, 1921. Serial No. 444,911. 2 Claims. (Cl. 129—1.)



1. A sales book cover, comprising a front cover stamped from sheet metal and provided on its outer face with longitudinal ribs, a series of tongues bent into eyes formed along one margin of said front cover, an internally projecting sheet holding flange formed near the upper and lower edges of said front cover, a back having a series of tongues bent into eyes along its opposite margins and a series of eyes formed intermediate of said first mentioned eyes, an all-metal intermediate section pivotally secured to said back, a back cover formed of metal provided on its outer face with a series of projecting ribs and provided with a series of eyes on its opposite margins and pivotally secured to said back, an integral strip bent at right angles to said back cover and having formed on one end thereof a hook, a flexible strip secured to said first mentioned strip and provided with a free end adapted to be engaged with said hook, an intermediate section hinged to the back cover and adapted to be folded inwardly, and a spring clamp pivotally secured to the second mentioned intermediate section.

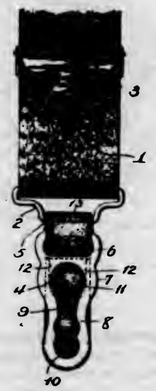
1,426,633. PROCESS FOR APPLYING IODINE TO DISEASED AND INJURED PORTIONS OF THE BODY. HENRY C. HARDING, Chicago, Ill., assignor of one-half to Madison B. Rutherford, Chicago, Ill. Filed Dec. 13, 1918, Serial No. 266,553. Renewed Jan. 14, 1922. Serial No. 529,370. 3 Claims. (Cl. 128—184.)



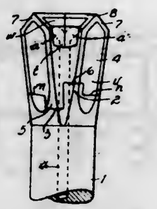
1. The process of applying iodine to diseased or injured parts of the body which consists in taking the iodine in a solid form, converting it into a fume, and while in this form mixing it with a current of air and forcing the mixed air and iodine fume against the surface to be treated so that the iodine is condensed thereon.

1,426,634. RUSTLESS BUCKLE. MICHAEL HAWIE, Bridgeport, Conn. Filed Nov. 12, 1921. Serial No. 514,633. 4 Claims. (Cl. 24—184.)

1. A rustless buckle comprising a sheet metal frame-member and a lever-member, said frame member including a back having forwardly projected ears and a series of spaced apart teeth struck up from said back intermediate its top and bottom edges and extending upwardly and forwardly, the lever-member being pivoted in the ears of the frame and including an operating arm and a clamping arm arranged at an angle thereto and having a series of teeth arranged alternately with respect to the teeth of the frame and adapted in the operation of the lever to pass between and clear of the teeth of the said frame-member.



1,426,635. HOSE SUPPORTER. MICHAEL HAWIE, Bridgeport, Conn. Filed Apr. 14, 1922. Serial No. 552,693. 2 Claims. (Cl. 24—245.)

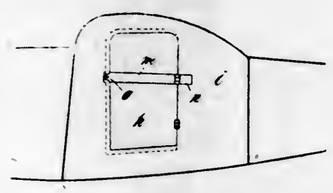


1. In a hose supporter, the combination of a loop member and a soft rubber clasp member secured directly thereto, said clasp member provided near its free end with two headed rubber studs integral therewith and integral with each other, the intermediate portion of said soft rubber clasp having reduced thickness and having integral reinforcing edge portions adjacent thereto.

1,426,636. HOSE SUPPORTER. MICHAEL HAWIE, Bridgeport, Conn. Filed June 22, 1922. Serial No. 570,076. 5 Claims. (Cl. 24—245.)

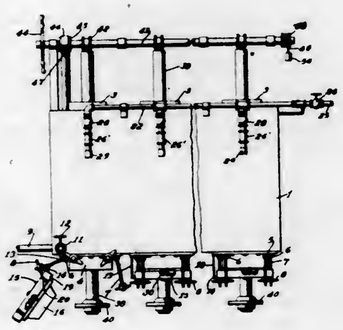
1. Attaching means for a hose supporter comprising a rigid loop member and a flexible clasp member cooperable therewith, said clasp member provided with an imperforate part having interlocking connection at its upper portion with the upper portion of the loop or frame member.

1,426,637. DRILL. ARTHUR L. HAWKESWORTH, Butte, Mont. Filed Nov. 21, 1921. Serial No. 516,782. 7 Claims. (Cl. 255—64.)



6. A drill bit provided with cutting legs terminating at their outer ends in cutting surfaces having circumferentially extending wings the peripheral surfaces of said legs being recessed.

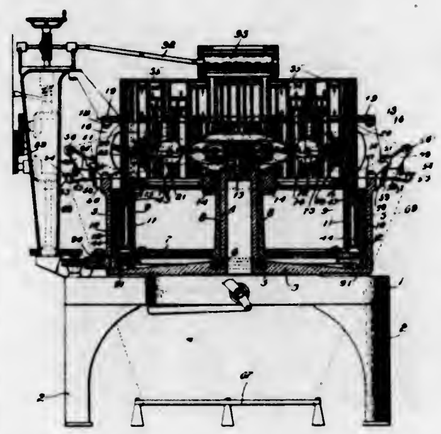
1,426,638. PROCESS FOR THE SOFTENING OF WATER. GEORGE GRANT HEPBURN, Chorlton-Cum-Hardy, Manchester, England. Filed Aug. 17, 1921. Serial No. 493,112. 3 Claims. (Cl. 210—23.)



2. The process of softening water which consists in treating peat with a solution of alkali salt such as caustic soda or potash for removing the soluble constituents thereof and for transforming any free humic or ulmic acid substances such as lime and magnesia salts of such substances into their alkali salts, then filtering the water to be softened through the peat mass containing the insoluble or difficultly soluble salts of the alkali metals with humic or ulmic acid substances whereby insoluble salts of the metals of the alkali earths causing the hardness of the water with the said humic or ulmic substances, are formed and remain in the filtering mass, then re-converting the said salts by a regenerative process into the insoluble or difficultly soluble salts of the alkali metals for re-use.

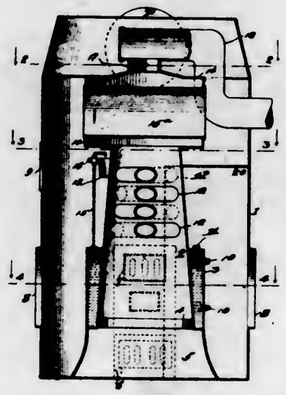
1,426,639. FLYING MACHINE. KURT HERRMANN, Leipsig, Germany. Filed Mar. 27, 1920. Serial No. 369,374. 5 Claims. (Cl. 244—30.)

3. In flying machines, a hull construction comprising in combination, an interrupted upper beam, an entrance door frame extending upwardly through the upper beam, and a bolt connecting the two ends of the upper beams, substantially as described.



1,426,640. ICE-MAKING APPARATUS. MARTIN B. HILL, Houston, Tex., assignor of forty-five per cent to J. J. Sullivan, Houston, Tex. Filed Feb. 21, 1922. Serial No. 538,274. 9 Claims. (Cl. 62—167.)

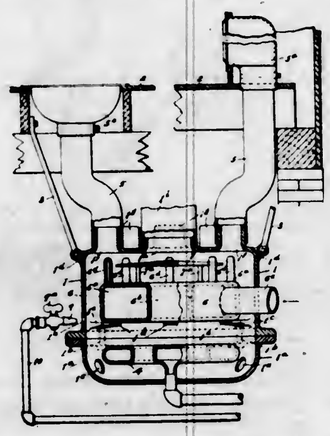
1. Apparatus of the class described including a tank, a can therein and opening downwardly through the bottom thereof, a closure for the bottom of the can, and means for heating the closure.



1,426,641. CIRCULAR LOOM. JAMES HIRST, Melrose, Mass., assignor, by mesne assignments, to Tubular Woven Fabric Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed July 17, 1918. Serial No. 245,362. 10 Claims. (Cl. 139—7.)

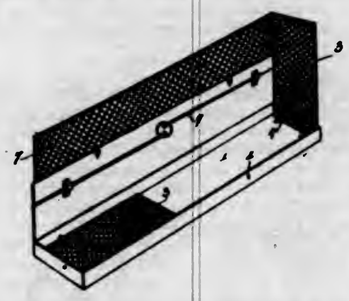
1. A circular loom including a base, brackets mounted upon said base and spaced apart in circular arrangement about a common center, shuttle driving shafts and pinions mounted upon said brackets, heddle guides mounted between the brackets in a position substantially tangent to the outer sides of the pinions, a plurality of heddles mounted to reciprocate in each of said guides, and driving cams directly engaged with said heddles formed to reciprocate

oppositely to one another the heddles which guide adjacent warp threads.



1,426,642. TUBULAR HOT-AIR FURNACE. ROBERT HITCHEN, Kewanee, Ill. Filed Jan. 31, 1922. Serial No. 533,074. 2 Claims. (Cl. 126—101.)

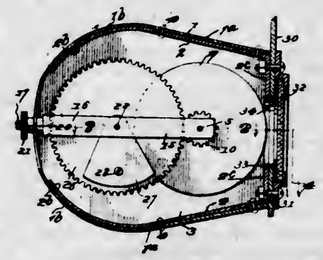
1. In an apparatus of the class described, the combination of a furnace casing provided with inlets and an outlet, a fire-box in said casing, a water jacket formed upon said fire-box, a humidifier receptacle secured to the side of the fire-box, a pipe fastened at its lower end to the water jacket and overhanging at its upper end said humidifier receptacle, said pipe provided with a valve contiguous to one of the inlets of the furnace casing, a smoke pipe, and means connecting said smoke pipe to said fire-box.



1,426,643. HEATING SYSTEM. THEODORE A. HOLMBERG, Stamford, Conn. Filed Apr. 7, 1922. Serial No. 550,292. 7 Claims. (Cl. 126—116.)

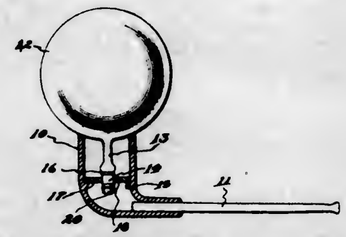
1. In a heating system, a flame enclosing generator provided with heat distributing pipes and subjacent air inlet passages, an air pressure distributing head provided with nozzles adapted to discharge air into and through said heat distributing pipes, and a burner in said casing below said air distributing head whereby the said head

is heated and the products of combustion are carried through said heat distributing pipes with the air discharged by said head and nozzles.



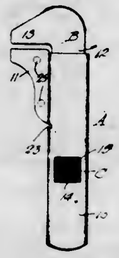
1,426,644. COLLAPSIBLE LUGGAGE CARRIER. CHARLES H. HOFF, Jr., Milwaukee, Wis. Filed Nov. 22, 1920. Serial No. 425,721. 2 Claims. (Cl. 224—29.)

1. In a luggage carrier, end walls adapted to be disposed substantially vertically in open position or folded substantially horizontally, a longitudinally hinged two-part side wall, the upper portion thereof being foldable against the lower portion, the two portions being foldable into substantially horizontal position over the horizontally disposed and folded end walls, said side and end walls terminating on the same horizontal plane, and means for holding the end walls and the two-parts of the side wall in vertical open position for the reception of luggage.



1,426,645. INCLINOMETER. HARRY C. HORNBECK, San Bernardino, Calif. Filed June 16, 1920. Serial No. 389,528. 5 Claims. (Cl. 33—220.)

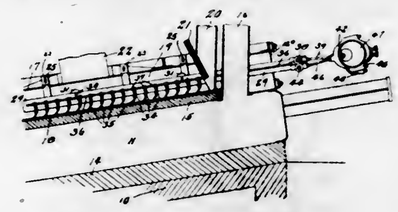
1. In a grade indicator, a casing adapted to be fastened on a vehicle and having an opening provided with a transparent covering, an indicator cylinder mounted to oscillate in the casing and provided with a plurality of radial baffles and liquid partially filling the cylinder to damp the oscillation of the cylinder, means for supporting said cylinder, a cradle mounted upon the supporting means, a gravity actuated gear mounted on the cradle and having operative connections with the cylinder,



whereby the gear may seek a stable position with regard to its center of gravity, so that the cylinder may indicate the angle of inclination of the grade.

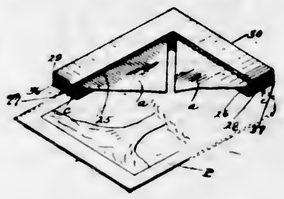
1,426,646. TOY. GEORGE W. HUGHEY, Springfield, Mo., assignor of one-half to Joseph O. Howard, Evanston, Ill. Filed Oct. 20, 1919. Serial No. 331,935. Renewed Jan. 11, 1922. Serial No. 528,564. 1 Claim. (Cl. 46—37.)

In combination, a pipe comprising a bowl and a stem, an internal annular shoulder formed in the bowl of the pipe a slight distance above the lower end thereof, a disk reposing upon said shoulder and having a central opening, a tubular member passed through said opening and frictionally held therein with its terminals disposed above and below the disk, said tubular member being open at both ends, that portion of the member arranged above the disk being formed with an annular groove, a balloon having a neck portion received by said groove and adapted to be inflated by blowing through the stem of the pipe, and a strip extending across the lower end of the member to produce a whistling sound when the balloon is deflated.



1,426,647. WRENCH. GEORGE D. ILLIG, Depew, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Aug. 6, 1921. Serial No. 490,320. 2 Claims. (Cl. 81—167.)

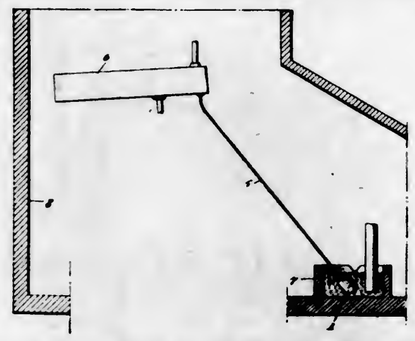
1. In a wrench, the combination of a body portion having a fixed inner jaw formed integral with a hollow



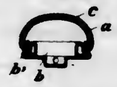
handle, said body portion being made of a sheet metal blank, the longitudinal middle portion of which forms the rear edge of said body portion and the portions of said blank adjacent to said middle portion forming the sides of the body portion, and the side edges of said blank having parts which are bent at substantially right angles to said side portions and are adapted to abut at approximately the middle of the front edge of said body portion, a movable outer jaw member stamped from a sheet of metal of approximately twice the thickness of the blank from which said body portion is made, and having a shank portion arranged in said hollow handle to guide the movement of said movable jaw, and a threaded stem, said shank portion, said stem and said movable outer jaw being of the same thickness, and a nut engaging said threaded stem for adjusting said movable jaw relatively to said fixed jaw.

1,426,648. MATERIAL-FEEDING MECHANISM. GEORGE MCD. JOHNS, St. Louis, Mo., assignor, by mesne assignments, to The Industrial Process Engineering Company, a Corporation of Delaware. Filed Dec. 6, 1920. Serial No. 428,592. 9 Claims. (Cl. 196—19.)

8. A retort feeding mechanism including a carriage reciprocatorily movable in the retort and a series of spaced material feeding members swingably carried by the carriage, in combination with means for adjustably regulating the swingable throw of the feeding members relatively to the floor of the retort and for holding said members in normal feeding position on the forward travel of the carriage.



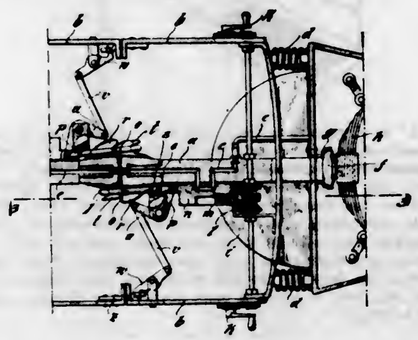
1,426,649. COMBINATION FOLDER AND PICTURE FRAME. DARWIN S. KASE, Los Angeles, Calif. Filed July 7, 1920. Serial No. 394,502. 8 Claims. (Cl. 40—154.)



1. A combined folder and picture frame, comprising a blank having a central portion provided with intersecting indications as to cutting the same to form flaps, said blank likewise being provided with a frame portion between which and such flaps a picture may be retained, the flaps permitting the insertion of the picture in place.

1,426,650. SAFETY BLOW-OUT. DAVID FORBES KEITH, Toronto, Ontario, Canada. Filed Mar. 25, 1921. Serial No. 455,542. 2 Claims. (Cl. 220—89.)

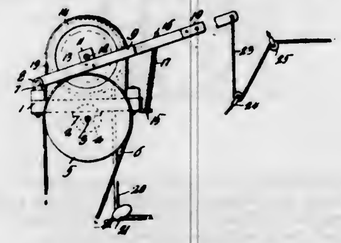
1. The combination of a mercury-valve trap forming part of a pressure-containing system, a repression for holding water, a chamber having a wall of predetermined thinness to be submerged in said water, and a tube affording communication between said chamber and said trap.



1,426,651. BUTTON. ERNST KLEINMANN, Berlin, Germany. Filed July 29, 1921. Serial No. 488,387. 8 Claims. (Cl. 24—113.)

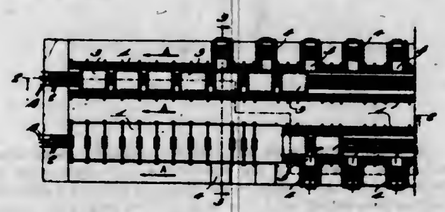
1. A button comprising, an upper portion, a pliable covering on the upper portion, and a base portion with a member projecting into a cavity of the upper portion and having a turned-back end that engages with the upper portion and is adapted to form a connection therewith.

1,426,652. CAR COUPLING. GUSTAV KRUM, Duisburg-Beeck, Germany. Filed July 8, 1920. Serial No. 394,846. 3 Claims. (Cl. 213—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



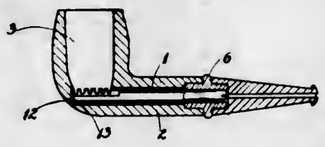
1. In a car coupling of the character set forth, in combination with the end of a car, a draw bar articulated to the car end, a slide member adapted for longitudinal displacement on said draw bar, means manually operable from the sides of the car for displacing said slide member relative to said draw bar, a coupling link pivoted to said slide member, means for causing lateral turning-out of said link about its pivot on relative forward displacement of said slide block, and a hook member at the outer extremity of said draw bar.

1,426,653. BARN-CLEANING IMPLEMENT. FRODE A. KAUSE, Tyler, Minn. Filed Nov. 27, 1920. Serial No. 426,779. 2 Claims. (Cl. 37—19.)



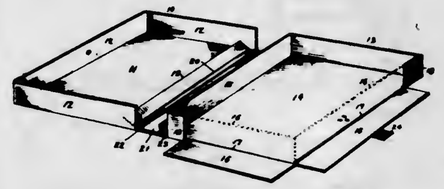
1. A device of the class described comprising a scraper being curved throughout its length and having its side edges converging at their upper portions, braces disposed on the rear face of the scraper and along the side edges thereof, a clevis disposed between the upper end of said braces, a handle connected to the scraper, a pair of brackets attached at one end to the handle intermediate its ends and having their other ends attached to the braces.

1,426,654. BARN-CLEANING MECHANISM. FRODE A. KAUSE, Tyler, Minn. Filed Nov. 27, 1920. Serial No. 426,780. 2 Claims. (Cl. 254—186.)



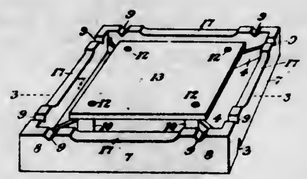
1. In a device of the class described, a main frame, an auxiliary frame, a drive gear mounted on the main frame, a driven gear mounted on the auxiliary frame, a drum mounted on the auxiliary frame so as to be driven by said driven gear, a spring mounted on said main frame and engaging said auxiliary frame so as to hold said gears apart, a cable trained over said drum, a pulley disposed below the end of said auxiliary frame, a second pulley disposed above the first mentioned pulley, said cable being trained over said pulley whereby the two frames may be positioned so that the two gears will be in engagement with each other when a load is attached to the free end of the cable in the manner and for the purpose specified.

1,426,655. KILN. ROBERT T. KYLE, Huntington, W. Va. Filed Mar. 10, 1921. Serial No. 451,080. 9 Claims. (Cl. 25—142.)



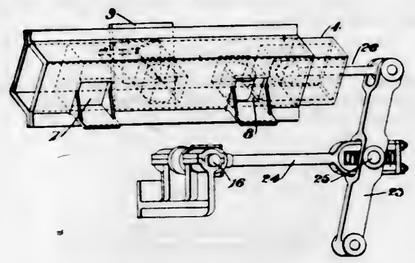
1. A kiln comprising a tunnel, a series of heat inlets opening into said tunnel at horizontally spaced points along one vertical side thereof only, and a single heat outlet from said tunnel, said outlet being located at the opposite side of the tunnel from said heat inlets and being longitudinally spaced from all of said heat inlets and in substantially the same horizontal plane therewith, whereby to force the heat from said inlets to travel diagonally across the tunnel and through the ware before escaping through said outlet.

1,426,656. TOBACCO PIPE. CHARLES LABAN, Walsall, England. Filed Sept. 3, 1921. Serial No. 498,297. 6 Claims. (Cl. 131—12.)



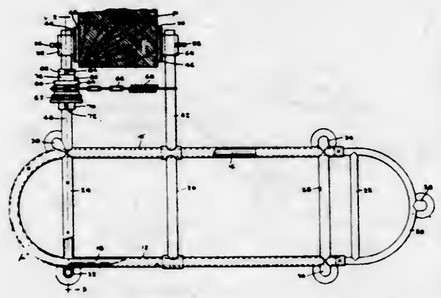
6. A tobacco pipe having a rotatable tube which projects into the base of the bowl and communicates axially with the exterior thereof, a part-circular tubular part adjacent the inside of the bowl, the opening of which is adapted to normally communicate with the bowl to allow any liquid deposits therefrom to pass to the tube, a stationary perforated tube concentric with the said rotatable tube, a closure for the end of said tube adapted to normally close it but allow it to be opened as desired, and means for rotating the said tube so as to isolate it from the bowl when the deposit can be removed by a straight blow through the stem.

1,426,657. NOTEBOOK COVER. ERNEST H. LONG, Lincoln, Nebr. Filed May 27, 1920. Serial No. 384,756. 5 Claims. (Cl. 129—43.)



1. An article of the character described comprising two trays situated side by side, each having side-walls, one having adjacent the other an open side, and a lip adjacent said open side.

1,426,658. BENCH BLOCK. JOHN J. MCGUCKIN, Brooklyn, N. Y., assignor to Louis Schwab, New York, N. Y., doing business under name of Stevens & Company. Filed Mar. 16, 1921. Serial No. 452,739. 9 Claims. (Cl. 153—32.)

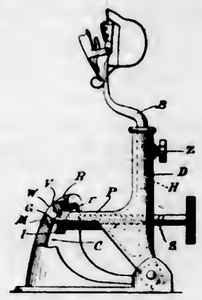


1. A testing and truing bench block provided upon one side with a comparatively roughly finished working face and upon its reverse side with a supplementary plate provided with a highly polished working face.

1,426,659. CAN FEEDING DEVICE. LELAND S. MAEDE, San Francisco, Calif. Filed Apr. 13, 1921. Serial No. 461,070. 6 Claims. (Cl. 198—221.)

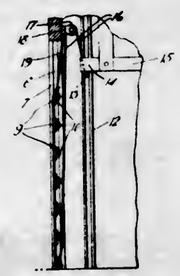
1. A can feeding device comprising a casing having a pair of inlet openings and a discharge opening formed therein, said discharge opening being located intermediate the inlet openings, and a plunger having a transverse pocket reciprocally mounted in said casing, said pocket during the reciprocal movement of the plunger alternately registering with the inlet openings and the discharge opening.

1,426,660. WORKBENCH. JOHN F. MAGALSKI, Minneapolis, Minn., assignor of one-half to Albert J. Schmitt, Minneapolis, Minn. Filed Apr. 27, 1921. Serial No. 464,909. 3 Claims. (Cl. 144—286.)



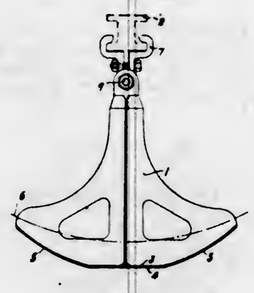
1. A portable workbench comprising two longitudinal parallel pipe members, transverse members joining said pipe members, two longitudinal parallel members adapted to fit telescopically in said pipe members whereby the length of the bench may be varied, and detachable legs for supporting said longitudinal members.

1,426,661. ARTIFICIAL TOOTH. VINCENT MALLON, New York, N. Y., assignor to Dental Manikin Head Co. Inc., a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,591. 6 Claims. (Cl. 32—30.)



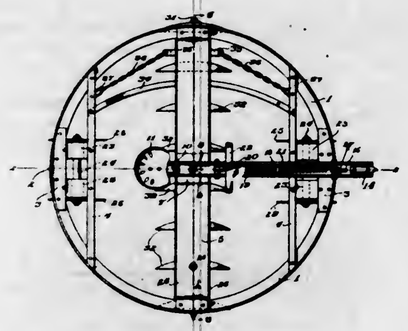
1. An artificial tooth including a formed metallic backing provided with an open top, dove-tail socket on the front face thereof and an upwardly facing seat defining the lower portion of the socket, and a facing provided with a dove-tail projection on the rear side fitted in said socket and engaged by said seat to prevent relative movement of the facing towards the bite end of the tooth, said facing adhering to the backing over a contact surface disposed in more than one plane thereby to increase the area of the adhering surface beyond the area of a flat contacting surface within the projected outlines of the tooth.

1,426,662. DENTAL MANIKIN-HEAD BENCH REST. VINCENT MALLON, New York, N. Y., assignor to Dental Manikin Head Co. Inc., a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,593. 4 Claims. (Cl. 35—16.)



1. Dental manikin head bench rest consisting of a concaved frame, a hollow holder hinged at one end with said frame and means for securing anchorage of said holder upon the concave portion of said frame.

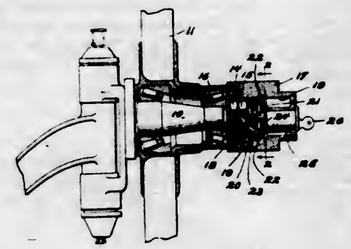
1,426,663. AUTOMATIC ELEVATOR GATE. LYNN ERVINE MARTIN, Paducah, Ky. Filed May 11, 1920. Serial No. 380,655. 1 Claim. (Cl. 187—51.)



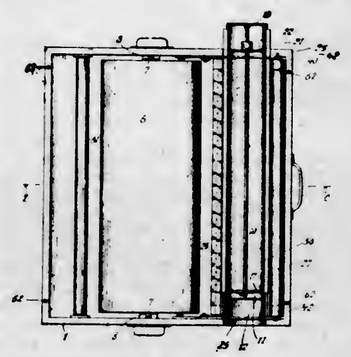
In combination with an elevator, vertical guideways supported adjacent to the elevator, a gate embodying a flexible structure, horizontally disposed bracing elements having connection with the gate and having their ends disposed in the guideways, vertically disposed trackways, an operating rod having its ends positioned in the trackways and having connection with the gate, and an arm carried by the elevator and contacting with the rod to move the gate to an open position.

1,426,664. JACK FOR VEHICLES. ALEXANDER MERCHANT, Jr., Forres, Scotland. Filed July 15, 1921. Serial No. 484,845. 1 Claim. (Cl. 254—94.)

A jack for vehicles comprising a clip engageable with an axle of the vehicle, a strut pivotally connected at one end to said clip and formed at the other end with a shoe presenting a flat face merging into curved tracks, and rolling members fitted to said base.



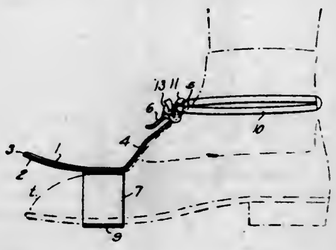
1,426,665. CULTIVATOR. MAURICIO L. NOVO, Guadalupe, Calif. Filed Aug. 12, 1921. Serial No. 491,771. 6 Claims. (Cl. 55—30.)



1. In a cultivator, the combination of a circular main frame provided with notches in its outer edge at diametrically opposite points, a tongue pivotally mounted upon the frame at the center thereof and extending over the side of the same, a locking pin mounted for vertical rocking movement upon the tongue and adapted at its lower end to engage either of said openings in the main frame, and means upon the tongue acting on the upper end of said locking pin to set the same.

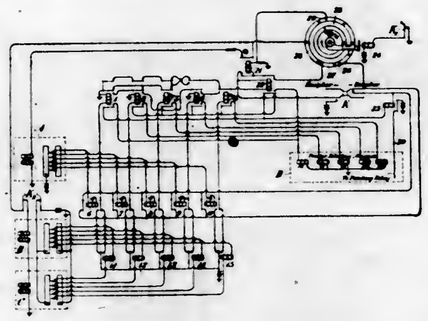
1,426,666. AUTOMOBILE LOCK. JOHN MCKENNEY PALMER, Springfield, Mass. Filed Sept. 13, 1919. Serial No. 323,583. 4 Claims. (Cl. 70—90.)

1. In a vehicle, the combination with a non-rotatable spindle and wheel rotatably mounted thereon of means for locking the wheel to the spindle to prevent movement of the vehicle, said means consisting in a non-rotatable member comprising abutting right hand and left hand nuts mounted on the spindle, a member non-rotatably connected to the wheel and slidable axially of the wheel and spindle into or out of engagement with said nuts, for the purpose set forth.



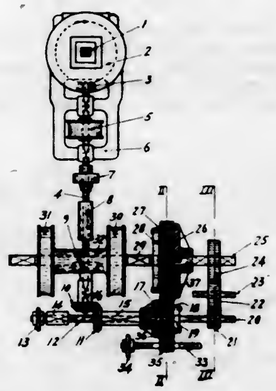
1,426,667. WALL-PAPER CUTTING AND PASTING DEVICE. CAESAR PANZERI, Brooklyn, N. Y. Filed Oct. 29, 1920. Serial No. 420,409. 7 Claims. (Cl. 91—14.)

1. In a device of the class described, a box, a paste applying roll, a shaft to support a roll of paper, a cutter adjacent said shaft, a longitudinally adjustable support for said shaft, and means to abut the end of the roll of paper adjustably mounted on said shaft.



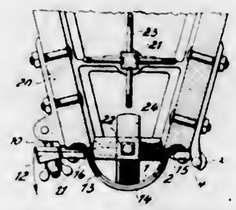
1,426,668. SPRAG FOR SLEDDING. FRANK PARDEE, Jr., Hazleton, Pa., and MARJORIE R. VAN W. LYON, Boston, Mass., assignors to Anthracite Separator Company, a Corporation of Pennsylvania. Filed Mar. 25, 1921. Serial No. 455,460. 5 Claims. (Cl. 36—72.)

1. A sprag for sledding having a surface-engaging member comprising a substantially flat plate, having a sur-



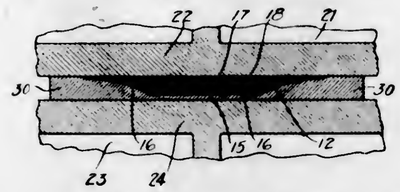
face engaging forward edge at least as wide as the toe portion of the wearer's shoe, a stirrup secured below said member at a location to the rear of said forward edge arranged to support said surface engaging member in such position that the forward edge is located above and extends forward of the toe portion of the wearer's shoe and means for detachably securing the sprag to the shoe of the wearer's foot.

1,426,669. CIPHERING DEVICE. RALPH E. PIERCE, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 23, 1920. Serial No. 398,392. 4 Claims. (Cl. 178—22.)



1. A transmitter including a message tape, a transmitter including a cipher tape, a plurality of selecting relays, means for combining the code combinations of said message tape with the code combinations of said cipher tape and setting up the resulting code combinations on said selecting relays, said resulting code combinations representing characters and "stunt" signals, a printer normally controlled by said selecting relays, and means operating whenever said resulting code combination represents a "stunt" signal, said means when operated causing said printer to print an arbitrarily chosen character and causing said cipher tape to be stepped ahead.

1,426,670. ROTARY DRILLING MACHINERY. GURDON T. POLLARD, Denver, Colo. Filed Oct. 3, 1921. Serial No. 505,131. 6 Claims. (Cl. 255—19.)

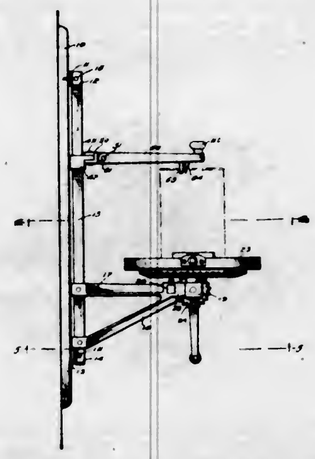


1. In rotary drilling sets, a rotary table, with means for holding drilling tool, double planetary gear sets connecting said table to transmitting power, brake band means controlling speed and direction of said table and also the raising or lowering of drill tool with change gear set as a means for obtaining various speed relations of double differential gear sets.

1,426,671. MACHINE FOR DISTRIBUTING FERTILIZERS. WILHELM PRINTZ, Kettwig-Ruhr, Germany. Filed Dec. 14, 1920. Serial No. 430,808. 3 Claims. (Cl. 221—118.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

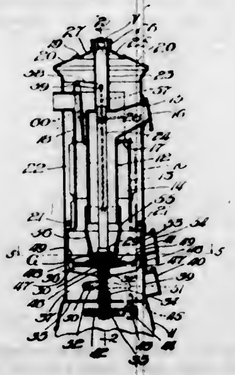
1. In a machine for dispensing fertilizer, in combination, a suitably supported supply box open below; fertilizer agitating and distributing means in said box; an adjustable readily droppable two-part gate serving as a bottom for said supply box, comprising a trough-shaped member having a series of dispensing perforations in its lower curvature, lips angularly outwardly extending from the upper longitudinal edges of said trough, means for pivotally securing said trough by one of its lips to said supply box and means for detachably clamping the other lip to said supply box; a trough-shaped slide member having perforations similar in extent and location to those in said trough, and means for readily adjustably securing said slide member underneath and in close contact with said trough.

1,426,672. RETREAD FOR TIRES AND METHOD OF MAKING THEM. DOUGLAS R. RADFORD, Los Angeles, Calif. Filed Oct. 20, 1921. Serial No. 508,912. 9 Claims. (Cl. 18—56.)



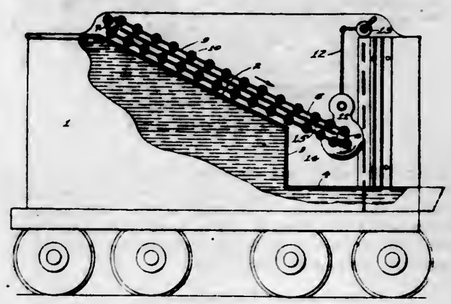
1. In the manufacture of treads for tires, the method of placing a raw breaker strip between a strip of raw tread rubber and a strip of cushion rubber, and subsequently subjecting said combined strips to pressure between suitably formed plates, said plate adjacent to said tread rubber being heated to cause the vulcanization of the outer portion of said tread rubber, and said plate adjacent to said cushion rubber being maintained at a low temperature to prevent the vulcanization of the rubber adjacent thereto.

1,426,673. CAN OPENER. FRED E. REDDER, Hominy, Okla. Filed Mar. 29, 1920. Serial No. 369,710. 3 Claims. (Cl. 30—3.)



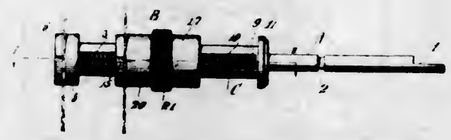
1. In a can opener, means for supporting and rotating a can, a vertical support fixed at its upper and lower

ends and disposed at one side of said can supporting means, a supporting member vertically adjustable upon said support intermediate its ends, a link pivoted to said supporting member to swing in a horizontal plane, a handle pivoted to said link to swing in a vertical plane,



said supporting member, link, and handle, being in substantial alinement when in the normal position, and a cutting implement arranged adjacent the free end of said handle whereby said cutting implement is positioned above said can supporting means.

1,426,674. STOVE AND FURNACE. ERNÖ WALDMANN and STEPHEN HOKKY, Budapest, Hungary, assignors, by mesne assignments, to Charles Heitler and Eugene Waldmann, both of Chicago, Ill. Filed Oct. 31, 1921. Serial No. 511,928. 20 Claims. (Cl. 126—73.)

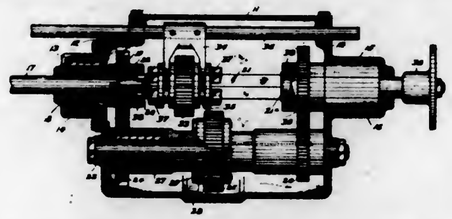


1. The combination with a casing, of a fuel magazine mounted therein and spaced therefrom, an extension at the lower end of said magazine adjustable relatively thereto, a draft tube extending through the magazine from the upper end of said casing to the lower end of said magazine, a collar embracing the lower end of said tube, a series of radiating spider arms carried by said collar having their outer edges sloping inwardly to said collar and provided with a socket in the under side of their junction, an outstanding grate base plate secured to the lower extremities of said spider arms, an outstanding rib extending spirally from the collar to the base plate having the convolutions thereof spaced, a shaft fixed in the socket at the junction of said spider arms, means for rotating said shaft, and a grate ring surrounding the grate base plate and adjustable relatively thereto.

1,426,675. FEEDING DEVICE FOR LOCOMOTIVE TENDERS. LAWRENCE RICHARDSON, Louisville, Ky. Filed July 13, 1920. Serial No. 395,992. 11 Claims. (Cl. 105—232.)

1. A locomotive tender shovel pit having an inclined feeding surface, and a shovel pit at one end thereof disposed below the inclined surface and from which coal is manually removed, and means adjacent said feeding surface for positively feeding coal over the surface into the shovel pit.

1,426,676. ADJUSTABLE TWIN SAW. CHARLES RUDICH, New York, N. Y., assignor, by mesne assignments, to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed Feb. 25, 1918. Serial No. 219,011. Renewed Jan. 6, 1922. Serial No. 527,517. 4 Claims. (Cl. 143—155.)

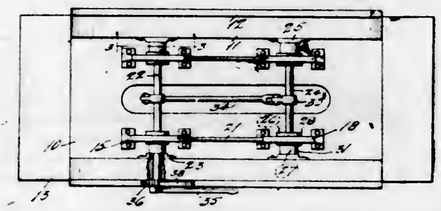


1. An adjustable multiple saw-tool comprising a rotary chuck-shank; a guide-sleeve fixed to said shank and having a longitudinal locking channel; a carriage for mounting a circular saw slidable on said sleeve; teeth formed crosswise at the base of said channel; and a releasable spring-pressed toothed block passing through said channel locking said carriage against relative rotation and permitting the axial adjusting and fixing of said carriage.

1,426,677. TRANSMISSION MECHANISM. CHARLIE SANO, Castorville, Calif. Filed Mar. 17, 1920. Serial No. 366,677. 1 Claim. (Cl. 74—58.)

A power transmission mechanism comprising a drive shaft, a gear keyed on the drive shaft having a clutch face thereon and also having an elongated journal bearing formed therein, in which the drive shaft has substantial mounting, a driven shaft having a short reduced end journaled within said gear, with its inner end lying adjacent the inner end of the drive shaft, a gear freely mounted on the driven shaft and having a clutch face on one end thereof, a sliding gear splined to the driven shaft and having clutch faces on opposite ends thereof, a shifting rod slidably mounted above the driven shaft,

a yoke secured to said shifting rod and engaging the sliding gear for shifting the latter in opposite extreme and intermediate positions when the shifting rod is actuated, an auxiliary shaft, sleeves rotatably mounted on the auxiliary shaft, a gear formed at the outer end of the sleeves, one in constant mesh with said fixed gear

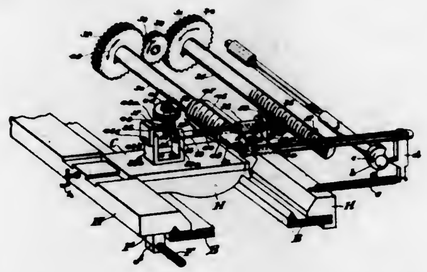


on the drive shaft and the other in constant mesh with the free gear on the driven shaft, and an intermediate gear on the auxiliary shaft, said sleeves each having a flange at its inner end bolted to said intermediate gear, said intermediate gear being arranged for meshing engagement with said sliding gear.

1,426,678. PROCESS OF PRODUCING DENSE AND FIRMLY-ADHERING TIN DEPOSITS. MAX SCHLÖTTER, Berlin, Germany. Filed Jan. 21, 1920. Serial No. 353,113. 10 Claims. (Cl. 204—1.)

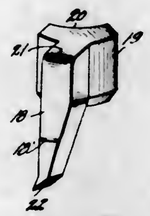
1. A process of producing dense and firmly adhering tin deposits, consisting in adding a substance of capillary activity to a tin salt solution, and subjecting the same to the action of an electric current.

1,426,679. AUTOMOBILE TURNTABLE. ANDY SHUSTER, San Antonio, Tex. Filed June 6, 1921. Serial No. 475,301. 5 Claims. (Cl. 254—87.)



1. In an automobile turn table, a platform, tracks mounted on the platform, vertical lifting members, jack bars mounted in the platform, and means for simultaneously moving the jack bars downwardly and the lifting members upwardly.

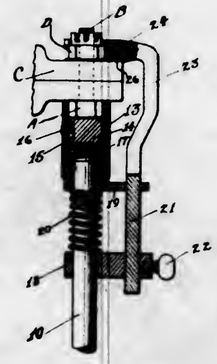
1,426,680. GENERATION OF CONVOLUTE LINES IN HOBBING CUTTERS AND THE LIKE. OLIVER G. SIMMONS, Philadelphia, Pa., assignor to Simmons Method-Hob Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1918. Serial No. 227,784. 45 Claims. (Cl. 90—4.)



1. A method for generating threads of convolution, which consists in imparting rotary motions to a cutter provided with radial teeth projecting from its periphery in substantially a plane of rotation, and to a blank to be operated upon, functionally correlating the said rotary motions and simultaneously with the rotary motions of the cutter and the blank producing relative rectilinear reciprocating movement between the cutter and the blank.

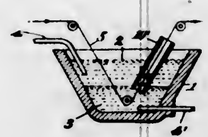
26. The method of producing a hob, which comprises gashing a blank, generating a thread in the blank and a surface between threads terminating at a gash to form a cutting edge continuous with the cutting edge formed by the intersection of the thread with a gash by rotating the blank and cutter on axes substantially at right angles to each other, feeding the cutter into the blank to a depth less than the depth of the gashing, for each gash feeding the cutter into and withdrawing it from the blank for relieving the thread and said surface, and moving the cutter longitudinally with respect to the blank with its speed of rotation differentially correlated to that of the blank.

41. The combination with means for rotating a blank, of a rotatable shaft whose axis is at an angle to the axis of rotation of said blank, a second shaft splined to said shaft and driven thereby, a cutter rotatable about an axis approximately at right angles to the axis of rotation of said blank, a driving connection between said second shaft and said cutter, means for reciprocating said cutter longitudinally of said first named shaft toward and away from said blank in timed relation to the speed of said blank, a gear fixed to said first named shaft, means extending lengthwise of said blank engaging the teeth of said gear, and means for moving said cutter, said shafts and said gear as a unitary part lengthwise of said blank.



1,426,681. BLADE FOR WELL-DRILLING DEVICES. PRIMUS W. SMITH and JOHN J. BOOKHOUT, Dallas, Tex. Filed Mar. 21, 1921. Serial No. 454,152. 4 Claims. (Cl. 255—73.)

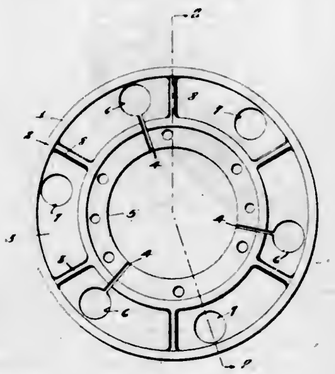
1. A blade for well drilling devices including, a shank having its upper and lower ends beveled to engage a retaining socket, and a blade member extending laterally from the shank and depending therefrom, the lower end of the member being reduced and provided with a transverse cutter.



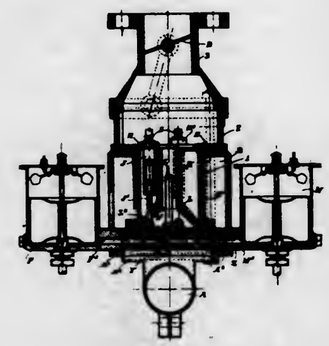
1,426,682. SOCKET WRENCH. OWENS C. SNELL, Dallas, Tex. Filed Oct. 10, 1921. Serial No. 506,777. 2 Claims. (Cl. 81—55.)

1. In a socket wrench, a revoluble shank, a socket fixed on the end of the shank, a bar slidable on the shank, a keeper mounted on the shank between the bar and the socket, a coiled spring surrounding the shank between the bar and the keeper, an extension slidable through the keeper and adjustably fastened in the bar, and a head on the end of the extension overhanging the

socket and provided with a round opening for receiving a nut and an angular socket below the opening for engaging the lower portion of a nut.



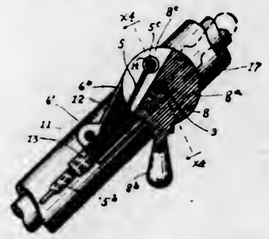
1,426,683. PROCESS FOR COATING METAL OBJECTS WITH A LAYER OF ANOTHER METAL. OTTO STÅLHANE and OLOF OSKAR KRING, Djursholm, Sweden. Filed Apr. 29, 1920. Serial No. 377,714. 3 Claims. (Cl. 91—70.2.)



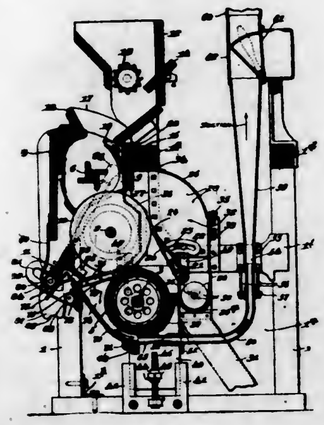
1. Process for coating objects of metal with a layer of another metal, characterized by the fact that a bath consisting partly of the metal with which the objects are to be coated, and partly of a suitable flux is kept in a molten condition by passing an alternating electric current through the flux, that the objects are first dipped in the flux, and afterwards, when they have been sufficiently heated are plunged down into the metal bath under the flux, and passing said alternating electric current through both the flux and the metal bath.

1,426,684. BRAKE DRUM. LOUIS M. STELLMANN, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed May 25, 1921. Serial No. 472,401. 9 Claims. (Cl. 188—218.)

5. A brake drum for motor vehicles having a cylindrical flange, the periphery of which constitutes the brake surface of the drum, and a discoidal web within the flange and formed with a central opening, the web being formed with perforations therethrough at intervals near the inner face of said flange, and radial slots extending from such perforation to the central opening of the web, substantially as and for the purpose specified.

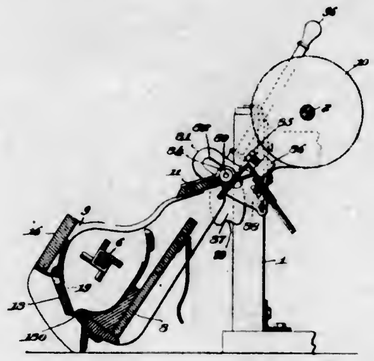


1,426,685. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. FENTON FREDERICK STRATTON, East Croydon, England. Filed Aug. 7, 1917. Serial No. 184,952. 2 Claims. (Cl. 261—18.)



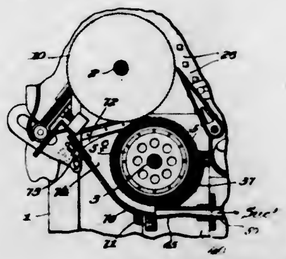
1. In a carburetor, a casing having a plurality of air ports arranged in stepped relation, a multiplicity of nozzle including a main nozzle and a pilot nozzle, an automatic piston valve reciprocable in the casing and operated by the engine suction, means connected with the piston valve for opening and closing the air ports in the casing and the main nozzles in succession, said casing having a base plate formed with a straight channel extending through and across the same, a float chamber for the heavier fuel connected with one end of said passage, a float chamber for the lighter fuel connected with the other end of the passage, the starting nozzle and one of the main nozzles being located in line with said main channel and in communication therewith, means for closing the main channel between said main nozzle and the starting nozzle, and branch channels leading from the main nozzle side of the main channel to the other main nozzles.

1,426,686. CONTROLLING DEVICE. HARRY A. TROUP, Los Angeles, Calif. Original application filed Feb. 21, 1918, Serial No. 218,382. Divided and this application filed June 1, 1920. Serial No. 385,853. 1 Claim. (Cl. 74—39.)



In a controlling device of the character disclosed, a rotatable disk having a peripheral channel forming a guideway for an actuator wire, said actuator wire, a crank pin extending across said channel and to which said wire is secured, a lever extending from the periphery of said disk, a pair of friction cheecks between which said disk is rotatably mounted, a projection having a chamber with converging walls formed by extensions formed on said cheeks and secured together at their ends, a tubular member leading from the terminus of the projection into the chamber, an adjustable screw uniting said cheeks and forming a shaft upon which said disk is rotatably mounted, spring means urging said cheeks into contact with said disk, and securing means on one of said cheeks whereby the device may be secured to vehicle features.

1,426,687. MECHANISM FOR REMOVING USEFUL FIBER FROM SEEDS. ARTHUR A. VARDELL, Dallas, Tex.: Highland Gee Vardell, executrix of said Arthur A. Vardell, deceased. Filed Aug. 22, 1919. Serial No. 319,105. 25 Claims. (Cl. 19—58.)



3. A saw gin having therein the usual grate-fall and saws, whereby the material to be ginned is mechanically held in contact with the saws, a rotating doffing-brush beneath the saws, and having deep engagement with the latter and a casing for the saws and brush, a lint trunk leading therefrom, and means independent of the brush for inducing a negative pressure relation to the atmosphere in the lint trunk, whereby to cause an inflow of air into all openings in the casing, and thence into the lint trunk.

1,426,688. BREAST MECHANISM FOR FIBER-TREATING MACHINES, SUCH AS GINS. ARTHUR A. VARDELL, deceased, late of Dallas, Tex., by Highland Gee Vardell, executrix, Dallas, Tex. Original application filed Aug. 22, 1919, Serial No. 319,105. Divided and this application filed Nov. 30, 1920. Serial No. 427,369. 8 Claims. (Cl. 19—55.)

6. A fiber-treating machine having therein a breast pivoted at its lower portion and free to be swung forward at the top, in combination with means for stopping the opening at the top of the breast to prevent spilling its contents when swung forward.

1,426,689. DOFFING MECHANISM FOR GINS. ARTHUR A. VARDELL, deceased, late of Dallas, Tex., by Highland Gee Vardell, executrix, Dallas, Tex. Original application filed Aug. 22, 1919, Serial No. 319,105. Divided and this application filed Dec. 9, 1920. Serial No. 429,562. 9 Claims. (Cl. 19—60.)

2. In combination with a gin saw, a doffer brush comprising an isolated and substantially uninterrupted axially narrow circumferential row of brush tufts arranged substantially in the plane of said saw, the parts being so constructed and arranged that the edge of the saw cuts deeply into the row of bristles.

1,426,690. MACHINE FOR RUBBING TISSUES. MARIUS VERNAY, Cornillon-Beaujeu, France, assignor to Ernest Cadgène, Paterson, N. J. Filed Sept. 2, 1921. Serial No. 497,943. 2 Claims. (Cl. 8—19.)

1. In machines for rubbing tissues the combination of a rubbing member having a wick surrounded by layers of absorbent material, a plate on the plug, funnels, the tubes of which cross the plate and arranged over the wick, a

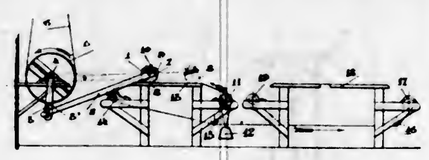


table under the member, and means for giving to the tissue a longitudinal displacement over the table between the latter and the member.

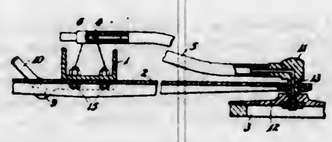
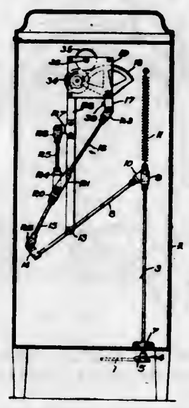


1,426,691. CONVEYING APPARATUS. GEORGE C. VIDETTO, Pittsburgh, Pa. Filed July 3, 1920. Serial No. 395,909. 12 Claims. (Cl. 198—9.)

1. A loading and conveying apparatus comprising a supporting truck, a conveyor pivotally mounted thereon, means for raising and lowering the conveyor, a rotatable loading drum arranged to scoop up material and empty it onto the conveyor, a frame therefor pivotally connected with the conveyor truck, means whereby the frame may be raised and lowered independently of the conveyor into such positions that its gathering portion may be below or above the terminal of the conveyor, and operating mechanism for the conveyor and loading drum.



6. The combination with a loading conveyor, of a drum disposed at the receiving end thereof, said drum having its periphery provided with a series of adjacent transversely extending pockets having outer edges for scooping up the material, some of the edges thereof being provided with prongs while the edges of others are substantially smooth, the pronged edges being terminated substantially the same distance from the center of the drum as the smooth edges.

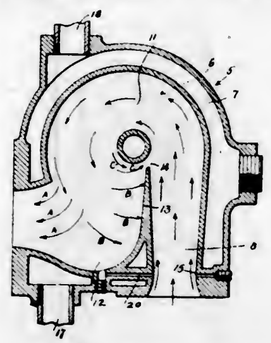
1,426,692. APPARATUS FOR HOLDING AND LIFTING BY MEANS OF SUCKERS. FREDERIC BARNES WALDRON, Prescott, England, assignor to Pilkington Brothers Limited, St. Helens, England, a Limited Liability Company of England. Filed Oct. 6, 1920. Serial No. 415,121. 6 Claims. (Cl. 294—65.)

1. In apparatus for lifting and carrying glass plates, the combination of a frame, suckers thereon adapted to be attached to glass plates by suction and a carrying sling pivoted to the frame on an axis nearer to one side of the frame than to the other.

1,426,693. ATTACHMENT FOR PHONOGRAPHS. WILLIAM H. WEAVER, Pittsfield, Mass. Filed Sept. 13, 1920. Serial No. 409,751. 7 Claims. (Cl. 185—39.)

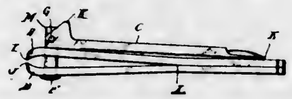
7. In a device of the class described, the combination with a shaft, of means for revolving the shaft by foot power, and including a rod arranged for reciprocating movement, means for reversing the action of the rod when moved in one direction by a force independent thereof, a lever pivoted to a support and movably secured to said rod, a series of gear members arranged in mesh and adapted when moved to rotate said shaft in one direction, means, including a ratchet and a registering pawl carried by said gear members, for preventing said shaft being reversely rotated, an oscillatory member having an arcuate toothed portion arranged in mesh with one of said gear members, a power transmission member movably connecting said lever with said oscillatory member and including arms arranged end to end, and forming a joint, and means for flexing said power transmission member at said joint to provide a uniform movement of the oscillatory member.

1,426,694. OILPROOF PISTON RING. PATRICK WEIDENFELLER, Aberdeen, S. Dak. Filed May 10, 1920. Serial No. 380,249. 3 Claims. (Cl. 74—109.)



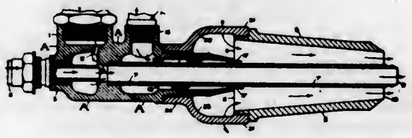
1. A set of piston rings positioned in superposed relation with one ring having its face contacting with the second ring cut to provide an oil groove relatively wide and shallow, and one ring having its outer peripheral face cut to provide an oil groove V-shaped in cross section.

1,426,695. GAS-MIXING DEVICE. ERNEST M. WHITE, Los Angeles, Calif. Original application filed July 8, 1919, Serial No. 243,917. Divided and this application filed Apr. 18, 1921. Serial No. 462,420. 5 Claims. (Cl. 48—180.)



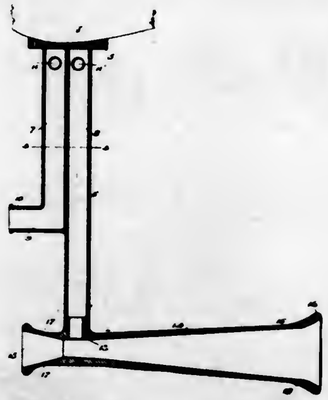
5. A gas mixing device, comprising a casing provided with a semi-annular passage communicating at one of its ends with an intake passage and at its other end with a discharge port and a dead air pocket, said semi-annular passage having its ends connected by a communicating

passage of smaller area than the area theerof and said intake passage being contracted to form a throat adja-



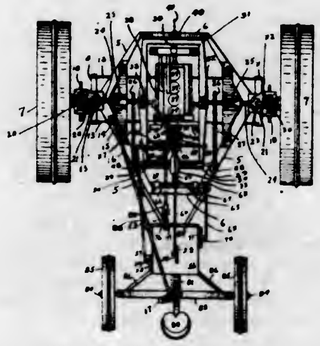
cent its outer end, said dead air pocket having a drain port communicating therefrom to said intake passage adjacent its outer end.

1,426,696. MANICURE IMPLEMENT. NAT WIESENBERG, New York, N. Y. Filed Feb. 1, 1922. Serial No. 533,244. 1 Claim. (Cl. 30—23.)



A nail cutter comprising two similar resilient members superimposed and united fixedly at one end; minor portions of said members lying in contact with each other; major portions of said members being divergently arranged and having oppositely disposed cutters on their free ends extend toward each other; each of said members being apertured adjacent their free ends, a swivel bolt in said aperture; the upper end of said bolt having oppositely disposed flat surfaces and being transversely apertured whereby it may be pivotally secured in the bifurcated end of an operating cam lever, the bolt being of sufficient length and thickness to serve as a guard for the corners and cam elements on the bifurcated end of said lever.

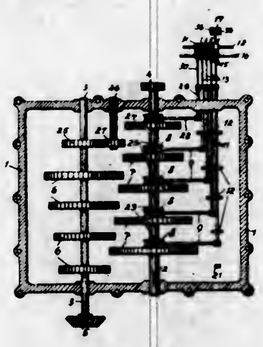
1,426,697. COMBINED ATOMIZER AND BURNER FOR LIQUID FUELS. ALBERT ERNEST WINDLE, Gravelly Hill, Birmingham, England. Filed June 3, 1919. Serial No. 301,468. 2 Claims. (Cl. 158—76.)



1. A combined atomizer and burner for heavy fuels comprising a casing having an opening therethrough, a primary air inlet tube leading into one end of said casing, a fuel inlet passage in said casing, said fuel inlet passage terminating in an annular chamber disposed around the discharge end of the primary air inlet tube, an inner discharge nozzle leading from said chamber for the passage of fuel and primary air, and on the outer tube for secondary air surrounding the inner discharge nozzle, the end of the inner discharge nozzle projecting beyond the end of said outer tube.

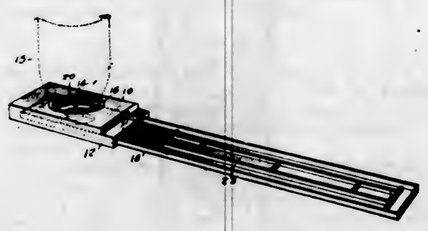
1,426,698. SPEED METER FOR AEROPLANES. ALBERT F. ZAHM, Washington, D. C. Filed Feb. 20, 1918. Serial No. 218,233. 5 Claims. (Cl. 73—2.)

1. A gauge operating device including a base, a pressure tube and a suction tube formed integral therewith, the pressure tube being of shorter length than the suction tube and having an inlet at right angles to the body thereof, and an outlet adjacent the base, said suction tube being provided with an inlet adjacent the base thereof, and a Venturi tube attached to the outer end of the suction tube, the axial line of which is substantially parallel to the axial line of the inlet mouth of the pressure tube.



1,426,699. TRACTOR. PAUL R. ZIECHE, Moville Township, Woodbury County, Iowa. Filed Aug. 19, 1918, Serial No. 250,464. Renewed Apr. 17, 1922. Serial No. 553,924. 3 Claims. (Cl. 180—54.)

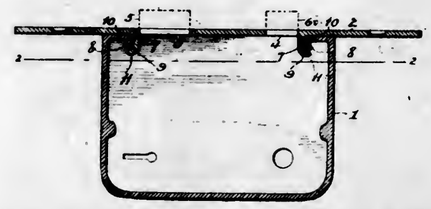
1. In a motor-vehicle, a main-frame, traction-wheels, a motor, driving connections between the motor and traction-wheels the motor being so supported by the main-frame that it may be tilted either laterally or longitudinally, with respect to the main-frame, and means for tilting and preventing tilting of the motor.



1,426,700. CHANGE-SPEED GEAR. ADOLF ZWYSSIG, Sisikon, Switzerland. Filed Oct. 21, 1921. Serial No. 509,328. 4 Claims. (Cl. 74—81.)

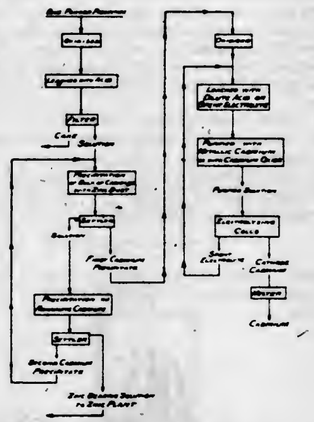
1. An improved device for the operation of change speed gear, specially for motor cars comprising in combination with the box of the change speed gear and with the driving shaft upon which the change wheels are loosely mounted so that they can be displaced in longitudinal direction and with the transmission shaft, the transmission wheels keyed upon the same, a two-armed rock lever for each change wheel, an articulated lever system connecting the lower arm of this lever with the corresponding change wheel, a cover plate over said two-armed levers having a longitudinal slot and transverse slots, one

for each lever, a pedal lever loosely mounted upon a horizontal rod and projecting with its upper end through said longitudinal slot so that it can be brought over any one of said two-armed levers and a lower arm of said pedal lever adapted to act upon the corresponding two-armed lever when said pedal lever is being depressed so that the two-armed lever is oscillated and throws the corresponding change wheel in gear with its transmission wheel.



1,426,701. BEE FEEDER. LEWIS H. ACHENBACH, Pottsville, Pa. Filed Feb. 13, 1922. Serial No. 536,149. 7 Claims. (Cl. 6—5.)

1. A bee feeder comprising a base block having a hole for the reception of a liquid container and a removable tray into which a nozzle from the container extends.

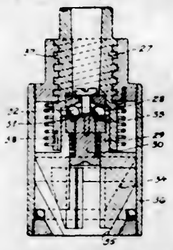


5. A bee feeder comprising a base block having a chambered underside which opens into the hive at one end and the block having an opening from its top into such chamber, a cap within such opening having a nozzle terminating in the chamber, said cap having means for the attachment of a jar, a tray having a bottom surface below the open bottom of the nozzle, and a wire coil depending from the nozzle with adjacent coils less than a bee space apart.

1,426,702. LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 29, 1921. Serial No. 496,286. 7 Claims. (Cl. 20—16.)

3. The combination with a lock casing provided therein with an inwardly projecting lug, of a sheet metal face plate provided with an integral tongue entering said casing, said integral tongue having a lip portion engaging the free end of said inwardly projecting lug in the casing.

1,426,703. ELECTROLYTIC TREATMENT OF ORES CONTAINING ZINC, CADMIUM, AND COPPER. DAVID AVERY, Melbourne, Victoria, and ROYALE H. STEVENS and ROLAND T. D. WILLIAMS, Risdon, Hobart, Tasmania, Australia, assignors to Electrolytic Zinc Company of Australasia Proprietary Limited, Melbourne, Victoria, Australia. Filed Mar. 16, 1920. Serial No. 366,362. 13 Claims. (Cl. 204—15.)



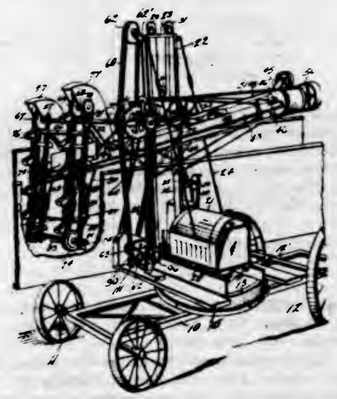
1. A process for the treatment of blue powder precipitate obtained in the purifying of zinc bearing solutions for electrolysis, comprising oxidizing the precipitate, dissolving the metal oxides in dilute sulphuric acid sufficient to dissolve a maximum amount of zinc and cadmium, separating the cadmium and zinc bearing solutions from the residue, and recovering the cadmium and zinc from the solution so obtained.

1,426,704. CHUCK. JOHAN ARVID AXELSSON, Eskilstuna, Sweden. Filed Jan. 8, 1921. Serial No. 435,858. 7 Claims. (Cl. 279—69.)

1. A chuck constructed to utilize the axial and tangential pressure on the tool during working for clamping the jaws around the tool, comprising a jaw supporting member having inclined guideways, jaws slidably mounted in said guideways, anti-friction members, and means

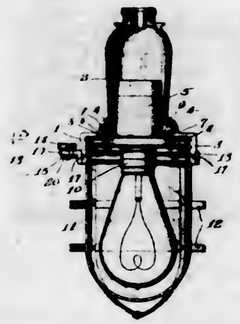
having oblique faces cooperating with said anti-friction members for causing a pressing down of said jaws in

said inclined guideways to thereby firmly clamp the tool when the latter is subjected to either axial or tangential pressure.



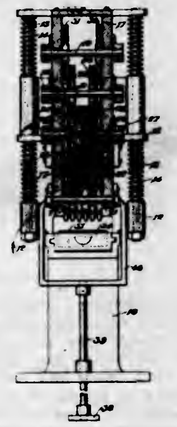
1,426,705. FULCRUM AND METHOD OF MAKING THE SAME. CARL E. BAUER, Hammond, Ind. Filed Oct. 18, 1920. Serial No. 417,639. 7 Claims. (Cl. 29—164.)

1. The method of making brake beam fulcrums which consists in preparing duplicate flat bars, then punching in the two bar openings of a size less than the diameter of the rod to be accommodated therein, then inserting a metallic filler adapted to occupy the opening thus formed, then forging the bars to increase the size of the opening, and to spread and rivet the filler around the sides of the opening.



6. A brake beam fulcrum comprising in combination two flat bars bent to provide means for attachment to a brake beam, each bar having an integral lateral projection, the projections on the two bars interfitting and being forged to rivet together the two bars and provide a flaring seat for a tension rod.

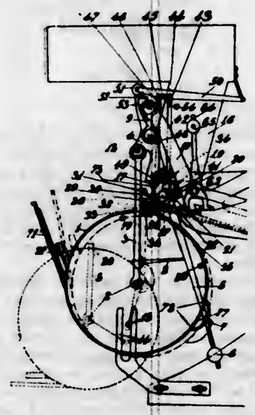
1,426,706. UNLOADING APPARATUS. CLIFFORD H. BEATTIE, Waxahachie, Tex. Filed Sept. 4, 1920. Serial No. 408,248. 17 Claims. (Cl. 198—88.)



1. In an unloading apparatus, the combination of an upright portable support, a carriage mounted to slide vertically in said support, an elongated conveyor extending through the carriage, an elevator depending from one end of the conveyor and having its upper end discharging onto said conveyor, driving means for the conveyor and elevator mounted on the carriage, and self contained means mounted on said support for imparting a slow forward movement to the same, whereby the elevator is fed to the work.

1,426,707. PORTABLE ELECTRIC LAMP. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed July 13, 1917. Serial No. 180,321. 1 Claim. (Cl. 240—11.)

An electric hand lamp comprising a discoidal base, and a hollow handle extending rearwardly from the base, the passage of the handle opening through the base and the base having an internal annular flange extending into the passage of the handle where it opens through the base, a lamp socket located in the handle and secured to the front face of the internal annular flange, a lamp supported in the socket, and a globe carried by the base, substantially as and for the purpose described.

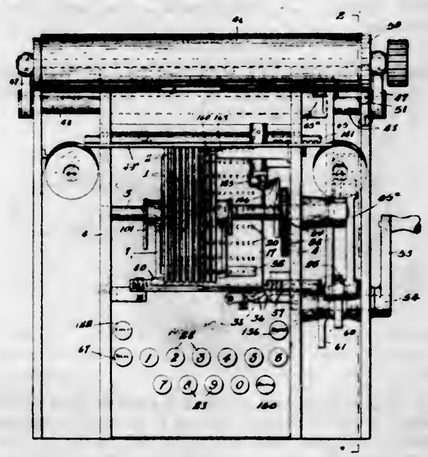


1,426,708. PRINTING DEVICE. MICHAEL BONSIAKOS, San Francisco, Calif. Filed Apr. 27, 1921. Serial No. 464,971. 4 Claims. (Cl. 101—111.)

1. A printing device comprising a supporting frame, a printing head vertically slidable on said frame, a plurality of sets of type carried within the head, means for selectively disposing type of the various sets in a printing

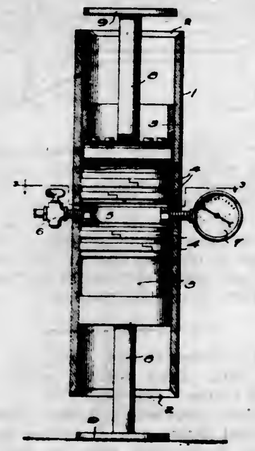
position, a table disposed beneath said head comprising a flat printing face and an inking face, and a mounting for said table whereby depression of the head may force the set type against the ink pad or an article on the printing face.

1,426,709. WEIGHING TANK FOR AUTOMATIC WEIGHING MACHINES. BALTUS BOULOGNE, Soerabaia, Java, Dutch East Indies. Filed Aug. 17, 1921. Serial No. 493,057. 12 Claims. (Cl. 249—54.)



1. Weighing tank for automatic weighing machines with tare-weighing, for liquid and for granular material, which weighing tank is suspended from a weighing beam and rotatable upon a horizontal axis and provided with stops or other suitable means to limit the extreme positions for charging and for pouring, in respect to the suspension members, whilst further on, means have been provided of such a nature that they compel the weighing tank to accomplish the first part of its movement under the control of the movement of the weighing beam and after this to release the weighing tank during its further turning towards the extreme positions, for which further rotation the weighing tank is made in such a manner that it will be accomplished automatically, in consequence of its search for equilibrium.

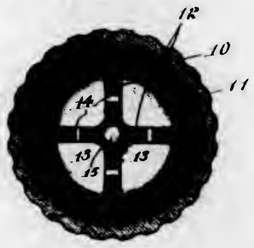
1,426,710. CALCULATING MACHINE. WILLIAM H. BROWN, Syracuse, N. Y., assignor to H. H. Franklin Mfg. Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 19, 1920. Serial No. 359,817. 32 Claims. (Cl. 235—60.)



1. In a calculating machine, the combination of a shaft, a series of computers, a series of indicators mounted on the shaft and movable about the same, the computers being arranged alternately with the indicators and being paired therewith, means for transferring the movement of the indicators in one direction to the computers, means for actuating the indicators, and means for controlling the extent of movement of the indicators, substantially as and for the purpose specified.

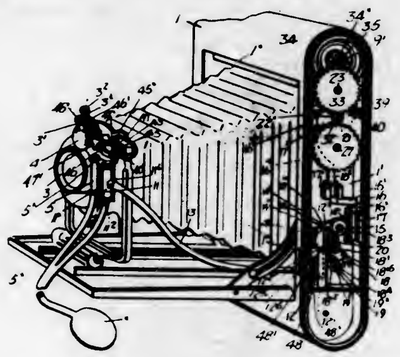
12. In a calculating machine, the combination of a shaft, a series of computers rotatably mounted on the shaft, and a series of indicators loosely mounted on the shaft and being paired with the computers, means for rocking the indicators about the shaft, means for transferring the movement thereof to the companion computers, means for limiting the movement of the indicators by the actuating means, and means detachably connecting the actuating means and the indicators whereby the indicators are released from the actuating means when said indicators are limited in their movement, substantially as and for the purpose described.

18. In a calculating machine, the combination of a series of computers, each having a total stop, a series of indicators paired with the computers, means for actuating and determining the extent of movement of the indicators, means for transferring the movement of the indicators to the computers, said means being arranged to also coact with the stops of the computers and total mechanism comprising means operable to lock the computers from movement and shift the transferring means in position to coact only with said stops, whereby the indicators are limited in their movement by the stops when moved by the actuating means, substantially as and for the purpose set forth.



1,426,711. APPARATUS FOR TESTING PISTON RINGS. JAY EDGAR BUTLER, Baltimore, Md., assignor to Victor Piston Ring Company, Baltimore, Md., a Corporation of Maryland. Filed Oct. 27, 1921. Serial No. 510,706. 5 Claims. (Cl. 73—51.)

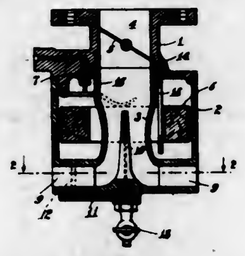
1. An apparatus for testing piston rings comprising a cylinder, having open ends, a pair of pistons mounted



therein, said pistons being provided with grooves for the reception of the rings to be tested, piston rods connected to said pistons and projecting toward the respective ends of the cylinder, and pedals formed on the outer ends of said rods.

1,426,712. GOLF BALL. AUGUSTUS S. CHATFIELD, New York, N. Y. Filed Sept. 19, 1919. Serial No. 324,774. 13 Claims. (Cl. 46—4.)

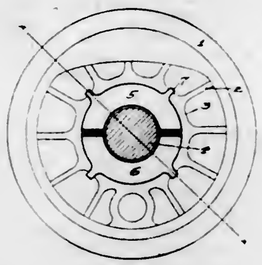
1. In a resilient ball, a spherical resilient body portion having a hollow central core and a plurality of resilient supports for said body portion located in the core and subdividing the core into a plurality of pockets, the said resilient supports traversing the core in a plurality of directions, the supports being attached to said body portion.



1,426,713. CAMERA. JOSEPH PACY CLEAL, Toronto, Ontario, and CHARLES HARRISON GIBBONS, Victoria, British Columbia, Canada. Filed Aug. 22, 1918. Serial No. 251,031. 11 Claims. (Cl. 242—71.)

1. In a film feeding device for cameras, the combination with the motor driven film rolls, of a pneumatic plunger arranged in the camera case, a rotating stop member connected with the motor, a pawl adapted to engage said stop member to arrest the motor, means operated by said pneumatic plunger adapted to strike the pawl to release it from engagement with said rotating stop member, and means operated by the motor for returning the pawl to its stop position.

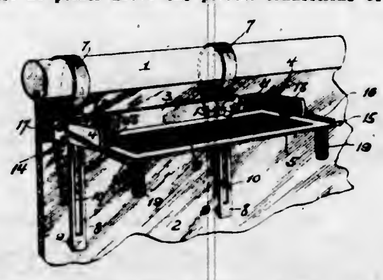
1,426,714. CARBURETOR. WILLIAM H. COLLIER, Sandusky, Ohio. Filed June 7, 1917. Serial No. 173,303. 3 Claims. (Cl. 261—79.)



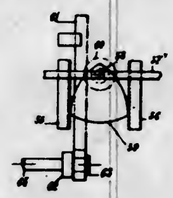
1. A carburetor comprising a member provided with a normally vertical mixing passage, having its walls contracted at an intermediate point to form a Venturi throat, a plurality of lateral air inlet passages leading tangentially into the lower part of said mixing passage, and a fuel jet nozzle centrally disposed within said mixing passage and projecting upwardly into said Venturi throat portion.

2. In a carburetor, a bowl member having a central mixing passage and a surrounding annular fuel space, and having beneath that fuel space a plurality of lateral air inlet passages leading from the outside to said central mixing passage and arranged substantially tangentially with respect to said mixing passage, and a nozzle centrally disposed within said mixing passage and connected to said fuel space.

3. In a carburetor, a bowl member having a central mixing passage and a surrounding annular fuel space, and having beneath that fuel space a plurality of lateral air inlet passages leading from the outside to said central mixing passage and arranged substantially tangentially with respect to said mixing passage, a nozzle centrally disposed within said mixing passage and projecting up thereinto from the bottom of the bowl member, and a duct connecting said nozzle with said fuel space and passing through the bottom of the bowl member and through one of the walls between said inlet passages.



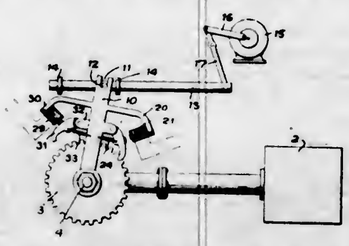
1,426,715. HUB LINER FOR RAILWAY LOCOMOTIVE WHEELS. HOWARD CRAMER, Jacksonville, Fla., assignor of one-half to Lawrence Richardson, Louisville, Ky. Filed Aug. 11, 1920. Serial No. 402,927. 7 Claims. (Cl. 64—25.)



1. A liner of the character described adapted to be interposed between a railway journal box and a wheel, said liner having a body and extensions projecting between the spokes of the wheel accessible from the outside thereof, said extensions being welded to the railway wheel.

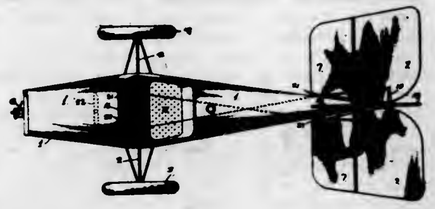
1,426,716. ATTACHMENT FOR WINDSHIELDS FOR AUTOMOBILES. BURR CUSTER, Marion, Ind. Filed Apr. 27, 1921. Serial No. 464,816. 5 Claims. (Cl. 296—97.)

2. A guard attachment for wind shields, comprising supporting means attachable to a wind-shield, a supporting bracket having vertically adjustable connection with said supporting means, a guard pivotally mounted in said supporting bracket and springs connected with said bracket at points above the pivotal connections of the guard with said supporting bracket and with the guard and operable to hold the latter in operative position or in inoperative position.



1,426,717. WEAVING LOOM. ADRIEN DAVID, St. Etienne, France. Filed Jan. 5, 1920. Serial No. 349,462. 4 Claims. (Cl. 139—19.)

1. In a narrow wear loom, the combination of a batten, a shuttle connected therewith, angle irons secured to the rear face of the batten, a shaft having at one end a vertically disposed cam extending between and contacting with said angle irons, a pinion mounted on the opposite end of said shaft, a vertically reciprocating rack geared to said pinion, and means for varying the stroke of the rack.

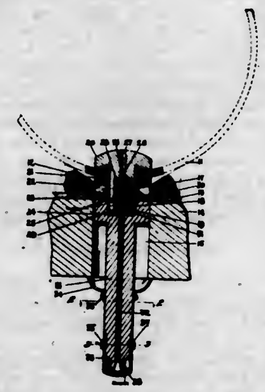


1,426,718. FLOW-REGULATING APPARATUS. LUIS DE FLOREZ, Boston, Mass. Filed Sept. 3, 1919. Serial No. 321,422. 6 Claims. (Cl. 137—139.)

6. In apparatus for regulating the flow through a valve opening, the combination of means operative independently of the extent of valve opening for periodically changing in one direction the extent of said opening, and means operative upon the occurrence of a predetermined extent of opening for changing said extent of opening in the opposite direction and at a more rapid rate than said periodic changing.

1,426,719. VEHICLE. WALDEMAR E. DOYAL and RALPH HAGOPIAN, Berkeley, Calif. Filed Dec. 20, 1919. Serial No. 348,219. 4 Claims. (Cl. 180—1.)

1. As an article of manufacture, a vehicle for ground travel comprising a wingless body; a pair of parallel supporting wheels mounted upon said body slightly in advance of the center of gravity thereof; an air propeller operatively mounted upon the body to propel the vehicle along the ground by air displacement; horizontal elevating rudders pivotally mounted upon the rearward end of the vehicle for balancing the body upon the wheels by air resistance against said rudders when the vehicle is in



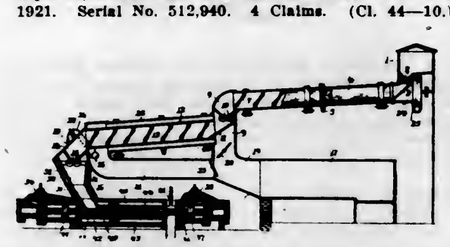
motion; a vertically disposed steering rudder mounted between the elevating rudders to operate by air resistance thereagainst to steer the course of the vehicle, the balancing and the steering of the vehicle along the ground giving a sensation similar to flying without the attendant dangers of actual flight and thereby affording a safe means of practice preliminary to flying.

1,426,720. PROCESS OF FORMING IMITATION LEATHER UPHOLSTERY AND THE PRODUCT PRODUCED THEREBY. RUSSELL DWIGHT, Wyoming, Ohio. Filed Sept. 29, 1919. Serial No. 327,272. 3 Claims. (Cl. 154—2.)

1. The process of manufacturing artificial leather upholstery which consists in stitching together two pieces of cloth or other suitable material with rows of stitches, then applying artificial leather composition to one of the exposed surfaces and then filling the openings between the rows of stitches with suitable padding material.

1,426,721. TIRE VALVE. EMIL ERIK, Ossining, N. Y., assignor of one-fourth to Barney Pindek and one-fourth to Isador Pindek, both of Brooklyn, N. Y. Filed Oct. 22, 1921. Serial No. 509,624. 3 Claims. (Cl. 152—12.)

3. In combination with a tire valve having a stem, a protective closure for the end of the stem, channelled

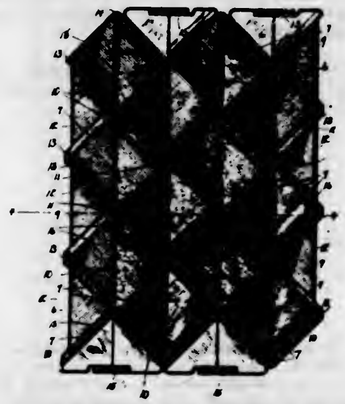


means on said closure, and an element extending alternately into and out of said channel means for locking the closure to said stem.

1,426,722. MOTION-PICTURE APPARATUS. HENRY R. EVANS, New York, N. Y.; Adele Kean Evans, executrix of said Henry R. Evans, deceased. Filed July 27, 1916, Serial No. 111,606. Renewed Jan. 7, 1922. Serial No. 527,779. 3 Claims. (Cl. 88—24.)

1. In motion picture apparatus, the combination of a gate past which a film is to be moved, a source of light, an objective, optical means for condensing the light rays and directing them upon the gate and thence in the form of a slightly divergent light beam to the objective, said objective causing the light rays to form an apex beyond the same, whereby the rays converging from the objective form a relatively small apex, and a shutter at said apex for intermittently intercepting the light beam at said apex.

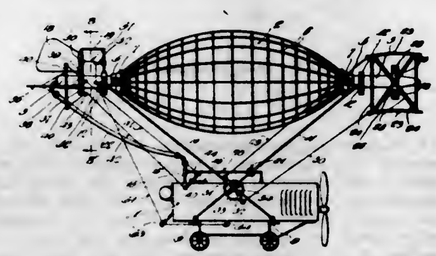
1,426,723. PROCESS AND APPARATUS FOR THE CONVERSION OF PEAT, LIGNITE, AND OTHER CARBONACEOUS SUBSTANCES INTO ARTIFICIAL COAL. OLPHA A. FORD, Malden, Mass., assignor of one-half to Margaret J. Thompson, Kennebunk, Me. Filed Sept. 23, 1916, Serial No. 121,877. Renewed Nov. 4, 1921. Serial No. 512,940. 4 Claims. (Cl. 44—10.)



3. The herein described means for converting peat, lignite and other carbonaceous substances into artificial coal, comprising means for giving the material a preliminary dehydration, means for giving to the material a second dehydration, means for receiving the material from the first dehydrating means, pulverising it and delivering it to the second dehydrating means, means for receiving the material from the second dehydrating means and giving it a final pulverization, and means for variably delivering intermixed atmospheric air and hot products to the second dehydrating means, said pulverising means being in the direct path of travel of the gases and material, and both being at all times enclosed within the kiln body.

1,426,724. COLLAR OR THE LIKE FOR JOINING HARD-METAL PIPES. THOMAS LILLIE FYFFE, Dundee, Scotland. Filed May 5, 1920. Serial No. 378,986. 1 Claim. (Cl. 285—120.)

Means for joining two hard metal pipes comprising a pair of collars each flared or swelled at one end, means for securing the collars to the pipes to be joined, a hollow hard metal core adapted to lie in the swelled ends of the collars, a seating of soft metal adapted to lie between the collars and the core, means for drawing the collars towards one another so as to grip the seating between the collars and core, said core being provided with a central rib the internal surface of the collars and the external surface of the core being spherical in form.



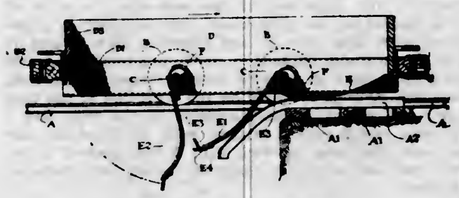
1,426,725. RADIATOR FOR INTERNAL-COMBUSTION ENGINES. FREDERICK GARGUILO, New Haven, Conn. Filed June 16, 1921. Serial No. 477,900. 3 Claims. (Cl. 257—130.)

2. A radiator-unit consisting of a corrugated, sheet-metal strip folded upon itself and having its ends secured together, the said sheet-metal strip having its edges offset to form combined spacing-and-assembling flanges, and the strip being transversely corrugated from edge to edge throughout its length at an angle to its longitudinal axis, and the apices of the corrugations on the air-passage side of the strip being flattened to permit the apices of the flanges on the said side of the strip to make contact.

1,426,726. DIRIGIBLE BALLOON. JESSE W. GILBERT, Salina, Kans. Filed July 25, 1921. Serial No. 487,283. 7 Claims. (Cl. 244—6.)

1. A dirigible balloon comprising a gas bag, a beam extending through said bag, yokes loosely mounted upon said beam in front of and to the rear of said bag, a car beneath said bag, and hanger rods loosely connected with the forward and rear end portions of said car and extending upwardly in crossed relation and loosely connected with said yokes.

1,426,727. BRASSIÈRE. ALINE M. GODCHAUX, New Orleans, La. Filed Apr. 30, 1920. Serial No. 377,814. 2 Claims. (Cl. 2—73.)



1. A combination brassière and corset cover, comprising three horizontal continuous portions fastening in the back, a top compressing portion composed of strong material with a pair of shoulder straps inserted thereon adapted to press the busts of the wearer downwardly, an intermediate breast receiving portion relatively wider and a lowermost waist line forming portion comprising a plurality of thicknesses and provided with a plurality of darts extending upwardly into the intermediate section to make the lower portion of the garment circumferentially form-fitting and to make the lower front portion of the garment pocketlike to receive part of the body.

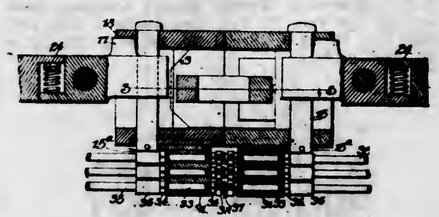
1,426,728. SANITARY BOTTLE STOPPER. ANDREW W. GRAHAM, Buffalo, N. Y. Filed Dec. 8, 1920. Serial No. 429,237. 7 Claims. (Cl. 215—51.)

1. A stopper of the class described consisting of outer and inner layers of paper like material and an intermediate reinforcing layer of flexible metal, all of said layers having coterminous edges whereby the edge portions of the stopper will be retained in shape by the reinforcement after forcible shaping to fit a bottle.

1,426,729. DUMPING CAR. CHARLES A. GRIFFITH, Knoxville, Tenn. Filed Jan. 11, 1921. Serial No. 436,448. 4 Claims. (Cl. 214—63.)

1. The combination with a car body, of two doors having their forward parts hinged on lines which are horizontal and transverse to the length of the car body and the forward of said doors having its rear edge meeting the forward edge of the other door, and the rear of said meeting edges being turned downward below its hinge line and the other of said edges being turned upward, and one of said meeting edges being of hook-form, and the other of said edges being formed for inter-locking with said hook-form edge, substantially as described.

1,426,730. METHOD OF HOT-ROLLING EXTREMELY THIN STEEL SHEETS. WILLIAM E. HANNA, Brackenridge, Pa., assignor to Valley Holding Corporation, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1920. Serial No. 428,487. 2 Claims. (Cl. 29—18.)

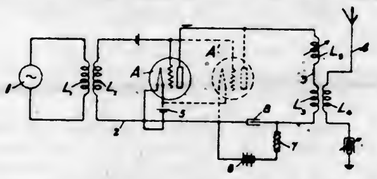


1. The method which consists in grouping two silicon steel sheets while cold, in placing such group between pickled bars of mild steel raised to rolling temperature, in rolling the pack thus made up to 72 inches or more in length, in separating the pack, cutting each of the silicon steel sheets into two pieces, re-grouping two or more of these cut sheets together and inserting such group between pickled bars or relatively heavy sheets of mild steel, raised to rolling temperature and then rolling the pack to such length as will give the desired thickness to the silicon steel sheets.

1,426,731. GAS COCK. GEORGE H. HARRIS, Utica, N. Y., assignor to Utica Valve and Fixture Company, Utica, N. Y., a Corporation of New York. Filed Mar. 1, 1919. Serial No. 280,077. 6 Claims. (Cl. 251—112.)

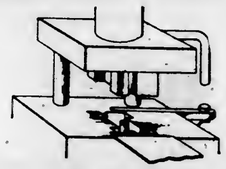
1. In a gas cock, a casing having an aperture therein, a key disposed in said aperture, spring means for holding said key within said aperture, a lateral recess in the wall of said casing, a lateral recess in said key adapted to co-operate with the recess in said wall, whereby to permit the passage of gas when the key is turned into open position, and means for stopping the turning of the key in either full open or full closed position.

1,426,732. COMBINATION CAR AND TRAIN-PIPE COUPLING. ONESIME HEBERT, Oklahoma, Okla., assignor to Universal Car and Hose Coupler Company, Phoenix, Ariz., a Corporation. Filed Dec. 8, 1917. Serial No. 205,103. 4 Claims. (Cl. 213—40.)



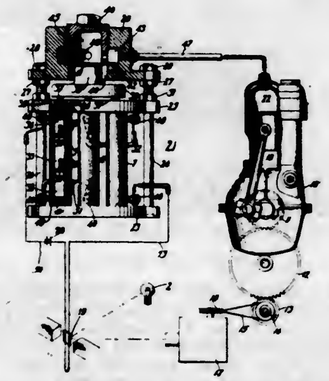
3. A car coupler head provided with a detachably mounted pipe block and a pin passing vertically through said head for connecting said head to a draw bar, said pin serving also as an abutment for said pipe block.

1,426,733. METHOD AND MEANS FOR PREVENTING AMPLIFIERS FROM OSCILLATING. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1918. Serial No. 217,189. 6 Claims. (Cl. 179—171.)



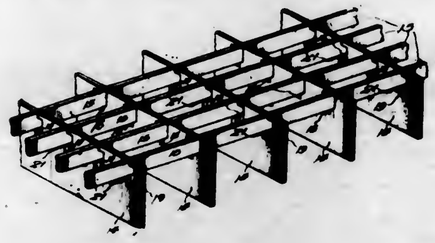
2. A transmission system adapted to amplify waves in substantially the same form as they are received compris-

ing means for preventing free oscillations in a vacuum tube amplifier having negligible external input and output resistance, which means consists of an effective in-



ductance in the output circuit having a ratio to the effective inductance of the input circuit not less than the amplifying ratio of the tube.

1,426,734. METHOD OF MANUFACTURING AUDIONS. WILLIAM F. HENDAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1919. Serial No. 293,838. 5 Claims. (Cl. 250—27.)



1. The method of making an electrode unit which comprises cutting out in blank two surfaces adapted to serve as vacuum tube electrode surfaces with an integral collar portion connecting their lower ends, bending said surfaces into parallel opposed relation, and bending said collar portion to embrace a support, joining the upper ends of the surfaces by a metallic connection, associating insulating material with said connection and supporting other electrodes from said insulating material.

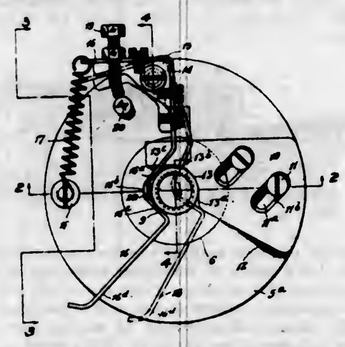
1,426,735. METHOD AND APPARATUS FOR RECORDING PRESSURE. WILLIAM FERRIS HENDEY, New York, and CHARLES E. REDDIG, Richmond Hill, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1919. Serial No. 345,437. 16 Claims. (Cl. 234—21.)

4. A pressure recording apparatus for gas and heat engines and the like comprising a pressure actuated element, a resistance device in engagement with said element, a circuit including said resistance device and means actuated commensurate with the varying current in the circuit for deflecting a beam of light upon a photographic film, and means for actuating said film in synchrony with the piston of the engine.

1,426,736. GRATING. WILLIAM H. HESS, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,896. 18 Claims. (Cl. 189—82.)

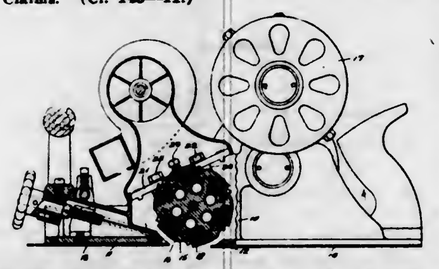
1. A grating formed of a plurality of series of bars extending in intersecting relation, the bars of one series containing apertures presenting shoulders, said shoulders being located between the upper and lower ends of said apertures and the bars of said other series being inserted through said apertures into intersecting relation with the bars containing said apertures and extending across said shoulders, and means for holding said bars in said intersecting relation.

1,426,737. AUTOMATICALLY-OPERATING WEATHER STOP. JOHN JAMES HINES and HENRY ROBERT WAY, Halifax, Nova Scotia, Canada. Filed Feb. 19, 1921. Serial No. 446,352. 2 Claims. (Cl. 20—67.)



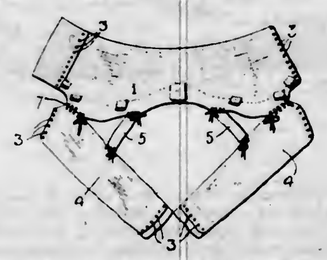
1. In an automatically operated weather stop, the combination of a back plate, an outer stationary casing secured to the upper end of the back plate, a series of ribs formed on the back plate, rods arranged in alignment with each other in and rotatable with respect to the ribs, a clutch adapted to couple and rotate said rods as a unit, cams of eccentric form arranged on the rods, members movably arranged on the lower end of the back plate and having surfaces actuable by the cams and a movable casing formed integral with the members; one of said rods being provided with a trip adapted to rotate the rods when the clutch is thrown into operative position.

1,426,738. BLANK HOLDING AND EJECTING MECHANISM. HENRY C. HOOK, Windsor, Vt., assignor, by mesne assignments, to Aluminum Manufactures, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 30, 1920. Serial No. 407,029. 8 Claims. (Cl. 90—33.)



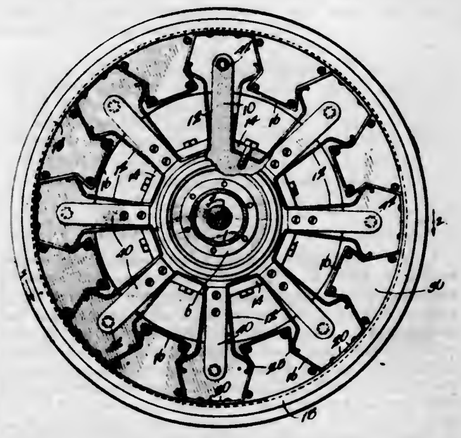
1. In a blank holding and ejecting mechanism for presses and the like in combination a platen, a plate adjustably mounted thereon and adapted to form a stop for a blank, and a spring actuated member pivotally

mounted on the said platen and cooperable with the said plate to retain a blank in operative position relative to



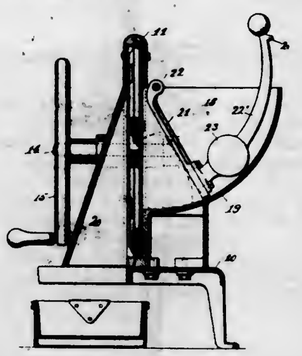
the press and to remove the blank after the press has completed its work thereon.

1,426,739. HAND PLANER. JOHN F. HOY and JOHN C. WHITEALL, Jr., Norristown, Pa., assignors to The Luster-Jordan Company, Norristown, Pa., a Corporation of Pennsylvania. Original application filed Aug. 7, 1919, Serial No. 315,986. Divided and this application filed June 30, 1921. Serial No. 481,679. 2 Claims. (Cl. 145—11.)



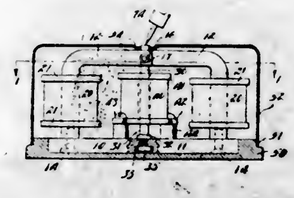
1. In a planer the combination of frames the sides of which are provided with inclined slots to receive blocks and the upper faces of which are inclined and grooved, slidable blocks mounted in said slots, a cutter journaled in said blocks, plates provided with tongues fitted to the grooves of said frames, screws securing said blocks with respect to said plates and adjusting screws passing through said plates and engaging said blocks whereby upon loosening of the first mentioned screws and tightening of the adjusting screws said cutter may be lowered.

1,426,740. SURGICAL APPLIANCE. GEORGE O. HULICK, East St. Louis, Ill. Filed Nov. 8, 1917. Serial No. 200,915. 1 Claim. (Cl. 2—188.)



A device of the class described having a main abdominal portion laced in front, leg portions laced thereto in front, and straps at the rear connecting the leg portions with the main portion.

1,426,741. SPRING WHEEL. JULIUS JEIDEL, Chicago, Ill. Filed Oct. 7, 1921. Serial No. 506,109. 5 Claims. (Cl. 152—28.)

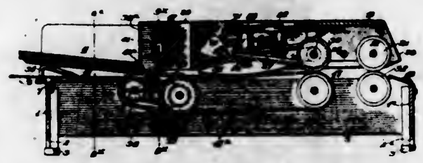


1. A spring wheel having a hub and a felloe, one having springs arranged approximately radially and the other having seats, the springs being fastened at one end and free at the other, the free ends of the springs seating in said seats, and the seats having sloping, nonradial sides whereby the engaged ends of the springs tend always to return to the bottom of the seats and thereby hold the hub concentric with the felloe.

1,426,742. ICE-SHAVING MACHINE. HORACE M. JEROME, Davenport, Iowa, assignor to B. L. Schmidt Company, Davenport, Iowa, a Corporation of South Dakota. Filed Sept. 9, 1921. Serial No. 499,476. 3 Claims. (Cl. 83—62.)

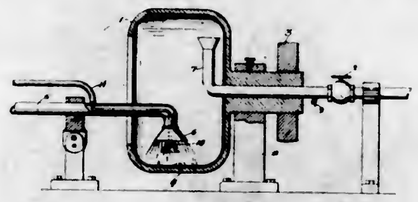
1. An ice-shaving machine embodying a casing formed of two sections one of which is secured to a suitable base and the other being secured to and closely supported by the first-mentioned section, said first-mentioned section having a feed-hopper formed integrally therewith and said last-mentioned section having a delivery-chute formed integrally therewith and extending the full height of the feed-hopper, and a circular cutter-wheel mounted to rotate in said casing, said feed-hopper and delivery-chute being positioned directly opposite to each other and entirely to one side of the center of rotation of the cutter-wheel, whereby both sides of the cutter-wheel are closely confined in the casing except at the points where the feed-hopper and delivery-chute are positioned.

1,426,743. ELECTROMAGNETIC SOUND-PRODUCING DEVICE. FRANK J. KAEHNI and WILLIAM L. KAEHNI, Cleveland, Ohio. Filed June 9, 1922. Serial No. 567,042. 2 Claims. (Cl. 179—100.1.)



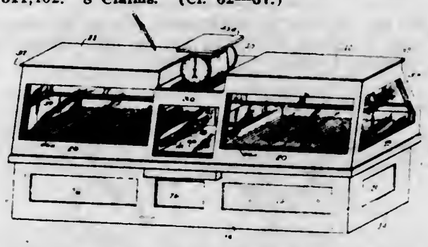
1. The combination with a phonograph reproducer having a rockable stylus, a sound box, and a sound reproducing diaphragm, of a magnetic core having a pair of end portions adjacent each other overlapping and spaced apart, iron screws adjustably mounted in said end portions and forming pole pieces, a bar rigidly anchored at its lower end to the intermediate portion of the magnetic core and extending upwardly between said pole pieces and adapted to vibrate transversely to the general plane of the magnet core and having means at its upper end for connection to said phonograph stylus, a coil surrounding said bar and spaced therefrom, and a casing surrounding the magnet and coil and having an opening adjacent the end of said bar.

1,426,744. PENCIL. CHARLES R. KERRAN and FRANK R. TAYLOR, Chicago, Ill., assignors, by mesne assignments, to Autopoint Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1919. Serial No. 340,151. 6 Claims. (Cl. 120—18.)



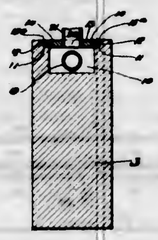
4. A pencil having a body reduced at its upper end to provide a shoulder in combination with a clip formed with a collar-shaped head adapted to seat upon the shoulder, elements projecting from the lower edge of the clip head to engage with the pencil body to prevent relative rotation between the clip and pencil, a body for the clip extending laterally and then longitudinally to lie adjacent the pencil body, and means locked to the pencil including a circular wall adapted to overlie the head of the clip and provided with a notch through which the clip body may extend, said means acting to lock the clip in place upon the pencil, substantially as described.

1,426,745. ENVELOPE-SEALING MACHINE. ARTHUR J. KRIESA, Rochester, N. Y., assignor to The Bircher Co., Inc., Rochester, N. Y., a Corporation of New York. Filed May 11, 1918. Serial No. 233,890. 25 Claims. (Cl. 120—6.)



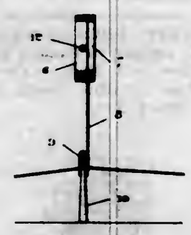
1. In an envelope sealing machine the combination of a table for a stack of envelopes, means for separating and carrying the envelopes from the stack, flap uppermost comprising a traveling belt, a revoluble disk having its edge located in proximity to said belt serving to separate the flap from the body of the envelope during the movement of the latter, means for supplying moisture to the upper surface of the disk and a pair of rollers for pressing the flap into contact with the body of the envelope.

1,426,746. RECOVERING GOLD AND APPARATUS THEREFOR. OLIVER C. KNIPE, Palo Alto, Calif. Filed Oct. 31, 1921. Serial No. 511,692. 4 Claims. (Cl. 83—67.)



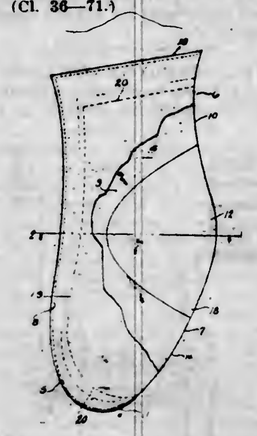
1. The process of recovering finely divided insoluble material in dilute suspension in a liquid consisting in rapidly rotating the liquid in a hollow open drum, a lining of porous fabric on the inside of the drum coated with grease to imbed and retain the gold, and simultaneously removing the clear water after a sufficient period of centrifugal action.

1,426,747. MEAT-DISPLAY CASE. OSMER J. LASHER, Waterbury, Conn. Filed Oct. 29, 1921. Serial No. 511,402. 8 Claims. (Cl. 62—37.)



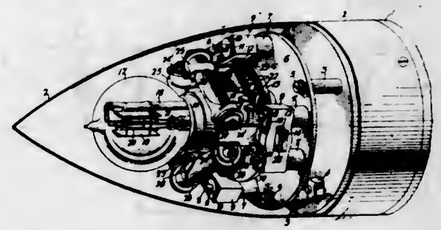
1. In a refrigerator display case, a pair of spaced twin troughs providing a central ventilating and circulating space therebetween, said troughs having perforated horizontal flanges around their top edges, and having vertical rims surrounding said flanges, and a divided drip pan below said troughs, said drip-pan having a central tube extending upwardly into said ventilating and circulating space.

1,426,748. BUCKSTAY. JOHN F. LEWIS, North Braddock, and JOHN W. KAGARISE, Wilkinsburg, Pa. Filed May 9, 1921. Serial No. 467,824. 4 claims. (Cl. 263—44.)



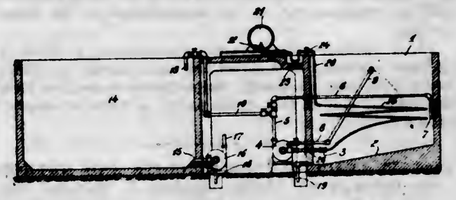
1. A buckstay formed of a substantially rectangular rolled metal slab having an open-sided recess machined therein, a cover plate welded over the open side of said recess, and water connections to said recess.

1,426,749. TREMOLO. ORVILLE O. LEWIS, Coldwater, Kans. Filed June 23, 1921. Serial No. 479,860. 11 Claims. (Cl. 84—313.)



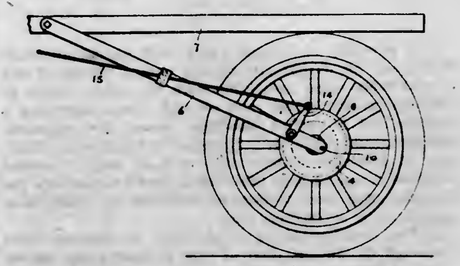
1. A device of the kind described comprising freely vibratory means to engage a vibratory portion of a stringed instrument, and vibratory sound-modifying means supported from said means for free vibration and also having a vibratory portion within itself vibratory relatively to the first named means.

1,426,750. ARCH SUPPORT. RUDOLF LUSTIG, Milwaukee, Wis. Filed Nov. 26, 1920. Serial No. 426,596. 3 Claims. (Cl. 36—71.)



1. An arch support, comprising a flexible insole member formed of an upper and a lower part connected together along its outer edge and both ends to form a pocket with an inner edge opening, a metallic spring base plate removably positioned within said pocket and having an upcurved medial edge portion, and a pad member removably positioned within the pocket and above the base plate and having its front and rear and outer side edges skived outwardly.

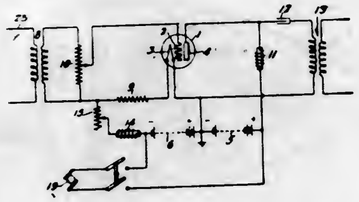
1,426,751. THERMIONIC REGULATOR. PHILIP K. MCGALL, West Orange, N. J., and HARRY R. MENEFEE, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,240. 10 Claims. (Cl. 171—312.)



1. In combination, a dynamo electric machine and a vacuum tube in circuit therewith and mounted in line with the axis of rotation thereof.

1,426,752. PREPARATION OF LIQUID BLEACH SOLUTIONS. JAMES H. MACMAHON, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Mar. 4, 1922. Serial No. 541,224. 9 Claims. (Cl. 8—2.)

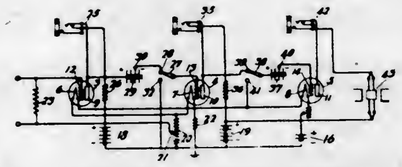
2. The method of preparing bleach solutions by subjecting alkaline solutions to the action of chlorine, which comprises supplying the chlorine in the form of liquid chlorine, and utilizing the heat of vaporization of the chlorine to cool the alkaline solution, the liquid chlorine being vaporized by indirect contact with the solution and being then introduced in gaseous form into the solution.



1,426,753. MOTOR-CAR BRAKE. DOUGLAS G. MACPHERSON, Portage La Prairie, Manitoba, Canada. Filed Jan. 7, 1921. Serial No. 435,696. 5 Claims. (Cl. 188—206.)

5. A motor car brake, comprising a brake drum secured to the outer side of the wheel, a brake shoe drum

rotatably mounted axially of said brake drum, means for detachably securing said brake shoe drum in place, means for anchoring said brake shoe drum from rotation, brake shoes supported on said brake shoe drum and engaging the brake drum, and means carried by said anchor means for operating said brake shoes.



1,426,754. CIRCUITS FOR ELECTRON-DISCHARGE DEVICES. ROBERT C. MATHES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1916. Serial No. 127,120½. 27 Claims. (Cl. 179—171.)

1. In an electric translating circuit, an electron discharge device having a heated filament, an anode and a grid, said grid and filament being in the input circuit, a battery for the output circuit, means for bringing the grid to a different potential than the filament, comprising a resistance in the input circuit and a battery for supplying current therefor, the grid-filament steady potential difference being determined substantially solely by the drop in said resistance said means so arranged that gradual fluctuations in the strength of the output battery will be compensated for by fluctuations in the input battery.

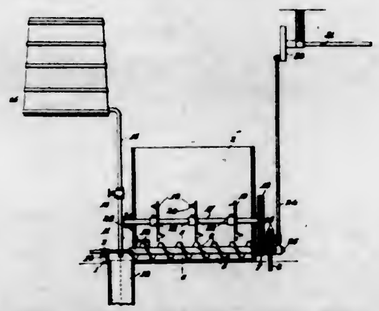
18. A vacuum tube apparatus comprising a plurality of tubes arranged in a series and each having a cathode and a grid, and a normally unipotential connection from the grid of one of said tubes to the cathode of another tube.

1,426,755. VACUUM-TUBE CIRCUITS AND METHOD OF OPERATING THEM. ROBERT C. MATHES, New York, N. Y., and HARRY S. READ, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 9, 1919. Serial No. 295,820. 15 Claims. (Cl. 179—171.)

1. A plurality of vacuum tubes each having an input circuit and an output circuit, the output circuit of one of said tubes being associated with the input circuit of a second of said tubes, each of said tubes comprising a cathode and a control electrode, means for supplying current to said cathodes and means for supplying a difference of potential between the cathode and a control electrode of one of said tubes, said means comprising the potential drop in a resistance connected in shunt to a cathode of a succeeding tube.

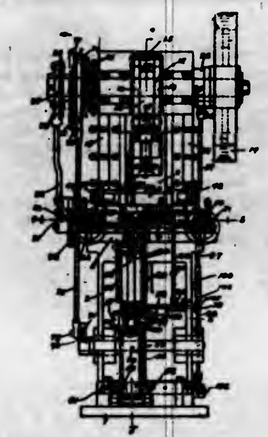
5. The combination of a plurality of vacuum tubes connected in tandem, each of said vacuum tubes having an input circuit and a filamentary electrode, the input circuit of one of said tubes including said electrode of a succeeding tube.

1,426,756. PUFFED FOOD PRODUCT AND PROCESS OF PRODUCING THE SAME. NATHAN MININBERG, Dickinson, N. Dak., assignor to Bran Products Company, Dickinson, N. Dak., a Corporation of North Dakota. Filed June 10, 1921. Serial No. 476,513. 7 Claims. (Cl. 99—10.)



1. The process of producing a puffed food product which consists in boiling a mixture of cereal bran and water to form a doughlike mass; cooling said mass; subdividing said mass into relatively small portions; and subjecting said portions to a temperature above 400° F. and not exceeding 700° F., whereby the air and moisture therein are caused to expand and puff said portions, substantially as described.

1,426,757. ACOUSTIC DEVICE. CHARLES R. MOORE, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,494. 11 Claims. (Cl. 179—122.)

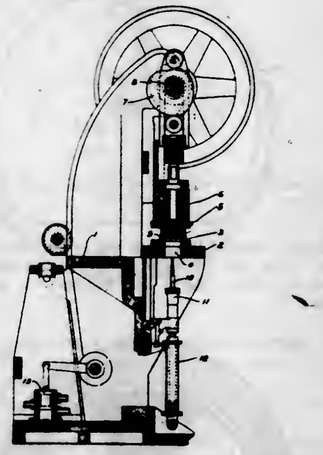


1. In an acoustic device, the combination with a sound-responsive body, of a current-varying device mounted thereon comprising a part fixed to said sound-responsive body, a plurality of spaced resilient diaphragms carried by said fixed part, and a second part solely supported by said diaphragms for relative movement to said sound responsive body.

1,426,758. ABRASIVE-MATERIAL-FEEDING MACHINE. FRANKLIN L. MOORE, Carthage, Mo. Filed Jan. 12, 1922. Serial No. 528,722. 5 Claims. (Cl. 51—263.)

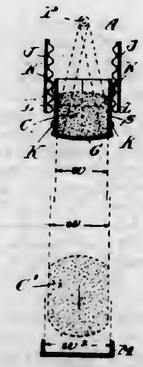
1. An abrasive feeding machine comprising a hopper having its apex rounded to form a trough, a screw conveyor mounted in the trough, the hopper being formed with a discharge opening at one end of the trough, agitating means for preventing packing of abrasive material above the conveyor, means for actuating the conveyor with a step-by-step movement, and means geared to the conveyor actuating means for imparting corresponding movement to the agitating means.

1,426,759. MACHINE FOR BUILDING LAMINATED ARMATURE CORES AND THE LIKE. FREDERICK C. NICKOL, Dayton, Ohio, assignor to City Machine & Tool Works, Dayton, Ohio, a Copartnership consisting of Frederick C. Nickol and Oscar M. Poock. Filed July 2, 1920. Serial No. 393,712. 67 Claims. (Cl. 29—33.)



1. In a machine for building laminated armature cores and the like, a support for a shaft, mechanism for producing disks from a strip of material, and means for causing said disks to be assembled on said shaft in proper relation one to the other.

30. In a machine of the character described, a die, a punch cooperating with said die to sever a perforated disk from stock which is fed to said die, means for actuating said punch and for causing the same to remain in a position adjacent to said die for an interval of time following the severing of the disk, means to support the severed disk adjacent to said punch, and means to move a shaft longitudinally through the perforation in said disk to cause the disk to be mounted on the shaft.

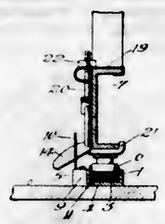


50. In a mechanism of the character described, piercing and blanking dies, movable punches for said dies, a device to feed stock to said dies, a driving shaft, operative connections between said driving shaft and said punches and said feeding device, a shaft support having movement to insert a shaft in a disk formed by said dies, each successive movement of said shaft support being less than the preceding movement thereof, means controlled by said driving shaft for actuating said shaft support, a power transmitting device, a clutch connection between said power transmitting device and said driving shaft, an actuating device for said clutch, a spring tending to move said actuating device into its operative position, a locking member to hold said actuating device in its inoperative position, a trip finger to actuate said locking member to release said clutch actuating device, a trigger connected with said shaft support, and means for causing said trigger to engage said trip finger when the movement imparted to said shaft support does not exceed a predetermined minimum movement.

1,426,760. MACHINE FOR BLANKING AND ASSEMBLING DISKS. FREDERICK C. NICKOL, Dayton, Ohio, assignor to City Machine & Tool Works, Dayton, Ohio, a Copartnership consisting of Frederick C. Nickol and Oscar M. Poock. Filed Jan. 5, 1921. Serial No. 435,248. 15 Claims. (Cl. 29—33.)

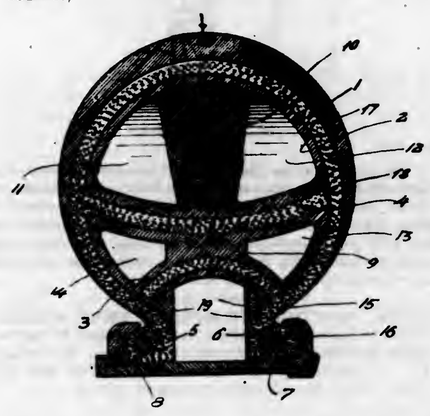
2. In a machine for blanking and assembling disks, the combination with a die and a punch to blank said disks, of a detent carried by one of said members and arranged to engage the disk which is being blanked and to support the same after the completion of the blanking operation, and means for assembling said disk on a supporting structure and releasing the same from said detent.

1,426,761. MACHINE FOR MOLDING BRICK SHAPES. CHARLES L. NORTON, Boston, Mass., assignor to Refractories Machinery Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,245. 8 Claims. (Cl. 25—103.)



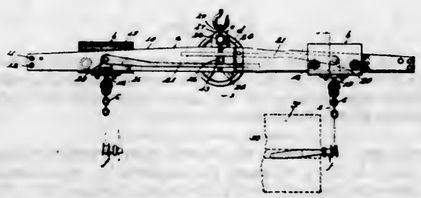
1. In a machine of the character designated, a mold, and a hopper above the mold comprising means adapted to deprive a mold-charge in the hopper of vertical and lateral support substantially simultaneously.

1,426,762. SLIDING SUPPORT FOR TYPEWRITERS. JOHN A. NOTT, Chicago, Ill., assignor, by mesne assignments, of one-half to Ira Krupnick, Chicago, Ill. Filed Aug. 22, 1919. Serial No. 319,082. 7 Claims. (Cl. 45—52.)



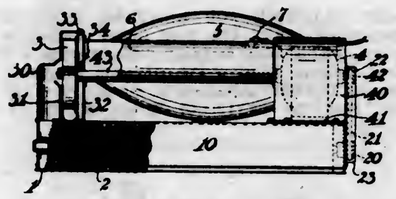
7. In an apparatus of the character described, a stationary channel-shaped guide, a channel-shaped piece of felt

considerably shorter than the guide lying within the guide and movable lengthwise of the latter, and a cushion



fitting within the channel of the felt and movable with the latter.

1,426,763. TIRE. MAURICE O'BANNON, Daytona Beach, Fla. Filed Oct. 20, 1919, Serial No. 331,780. Renewed Jan. 11, 1922. Serial No. 528,560. 2 Claims. (Cl. 152—1.)

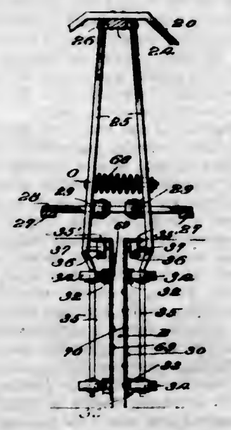


2. A device of the class described comprising a main member of fabric of substantially circular cross-section, a central basewardly curved bridging member integral therewith, a lower treadwardly curved bridging member integral therewith, said bridging members forming compartments, rubber linings in said compartments, a solid rubber member standing wedgelike between the upper and lower walls of the upper compartment and providing air chambers on the sides of said solid member, and air chambers in said other compartment, and a rubber coat surrounding said main member.

1,426,764. CRANE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of New Hampshire. Filed Aug. 2, 1920. Serial No. 400,601. 7 Claims. (Cl. 294—67.)

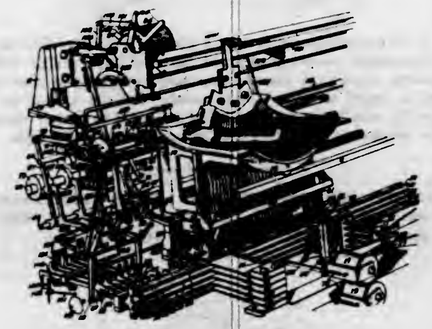
1. In an apparatus of the class described, a boom provided with trackways, a pair of carriages supported directly on said trackways for adjustment and adapted to support an article therebetween, a manually rotatable shaft journaled centrally of said boom, a pinion fixed on said shaft, and oppositely extending racks connected to said carriages and meshing with said pinion.

1,426,765. SUIT VACUUM CLEANER. FRANCISCO M. PESARILLO, Seattle, Wash. Filed Apr. 11, 1921. Serial No. 460,278. 5 Claims. (Cl. 15—8.)



1. In a device of the character described, a casing having a suction nozzle therein, an electric motor mounted at one end of said casing, a suction fan mounted upon the opposite end of said casing, a dust-receiver connected to said fan, a shaft connecting said motor and fan, and a tubular handle connecting the fan housing and the motor housing, and enclosing said shaft.

1,426,766. TWO-PART PISTON RING. JAMES R. PETRIE, San Francisco, Calif. Filed Sept. 28, 1921. Serial No. 503,944. 2 Claims. (Cl. 74—109.)



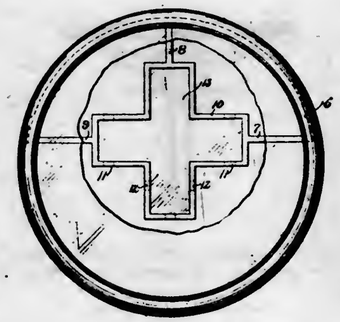
1. A two-part piston ring comprising an L-shaped part constructed and adapted to dovetail in to a second part, the two parts forming a two-part ring of rectangular section, and each of said parts having a joint consisting of ends formed to intermesh with each other and the parts assembled with the said joints opposite each other and grooves in the outer surface of the L part in the assembled ring to pass pressure between the parts.

1,426,767. ROOT-CROP HARVESTER. HARRY IRVING PETTENGILL, Flint, Mich. Filed Sept. 16, 1919. Serial No. 324,083. 5 Claims. (Cl. 55—108.)

1. A root crop harvester including a transportable frame, means at the forward end of the frame for gathering the root crop tops from the ground, and a pair of endless top engaging and conveying belts mounted longitudinally on the frame and comprising chains, vertical boards secured to the outer faces of the chains and being corrugated longitudinally of the chains to firmly grip the root crop tops, and resilient means for normally urging the inner laps of the chains toward each other.

1,426,768. PRINTING-TELEGRAPH RECEIVER. HARRY PFANNENSTIEHL, East Orange, N. J., and ERWIN P. BANCROFT, Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1917. Serial No. 195,712. 16 Claims. (Cl. 178—27.)

14. Printing telegraph apparatus comprising a paper platen, a group of printing elements movable transversely with respect to said platen, shift mechanism for effecting relative vertical motion between said platen and said printing elements, means for holding said shift mechanism in its actuated position, and means controlled by current impulses for simultaneously permitting relative transverse motion between said platen and said printing elements and for releasing said holding means.

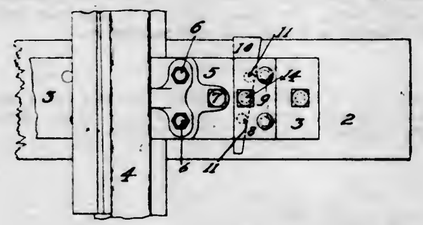


1,426,769. PROCESS FOR PLATING. GEORGE H. PINNEY, South Manchester, Conn., assignor to The Williams Brothers Manufacturing Company, Glastonbury, Conn., a Corporation of Connecticut. Filed Oct. 26, 1921. Serial No. 510,511. 6 Claims. (Cl. 204—1.)

1. The process of plating that consists in applying a removable cover to a portion of the article to be plated, then applying a plating resisting material to the article around said cover, then removing said cover, and then plating the uncovered portion of the article.

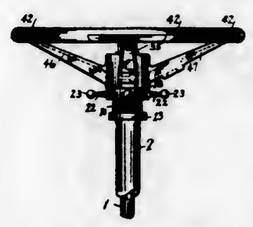
1,426,770. INDICIA PLATE FOR LENSES. VITO A. QUAGLIANO, East Boston, Mass. Filed Feb. 20, 1922. Serial No. 537,764. 4 Claims. (Cl. 40—132.)

3. An indicia plate for lenses comprising a curved rim, a plurality of inwardly directed arms extending therefrom, an open frame of cruciform outline mounted upon the adjacent ends of said arms, a sheet of light transmitting material within said frame, and integral tabs projecting from said frame for holding such sheet of material in place.



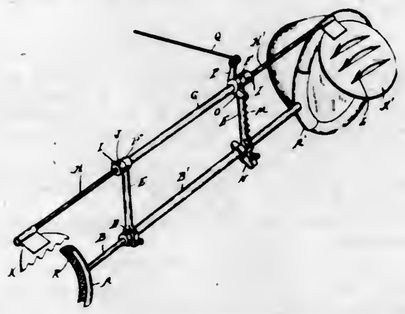
1,426,771. LEADING-IN CONDUCTOR. JOHN W. RADU, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1920. Serial No. 351,977. 9 Claims. (Cl. 91—70.)

4. A leading-in conductor of a base metal or metals comprising a baked-on flux coating which is welded to said conductor.



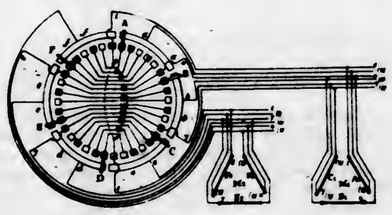
6. A leading-in conductor having a baked-on coating of phosphate.

1,426,772. ADJUSTABLE BACKING FOR RAIL BRACES. FRED RAPP, West Albany, N. Y. Filed July 2, 1921. Serial No. 482,126. 1 Claim. (Cl. 238—336.)



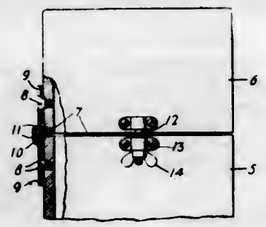
An adjustable backing for rail-braces comprising a tie plate with openings therethrough; a thrust resisting member fixedly attached to said plate a side of said member notched to form a vertical surface at an angle across said plate and a horisontal surface parallel to but spaced from said plate and having a vertical opening through said member into said notch; a wedge member with a series of notches vertical therein and in line with the aforesaid vertical opening when a side of said wedge member is in contact with the vertical angular surface of said thrust resisting member; and means adapted to pass through the vertical opening in said thrust resisting member, one of the notches in the wedge member, and an opening in said tie plate and hold said wedge member in adjusted position and fasten said wedge member, thrust resisting member, and tie plate to a railroad tie.

1,426,773. DIVISIBLE LOCKING STEERING WHEEL. PETER W. BECK, Bettendorf, Iowa. Filed July 14, 1919. Serial No. 310,725. 7 Claims. (Cl. 74—33.)



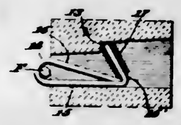
1. A divisible locking steering wheel, having a rim divided into quarters, each quarter mounted on the end of a spoke.

1,426,774. VEHICLE LAMP DIMMER. GEORGE S. RESSLER, Lansing, Mich. Filed Jan. 24, 1921. Serial No. 439,356. 7 Claims. (Cl. 240—45.6.)



1. A dimmer for headlights, comprising a longitudinally collapsible frame, shoes at the opposite ends of said frame for engaging the headlights, a rock shaft mounted in said frame, and shields secured to said rock shaft and movable in relation to said headlights.

1,426,775. AUTOTRANSFORMER. ANGELO DELLA RICCIA, Brussels, Belgium. Filed Dec. 2, 1921. Serial No. 519,560. 3 Claims. (Cl. 171—119.)

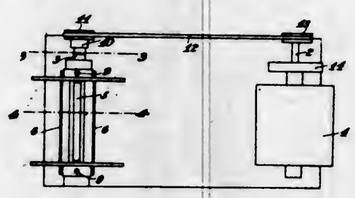


1. An auto-transformer for the supply of two symmetrically disposed secondary circuits, comprising for each secondary circuit a stationary terminal connected in the circuit at the corresponding end of the transformer winding and a terminal movable along the said winding, the two movable terminals being symmetrically disposed, and means for moving the same by equal amounts and in contrary sense upon the whole length of the winding.

1,426,776. MOISTUREPROOF RECEPTACLE. WILLIAM E. RIECKEN, Glendale, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1918. Serial No. 268,542. 6 Claims. (Cl. 217—57.)

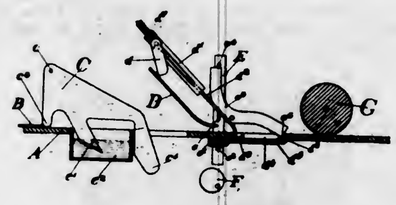
1. A receptacle comprising a casing, a closure therefor, compressible means positioned between said casing and closure, means for compressing said compressible means, and a hinge member loosely connecting the casing and closure, said hinge member being arranged to permit right line movement in a direction perpendicular to its axis.

1,426,777. FENCEPOST AND WIRE FASTENER. GRANT E. RUSSELL, St. Louis, Mo. Filed May 7, 1920. Serial No. 379,581. 10 Claims. (Cl. 256—48.)



1. A fastener for securing the line wires of a fence to a post comprising a shank having an eye at one end by means of which the fastener may be secured to the fence wire, and a portion at the other end bent away from the shank and inclined over the shank, said end portion being of less length than the shank and terminating intermediate the ends of the shanks, the end portion and the shank being adapted to fit within an opening in a fence post whereby the end portion may secure the fastener to the fence post.

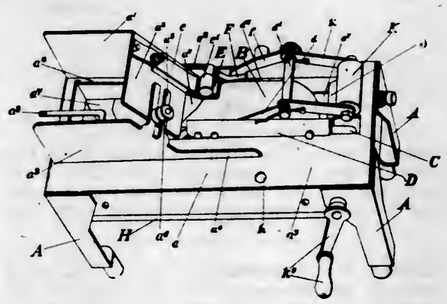
1,426,778. MULTIPLE-TURRET-TOOL HOLDER. WILLIAM A. SALTER, Kansas City, Mo. Filed July 6, 1920. Serial No. 394,226. 2 Claims. (Cl. 29—49.)



1. In a multiple turret tool holder, the combination of a supporting member, a revolving tool carrier member having locking recesses with registry holes, a registry stop pin carried by the supporting member engaging with the registry holes in the tool carrier and the adjustable stop screws therein, an operating locking bolt, and means whereby the tool carrier is locked by wedging action between one side of the stop pin and the beveled side of the locking bolt engaging with a locking recess.

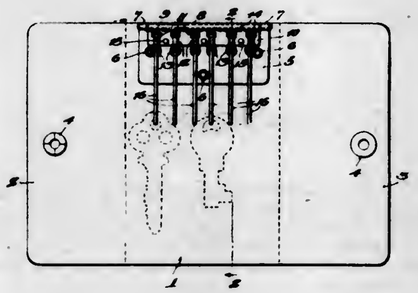
1,426,779. DEVICE FOR ROLLING UP PAPER AND THE LIKE. FREDERIK SCHADE, Skive, Denmark. Filed Apr. 19, 1919. Serial No. 291,325. 2 Claims. (Cl. 242—55.)

1. A device for rolling paper, comprising a pair of reels, removable means carried by one of said reels for preliminarily bending the paper into a plurality of sections having parallel edges, and means carried by said reels for curving said sections to roll the paper into cylindrical form upon the removal of said first means.



1,426,780. STAMP-AFFIXING MACHINE. WILLIAM F. SCHWEIGER, Rochester, N. Y., assignor to Multipost Company, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Dec. 22, 1919. Serial No. 346,479. 5 Claims. (Cl. 216—28.)

1. A machine for automatically affixing stamps on envelopes comprising moistening means operated by an envelope as it is fed through the machine, stamp strip feeding means which is engaged and moved along by the forward edge of an envelope at the same speed as the envelope, and stamp severing mechanism, the operation of which is controlled by the envelope.



1,426,781. ENVELOPE-MOISTENING MACHINE. WILLIAM F. SCHWEIGER and WESLEY J. BALKWILL, Rochester, N. Y., assignors to Multipost Company, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Jan. 31, 1920. Serial No. 355,326. 9 Claims. (Cl. 91—50.)

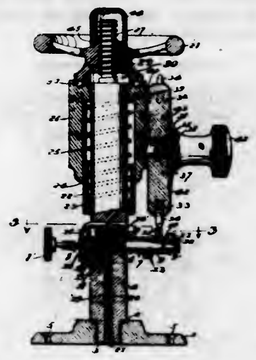
1. An envelope moistening machine comprising supporting means having an opening to receive the downwardly projecting flap of an envelope, a table located in the path of travel of the envelope, feeding means for actuating the envelope across the top of the table, deflecting means lying in the path of the envelope and acting to guide the flap to the underside of the table,

and a moistening device arranged beneath the table and acting to moisten the flap of the envelope as the latter is fed across the table.

1,426,782. KEY POUCH. MAX SCHWEINSHAUT, Attleboro, Mass., assignor to M. S. Company, Attleboro, Mass. Filed Feb. 9, 1922. Serial No. 535,222. 3 Claims. (Cl. 150—40.)

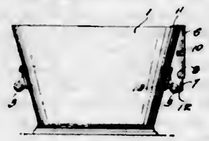
1. In a key pouch, a case, a plate secured to the case and having spaced hinged knuckles at its ends, a plate doubled upon itself to form a knuckle received between the first named knuckles, a pintle passed through all of the knuckles, the leaves resultant from doubling of the plate being formed with openings adjacent to the knuckle thereof and with registering concavities extending from the openings through the free outer side edges of the leaves, the respective concavities conjointly forming sockets, eyes having shanks turnable in the sockets, the eyes abutting the free outer side edges of the leaves and the shanks having heads disposed within the respective openings, and key holding members carried by the eyes.

1,426,783. PISTON PACKING. FREDERICK E. SMALL, Needham, Mass., assignor to Pressure Proof Piston Ring Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 13, 1920. Serial No. 410,052. 2 Claims. (Cl. 74—109.)



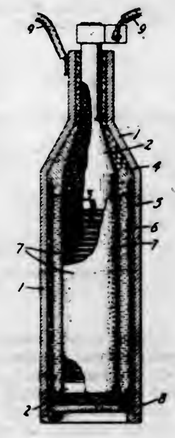
2. In a piston packing comprising a main bearing ring having a beveled inner portion and an outer circumferential seat, a split breaker ring fitted in the seat

upon the main ring and a split expander ring bearing against said beveled portion, a pin extending axially through the main bearing ring and projecting into the



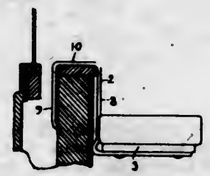
circumferential seat and from the surface of the inner beveled portion and fitting into the splits of the breaker and expander rings and adapted thereby to preserve the relative circumferential position of the rings.

1,426,784. PIPE-STAMPING MACHINE. ROBERT R. SOLMSON, New Brunswick, N. J. Filed Jan. 17, 1922. Serial No. 529,853. 4 Claims. (Cl. 101—18.)



1. A pipe stamping machine comprising a set of dies mounted in a rotatable support, means for rotating said support, and means for regulating said rotation, a slidably mounted arm adapted to secure a pipe bowl in place, means for imprinting said dies in said pipe bowl, and means for securing the machine in place on a counter or table top.

1,426,785. HANDLE HOLDER FOR CASKETS. FRANCIS M. SONDAY, Churubusco, Ind. Filed Mar. 25, 1921. Serial No. 455,535. 3 Claims. (Cl. 33—180.)

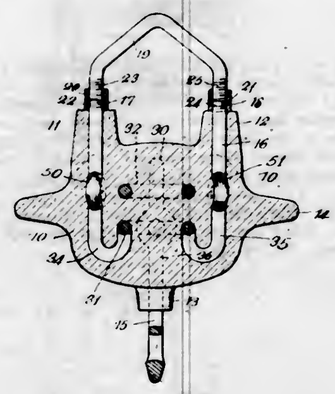


1. In a handle holder for caskets, the combination of a plurality of operatively connected plates, each of said plates having inturned end portions, the inturned end of one plate being adapted to engage over the upper edge of the casket, and the inturned end of the other plate being suitably shaped to engage the casket handle, and means securing the plates together and permitting of longitudinal adjustment of one plate relative to the other plate.

1,426,786. STORAGE BATTERY. JAMES BUCKNER SPEED, New York, and FRANKLIN HUTCHINSON, Jr., Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 3, 1920. Serial 370,972. 20 Claims. (Cl. 204—29.)

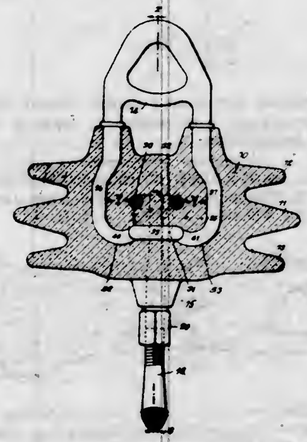
1. A hermetically sealed storage battery comprising an electrolyte and two electrodes whose potential difference is less than that required to liberate gases from the electrolyte.

1,426,787. ARMREST. CHARLES R. SPENCER, Buffalo, N. Y., assignor of one-half to George H. Rowe, Buffalo, N. Y. Filed Sept. 22, 1921. Serial No. 502,455. 4 Claims. (Cl. 296—1.)



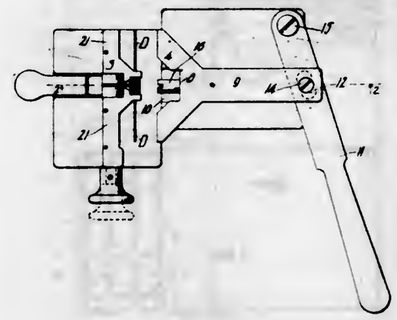
3. An arm rest comprising a block, a pair of U-shaped hangers having extension portions, a base to which the extension portions are riveted and a screw securing the base to the block, the base having flanges to bear against the block and provide a clearance for the rivets.

1,426,788. INSULATOR STRAIN MEMBER. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Nov. 26, 1918. Serial No. 264,146. 7 Claims. (Cl. 173—366.)



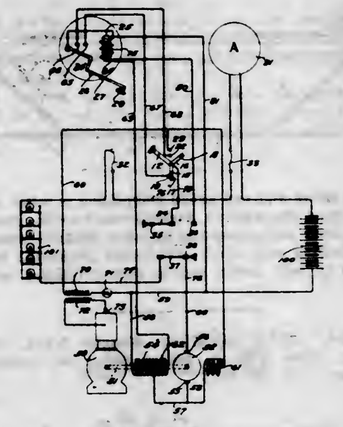
2. In a device of the kind described, an insulating body, interlocked strain members embedded therein, said strain members consisting of leg portions and ring

shaped bridge portions oppositely disposed to each other, and circular elements forming a portion of the leg por-



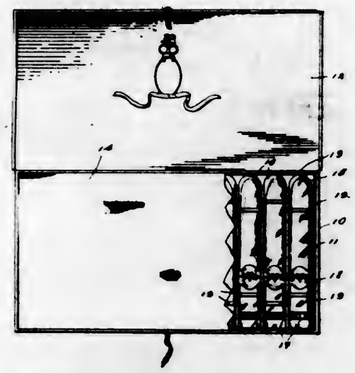
tions of one strain member and extending therefrom in a line concentric with the bridge portion of the other strain member.

1,426,789. INSULATOR. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Jan. 28, 1922. Serial No. 532,387. 14 Claims. (Cl. 173—366.)



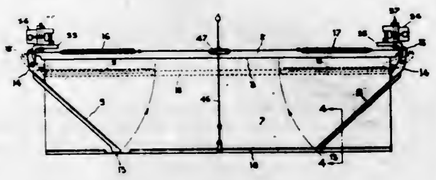
1. In a device of the kind described, an insulating body, interlocked strain members embedded therein, each of said strain members embodying leg portions and a stress distributing ring portion therebetween, the said leg portions being rigidly secured to and bridged by the said ring portion, the ring portion of one of said strain members being disposed opposite to the ring portion of the other strain member, each of said ring portions being circular in vertical cross section, the ring portion of one strain member being insulated from the leg portions of the other strain member.

1,426,790. WIRE-BENDING MACHINE. OLAF STENSON, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1920. Serial No. 349,067. 11 Claims. (Cl. 153—21.)



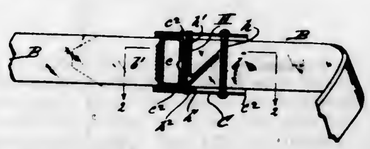
6. In a wire bending machine, the combination with a rotary bending die having a transverse slot therein extending through its axis, of a longitudinally movable mandrel intersecting the slot and having one edge coincident with the axis of said die.

1,426,791. ELECTRIC CONTROL SYSTEM. HUGH M. STOLLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 21, 1921. Serial No. 479,192. 13 Claims. (Cl. 290—35.)



1. The combination with an internal combustion engine of a dynamo electric machine having a shunt field and two independent series fields, one having a larger number of ampere turns than the other, both of said series fields wound cumulatively with said shunt field, a secondary battery, means for connecting said shunt field and the series field having the larger number of ampere turns to said secondary battery for starting said engine and for connecting said shunt field and the series field having the smaller number of ampere turns to said battery for charging it, said means comprising two manually operable switches, and electromagnetic means for controlling one of said switches.

1,426,792. METHOD AND PACKAGE FOR CIGARS IN GLASS TUBES. EUGENE VALLENS, New York, N. Y. Filed Apr. 23, 1921. Serial No. 463,883. 2 Claims. (Cl. 206—46.)

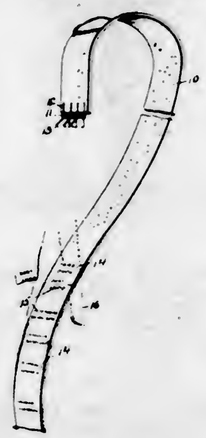


1. In a package of the character described, a case, a plurality of tubes, elastic rings frictionally fitted upon the tubes, the case being of a size to snugly receive the rings in bearing upon the tubes and sides of the case.

1,426,793. WINDSHIELD ATTACHMENT. JOSEPH H. VINESERG, JOHN HALLIDAY, and JOSEPH PRESNER, Montreal, Quebec, Canada, assignors to The V. P. Auto Appliance Company Limited, Montreal, Canada. Filed July 14, 1921. Serial No. 484,743. 9 Claims. (Cl. 296—95.)

1. A storm and sun shield comprising a roller, a blind wound upon the roller, a device secured to the front edge of the blind and presenting an open channel, and means for extending said blind, said means projecting into the channel in said device and in sliding relation with the latter.

1,426,794. BELT BUCKLE. GEORGE WADE, Newark, N. J. Filed Oct. 21, 1921. Serial No. 509,306. 2 Claims. (Cl. 24—73.)



1. A belt buckle formed with a retaining hook of the character designated having an insert portion disposed at an angle of substantially 45° from its junction with the body of the hook to extend substantially across the belt and adapted to engage to a considerable extent in the button-hole of the waist-band of a garment.

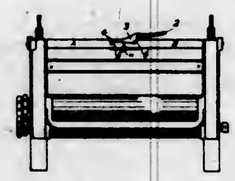
1,426,795. WEAR PLATE. JOHN F. WAIDELICH, Jackson, and THOMAS F. WHELAN, Hollwand, Mich. Filed Jan. 23, 1920. Serial No. 353,508. 4 Claims. (Cl. 36—74.)

1. A wear plate for shoe soles, comprising a pressed sheet metal member formed from a rectangular blank and having a rounded body portion with an inwardly extending annular flange surrounding the same and the corner portions of the blank forming slightly diverging prongs, the metal thereof being squeezed to thin the same and form sharp edges for driving into the leather.

1,426,796. DRIVING BELT. LEON A. WALKER, Newark, N. J. Filed Oct. 26, 1921. Serial No. 510,516. 3 Claims. (Cl. 74—62.)

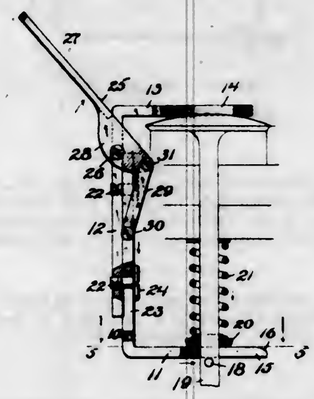
1. A driving belt having indicia thereon to indicate where the belt is to be severed to adapt it for predetermined installations.

1,426,797. HANDKERCHIEF RETAINER FOR GLOVES. EMMA D. WANGELIN, St. Louis, Mo. Filed Jan. 3, 1920. Serial No. 349,163. 1 Claim. (Cl. 2—9.)



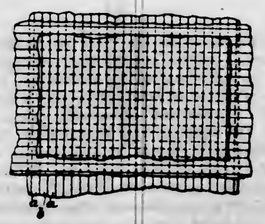
In combination with a hand covering having separable devices for securing it upon the hand, a tape like element secured to the hand covering between said securing devices at its ends only and with its body portion free from the hand covering between its secured ends, whereby said body portion will be taut or loose from the hand covering as the fastening or securing devices of the hand covering are relatively united or separated substantially as shown and for the purposes stated.

1,426,798. WRINGER. HENRY A. WEBSTER, Milford, Mass., assignor to American Wringer Company, Woonsocket, R. I. Filed Nov. 1, 1921. Serial No. 512,119. 3 Claims. (Cl. 68—32.)



3. In combination with the hinged pressure bar of a wringer, and pins extending outwardly from one of the

bar sections and on opposite sides thereof, a latch having a pair of hooks borne by the other section of the pressure



bar, and means to effect automatic engagement of the hooks with the pins when the pressure bar is in extended position.

1,426,799. VALVE REMOVER. EDWARD L. WEIL, Kearny, N. J. Filed Mar. 12, 1921. Serial No. 451,896. 1 Claim. (Cl. 29—86.3.)

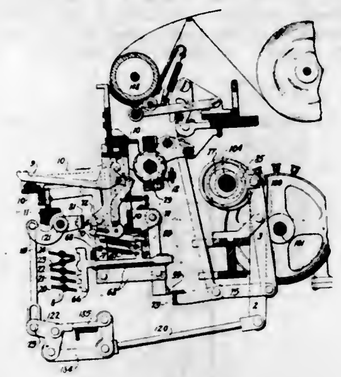
A valve remover comprising two L-shaped members slidably connected and with their ends opposed, a lever swinging on one member, and a link hinged to the other member and to the lever, so that the link crosses the pivot of the lever when the handle is swung to pull the members inwardly.

1,426,800. CONSTRUCTION OF WEAR-RESISTING AND NONSLIPPING SURFACES, SUCH AS TIRE COVERS, STAIR TREADS, OR THE LIKE. WALTER PERCY WHITEHOUSE, Whitstable, England. Filed Aug. 31, 1921. Serial No. 497,272. 1 Claim. (Cl. 154—52.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

Wear resisting and non-slipping surfaces comprising two or more layers or sheets composed of strips of vulcanized rubber of different degrees of resiliency or hardness arranged side by side and adhering together, the strips of each layer crossing at an angle the strips of the adjacent layer or layers, substantially as described.

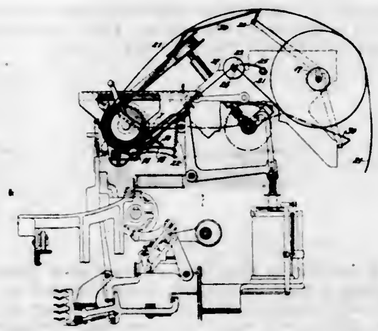
1,426,801. REPEATER FOR UNDULATORY CURRENTS. WILLIAM WILSON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,276. 20 Claims. (Cl. 250—27.)

1. A discharge device comprising a tube operating with a luminous discharge and having an anode, a cathode, a control electrode, and an apertured screen, said screen dividing the space between said anode and cathode into separate parts and having a size substantially the same as a cross-section of the tube at the point where the screen is located.



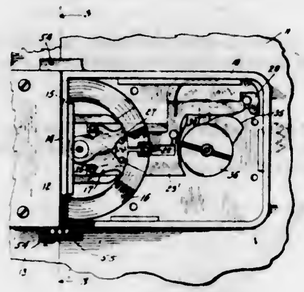
17. A vacuum tube containing a stem projecting into the interior of said tube, and a plurality of discs of conducting material symmetrically supported by said stem as an axis.

1,426,802. BOLT FOR DEMOUNTABLE WHEELS. IRVING C. WOODWARD, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 375,060. 2 Claims. (Cl. 85—1.)



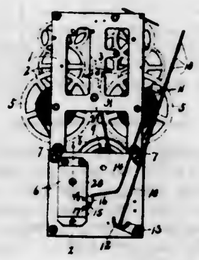
1. A bolt for clamping two or more parts together, comprising a head on one end, a nut threaded on the other end of said bolt, tapered shoulders formed on the shank adjacent said head and spaced apart circumferentially, and a thread formed on a portion of said head adjacent said shoulders and on said shoulders, said threaded head being adapted to be screwed into a threaded aperture in one of said parts to secure said bolt against accidental axial movement, said shoulders extending axially of said bolt so that by the drawing up of the bolt and nut they are adapted to be wedged into one of said parts adjacent to a bolt hole for securing the bolt against rotation relative to said part.

1,426,803. PRINTING TELEGRAPH. ARTHUR H. ADAMS, Galion, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1920. Serial No. 397,806. 8 Claims. (Cl. 178—27.)



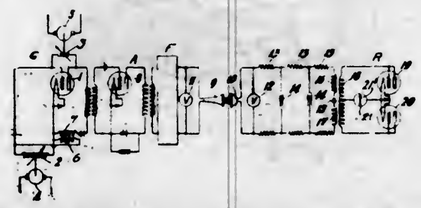
8. In a printing telegraph receiver, a movable type carriage carrying a plurality of type levers, a plurality of selecting bars, a selectable bar individual to each of said type levers, a support for said selectable bars suspended from said type carriage, and means for bringing said selectable bars toward said selecting bars for selecting purposes.

1,426,804. TYPEWRITER. ARTHUR H. ADAMS, Galion, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Oct. 29, 1918, Serial No. 260,111. Divided and this application filed Jan. 26, 1921. Serial No. 439,965. 13 Claims. (Cl. 197—133.)



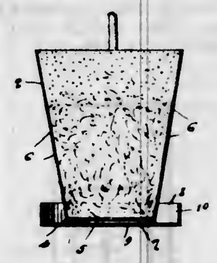
1. In combination, a paper holder, means for drawing paper from said holder in a longitudinal direction, and a take-up device over which said paper travels, said device being free to oscillate when the paper travels in a uniform longitudinal direction and a portion thereof being restrained from movement when the paper travels in a transverse direction whereby the direction of travel of the paper is automatically corrected.

1,426,805. LOCK. ARTHUR A. ALEXANDER and BERNARD MORGENTHAU, New York, N. Y. Filed Dec. 30, 1920. Serial No. 434,055. 3 Claims. (Cl. 70—16.)



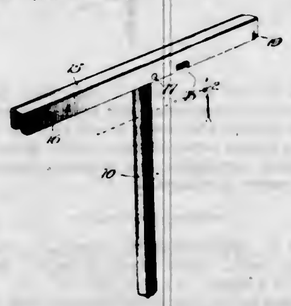
1. The combination with a lock casing, of a keeper in operative relation thereto, a hollow body on said casing projecting over the gap between said casing and keeper, and a plurality of balls loosely mounted in said body.

1,426,806. CHIME ATTACHMENT FOR CLOCKS. WILLIS H. ALLEN, Syracuse, N. Y. Filed Feb. 18, 1919. Serial No. 277,808. 4 Claims. (Cl. 58—13.)



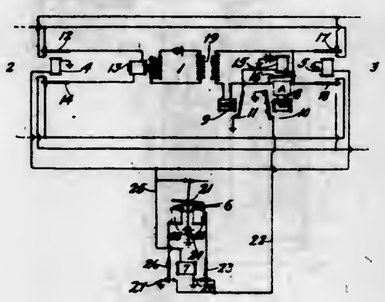
4. The combination with a clock mechanism having an upright frame, a minute spindle and a cam on the minute spindle, of a supplemental upright frame having means at its upper end for attachment to the lower end of the clock frame, a vertically adjustable charm-bar support mounted on the supplemental frame near the lower end thereof, charm bars secured at their lower ends to said support and extending upwardly some distance above the supplemental frame, strikers pivotally mounted on the supplemental frame, a motor on the supplemental frame, mechanism actuated by the motor for operating the strikers, and means controlled by the cam-wheel on the minute spindle for controlling the operation of the striker-operating mechanism.

1,426,807. METHOD OF AND SYSTEM FOR TESTING TRANSMITTERS OR RECEIVERS. HAROLD D. ARNOLD and JOHN P. MINTON, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1917. Serial No. 201,565. 15 Claims. (Cl. 179—175.)



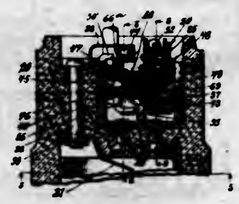
10. A testing system comprising a generator supplying current continuously variable in frequency in a regular manner, a receiver connected thereto and in attenuating device between said generator and said receiver.

1,426,808. FLOWERPOT. CHARLES H. BAILEY, Cleveland, Ohio. Filed Jan. 29, 1919. Serial No. 273,779. 2 Claims. (Cl. 47—34.)



2. A planting pot having its upstanding soil enclosing wall of material disintegrable on transfer to the ground, said wall having a groove in its inner surface to provide a weakened portion for disintegration before the remainder thereof, and a bottom disposed in said groove.

1,426,809. COLLAPSIBLE HANDLE. JOHN W. BATE, Racine, Wis. Filed July 22, 1921. Serial No. 486,689. 7 Claims. (Cl. 74—33.)

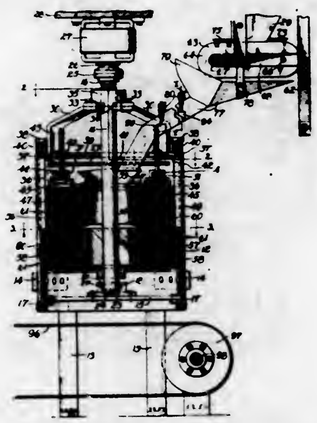


1. A collapsible handle comprising a shaft having a head formed at an angle thereto and a hollow member slidably mounted upon said shaft and having an element near the center for limiting the movement of said shaft, said shaft being movable about said element until said head lies within the hollow member.

1,426,810. REPEATER SYSTEM. WILLIAM E. BRADEY, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,248. 25 Claims. (Cl. 179—170.)

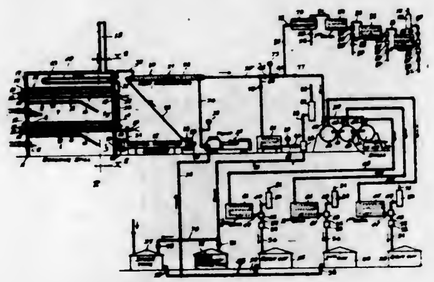
1. The combination of two lines, a repeater adapted to be reversibly connected therebetween, means for controlling the connection of said repeater to said lines and for connecting said repeater in position to transmit currents in one direction over said lines in the absence of signaling current in said lines, said means comprising a relay connected to the output side of said repeater for energization by amplified currents from said repeater.

1,426,811. ELECTRIC SWITCH. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1919. Serial No. 306,783. 9 Claims. (Cl. 173—354.)



1. A switch mechanism comprising an oscillatable operating member, a pull member for actuating said operating member, a coil torsion spring for returning said oscillating member after it has been actuated, a ratchet-member actuated by said oscillating member, a rotatable switch contact, a coil torsion spring connecting said ratchet and said rotatable switch member, a releasable detent for holding said rotatable switch member from rotation to cause energy to be stored in said second torsion spring, one of said coil torsion springs surrounding the other.

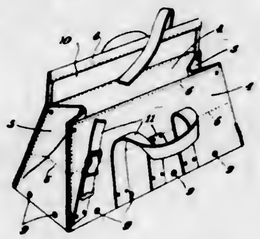
1,426,812. CEMENT MILL. ANDREW BERGLUND, Indiana Harbor, Ind., assignor to Richard S. Broge, Chicago, Ill. Filed July 23, 1921. Serial No. 486,927. 2 Claims. (Cl. 83—3.)



1. A grinder for a cement mill consisting of a cylindrical body of soft material having longitudinally imbedded therein spaced and relatively thick steel bars ex-

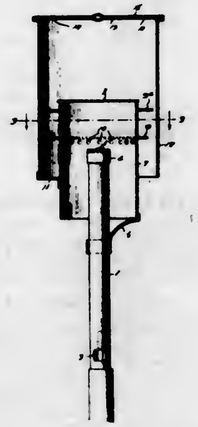
posed through one of the opposed ends of said body, said bars being arranged in spaced concentric circles with re-

spect to the axis of the body of the grinder and in spaced staggered relation to one another diametrically of said body.



1,426,813. PROCESS FOR THE PRODUCTION OF LOW-BOILING-POINT HYDROCARBONS. JOHN C. BLACK, Beverly Hills, Calif. Filed Dec. 12, 1919. Serial No. 344,406. 16 Claims. (Cl. 196—25.)

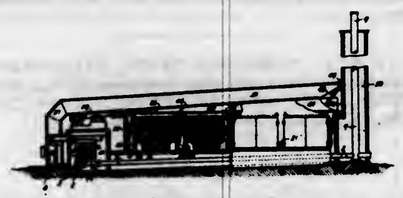
5. In the process for the production of low boiling point hydrocarbons, the combination of steps consisting in heating the hydrocarbons in a single passage to a temperature sufficient to crack them and under pressure of not less than 35 atmospheres to prevent vaporization thereof, then reducing their rate of flow, and then reducing the pressure and vaporizing the hydrocarbons separating fractions heavier than gasoline and returning said fractions to the cracking apparatus.



16. In the process for the production of low boiling-point hydrocarbons, the combination of steps comprising heating the hydrocarbons in a coil to a temperature sufficient to crack them and under pressure of not less than 35 atmospheres to prevent vaporization thereof, transferring the hydrocarbons to a tube or chamber of larger cross sectional area, completely filling the larger tube or chamber with hydrocarbons in a liquid state and passing the hydrocarbons through the larger tube or chamber while still maintaining them under pressure to deposit the carbonaceous matter and finally discharging the undeposited hydrocarbons from the chamber.

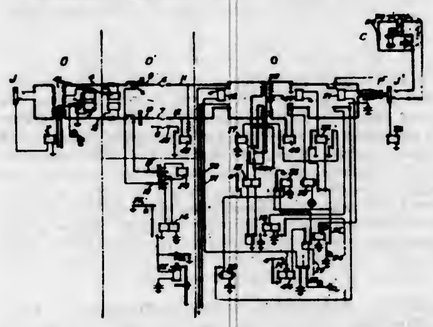
1,426,814. BAG. AUGUST BRUNS, Brooklyn, N. Y. Filed Jan. 7, 1922. Serial No. 527,615. 5 Claims. (Cl. 150—50.)

1. A bag of the character described comprising a stiff flat metal bottom with narrow upturned flanged edges and a body of heavy waterproof material like canvas which around its base is folded back upon and secured to itself to form a pocket and is secured to the flanged edges of the bottom by means of metallic fasteners passing through both folds of the pocket and an intermediate strip of metal inserted in and resting on the bottom of the pocket.



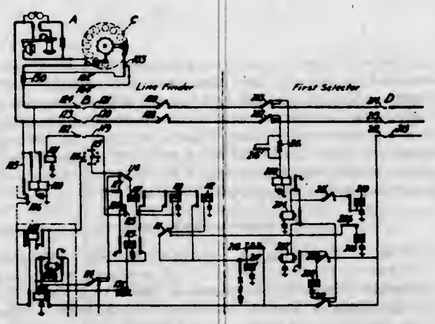
1,426,815. GAS BURNER. MATHIAS BURGSTALLER, Cleveland, Ohio. Filed Dec. 29, 1921. Serial No. 525,677. 2 Claims. (Cl. 158—99.)

1. A gas burner comprising a pipe head having jet openings, a drum surrounding said head, said drum being open at the bottom and closed at the top, the side wall of the drum having baffles on the outside thereof and jet openings below said baffles, and a shell surrounding the drum and spaced therefrom.



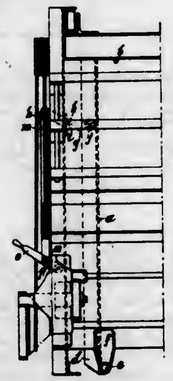
1,426,816. DEHYDRATOR. THOMAS I. CARBY, San Francisco, Calif. Filed Sept. 16, 1919. Serial No. 324,124. 8 Claims. (Cl. 34—39.)

1. In apparatus for the dehydration of food products, a plurality of compartments each adapted to receive a plurality of stacked trays, spaced apart; having ports or openings in the opposite walls of the compartments registering with said spaces, said adjacent compartment walls spaced apart forming air passages therebetween; pivoted partition members within said passages, adapted to contact their opposite edges with adjacent walls forming an inlet and an outlet passage of tapering section with the adjacent compartment walls respectively, and



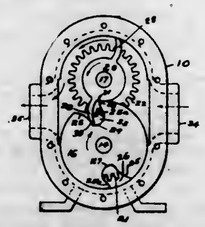
when swung about their pivots to form outlet and inlet passages respectively, as and for the purpose set forth.

1,426,817. TELEPHONE-EXCHANGE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1919. Serial No. 344,095. 8 Claims. (Cl. 179—27.)



8. In a telephone exchange system, an originating office, a terminating office, a plurality of two conductor trunk circuits extending between said offices, high resistance relays permanently bridged across said circuits at the outgoing ends thereof, and means at the terminating office for causing the operation of said relays at will to render any or all of said circuits artificially busy.

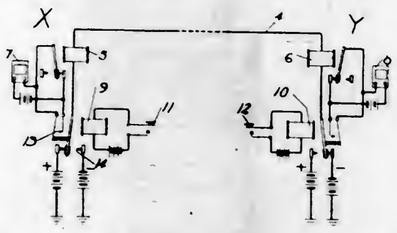
1,426,818. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,665. 9 Claims. (Cl. 179—18.)



3. In a telephone system, a telephone line, a sender therefor, a numerical switch, means for automatically extending said line to said switch upon the initiation of a call therein, and means for preventing said numerical switch from responding to the first set of impulses from said sender, said means being rendered effective only in case said numerical switch is connected to the sender while the sender is operating.

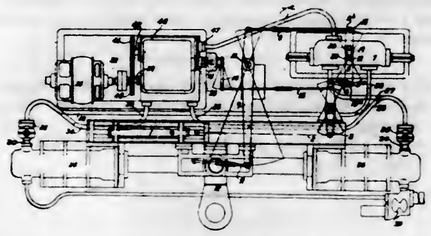
1,426,819. BALING PRESS. THOMAS COOK, Stalybridge, England. Filed Mar. 14, 1921. Serial No. 452,169. 1 Claim. (Cl. 100—19.)

The combination, with a press box provided with a side which is pivoted to it at one end, of a rock-shaft journaled in bearings secured to the press box and arranged parallel to its pivoted side, arms secured on the rock-shaft and provided with rollers for bearing against the pivoted side and holding it in place, an operating lever secured to the rock-shaft and arranged at an angle to the said arms, a hand lever pivoted to the press box and arranged substantially parallel to the operating lever, and a connecting-rod pivotally connecting the two said levers.



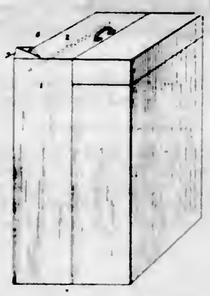
1,426,820. ROTARY PUMP. MIDDLETON CRAWFORD, Spokane, Wash., assignor to Spokane Irrigation Pump Company, Spokane, Wash., a Corporation of Washington. Filed Jan. 12, 1921. Serial No. 436,732. 1 Claim. (Cl. 103—44.)

A rotary pump comprising a casing in which is mounted two rotary drums, one of which drums is provided with crescent shaped vanes and the other of which drums is provided with corresponding recesses adapted to engage said vanes in the rotation of the drums, the periphery of said drums having a rolling contact with each other, excepting as to the said vanes and recesses, the side walls of such recesses being substantially crescent shaped, substantially parallel with each other, one of such walls being convex and the other concave, the two walls being separated at their inner ends by a substantially U-shaped wall, the relative forms of the blades and walls of the



recesses being calculated to pass comparatively long blades through recesses having comparatively narrow openings, thereby comparatively increasing the peripheral rolling contact of the drums to increase the capacity of the pump.

1,426,821. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1919. Serial No. 347,097. 7 Claims. (Cl. 178—2.)



2. In a telegraph system employing positive and negative current impulses, a line conductor connecting two stations, transmitting and receiving apparatus at each of said stations, electromagnetic means continuously and conductively connected with said line and arranged to normally disable the receiving apparatus at each of said stations, and means responsive to the actuation of the transmitting apparatus at one of said stations for maintaining the receiving apparatus thereat disabled for preventing the false operation of this apparatus.

1,426,822. HYDRAULIC STEERING SYSTEM. GEORGE DARROCH, Greenock, Scotland. Filed Mar. 28, 1921. Serial No. 456,180. 4 Claims. (Cl. 138—23.)

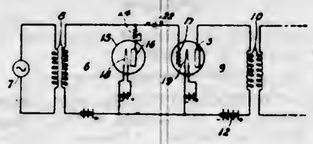
1. In a hydraulic steering system, in combination, steering cylinders, steering rams in said cylinders, a pump for supplying fluid to said steering cylinders, said pump comprising a driven shaft, crank devices on said shaft, multiple rams operatively connected to said cranks, cylinders in which said multiple rams are reciprocable, a chest associated with said second mentioned cylinders said chest having a suction passage and a discharge passage common to all said second mentioned cylinders, said chest also formed with relatively small suction holes leading into said suction passage and so arranged as to be uncovered sufficiently for effective replenishment of said second mentioned cylinders before commencement of the discharge portion of the stroke, a revoluble tube located at the discharge end of said second mentioned cylinders and operatively connected to said driven shaft, said tube being provided with discharge ports leading to said common discharge passage so arranged that the discharge of said second mentioned cylinders occurs in sequence and that each of said second mentioned cylinders is cut off from said discharge passage during the suction stroke of said pump, controlling valves under control of the steersman for selecting the steering cylinders to which fluid is to be delivered, and a branch communicating with said tube and with said controlling valves.

1,426,823. WARDROBE-TRUNK ATTACHMENT. WILLIAM R. DICKSON, San Francisco, Calif. Filed Jan. 21, 1919. Serial No. 272,359. 1 Claim. (Cl. 190—18.)

A device for attachment to an end of a wardrobe trunk adjacent an end edge of said trunk, comprising a relatively small base plate having perforations to facilitate its attachment to the trunk and a plurality of projections formed integral with one another and with the plate, being angularly related and diminishing in width and height from the point where joined to their free ends, certain of said projections being disposed substantially in alinement with an edge of the plate, whereby said projection may be alined with an end edge of the trunk.

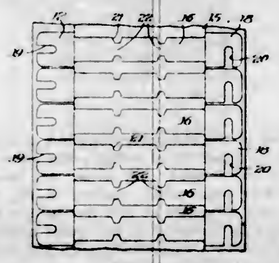
1,426,824. FIELDER'S GLOVE. WILLIAM L. DOAK, Pittsburgh, Pa. Filed Apr. 18, 1921. Serial No. 462,316. 5 Claims. (Cl. 2—195.)

5. A fielder's glove, comprising a thumb and index finger combined in such a way that they can separate sufficiently to permit a caught ball to pass between same, and a plurality of transversely-disposed strands connected with said thumb and index finger and being of sufficient length to form a yielding back stop for a caught ball, which, when engaged by the ball, tends to draw said thumb and index finger around the ball.



1,426,825. NUMERICAL CALCULATING DEVICE. GEORGE G. DOBSON, Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1918. Serial No. 209,965. 3 Claims. (Cl. 235—70.)

1. A slide rule for the solution of a problem involving a number of variables, at least one of which is unknown, said rule comprising a body, a duplex slide and an additional slide, scales on said body and said slides representing said variables, whereby said scales are adapted to cooperate for the determination of an unknown variable



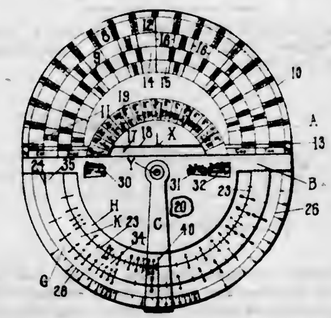
when values of other variables involved in said problem are known, one scale on each side of said body being a logarithmic scale, the scales on both sides of said duplex slide being logarithmic scales.

1,426,826. ELECTRON-DISCHARGE-DEVICE CIRCUITS. HENRY C. EGERTON, Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1917. Serial No. 181,645. 11 Claims. (Cl. 250—27.)

1. An electric system comprising an evacuated vessel having an anode, a cathode, and an auxiliary electrode, and a leakage path for positive charges from said auxiliary electrode comprising a unilateral impedance connected between said auxiliary electrode and said cathode.

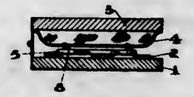
1,426,827. METHOD OF MAKING FUSE LINKS. ALFRED L. EUSTICE, Chicago, Ill. Filed Mar. 7, 1918. Serial No. 220,964. 2 Claims. (Cl. 113—112.)

1. The method of forming fuse links consisting first in providing a plurality of terminal blanks and a fusible blank, said fusible blank being flanked by said terminal blanks, then bending the edges of said blanks and pressing the same to form mechanically secure connections therebetween thereby providing a unified blank, then perfecting the electrical connection by soldering, and then stamping fuse links from the unified blank, transversely of said bent edges to produce links having a fusible central portion and end portions cut from said terminal blanks.



1,426,828. CROSSTIE. ROBERT FARNHAM, Philadelphia, Pa. Filed June 22, 1921. Serial No. 479,449. 3 Claims. (Cl. 238—55.)

1. A reinforced concrete cross tie which is provided with blocks for supporting rails, said blocks being recessed on their upper surfaces to receive a steel channel and on their lower surfaces to receive a plurality of nuts,

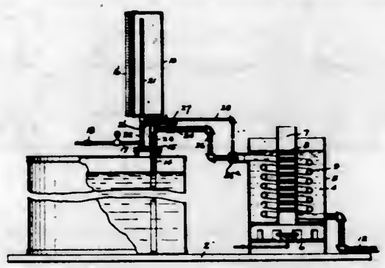


means for locking the said blocks to the body of the cross tie and means for securing rails to the said blocks.

1,426,829. CALCULATING DEVICE. GEORGE RYAN FLYNN, Lowell, Mass. Filed Apr. 8, 1921. Serial No. 459,617. 5 Claims. (Cl. 235—84.)

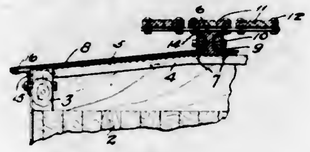
3. In a calculating device, the combination of a base having a slot with a straight edge in which is the center point of a semi-circular scale, and a pivot point which is at another center for semi-circular slide rule scales and another scale marked on said base, with a half disc member pivotal on said pivot point so cut as to form a semi-circular slide member with scales thereon for the slide rule and with apertures to disclose the other scale, together with a transparent runner pivotal on said pivot point having a hair line which crosses the slide rule scales.

1,426,830. APPARATUS FOR MANUFACTURING PAINTED SIGNS. WILLIAM J. FRASER, Toronto, Ontario, Canada. Filed Mar. 11, 1920. Serial No. 365,090. 8 Claims. (Cl. 101—126.)



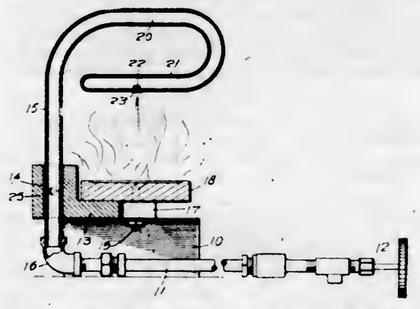
3. A mask for use in sign-making apparatus provided with a plurality of short pins, not less than three, projecting from its back, the outer ends of said pins being adapted to engage a substantial plane surface to hold the back of the mask out of contact therewith.

1,426,831. APPARATUS FOR MEASURING AND GASIFYING LIQUIDS. MORTIMER J. BROWN, Los Angeles, Calif., assignor to The Pacific R. & H. Chemical Corporation, Los Angeles, Calif., a Corporation of California. Filed June 29, 1921. Serial No. 481,438. 13 Claims. (Cl. 43—128.)



3. An apparatus for measuring and gasifying measured charges of volatile liquid, comprising a measuring cham-

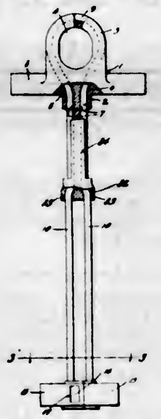
ber, a gasifier connected to the measuring chamber, to which the liquid flows from the measuring chamber and in which a pressure is produced opposing said flow means



for introducing a non-condensable gas into the measuring chamber above the liquid therein and means for transmitting the pressure produced in the gasifier to the measuring chamber above the liquid therein.

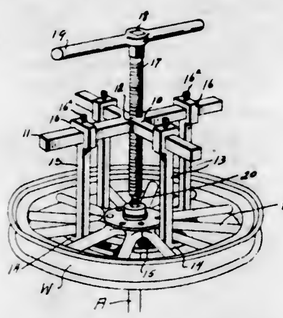
1,426,832. ROOF STRUCTURE. CHARLES I. WALKER, San Francisco, Calif. Filed June 1, 1920. Serial No. 385,522. 5 Claims. (Cl. 108—5.4.)

1. A roofing structure including a ridge pole having channels in its sides, and roofing sheets having ends laid in the channels and secured therein by longitudinally extending clamping means.



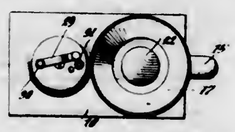
1,426,833. LIQUID-FUEL BURNER. GEORGE H. LEIFHEIT, Aurora, Ill. Filed Nov. 8, 1921. Serial No 513,712. 2 Claims. (Cl. 158—63.)

2. A liquid fuel burner comprising a base, a baffle plate, a platform on which the baffle plate is mounted, means connecting said base, baffle plate and platform, a pipe passing vertically through an opening in said support, and a set screw for securing said support to said pipe, said pipe being doubled upon itself above the baffle to provide horizontal portions at different levels, the lower portion having a gas outlet in its underside.



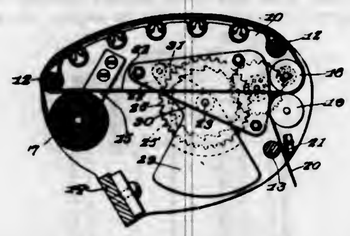
1,426,834. BEAM HANGER. FIDELIS M. MECHLING, Wichita, Kans. Filed Oct. 11, 1921. Serial No. 507,140. 4 Claims. (Cl. 255—18.)

1. In a device of the class described, a suspension member including a body having trunnions, and provided with a head, the head having a groove, and there being bores in the body; a flexible element located in the groove and



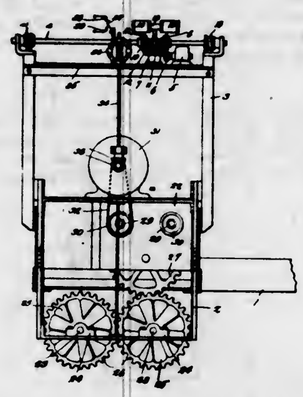
having arms which are extended through the bores; and a clamp mounted on the arms.

1,426,835. COMBINED PULLER AND PRESS. HERMAN R. MOHRMAN, Deli Rapids, S. Dak. Filed Mar. 9, 1921. Serial No. 450,886. 3 Claims. (Cl. 29—85.)



1. In a tool of the character described, a spider member embodying a plurality of radial arms, puller members adjustably mounted upon said arms, flat arcuate feet secured at their longitudinal centers to the free ends of the arms, the curvature of said feet having as an axis a point substantially central of the spider member, and a shaft having threaded engagement with the spider member at the central portion thereof.

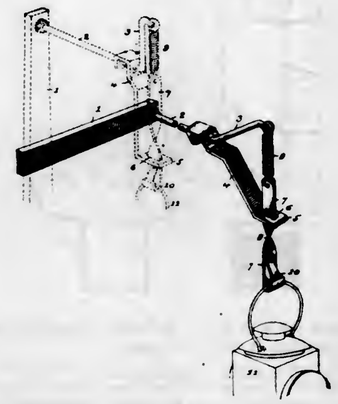
1,426,836. APPARATUS FOR TREATING OIL. HORACE FALK NEUMEYER, Macungie, Pa. Filed Mar. 1, 1918. Serial No. 219,923. 4 Claims. (Cl. 83—71.)



1. An apparatus for treating oil including a conduit, a core mounted therein in spaced relation, and a solenoid surrounding said conduit, to set a magnetic field within the conduit and to magnetize said core.

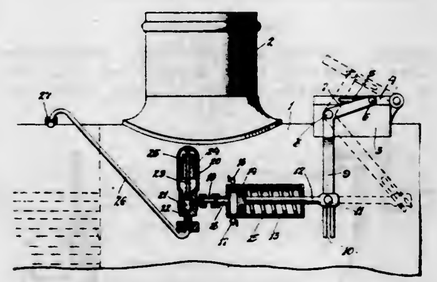
1,426,837. PAPER FEED FOR HEADRESTS. AUGUSTUS T. PATTIMORE, Sacramento, Calif. Filed Nov. 17, 1921. Serial No. 515,851. 2 Claims. (Cl. 155—176.)

1. The combination with the head-rest of a barber's chair, of a paper feeding mechanism comprising a paper roll support, a paper guide, feed rolls between which the paper is moved, a train of gears engaged with one of the feed rolls, a pendulum, a pawl carried by the pendulum and engaged with one of the gears of the train, and an endless belt between the head-rest and the paper and movable therewith.



1,426,838. WATER MOTOR. WILLIAM PETERSON, Sargent, Nebr. Filed Mar. 21, 1922. Serial No. 545,518. 2 Claims. (Cl. 170—129.)

1. Apparatus of the class described including a stationary structure, a frame mounted for up and down sliding movement therein, parallel shafts journaled within the lower portion of the frame, a series of propellers upon the shafts for rotating the shafts in opposite directions respectively, meshing gears on the shafts, a generator movable with the frame, means for transmitting motion to the generator from the gears, motor driven screws for raising and lowering the frame, a centrifugal governor driven by the gears, and electrically operated means controlled by the governor for controlling the operation of the motor and for raising or lowering the frame to maintain a substantially uniform speed of rotation of the propellers.

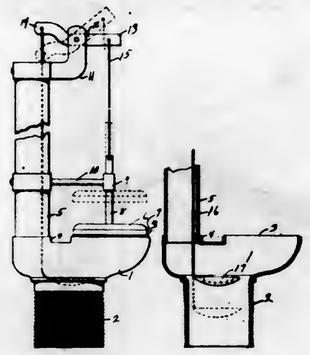


1,426,839. RAILWAY-CROSSING-GATE SIGNAL. RALPH E. PIERCE, Zion, Ill. Filed Feb. 17, 1922. Serial No. 537,169. 4 Claims. (Cl. 246—294.)

1. In a signal appliance of the type described, the combination of a vertically swinging gate arm, a suspension link pivotally connected to said arm and provided at its lower end with means for supporting a signal lantern, a pendant link pivotally connected to the gate arm at a point removed from the connection of the

suspension link, and an operative connection between said links for imparting a turning movement to the suspension link in unison with the movement of the gate arm.

1,426,840. DRAFT CONTROLLER FOR LOCOMOTIVES. HENRY M. RICE, Knoxville, Tenn. Filed May 27, 1921. Serial No. 473,001. 1 Claim. (Cl. 110—157.)

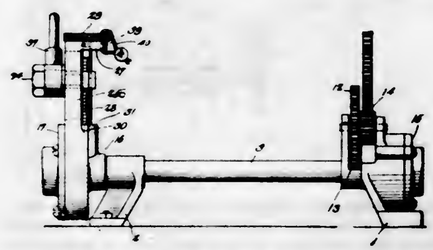


The combination with the draft chamber of a steam boiler, of a draft box open to said chamber, a swinging closure for said draft box provided with a longitudinal slot in one side edge, an angle lever fulcrumed upon the draft box and provided at one end with a pin playing in the slot in the said closure and provided at its opposite end with a longitudinal slot, a rod carrying a pin playing in the slot of the angle lever, and pressure-controlled means acting on said rod whereby to oscillate the lever.

1,426,841. FLUSH VALVE. HENRY W. SCHWAB, Muscatine, Iowa. Filed June 28, 1921. Serial No. 481,021. 1 Claim. (Cl. 4—5.)

In combination, a flush valve comprising a valve proper, a rocker arm fulcrumed above the valve, a rod attached to one end of the rocker arm, a dipper situated in the body portion of the valve and arranged to receive the

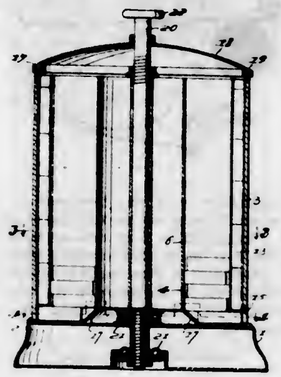
force of the water when the valve is open, said dipper being rigidly mounted on said rod and supported thereby,



and a second rod attached to the other end of said rocker arm and attached to the valve proper.

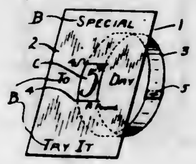
1,426,842. PROCESS OF MAKING FRICTION FACINGS. WILLIAM C. SWIFT, Cambridge, Mass., assignor to Standard Woven Fabric Company, Walpole, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1918. Serial No. 264,245. 5 Claims. (Cl. 92—21.)

1. The process of making blank stock for friction facings which consists in mixing the facing materials, including asbestos fibre and a binder, substantially insoluble in water, with a relatively large quantity of liquid solvent for the binder to enable said liquid to hold the materials in suspension, and then straining out a sufficient quantity of the solid matter from the mixture to form a blank of suitable form and thickness, whereby said blank will be uniformly impregnated with the binder.



1,426,843. POWER-TRANSMITTING MECHANISM. JOHN J. TOKHEIM, Cedar Rapids, Iowa. Filed Mar. 21, 1922. Serial No. 545,424. 6 Claims. (Cl. 74—53.)

1. A power transmitting mechanism including a shaft, a friction clutch for holding the shaft against rotation in one direction, a casing rotatably mounted on the shaft, a friction clutch therein for rotating the shaft in the opposite direction, a wrist pin connected to the casing means including a screw for adjusting the wrist pin radially, and sealing means for holding the screw against rotation.

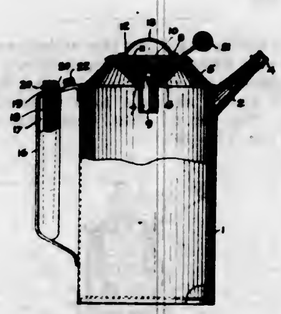


1,426,844. ARTICLE DISPLAY AND DELIVERY CABINET. EMORY S. WOOD, Commerce, Ga. Filed Dec. 17, 1921. Serial No. 523,018. 5 Claims. (Cl. 211—21.)

1. In an article display and delivering cabinet, stationary and revoluble cabinet sections, the latter being mounted within the former, the revoluble cabinet section having compartments for articles on display, and compartments for articles to be sold, said compartments being alternately arranged, the compartments containing the articles to be sold being disposed inwardly of the compartments containing articles on display, the wall of

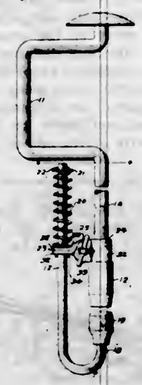
the stationary cabinet section having an opening through which articles may be withdrawn from the various compartments containing articles to be sold, the lower inner portions of the compartments containing articles to be sold having means for causing the ejection of an article toward said opening.

1,426,845. DISPLAY CARD AND THE LIKE. GEORGE TAYLOR HUMBLE and RICHARD NICHOLSON HUMBLE, Brantford, Ontario, Canada. Filed Dec. 6, 1921. Serial No. 520,394. 3 Claims. (Cl. 40—148.)



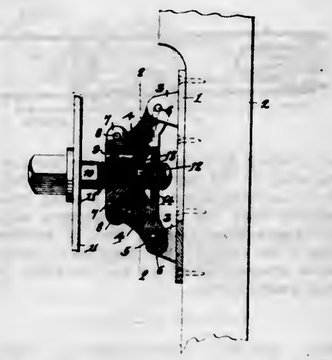
3. A device of the class described, comprising a card provided with a plurality of spaced, parallel transverse slits in the central portion thereof and bearing suitable display matter on its front face, a flexible strip extending through said slits so that a small section thereof lies in front of the card between the aforesaid slits, a plurality of spaced legends on the front face of said strip and adapted to be displayed one at a time in front of the card as the strip is moved with respect to the card, and means for detachably connecting the ends of the strip together at the rear of the card.

1,426,846. CONTAINER FOR DISPENSING LIQUIDS. ROBERT JOHN EDWARD CRAIG, Collingwood, Ontario, Canada. Filed Sept. 2, 1921. Serial No. 498,123. 4 Claims. (Cl. 220—85.)



1. In a container for dispensing liquids, a top portion provided with a cup shaped portion, said cup-shaped portion having a central orifice therein, a cap covering the

cup-shaped portion, a depending tube formed on the lower face of the cap and extending through the central orifice

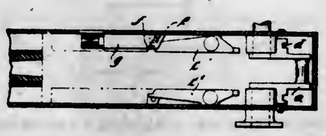


for closing the same and an outwardly extending flange formed on the tube intermediately of the length of the same.

1,426,847. BOLT-RETAINING ATTACHMENT FOR WRENCHES. EDWARD K. DEGENER, Lewistown, Mont. Filed Jan. 27, 1921. Serial No. 440,393. 2 Claims. (Cl. 81—55.)

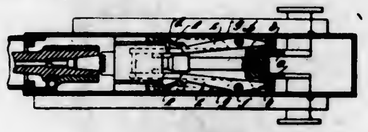
1. A socket wrench comprising a shank and a socket head, a retaining rod including a shank and a socket head, a two part bracket member adapted for attachment of said retaining rod to said socket wrench, and whereby the shank of said retaining rod lies substantially parallel with the shank of said socket wrench, said part of said two part member including a relatively flat arcuated portion and a half circular sleeve portion, the axis of the latter being substantially at right angles to the plane of the flat portion, said part adapted for pivotal mounting on said rod independent of the other portion so that the half circle sleeve portion extend forwardly to provide an enclosed sleeve for loose gripping about the shank of said socket wrench, and adjusting means engaging both parts of said two part member intermediate the flat and sleeve portions thereof, whereby the sleeve portions can be readily adjusted with said rod as a pivot point for said parts, and spring means for engaging said two part member and said retaining rod for normally forcing the latter in direction to have the socket head thereof disposed adjacent the socket head of said socket wrench.

1,426,848. TABLE-LEG FASTENER. CHARLES R. DOSSWORTH, Grand Rapids, Mich. Filed Oct. 5, 1921. Serial No. 505,553. 3 Claims. (Cl. 45—48.)



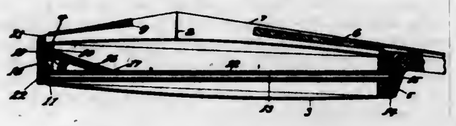
1. In combination, a plate, a pair of arms pivoted to the plate, a block having a threaded bore, means for pivotally attaching the block to the ends of the arms, a bolt adapted to be received in threaded engagement with the block, said bolt provided with a groove in its threaded portions intermediate its ends, and fingers projecting from the arms for engagement in the groove so as to hold the bolt locked against rotation.

1,426,849. DEVICE FOR ACTUATING CONTROL GEARS FOR MACHINE GUNS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Sept. 1, 1920. Serial No. 407,537. 2 Claims. (Cl. 89—27.)



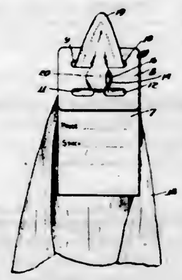
1. In combination with a controlling member of a machine gun firing mechanism, a rotor, and a centrifugally operated impact element, carried by the rotor and arranged to strike and actuate said controlling member.

1,426,850. SAFETY TRIGGER GUARD ON MACHINE GUNS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Sept. 1, 1920. Serial No. 407,538. 3 Claims. (Cl. 89—11.)



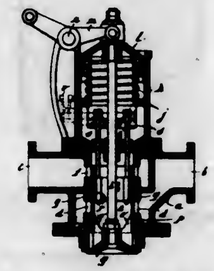
1. In a breech block mechanism for machine guns, operated by a rotating crank, and provided with pivoting levers which lock the breech block in position at the time of firing, a sliding trigger catch actuated by one of the locking levers in such a manner as to prevent contact with the trigger while the breech block is unlocked.

1,426,851. BREECH LOCK FOR MACHINE GUNS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Sept. 1, 1920. Serial No. 407,540. 2 Claims. (Cl. 89—11.)



2. In a breech block mechanism for machine guns, a rotating crank having cam faced grooves, locking levers, subject to compression but not to bending stress, pivotally mounted upon the frame of the gun, engaging behind the breech block, locking same in position during the firing of the cartridge and operated by means of said cam faced grooves formed on the operating crank and positively guided thereby.

1,426,852. STRINGED INSTRUMENT. ERNST EMIL FROZETH, Minneapolis, Minn. Filed Apr. 12, 1921. Serial No. 460,753. 4 Claims. (Cl. 84—275.)



1. The combination with a stringed instrument having a hollow sound box and a neck piece secured thereon, of a heel plate at the butt end of the instrument, strings positioned over the face of the instrument and means for securing them to the heel plate, a hollow brace extending longitudinally within the sound box, a rod within the brace, said rod being secured at one end in the neck piece and having its other end terminating in the heel plate, an angular brace bracing the heel plate against the first mentioned brace whereby the plate will be spaced from the sound box.

1,426,853. TAG. SIDNEY R. GEIST, New York, N. Y. Filed Feb. 13, 1922. Serial No. 536,253. 2 Claims. (Cl. 40—20.)

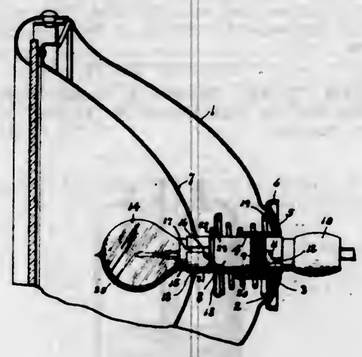
2. A self-clinging tag, comprising a tag structure provided with a number of slots merging into each other, some of said slots each having a substantially arcuate form, said slots being so located and arranged as to leave a portion of said tag structure in the proximate form of a disk but integral with the rest of the tag structure, so that said portion of the tag structure having the proximate form of a disk may be bent out of the general plane of the tag structure to permit the insertion of a piece of dry goods, and then sprung back again approximately into its original position, the tag structure being further provided with portions located intermediate said slots and extending toward said portion having the form of a disk.

1,426,854. APPARATUS FOR REGULATING THE SUPPLY OF EXPLOSIVE MIXTURE TO GAS ENGINES. TOUSSAINT GENDARME, Seraing, Belgium, assignor to Societe Anonyme John Cockerill, Seraing, Belgium. Filed Oct. 27, 1919. Serial No. 333,695. 2 Claims. (Cl. 123—108.)

1. The combination of a valve casing having therein a cylindrical admission chamber, with gas and air admission ports spaced endwise thereof, a valve controlling the passage of the mixture from the chamber to the cylinder, a pair of concentric cylindrical slide valves slidable within the chamber, one of the slide valves having ports cooperative with the ports of the chamber to vary the admission of gas and air in a definite ratio and rigidly connected to the first mentioned valve for operation therewith, the other cylindrical valve being responsive to the engine governor to control the admission of gas through the gas inlet port proportionally to the speed of the engine and independently of the admission of air through the air intake port.

1,426,855. LOADING MACHINE. ROBERT K. GIFFEN, Wheeling, W. Va. Filed Apr. 30, 1920. Serial No. 377,777. 3 Claims. (Cl. 198—11.)

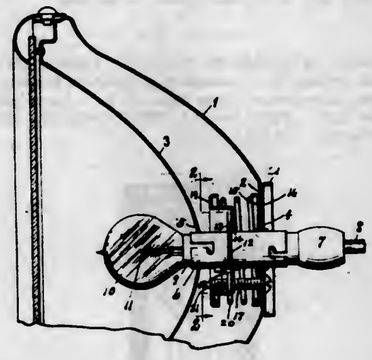
1. A loading machine comprising a truck, said truck having a frame, a scoop, links pivotally connected with said scoop and with the front end of the frame whereby a gravity-seated position of the scoop is maintained during operation, said scoop being actuated alone by the travel of the truck, and an endless travelling conveyor superposed upon said truck and having its front end disposed in underlying relation to the rear portion of the carrying surface of said scoop.



1,426,856. AUTOMOBILE LICENSE PLATE. PLEASANT B. GILES, Waverly, Iowa, assignor of one-half to Julian Q. Lauer, Waverly, Iowa. Filed Apr. 23, 1917. Serial No. 163,849. 1 Claim. (Cl. 40—63.)

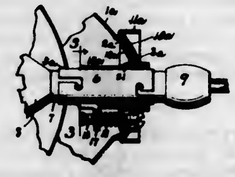
The combination with an opaque integral number plate having upon it numerals forming a permanent number and a separate space, of a detachable opaque yearly license slip, tag or plate adapted to be attached to the number plate at said space and having upon it numerals and letters, said numerals on the detachable yearly license slip, tag or plate forming the number of the year to which the license plate is immediately applicable and said letters indicating a geographical and political sub-

division or area over which said license plate is usable, whereby such slip, tag or plate may be substituted by or for a similar device bearing different indicia of year or area without changing the primary number plate or the permanent number thereon.



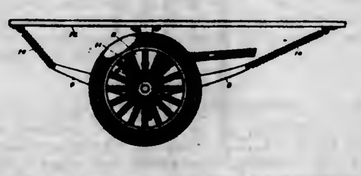
1,426,857. FOCUSING DEVICE. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Dec. 15, 1920. Serial No. 430,958. 6 Claims. (Cl. 240—44.)

1. In a headlight, the combination of a body having an aperture, a connector sleeve extending into the body through said aperture, and means attached to said sleeve and gripping the metal of the body around the aperture to hold the sleeve in desired position, the diameter of the aperture being sufficient to permit lateral movement of the sleeve therein, said gripping means comprising a plate fitting against the body around the aperture and attached to the sleeve, a collar movable longitudinally of the sleeve and means including a spring to force the collar and plate toward each other with the metal of the body between them.



1,426,858. FOCUSING DEVICE FOR HEADLIGHTS. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,097. 4 Claims. (Cl. 240—44.)

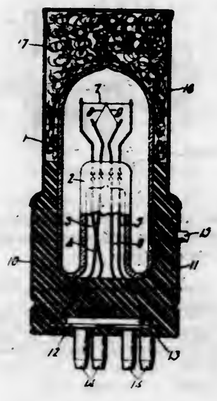
1. In a headlight, the combination of a cup-shaped lamp body having a central opening, a pair of plates slidably fitting said body around the aperture, a connector sleeve slidably mounted in said plates and movable laterally within said aperture, a screw mounted in said plates to adjust the sleeve longitudinally, a spring mounted on the sleeve to cause the plates to grip the metal of the body between them, said sleeve being formed with



a circumferential groove, a clip in said groove, and a collar on said sleeve and engaging the clip to serve as an abutment for said spring.

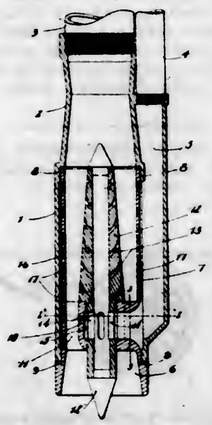
1,426,859. FOCUSING DEVICE FOR HEADLIGHTS. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,098. 3 Claims. (Cl. 240—44.)

1. In a headlight, a body having an aperture, a pair of plates fitting the body around the aperture, one on the outside and the other on the inside thereof, a tube connecting said plates and being in threaded engagement with one of them, a connector sleeve slidable in the tube, a screw carried by the plates to slide the connector sleeve longitudinally, means on the sleeve with which the screw engages, and a spring to hold the screw and sleeve forward.



1,426,860. OSCILLATING WHEEL AND DRIVING MECHANISM. EDWIN J. GOULD, Oakland, Calif. Filed June 18, 1921. Serial No. 478,723. 4 Claims. (Cl. 180—71.)

1. The combination in an oscillating wheel and driving mechanism, of a disk and pitman drive, a means for rotating one disk of said drive, a stub axle attached to the other disk of said drive, a wheel attached to said stub axle, a collar in which said stub axle revolves, and springs attaching said collar to the vehicle frame in

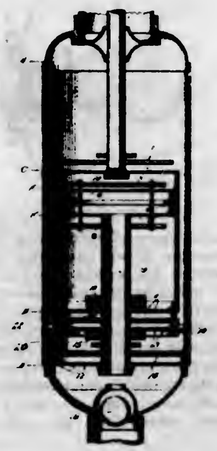


such manner as to hold said stub axle beneath the driving axle and at the same time allow said stub axle and attached wheel to oscillate, backward and upward whenever said wheel encounters an obstacle.

1,426,861. MEASURING DEVICE. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1919. Serial No. 345,623. 6 Claims. (Cl. 171—73.)

5. A measuring device having a surrounding evacuated envelope, electrical terminals for said device adjacent one end of said envelope, and means at the other end of said envelope for preventing fracture of the envelope and protecting said device from heat radiation from without.

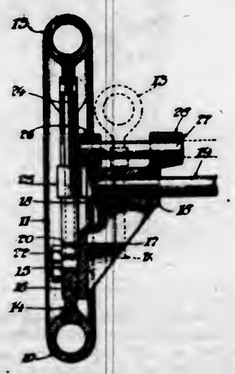
1,426,862. FLUID-OPERATED PUMPING SYSTEM. HALBERT B. HALVORSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 20, 1919. Serial No. 298,466. 20 Claims. (Cl. 103—84.)



1. In an air lift pump, a nozzle having provision for directing aerating fluid into intersecting jets whose axes lie in planes including the axis of the nozzle, the points of intersection lying in a surface of revolution.

1,426,863. AIR-LIFT PUMPING MECHANISM. HALBERT B. HALVORSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 23, 1920. Serial No. 398,466. 11 Claims. (Cl. 103—84.)

11. In an air lift pump, a foot piece comprising means for dividing the ascending column of liquid into an unbroken annulus, means for supporting said annulus forming means disposed at the upper end thereof, and means for simultaneously aerating said annulus from both sides thereof arranged below said supporting means and including jet forming means formed in said first mentioned means.



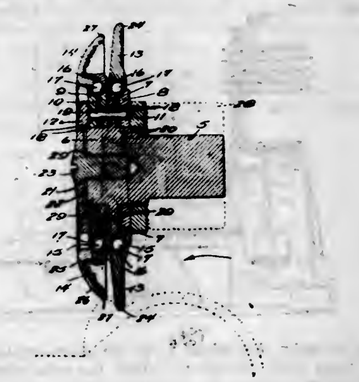
1,426,864. PUMP. HERBERT A. HANDY, Tulsa, Okla. Filed Mar. 14, 1921. Serial No. 453,556. 1 Claim. (Cl. 103—4.)

A pump consisting of a main cylinder, having attached to its lower end, and extending partially through it, a stand pipe fitted with a hollow head supplied with ports both on the upper and lower sides, said ports being controlled by valves; said main cylinder being supplied at the lower end with a port and said port controlled by a valve, a piston working reciprocally inside said main cylinder and outside said hollow head and stand pipe, and fitted closely thereto by packing; said piston supplied at the upper end with a port, said port controlled by a valve, and at the lower end with two ports, with

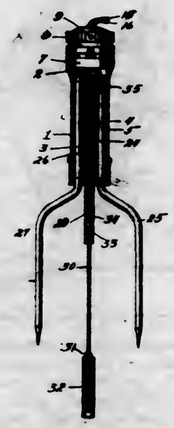
a small open chamber between, said chamber being supplied with a valve controlling said ports, and said chamber being supplied with open ports in its sides, all substantially as described.

1,426,865. COLLAPSIBLE TIRE CORE. ARCHER H. HARRIS, Barberton, Ohio. Filed Aug. 9, 1921. Serial No. 490,877. 5 Claims. (Cl. 154—9.)

1. In a collapsible tire-core comprising hingedly connected sections and a removable key section therefor, a supporting element on one of said first-named sections, and slidable connections between the key section and the supporting element, said connections including means for guiding the key section in two rectilinear paths, one within the interior plane of the core and the other at right angles thereto.



1,426,866. CONCRETE MOLD. LEWIS HARRIS, Benton, Ill. Filed Oct. 21, 1919. Serial No. 332,129. 3 Claims. (Cl. 25—131.)

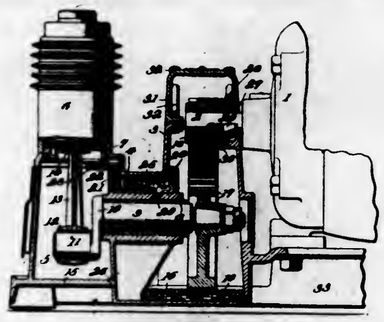


1. A mold or form for producing concrete wall structures having a side wall section provided with openings forming seats for the extremities of transverse wall reenforcing elements, clamping knives sliding mounted upon said wall section for cooperation with said seats, and a cam for actuating said knives and locking them in position to engage the seated extremities of transverse wall reenforcing elements.

1,426,867. STITCHING DEVICE. WILLIAM B. HARSEL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 11, 1918, Serial No. 216,581. Renewed Feb. 8, 1922. Serial No. 533,979. 5 Claims. (Cl. 154—10.)

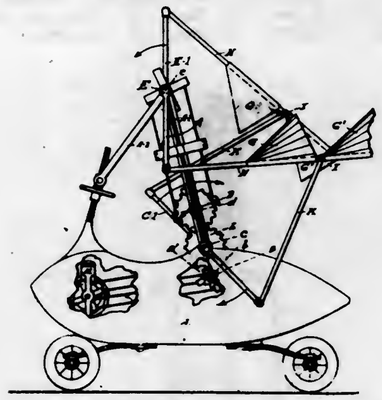
1. A compound stitcher of the character described, including a hub, a pair of complemental bearing discs mounted thereon to form an annular ball bearing raceway in their periphery, means for holding the discs against accidental separation but permitting separated or approachment of the discs for adjustment purposes, a stitcher disc and a series of ball bearings seated in the said raceway and supporting the stitcher disc for rotation about the bearing discs.

1,426,868. CADMIUM TEST DEVICE. BUTLER J. HASKINS, Kansas City, Mo. Filed May 10, 1920. Serial No. 380,275. 6 Claims. (Cl. 175—183.)



6. A cadmium test device, comprising a pair of prods, a cadmium electrode, a volt meter, and a switch for completing a circuit through the volt meter and either of said prods and the electrode, or through said pair of prods and the volt meter.

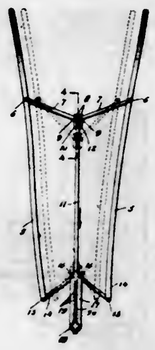
1,426,869. GARAGE AIR COMPRESSOR. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Nov. 15, 1920. Serial No. 424,153. 7 Claims. (Cl. 184—6.)



7. A motor driven air compressor, comprising a main shaft bearing having an oil well at its top, a gear housing at one side of the bearing and in communication with the said oil well, a crank case at the opposite side of the main bearing, a cylinder on the crank case, a piston in the cylinder, a pump shaft operatively connected with

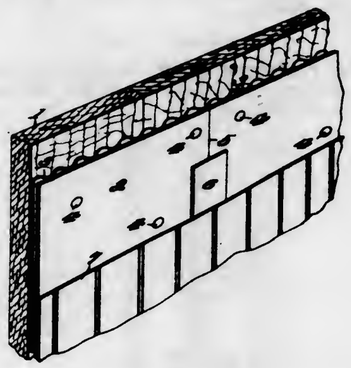
the piston, a wick in the oil well in communication with the cylinder, a gear in the housing carried by the pump shaft, an oil well in the housing into which the gear

dips whereby the splash from the gear supplies oil to the main shaft oil well for oiling the main bearing and the piston through the aforesaid wick.



1,426,870. BUOYING AND DRIVING MECHANISM FOR FLYING MACHINES. GUSTAF HEDÉN, New York, N. Y. Filed May 12, 1921. Serial No. 468,948. 1 Claim. (Cl. 244—11.)

A flying machine comprising an adjustable body, upper and lower, horizontal and parallel crank shafts mounted therein, rotatable in opposite directions at the same angular speed, oppositely disposed, radial and parallel cranks on said crank shafts, guiding frames joined at their lower ends to said lower cranks, flexible wings with loose rear edges mounted in frames, said frames rotatable and oscillatable between the crank pins of the upper crank shaft and the upper end of said guiding frames, said wing frames connected to said upper cranks at their upper ends and to said guiding frames at their lower ends, means for adjusting the balance of the body, means for rotating the two crank shafts at same angular speed in opposite directions, and for rotating and oscillating the frames between the opposing crank pins of the two crank shafts.

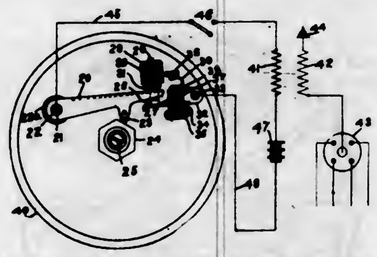


1,426,871. TROUSERS STRETCHER. JOSEPH HERN, Kingston, N. Y. Filed Aug. 25, 1921. Serial No. 495,351. 2 Claims. (Cl. 223—19.)

1. A trouser stretcher comprising a pair of spaced, longitudinal bars, a pivot plate, a pair of toothed intermeshing links pivotally connected with said bars and with said pivot plate, a locking plate, a pair of additional links pivotally connected with said bars and with said locking plate, a member connected with said pivot plate

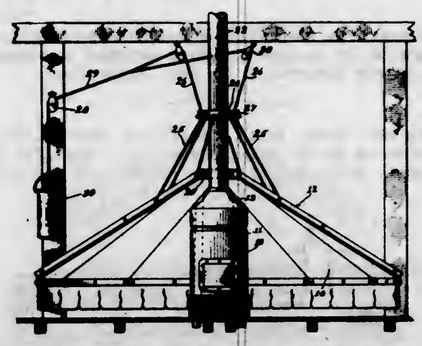
and slidably connected with said locking plate whereby said toothed links may be coincidentally adjusted and co-operating means on said locking plate and said member for locking the stretcher in an adjusted position.

1,426,872. MEANS FOR COVERING WOODEN WALL STRUCTURES. FRED HUMMERT, San Antonio, Tex. Filed Sept. 29, 1919. Serial No. 327,084. 3 Claims. (Cl. 20—4.



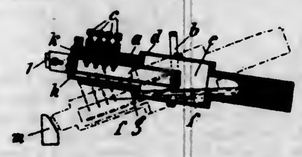
1. A facing for sheathing and the like comprising a layer of corrugated paper attached to said sheathing with the corrugations of said paper running substantially parallel with the grain of the sheathing, and a layer of flat paper attached to said corrugated paper constituting a wall facing adapted to receive wall paper or other ornamentation.

1,426,873. IGNITION SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Jan. 2, 1918. Serial No. 209,845. 12 Claims. (Cl. 200—30.)



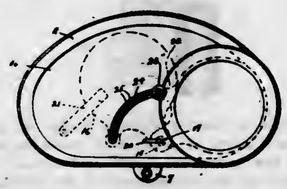
1. In a timer mechanism, the combination with co-operating contacts; of means for separating the contacts; means for bringing the contacts together after separation; means for absorbing the energy of impact of the

contacts, consisting of a yieldable elastic support for one of the contacts which absorbs energy of impact



and becomes distorted; and means for retarding the return movement of the support to its normal shape.

1,426,874. BROODER CONSTRUCTION. THOMAS W. HUNTER, Oakland, Calif. Filed Nov. 24, 1920. Serial No. 426,186. 3 Claims. (Cl. 119—32.)

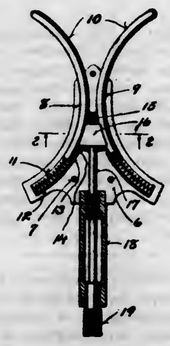


1. A brooder for fowls comprising a dome formed of tapering sheets having upturned meeting edges bolted together to form a cone, and having downturned peripheral edges, and a fabric material dependent from said edges, a platform near which the edge of the fabric approaches, a heater resting on said platform having a conical top within the dome, and a central smoke escape flue, a guide ring slidable on the flue above the dome, stay wires connecting the guide rings to the dome and suspending cords from the guide ring, passing through the ring and over pulleys fixed above, and a counterweight with which the cords are connected.

1,426,875. MERCURY STEP SWITCH FOR ELECTRICAL MACHINES AND APPARATUS. KARL KAISSER, Amsterdam, Netherlands, assignor to Metallbank und Metallurgische Gesellschaft, Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 29, 1920. Serial No. 427,121. 3 Claims. (Cl. 200—152.)

1. In an electric time switch of the character set forth, in combination, an outer chamber serving as a reservoir for a fluid electrical conductor, a contact chamber of approximately half the length of said outer chamber and nested therein, a passage of relatively narrow cross-section between the said two chambers and means in said passage for controlling the flow of said fluid conductor therethrough, contact members extending into said inner chamber, means for vertically tiltably suspending said nested chambers, and circuit closing means adapted to be operated by the tilting of the device.

1,426,876. CUSPIDOR FOR VEHICLES. ELIZABETH KANNOW, Hinton, Iowa. Filed Apr. 15, 1921. Serial No. 461,726. 2 Claims. (Cl. 4—39.)



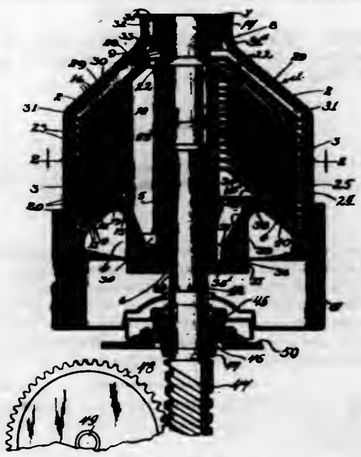
1. A cuspidor comprising a substantially upright tube having a slot in one side thereof, a horizontal supporting plate secured to one side of the tube and positioned above said slot, a closure plate pivoted below said first plate and through the slot to open and close the tube, said first plate having an arcuate slot concentric with the pivot of the closure plate, an operating handle on the closure plate projecting through the arcuate slot, and an element on the under side of the supporting plate to engage and support the free side of the closure plate in open position.

1,426,877. CHAIN-LINK COUPLING. JOHN D. KING, Syracuse, N. Y. Filed Mar. 4, 1922. Serial No. 540,991. 3 Claims. (Cl. 59—85.)

1. An emergency link-coupling for chains consisting of a rod or wire bent intermediate its ends to form a return bend-loop and opposite arms extending in the same general direction from the loop, one of the arms terminating in an eye and the other arm extending some distance beyond the eye and terminating in an offset extension in a plane substantially parallel with the eye.

1,426,878. CALIPERS. HENRY KOEBKE, Waukesha, Wis. Filed Sept. 1, 1921. Serial No. 497,489. 3 Claims. (Cl. 33—143.)

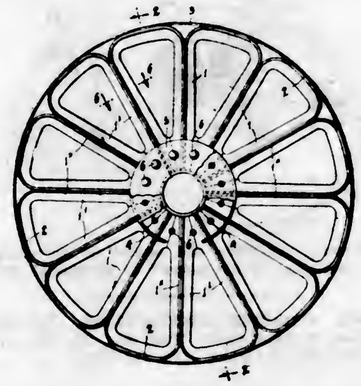
1. A device of the character described comprising an elongated housing having therein a pair of bores curved



toward each other, plungers reciprocable in said bores, springs seated in the bottoms of bores and urging the plungers outwardly and means for locking the plungers against movement.

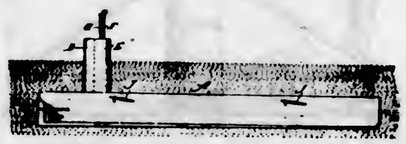
1,426,879. METHOD OF MANUFACTURING TUBULAR BODIES OF CORRUGATED PASTEBOARD. BERNHARD KREHER, Dresden, Germany. Filed Mar. 9, 1921. Serial No. 450,879. 2 Claims. (Cl. 93—81.)

1. A method of making tubular bodies of a plurality of superposed layers of corrugated paste-board, consisting in first combining said layers as flat pieces and then winding them up, the corrugations of the combined layers crossing each other from layer to layer and running diagonally to the winding-direction, substantially as and for the purpose set forth.



1,426,880. CREAM SEPARATOR. OTTO KRENKE, Port Huron, Mich., assignor to Earnest L. Powers, Port Huron, Mich. Filed Sept. 28, 1921. Serial No. 502,779. 9 Claims. (Cl. 233—29.)

1. In a cream separator, the combination of a rotary bowl shell forming a separator chamber provided with inlet and outlet openings including a cream outlet, a series of superposed annular truncated-cone-shaped separator disks located inside of the separator chamber and provided with spaces between said disks, and an inner annular baffle wall encircling the axis of the bowl shell and located between said axis and the outer peripheral wall of the separator chamber and bowl shell and forming a cream chamber within and encircled by said annular inner baffle wall and with which said cream outlet communicates.



1,426,881. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1921. Serial No. 465,669. 5 Claims. (Cl. 301—66.)

1. In a metal wheel, wheel spokes consisting each of two angle bars, two arms of which constitute together the face of the spoke while the two remaining arms lie against one another face to face in a plane transverse to

the plane of the wheel and constitute a compound strengthening rib for the spoke, resisting distortion or bending in a plane transverse to the plane of the wheel.

1,426,882. SHIP FOR SUBMARINE NAVIGATION. WILLIAM M. LE MOYNE, Chicago, Ill. Filed Feb. 5, 1918. Serial No. 215,444. 4 Claims. (Cl. 114—16.)

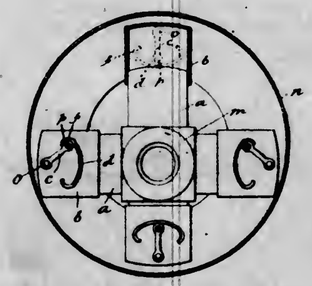
1. A cargo ship adapted for surface and submarine navigation, having a single power propulsion plant and having pipes open at their tops and of such length as to permit the ship to travel submerged to the area of still water, with such pipes extending above the water surface and of such size as to afford at all times a copious supply of fresh air and discharge of products of combustion and foul air.

1,426,883. COMBINED TIE AND FASTENER. ABRAHAM LEANER, Brooklyn, N. Y. Filed Feb. 9, 1921. Serial No. 443,626. 2 Claims. (Cl. 2—34.)

1. A combined tie and fastener comprising a tie having a polygonal socket on its inner face, and a button adapted to pass through the button hole of the neck band of a shirt and the button holes of a collar and snap into the socket of the tie, said button consisting of a base, a flat and tapering shank, the shank being of uniform thickness throghout its length and the portion thereof which lies in the button hole of the neck band being of a width to prevent it from turning therein, and a polygonal head terminating in a round portion and provided with a polygonal portion having its sides inclined inwardly toward

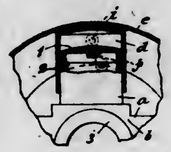
the round portion and forming therewith a shoulder, the polygonal portion of the head fitting snugly in the socket of the tie and preventing the turning of the tie thereon.

1,426,884. FLEXIBLE CHAIN. CHARLES M. LEVY, New York, N. Y., assignor to Charles M. Levy & Son, New York, N. Y., a Copartnership composed of Charles M. Levy and Norman C. Levy. Filed May 21, 1921. Serial No. 471,303. 7 Claims. (Cl. 59—80.)



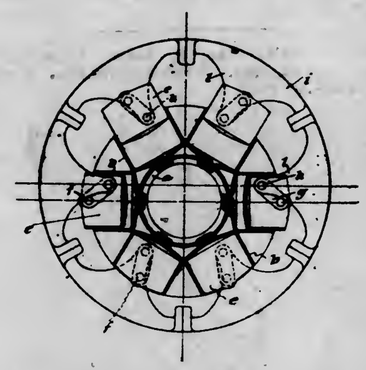
1. A flexible chain comprising a series of arch-shape outer links, a series of arch-shape inner links, the side members of said links extending in opposite directions and overlapping to form the sides of the chain, and each of the outer links being connected to two adjacent inner links.

1,426,885. FLEXIBLE CHAIN. NORMAN C. LEVY, New York, N. Y. Filed July 23, 1921. Serial No. 487,163. 5 Claims. (Cl. 59—80.)



1. A flexible chain of channel form open on its inner side and comprising a series of arch-shape outer links arranged side by side to form a channel and having their side members apertured, and connecting links bridging the joints between the side members of the outer links each of said connecting links being formed with lugs extending through apertures in the side members of the adjacent outer links said lugs being bent laterally and clinched within the channel formed by the outer links the side members of each outer link being flexibly secured to the side members of adjacent outer links by two of said connecting links.

1,426,886. AIR-CUSHION HUB. BORIS V. LOUTSKOY, Andreewka, Russia. Filed May 12, 1920. Serial No. 380,946. 2 Claims. (Cl. 152—44.)

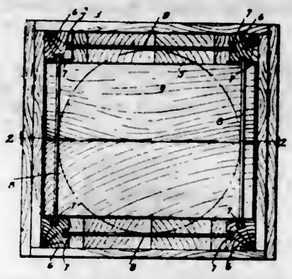


2. In a pneumatic cushioned wheel, a hub, a rim member, and a plurality of spokes connecting the hub and the rim, each of said spokes comprising a piston carried by the hub and a cylinder slidable on the piston, a link pivotally connecting the cylinder to the rim, and guides carried upon the cylinder having stop shoulders at opposite ends adapted to engage the link and limit the swinging thereof in opposite directions.

1,426,887. PNEUMATIC HUB FOR VEHICLE WHEELS. BORIS V. LOUTSKOY, Andreewka, Russia. Filed May 12, 1920. Serial No. 380,948. 2 Claims. (Cl. 152—44.)

1. In a pneumatic cushioned wheel, a hub provided with radial extensions and each extension being externally screwthreaded, caps detachably fitted over said extensions and engaging the screw threads thereof for securely holding the caps over said extensions, a rim enclosing the hub with its extensions, and cylinders carried by the rim engaging over said caps and co-operating therewith for pocketing air within the cylinders.

1,426,888. PNEUMATIC HUB FOR VEHICLE WHEELS. BORIS V. LOUTSKOY, Andreewka, Russia. Filed May 21, 1920. Serial No. 383,327. 2 Claims. (Cl. 152—44.)



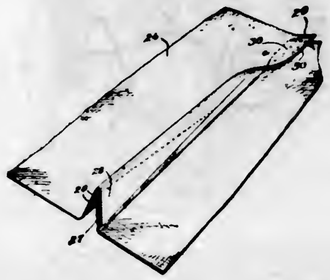
1. In a pneumatic cushioned wheel, a rim, a hub, a plurality of cylinders carried by the hub, pistons mounted in the cylinders, said rim having inwardly extending arms adapted to project into the pistons and being relatively narrow, links connecting the inner ends of the arms to the pistons and including crank pins mounted on the arms engaging the links, and retaining means for the crank pins embodying rings fitted upon said crank pins, bands engaging about the rings, and means for clamping the bands on the rings and to the ends of the arms.

1,426,889. CARBOY. CHARLES LEFKOWITZ, ELMER E. ROSS, and HARRY LUBIN, Newark, N. J. Filed Nov. 12, 1921. Serial No. 514,673. 6 Claims. (Cl. 217—64.)

1. A carboy comprising a rectangular box, a plurality of vertically disposed wooden plates spaced from the

walls of the box, and adapted to cushion the lateral movement of a bottle within the box, corner posts within the

box having vertical grooves therein, wherein the edges of said plates are slidable.

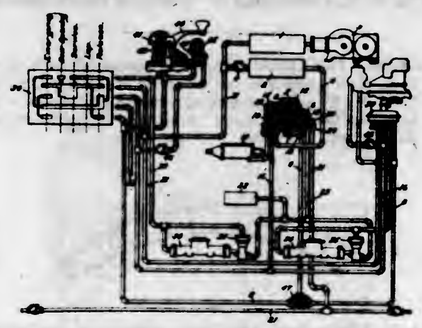


1,426,890. RECOVERY OF METALS FROM SILICATES. FRANCIS M. MCCLENAHAN, Oakmont, Pa. Filed Dec. 22, 1920. Serial No. 432,518. 7 Claims. (Cl. 23—22.)

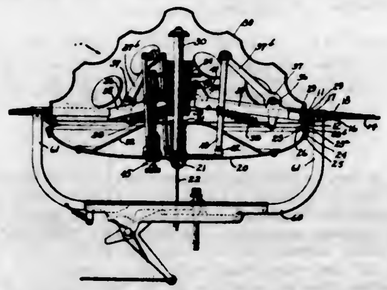
1. A step in the recovery of metals from silicates containing them, which consists in decomposing the silicates by an excess of a fluoride of ammonium solution.

1,426,891. PROCESS OF RECOVERING METALS FROM SILICATES. FRANCIS M. MCCLENAHAN, Oakmont, Pa. Filed Dec. 7, 1921. Serial No. 520,601. 9 Claims. (Cl. 23—22.)

5. The process of recovering hydrated oxide of aluminum from an intimate mixture of aluminum and ammonium fluorides, which comprises heating said mixture in the presence of water and simultaneously removing the resulting vapors.



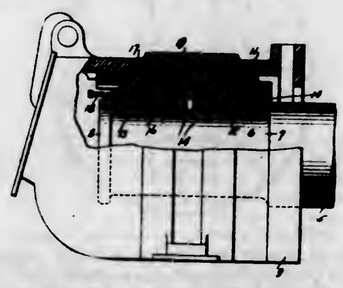
1,426,892. SEAM. FRED H. MCCOY, Burlington, Vt. Filed Aug. 30, 1920. Serial No. 406,743. 7 Claims. (Cl. 112—262.)



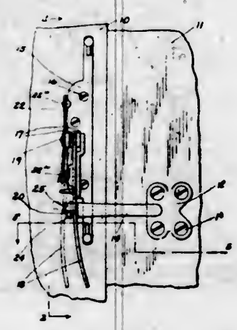
6. A method of seaming material in which there is a slit which consists in folding, interlocking and joining the edges of the slit and folding the unslit portion in substantial alignment with the slit to form a continuous seam.

1,426,893. SAFETY CAR CONTROL AND AIR-BRAKE EQUIPMENT. GEORGE MACLOSKIE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1921. Serial No. 463,606. 12 Claims. (Cl. 303—6.)

1. In a safety car control and air brake equipment, the combination with a source of fluid pressure, a brake cylinder, an emergency valve, an emergency pipe and a straight air pipe, of a motorman's handle, and a pilot valve operated upon release of said handle for venting fluid from said emergency pipe to said straight air pipe to effect the operation of said emergency valve to establish communication between said source of fluid pressure and said brake cylinder.



1,426,894. VALVE. ALGER G. MARANVILLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 331,199. 22 Claims. (Cl. 244—31.)



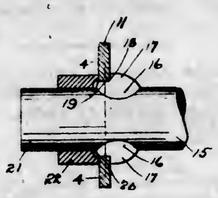
1. In a valve of the character described, the combination with a gas receptacle having an outlet, of an automatic valve in said outlet, comprising a flexible resilient gasket having two lipped sections, said lips serving as valve and valve seat respectively, pressed together by the gas pressure within said receptacle when the valve is closed and adapted to be separated by the variations in pressure difference between that of the atmosphere and that inside the receptacle.

1,426,895. CAR JOURNAL. ALBERT MELVILLE, Morrisville, Pa. Filed Sept. 15, 1921. Serial No. 500,894. 5 Claims. (Cl. 64—20.)

1. In a journal bearing in combination with an axle having a journal portion, a brass comprising two semi-cylindrical members maintained in spaced relation and in engagement with the ends of the journal portion of the axle, said brass members being free to move toward each other.

1,426,896. DOOR AND WINDOW LOCK. ROBERT F. A. MEYER, New York, N. Y. Filed Jan. 11, 1922. Serial No. 528,407. 3 Claims. (Cl. 70—14.)

2. A lock of the class described comprising an angular bracket secured to a door, an elongated knob formed on the end thereof, a plate member secured to the door sash and having ears formed thereon, a slotted locking plate pivoted between said ears, a spring stop urging the locking plate into engagement with said knob, said knob adapted to shoulder in the slot of the locking plate when partly open and means for disengaging the door bolt from the locking plate by closing the door.

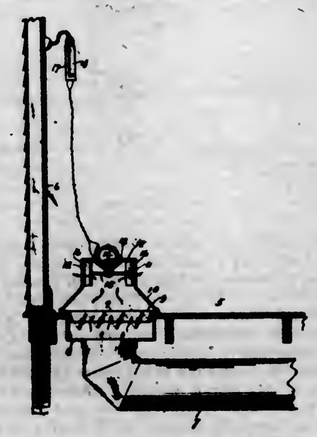


1,426,897. TIRE REPAIR. EDWARD M. MOORE and OWEN V. PEET, Indianapolis, Ind. Filed Jan. 9, 1922. Serial No. 528,071. 5 Claims. (Cl. 152—26.)

5. A tire casing repair comprising inner and outer plates adapted respectively to lie against the inner and outer faces of a tire casing and to envelop the inner and outer portions of a tire casing bead, and a fabric apron secured to the outer plate and adapted to be disposed in covering relation to the inner plate and in covering relation to a portion of the inner face of the tire casing.

1,426,898. BEAM AND REEL. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Oct. 8, 1920. Serial No. 415,586. 5 Claims. (Cl. 242—128.)

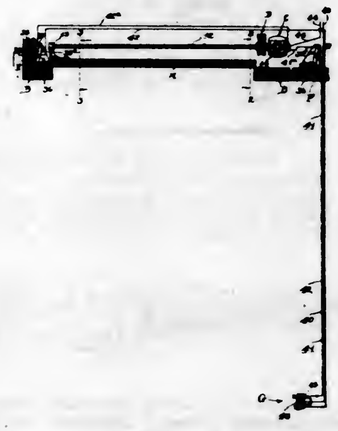
3. In a device of the character described, a pair of head-plates, a shaft passing through said plates and having an integral laterally-extending fin raised from the



stock of the shaft engaging each plate providing a supporting shoulder therefor.

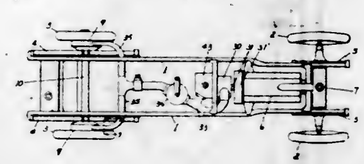
1,426,899. RADIOGRAPHIC PLATE CHANGER. ARTHUR MUTSCHELLER and KURT STOYE, New York, N. Y., assignors to Wappler Electric Company, Inc., a Corporation of New York. Filed Feb. 15, 1919. Serial No. 277,213. 20 Claims. (Cl. 250—34.)

1. In a device of the character described, a self-contained unit comprising a frame, a plurality of photographic trays carried by said frame and movable relatively to each other, and mechanism connected with said trays and controllable at the will of the operator for guiding each of said trays in succession into a single predetermined exact position.



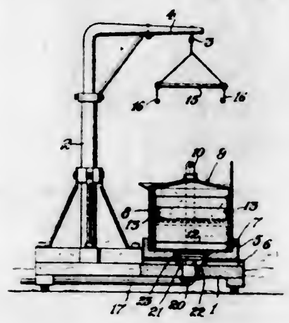
1,426,900. AUTOMATIC AIR CIRCULATOR FOR HEATING FURNACES. HARRY W. NEAL, Indianapolis, Ind., assignor of one-half to Hall-Neal Furnace Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 28, 1921. Serial No. 525,277. 2 Claims. (Cl. 126—110.)

1. In a hot-air heating system, the combination with a hot-air supply pipe and register, of a portable hood to cover the register, said hood having a top outlet, a horizontally rotating fan located at the outlet and having relatively small radial arms terminating with vertical



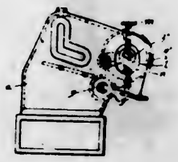
end vanes to insure minimum obstruction to the passage of air, and a top above the hood outlet having a funnel shaped member extending between the blades of the fan and directing the discharge of air between the cap and the hood.

1,426,901. DOOR OPENING AND CLOSING DEVICE. JOSEPH M. NELSON, Minneapolis, Minn. Filed Dec. 24, 1921. Serial No. 524,704. 7 Claims. (Cl. 268—9.)



1. In a device of the class described, the combination with a door, of a threaded actuating rod connected at one end to said door, a motor having a hollow driving shaft freely receiving said actuating rod, and a nut threaded on the rod and rotated by said shaft to shift said rod longitudinally.

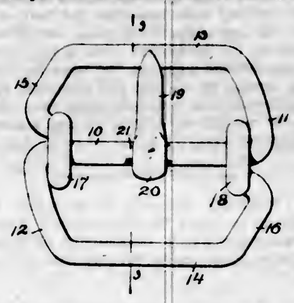
1,426,902. MOTOR-VEHICLE DRIVING MEANS. CELEST JOSEPH NOËL, Detroit, and KENNETH K. HICKS, Grand Rapids, Mich., assignors to Kirk E. Wicks, trustee, Grand Rapids, Mich. Filed Oct. 20, 1919. Serial No. 331,815. 9 Claims. (Cl. 180—66.)



1. The combination with a running gear frame, an engine, an axle, and a pair of driving wheels, of a fluid driving motor connected directly to said engine, a pair of fluid driven motors mounted on said axle and comprising rotors having shafts on which said driving wheels are mounted, fluid connections for said driving and driven motors comprising a power and a return conduit each having branches connected to the inlets and discharges respectively of said driven motors, a control valve common to said power and return conduits and provided with passages and ports permitting the bypassing of a portion or all of the fluid from said power to said return conduit or the delivering of a portion or all of the fluid to said driven motors or the delivery of the fluid thereto in reverse direction for reversing the same, or cutting off the passage of the fluid through said driven motors providing a braking means, and a valved bypass connection for said power and return conduits disposed at the rear of said control valve and in front of their branch connections to said driven motors.

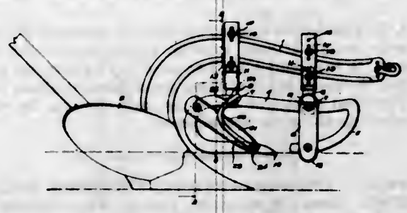
1,426,903. HARNESS OILER. RANDOLPH E. OGDEN, Rockville, Ind. Filed May 1, 1920. Serial No. 378,327. 1 Claim. (Cl. 91—46.)

In a harness oiler the combination of a basket comprising substantially cylindrical imperforate walls and perforate to form a bottom, rigid perforate ears upstanding above the top of the cylinder, a tank of appropriate depth to contain the basket with the ears upstanding, rigid perforate ears upstanding above the top of the tank, an outwardly flared flange at the top of te tank, a cover proportioned to set within the flange and close the tank with the basket therein, and a hoisting device provided with hooks proportioned to engage the perforations and a bar proportioned to hold the hooks spaced substantially equal to the spacing of the ears of the basket and tank.



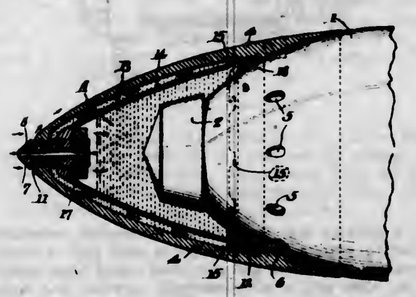
1,426,904. SHEET-FEEDING MECHANISM. ANDREW OLSON, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 3, 1920. Serial No. 393,878. 4 Claims. (Cl. 271—36.)

1. The combination in a sheet-feeding mechanism, with paired feeding members; one of which is rotated for individually advancing the sheets, of an adjustable guard associated with the non-rotated member, and means for adjusting said guard to expose more or less of the operative face of said member and modify its action, substantially as set forth.



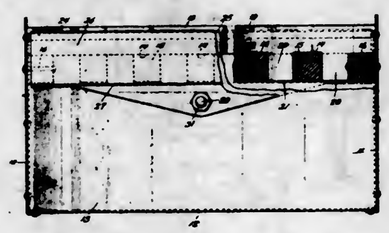
1,426,905. BUCKLE. CARL E. PETERSON, Bridgeport, Conn. Filed Jan. 4, 1922. Serial No. 526,898. 1 Claim. (Cl. 24—178.)

A buckle comprising a frame made from a single piece forming a central strand and forming loops of end stranda and top and bottom stranda, the two ends of the wire being looped around the central strand, the central strand having an off-set portion at the center, and at right angles to



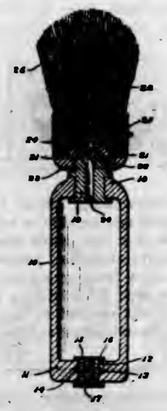
the plane of the buckle, and a tongue pivoted to the off-set portion of the central straud and adapted to engage one of the flanking strands.

1,426,906. SWEET-POTATO-VINE CUTTER. ARCHIBALD BRANTLEY PURDOM, Blackshear, Ga. Filed Nov. 18, 1920. Serial No. 424,919. 8 Claims. (Cl. 55—64.)



1. A cutting attachment for plows, comprising a frame, a plurality of cutters disposed on said frame, one of said cutters being disposed on a forward portion of said frame, the forward face of said frame having a sloping curvature to guide the material to be cut to the edge of the cutter blade.

1,426,907. PROJECTILE. GROSVOR RAMSEY, Brooklyn, N. Y. Filed Apr. 23, 1917. Serial No. 164,021. 12 Claims. (Cl. 102—23.)

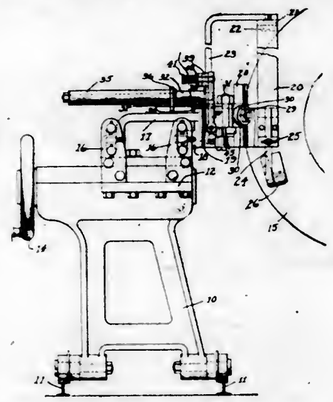


8. In a projectile, in combination, a body portion, a cap surrounding the nose of said body portion and forming a chamber, a bell-shaped partition member spaced apart from the inner side walls of said cap and dividing the said chamber into compartments, one of said compartments being operatively connected with an outlet opening adjacent the nose of the cap, the other of said compartments being operatively connected with an opening adapted to permit the introduction of air under pressure whereby the contents of said chamber may be discharged through said outlet opening when the projectile is in flight.

1,426,908. ADJUSTABLE STRAW CONVEYER. CLEMMA E. RANEY, Chicago, Ill., and REX B. HITCHCOCK, Hoosick Falls, N. Y., assignors to International Harvester Company, a Corporation of New Jersey. Filed Jan. 27, 1919. Serial No. 273,398. 4 Claims. (Cl. 130—26.)

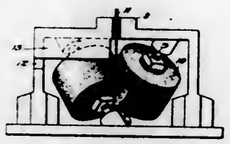
2. In a straw walker, a casing having an end wall, said end wall having apertures therein, a plurality of longitudinal slats removably secured in said casing and disposed in alinement with the apertures of said end wall, and a clip for securing said longitudinal slats against removal.

1,426,909. APPLICATOR BRUSH. JOSEPH A. RAYDER, Philadelphia, Pa. Filed Dec. 6, 1921. Serial No. 520,293. 1 Claim. (Cl. 15—136.)



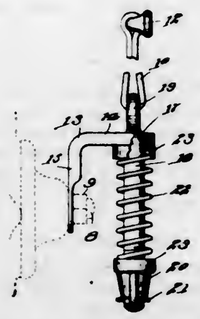
In combination, a shaving brush having a base portion provided with a semi-spherical recess and a longitudinal bore in communication therewith, said recess being partially screw threaded, a member having a semi-spherical head in screw threaded engagement with said recess and received therein, said member being provided with a longitudinal passage therethrough and radial passages communicating between the longitudinal passage and the recess and having two external annular flanges in spaced relation to provide an annular channel therebetween, and a resilient reservoir having one end open and adapted to snugly fit into said annular channel and having its opposite end provided with a filling opening.

1,426,910. BUFFER FOR TIRES. MARK A. REPLOGLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 28, 1919. Serial No. 313,908. 18 Claims. (Cl. 82—1.)



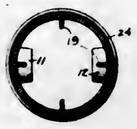
1. A tire buffing machine comprising, a base member, a carriage mounted thereon for movement toward or away

from the tire, a support movable transversely of the carriage and adapted to be positioned in proximity to the tire,



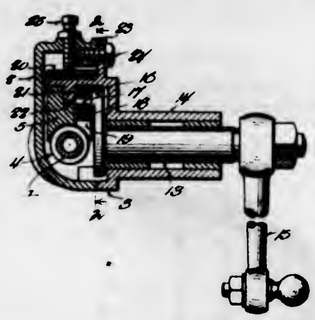
and buffer devices yieldably mounted upon the support and adapted to engage the tire periphery.

1,426,911. SHARPENING DEVICE. EDWARD E. ROGERS, New York, N. Y. Filed Feb. 21, 1922. Serial No. 538,322. 3 Claims. (Cl. 51—208.)



1. A grinding device including a base, a platform extending above and in spaced relationship to said base, said platform being formed with a slot, guide flanges formed adjacent to said slot, shafts extending between said platform and said base, said shafts being rotatably mounted and disposed at an angle to each other and to the said slot and base, and abrasive drums secured to said shafts and having their working faces extending substantially parallel to the same.

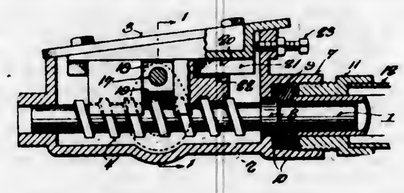
1,426,912. CONNECTING DEVICE FOR AUTOMOBILE TOPS. VIRGIL D. ROSS, Albemarle, N. C. Filed Mar. 21, 1922. Serial No. 545,573. 3 Claims. (Cl. 296—120.)



1. A device for connecting the wind shield post and top of an automobile, comprising an inverted approximately L-shaped bracket having substantially horizontal and vertical arms, said arms having openings formed therein, the opening in the vertical arm receiving the bolt of the wind shield post, an approximately vertical rod slidable within the opening in the horizontal arm, a nut having screw threaded engagement with the rod near its lower end, a coil spring carried by the rod and arranged between the nut and horizontal arm, a flexible strap connecting the upper end of the rod and automobile top, and means to adjust the length of the strap.

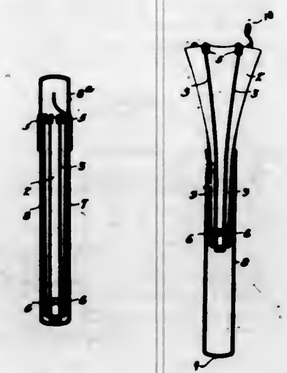
1,426,913. PISTON. WILLIAM H. SACKMAN, Pottstown, Pa., assignor to Light Manufacturing & Foundry Company, Pottstown, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1919. Serial No. 289,655. 5 Claims. (Cl. 74—108.)

1. In a piston for engines operated by explosive charges, a body portion of light material having an annular seat therein, in combination with an annular ring-carrying shell within the seat and interlocking spoke-like projections from a cylindrical surface of one of the parts entering the other at intervals about the circumference.



1,426,914. STEERING-POST TRANSMISSION MECHANISM. ERNST SCHMALLER, Racine, Wis., assignor to Paul B. Wohlrab, Racine, Wis. Filed Dec. 12, 1921. Serial No. 521,764. 5 Claims. (Cl. 74—79.)

1. A steering gear transmission mechanism comprising a steering post, a block slidable on said post, a casing surrounding said block and post, said casing being opened at one side, and a cover for said opening, said cover being adjustable with relation to the casing and serving as a guide for the block whereby wear between the block and steering post may be taken up.

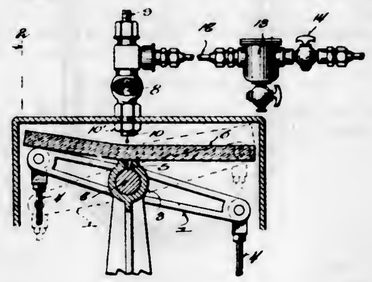


1,426,915. STEERING-POST TRANSMISSION MECHANISM. ERNST SCHMALLER, Racine, Wis., assignor to Paul B. Wohlrab, Racine, Wis. Filed Dec. 12, 1921. Serial No. 521,765. 2 Claims. (Cl. 74—79.)

1. A steering gear transmission mechanism comprising a steering post, a block slidable on said post, a casing surrounding said post and block, said casing being open at its top, and a cover for said opening, said cover serving as a guide for the block and being longitudinally

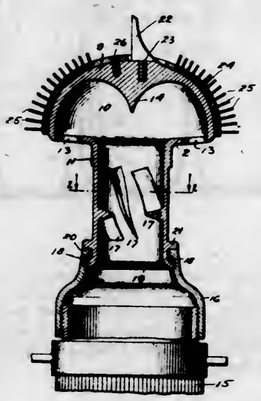
adjustable with relation to the casing on an angle to the axis of the steering post, whereby adjustment between the block and post is obtained.

1,426,916. COLLAPSIBLE DRINKING CUP. LOUIS SCHORPP, Philadelphia, Pa., assignor of one-half to Frederick A. Boekemann, Collingsdale, Pa. Filed Mar. 9, 1921. Serial No. 450,995. 3 Claims. (Cl. 65—58.)



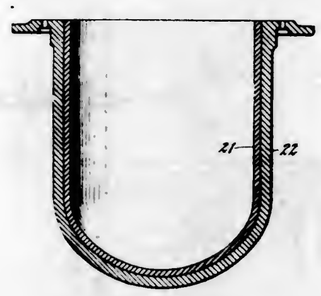
1. The combination of a cup of collapsible material, and a plurality of spring arms connected at the lower ends thereof and embracing the cup and normally holding it in open condition and permitting it to be collapsed under pressure, said arms having indentations in the lower portions thereof engaging the lower portion of the cup and holding it in place.

1,426,917. DOUBLE-SEAL FRICTION CAP. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 10, 1921. Serial No. 476,423. 21 Claims. (Cl. 215—39.)



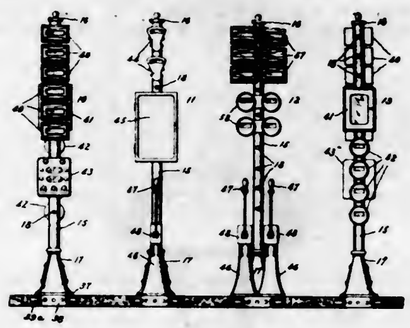
13. A closure cap comprising a cover portion, a skirt depending from said cover portion, a pair of sealing zones in said skirt, and constricting means between said sealing zones.

1,426,918. LUBRICATING DEVICE. LAMAR H. SHOVER, Milwaukee, Wis., assignor to Milwaukee Reliance Boiler Works, Milwaukee, Wis. Filed Mar. 14, 1922. Serial No. 543,547. 4 Claims. (Cl. 184—102.)



2. In combination with a mechanism consisting of a bearing provided with an oil hole, a shaft supported in said bearing, and an oscillating lever carried on said shaft; a pad supported by said mechanism and adapted to intermittently contact with said oscillating lever, and means positioned practically above said oil hole for supplying lubricant to the pad.

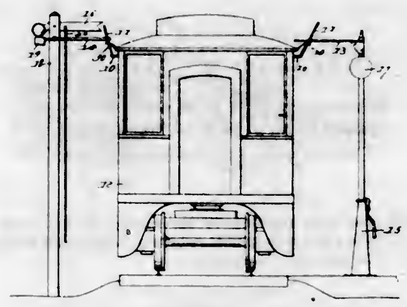
1,426,919. SELF-PROPELLING ROTARY CUTTER. SIDNEY C. SLADDEN, New York, N. Y. Filed Feb. 14, 1921. Serial No. 444,993. 5 Claims. (Cl. 137—70.)



1. An apparatus as characterized comprising a prime mover having rearwardly disposed fluid delivery openings for moving the apparatus forwardly through a surrounding medium; means for supplying said apparatus with fluid under pressure; and means for rotating said apparatus on its axis, said means being actuated by the fluid delivered to said apparatus.

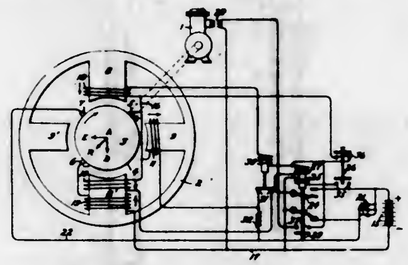
1,426,920. AUTOCLAVE. OLIVER S. SLEEPER, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 17, 1917. Serial No. 207,518. 1 Claim. (Cl. 206—2.)

An autoclave comprising a shell of cast iron which is low in silicon and high in tensile strength, and an acid resisting lining which is arranged within said shell and which consists of cast iron high in silicon and low in tensile strength.



1,426,921. ELECTRICAL APPARATUS. ARTHUR R. SMITH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 6, 1919. Serial No. 295,247. 9 Claims. (Cl. 175—298.)

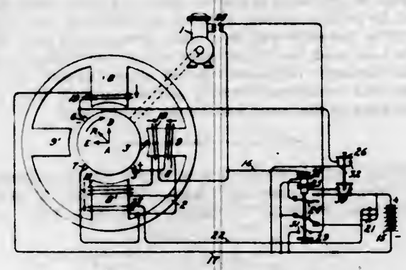
1. A switchboard structure comprising a tubular member, a hollow pedestal supporting said member, a terminal board within said pedestal, switchboard devices carried by said member, and conductors for said devices passing from said devices along the interior of said member to said terminal board.



1,426,922. RAILROAD SAFETY APPLIANCE. WILLIAM THOMAS SPILLANE, Crookston, Minn. Filed July 15, 1921. Serial No. 484,893. 2 Claims. (Cl. 246—200.)

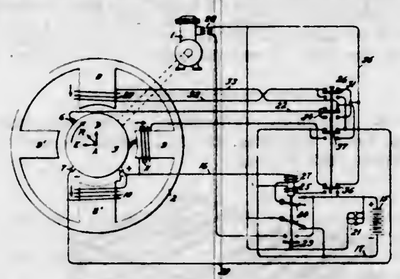
1. A railway safety appliance comprising car body carried operating arms mounted for swinging movement in planes parallel with the path of the car and adapted for contact with and to be operated by a roadside trip, a crank shaft at the extremities of which said arms are carried, a connecting rod connected to the crank of said crank shaft and having an offset providing oppositely inclined cam faces, a spring arm having transverse bearing engagement with the offset for yieldingly holding the connecting rod and crank shaft with the operating arms

in their normal position, and operative connections between said connecting rod and the air brake mechanism for effecting a reduction of train pipe pressure.



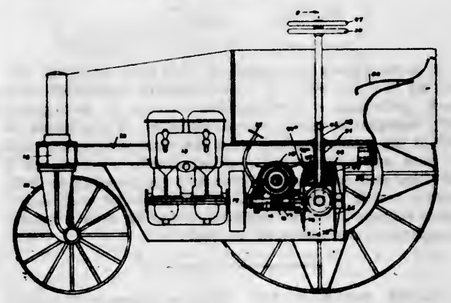
1,426,923. ELECTRICAL SYSTEM. ROBERT STECK, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,687. 17 Claims. (Cl. 171—223.)

1. An electrical system comprising an inherently regulated self-excited dynamo electric machine having an n pole armature winding and a field structure comprising $2n$ mechanical field poles arranged in two sets with an equal number of poles in each set, certain adjacent poles of the separate sets being arranged to be of like polarity, at least three brushes cooperating with said armature, two of said brushes being spaced substantially 180 electrical degrees apart and arranged with respect to said poles so that the voltage between said brushes is dependent on the flux in both of said sets of poles, the third brush being arranged with respect to said poles so that the voltage between said third brush and one of said 180 degree brushes is dependent on the flux in one only of said sets of poles, a translation circuit connected to said 180 degree brushes, a second translation circuit connected to be supplied at the voltage induced by one of said sets of poles only, an exciting winding for the set of poles last mentioned connected across said second translation circuit, the machine being constructed and arranged so that the current flowing in the armature winding between said 180 degree brushes produces in the set of poles last mentioned a magnetomotive force in the same direction as the magnetomotive force of said exciting winding.



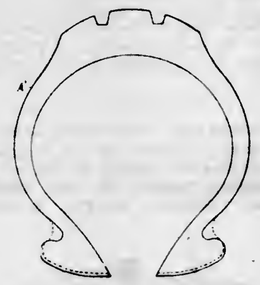
1,426,924. ELECTRICAL SYSTEM. ROBERT STECK, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,688. 5 Claims. (Cl. 171—223.)

1. An electrical system comprising an inherently regulated self-excited dynamo electric machine having an n pole armature winding and a field structure comprising $2n$ mechanical field poles arranged in two sets with an equal number of poles in each set, certain adjacent poles of the separate sets being arranged to be of like polarity, at least three brushes cooperating with said armature, two of said brushes being spaced substantially 180 electrical degrees apart and arranged with respect to said poles so that the voltage between said brushes is dependent on the flux in both of said sets of poles, the third brush being arranged with respect to said poles so that the voltage between said third brush and one of said 180 degree brushes is dependent on the flux in one only of said sets of poles, an exciting winding for the set of poles last mentioned, a translation circuit connected to be supplied



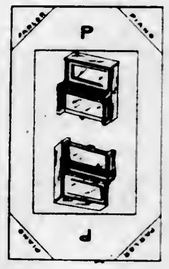
at the voltage induced by said last mentioned set of poles, a second translation circuit connected to said 180 degree brushes, an exciting winding for the other set of poles, the machine being constructed and arranged so that the cross-magnetizing magnetomotive force due to the load current in said second translation circuit produces in the set of poles inducing the voltage supplied to said first mentioned translation circuit a magnetomotive force in opposition to magnetomotive force of the first mentioned exciting winding, and a winding connected in series with said second translation circuit and arranged to produce in said last mentioned set of poles a magnetomotive force in opposition to the magnetomotive force produced therein by the cross-magnetization.

1,426,925. ELECTRICAL SYSTEM. ROBERT STECK, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,689. 8 Claims. (Cl. 171—223.)



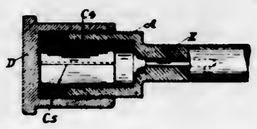
1. An electrical system comprising an inherently regulated self-excited dynamo electric machine having an n pole armature winding, and a field structure comprising $2n$ mechanical field poles arranged in two sets with an equal number of poles in each set, certain adjacent poles of the separate sets being arranged to be of like polarity, at least three brushes cooperating with said armature, two of said brushes being spaced substantially 180 electrical degrees apart and arranged with respect to said poles so that the voltage between said brushes is dependent on the flux in both of said set of poles, the third brush being arranged with respect to said poles so that the voltage between said third brush and one of said 180 degree brushes is dependent on the flux in one only of said sets of poles, a plurality of translation circuits connected to said brushes, one of said translation circuits being connected across said 180 degree brushes, another of said translation circuits being connected to be supplied at the voltage induced by one of said sets of poles only, a winding connected across one pair of said brushes and arranged to excite one of said sets of poles only, and a winding connected across another pair of said brushes and arranged to excite the other of said sets of poles only.

1,426,926. SPEED-CHANGING DEVICE. RICHARD STRNSAU, Quogue, N. Y. Filed May 16, 1918. Serial No. 234,907. 8 Claims. (Cl. 180—17.)



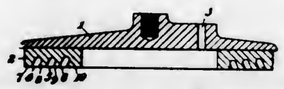
1. The combination of a driving means, a gear driven thereby, a planetary gear meshing with and driven by said first mentioned gear, a shaft rigidly secured to and driven by said planetary gear, a third gear meshing with said planetary gear, and means driving said last mentioned gear and varying the speed thereof with respect to said driving means to vary the speed of said shaft with respect to said first mentioned driving means, said last mentioned means including a variable speed frictional driving device for driving said last mentioned gear.

1,426,927. METHOD OF MAKING VEHICLE TIRES. JAMES A. SWINEHART, Akron, Ohio. Filed Nov. 6, 1920. Serial No. 422,164. 4 Claims. (Cl. 18—56.)



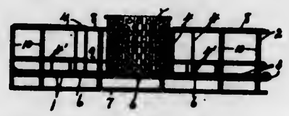
1. A method of making tires, comprising the step of molding a built-up tire casing while cold to approximately its finished contour and dimensions and with a partly developed bead, and then molding and compressing and stretching the casing to a slightly greater degree while heating and vulcanizing the same and forming a finished bead.

1,426,928. CARD GAME. JOHN H. TIENCKEN, Charleston, S. C. Filed Nov. 13, 1920. Serial No. 423,784. 1 Claim. (Cl. 46—25.)



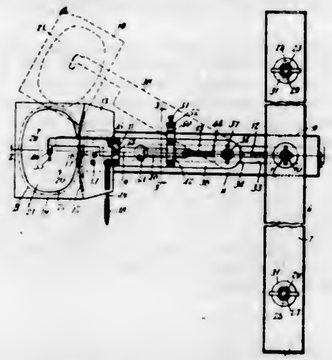
A game apparatus consisting of a pack of cards consisting of a plurality of distinguishably designated suits each containing a corresponding number of distinguishably designated cards, and a plurality of key cards of which the number is less than the number of suits, each of said suits representing an apartment or room of a dwelling and each card of each suit representing an individual article of furniture and equipment of such apartment or room, the key cards representing each a human occupant of the apartment or room.

1,426,929. GREASE CUP. CHARLES FREDERIC VAUGHAN, London, England. Filed Aug. 25, 1921. Serial No. 495,207. 1 Claim. (Cl. 184—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



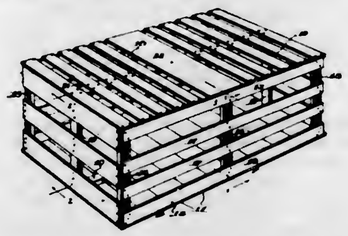
In a grease cup the combination of a cup-shaped body part having a cylindrical recess, a discharge conduit at the base of said recess, an interiorly threaded cap adapted to engage the threaded outer surface of the said body part, and a cylindrical flange attached to the said cap, and arranged to extend into the said recess closely fitted against the walls thereof, the said flange being of the same length as the said cap, and being longitudinally divided, the edges of the divided flange overlapping each other.

1,426,930. PNEUMATIC LOAD-ENGAGING MEANS. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, St. Helens, England, a Limited Liability Company of Great Britain. Filed Oct. 6, 1920. Serial No. 415,122. 8 Claims. (Cl. 294—64.)



1. A sucker ring for pneumatic load-engaging means having its operative face channelled, the inner wall of a channel being inclined inwards and upwards from the said operative face.

1,426,931. CULINARY BASKET FOR DISHWASHING MACHINES. WILLARD R. WALKER, Syracuse, N. Y., assignor to The Walker Brothers Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 27, 1920. Serial No. 406,305. 4 Claims. (Cl. 141—9.)



1. A culinary basket comprising an outer upright circular wall of open work having its lower and upper edges disposed in parallel planes, an open work bottom wall supported by the outer wall in a plane between and some distance from said lower and upper edges, and upright partitions arranged in spaced relation about the axis of the basket and extending inwardlly and downwardly from the upper edge of the outer wall to the bottom wall.

1,426,932. ATTACHMENT FOR BAND SAWS. GEORGE H. WALLACE, Cambridge, Mass. Filed May 7, 1920. Serial No. 379,512. 15 Claims. (Cl. 143—171.)

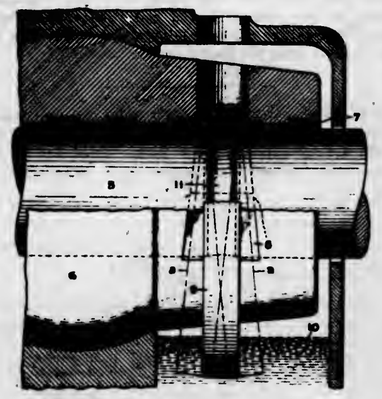
1. An attachment for band saw machines having, in combination, a guide frame provided with a slot for a band saw, means to fasten said guide frame to the work table of said band saw machine, a guide plate for a piece of material on said guide frame, and means to yieldingly position the piece of material relatively to said guide plate.

1,426,933. CHICKEN COOP. NEIL ACE WEBSTER, Waucoma, Iowa. Filed Aug. 31, 1921. Serial No. 497,117. 2 Claims. (Cl. 217—43.)

1. A light, rigid, return coop comprising a plurality of pre-constructed sections adapted to be initially shipped in knock-down form and readily assembled into a completed permanent light rigid structure, said sections including a bottom section provided with a central rib, side sections provided with top and bottom supporting rails, end and central posts secured to said rails, and comparatively thin slats secured to said posts, end sections consisting of end posts and thin slats rigidly secured thereto and a top section of comparatively thin slats provided with a central rib, to which the slats are rigidly secured, and when assembled said end and top sections being secured respectively to said side posts and top rails and a readily removable closure in the top section substantially as and for the purpose set forth.

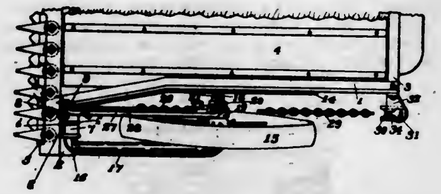
1,426,934. TIMING AND INJECTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM B. SMITH WHALEY, New York, N. Y., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Dec. 21, 1916, Serial No. 138,207. Divided and this application filed Oct. 1, 1917. Serial No. 194,103. Renewed Jan. 3, 1922. Serial No. 526,812. 4 Claims. (Cl. 60—16.)

1. In a device of the character described, a casing member having a receiving chamber, a discharging chamber and a transfer chamber communicating between said chambers; a ported sleeve-member fitted within said receiving chamber and porting said receiving chamber with said transfer chamber; a reciprocating valve member slidably fitted in said ported sleeve member and adapted to periodically free the ports of said sleeve member; means for supplying said receiving chamber with elastic-fluid; a protruding discharging sleeve-member fitted within said discharging chamber and adapted to extend through a cylinder wall and open to said transfer chamber and the combustion chamber of said cylinder; and means for normally closing the cylinder end of said discharge sleeve.



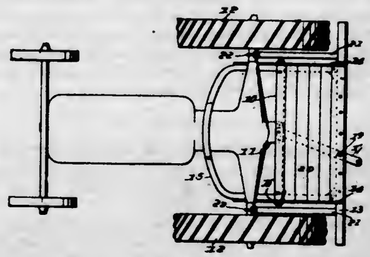
1,426,935. TOOTH PROTECTOR FOR DENTAL CLASPS. GEORGE A. WIECHERT, New York, N. Y. Filed Jan. 18, 1922. Serial No. 530,204. 4 Claims. (Cl. 32—12.)

2. In a device of the character described the combination of a denture and a clasp carried by said denture and provided with a clasp finger adapted to be bent in order to exert pressure upon a natural tooth, and a tooth protector carried by said clasp finger and engaging said tooth, said tooth protector being made of resilient material and so fitted upon the clasp finger as to practically envelop the same.



1,426,936. SHAFT BEARING. JAMES WILKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 9, 1920. Serial No. 402,265. 1 Claim. (Cl. 64—31.)

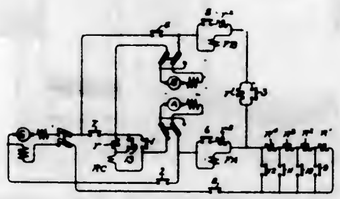
The combination of a shaft provided with a rounded annular groove formed directly in its surface, a bearing therefor having a flared oil ring groove, and an oil ring having a rounded inner wall hung in the groove in the shaft and located in said flared groove whereby such oil



ring is held from axial movement along the shaft but may swing on the shaft without coming into engagement with the walls of said flared groove.

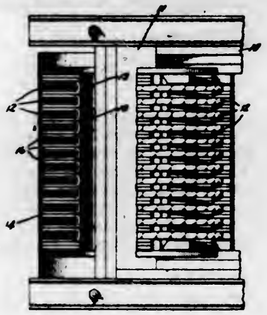
1,426,937. GRAIN WHEEL FOR HARVESTERS. FREDERICK D. WILSON, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 19, 1920. Serial No. 397,470. 7 Claims. (Cl. 56—214.)

2. In a device of the character described, the combination of a frame, a crank axle rockably supported thereon, a wheel on the crank axle, an eccentric non-rotatable bushing mounted on the axle and within the hub of said wheel whereby the wheel is given a constant downward pitch and forward gather, means to rock the axle and raise or lower the frame, and means to retain the pitch and gather of the wheel constant irrespective of the movement of the frame.



1,426,938. PLATFORM FOR TRACTORS. JAMES W. WRIGHT, Iowa, La. Filed Oct. 12, 1920. Serial No. 416,353. 1 Claim. (Cl. 280—33.2.)

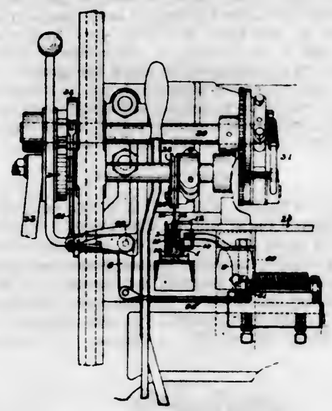
An attachment for tractors, having front and rear cross bars of which the former is attached to the tractor draw



bar, and of which the latter is disposed in terminal overlapping relation with the tractor wheels, side bars connecting said front and rear cross bars and extending in advance of the former, and a rod yoke connecting the forward extremities of the side bars and disposed in spanning relation with the frame of the tractor.

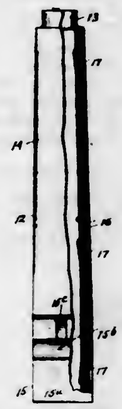
1,426,939. MOTOR CONTROL. JOHN D. WRIGHT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 2, 1919. Serial No. 269,380. 9 Claims. (Cl. 172—152.)

2. The combination with a hoist or the like, of a pair of reversible series driving motors connected in a closed loop during operation in both directions and a reversing controller for connecting the fields to the supply circuit independently of the armatures during lowering.



1,426,940. ELECTRICAL APPARATUS. LOUIS WULFF, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1920. Serial No. 416,668. 5 Claims. (Cl. 175—356.)

1. In an electrical apparatus, the combination with windings composed of coils in assembled relation, of spacing means for the windings comprising radially disposed elements, fillers and a channel member, said channel member engaging said elements to secure them against lateral displacement and to hold them in alignment.

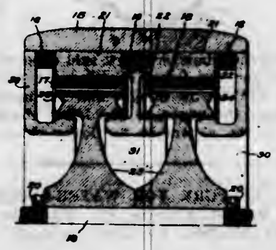


1,426,941. APPARATUS FOR THE MANUFACTURE OF WIREBOUND BOX BLANKS. WILLIAM G. ZIMMERMAN, Everett, Wash. Filed Oct. 2, 1918. Serial No. 256,537. 2 Claims. (Cl. 1—8.2.)

1. An automatic staple-feed controlling attachment for machines of the class described, comprising tappet plates adapted to be secured to the conveyor chain, a base plate adapted to be secured to the machine frame, a lever pivoted upon said base plate and having one end positioned to be engaged by said tappet plates, a spring secured to said base plate and to said lever to swing the

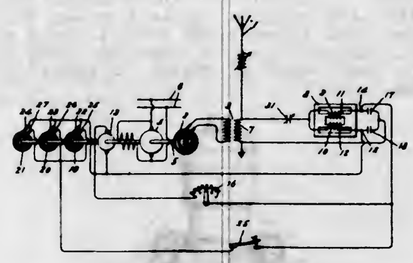
lever into engagement with the tappet plates, and a link secured to said lever and connecting it with the staple controlling mechanism.

1,426,942. TUBULAR SHEET-METAL SPOKE FOR VEHICLE WHEELS. THOMAS N. AIKENS, Lakewood, Ohio, assignor of one-half to David D. Walker, Lakewood, Ohio. Filed Dec. 9, 1921. Serial No. 521,143. 6 Claims. (Cl. 301—104.)



1. A tubular sheet metal spoke for vehicle wheels formed from a piece of sheet metal with one of its marginal portions overlapping the other, and the overlapping portions being indented to prevent spreading.

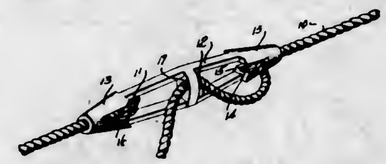
1,426,943. HIGH-FREQUENCY ALTERNATOR. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1916. Serial No. 121,870. 11 Claims. (Cl. 171—252.)



7. A high frequency alternator comprising a rotatable magnetic inductor terminating at its outer periphery in a cylindrical surface and adapted to be driven at high

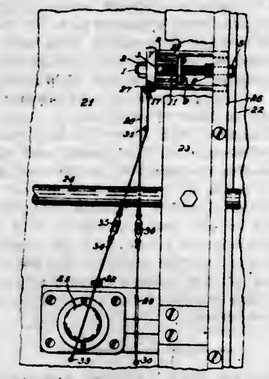
speed, said cylindrical surface having a plurality of distributed slots, non-magnetic material filling said slots, a stationary magnetic core surrounding the cylindrical surface of said inductor and separated therefrom by a small air gap, an armature winding carried by said core, a second cylindrical surface on said inductor concentric with the outer periphery of the inductor, a stationary magnetic member separated from the second cylindrical surface of said inductor by a small air gap, and an exciting winding positioned so that the flux set up thereby crosses said two air gaps in relatively opposite directions.

9. A high frequency alternator comprising a rotatable magnetic inductor having three concentrically positioned cylindrical surfaces, one of said cylindrical surfaces having a plurality of distributed slots, non-magnetic material filling said slots, a stationary magnetic core separated from said slotted cylindrical surface by a small air gap, an armature winding carried by said core, a pair of stationary magnetic members separated from the other cylindrical surfaces by a small air gap, and a magnetizing winding positioned so that the flux set up thereby passes across both of said air gaps.



1,426,944. RADIOSIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 4, 1917. Serial No. 189,495. 4 Claims. (Cl. 250—8.)

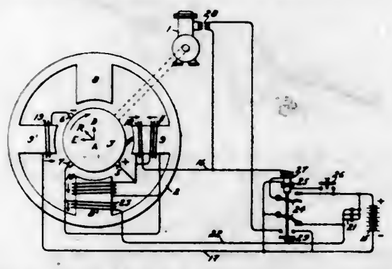
1. The method of radio signaling which consists in producing a continuous radio frequency current in a radiating system, transmitting a single signal by simultaneously producing amplitude pulsations of sine wave form of a plurality of different frequencies, all of which are below radio frequency, receiving the wave thus transmitted and producing an indication of the signal transmitted by selecting from the wave thus received any desired one of the different frequencies of amplitude pulsations.



1,426,945. SECURING DEVICE. FRANK CARLTON ANDERSON, Portland, Me. Filed Dec. 13, 1921. Serial No. 522,098. 2 Claims. (Cl. 24—130.)

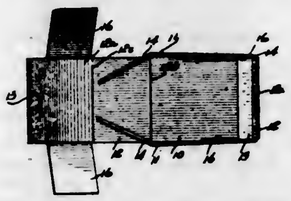
1. A securing device including a pair of arms, heads secured adjacent the ends of said arms, said heads being each formed with a bore and a wedge-shaped slot adjacent the inner end of said bore, and an inclined shoul-

der forming a part of said head, and also adjacent the inner end of said bore, said shoulder also being interrupted by said slot.



1,426,946. AUXILIARY LOCKING MEANS FOR VAULTS. CHARLES W. BABCOCK, Waterloo, Iowa. Filed Jan. 20, 1922. Serial No. 530,577. 6 Claims. (Cl. 109—3.)

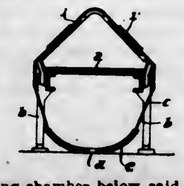
1. The combination with a door having a fixed orificed marginal rib, a shifting-bar movable to and from said rib, a locking-bolt carried by said bar, and a lock adapted to releasably secure said bar and bolt in certain positions, of auxiliary-locking-means, comprising a headless-bolt threaded at both ends with one end secured in a threaded orifice in said rib, a nut mounted on the inner end of the bolt, said bolt having a cylindrical enlargement spaced from the inner end of the bolt, a cross-bar positioned partially in the plane of said shifting-bar and orificed to seat it slidably upon the enlargement of said bolt, one or more rings having the same exterior diameter as said enlargement and a larger interior diameter than said bolt mounted loosely on the bolt between said enlargement and said nut, an orificed cross-bar slidably seated on said bolt and rigidly bracketed on the first-mentioned cross-bar, a coiled spring mounted on said bolt and engaged between said enlargement of the bolt and the second-mentioned cross-bar, an adjusting-nut on said bolt engaging the opposite face of the second-mentioned cross-bar, releasable engaging-means on the first-mentioned cross-bar, a wire having one end connected to said releasable engaging-means when the first-mentioned cross-bar has been moved to be mounted upon said rings, thence crossing the said lock contacting and having its other end secured to the door near the lock, and another wire releasably linked to said releasable engaging-means, carried thence across a vulnerable part of the door between said lock and said shifting-bar, having its other end secured to the door, and including a part of low melting point overlying said vulnerable part of the door.



1,426,947. ELECTRICAL SYSTEM. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,697. 10 Claims. (Cl. 171—223.)

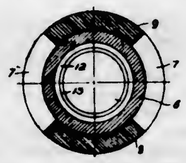
1. An electrical system comprising an inherently regu-

lated self-excited dynamo electric machine having an n pole armature winding, and a field structure comprising 2n mechanical field poles arranged in two sets with an equal number of poles in each set, certain adjacent poles of the separate sets being arranged to be of like polarity, at least three brushes cooperating with said armature, two of said brushes being spaced substantially 180 electrical degrees apart and arranged with respect to said poles so that the voltage between said brushes is dependent on the flux in both of said sets of poles, the third brush being arranged with respect to said poles so that the voltage between said third brush and one of said 180 degree brushes is dependent on the flux in one only of said sets of poles, an exciting winding for the set of poles last mentioned and a plurality of translation circuits connected to said brushes, one of said translation circuits being connected across said 180 degree brushes, another of said translation circuit being connected to be supplied at the voltage induced by said one set of poles only, said exciting winding being connected across one of said translation circuits.



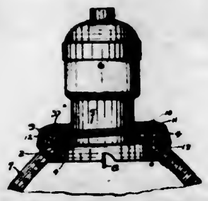
1,426,948. PAPER BOX. SAMUEL BERGSTEIN, Middletown, Ohio. Filed Nov. 17, 1921. Serial No. 515,804. 1 Claim. (Cl. 229—34.)

A box of the class described having side and end panels, these side panels being scored transversely to form flaps adapted to cover and reinforce the entire surface of the end walls of the box, the end panels being also scored transversely to provide flaps adapted to lie on the bottom of the box, each of said last-mentioned panels being also provided with side flaps adapted to cover and reinforce substantially the entire surface of the side walls of the box.



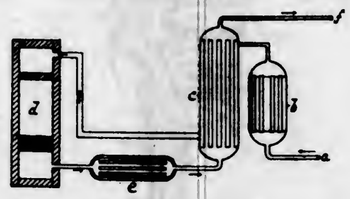
1,426,949. DEVICE FOR RECOVERING RUBBER SOLVENTS. ALBERT BOECLER, Malmo, Sweden. Filed June 20, 1921. Serial No. 479,115. 2 Claims. Cl. 34—3.)

1. A device for the recovery of solvent from rubber mixtures used in the production of materials made partly or wholly of rubber, the combination with a rubber machine having a support over which the product is passed while the solvent is evaporating through the application of heat thereto, of a casing completely enclosing and surrounding said support and forming a vapor evolving or expansion chamber above said support and a larger,



vapor condensing chamber below said support and cooling means only for the lower chamber for the purpose of condensing the vapors therein and for maintaining circulation from the upper to the lower chamber by condensation of the vapors in the lower chamber.

1,426,950. FIXTURE FOR WATER-CLOSET BOWLS. LEE W. BOLLOW, Chicago, Ill. Filed Apr. 22, 1920. Serial No. 375,695. 5 Claims. (Cl. 137—76.)

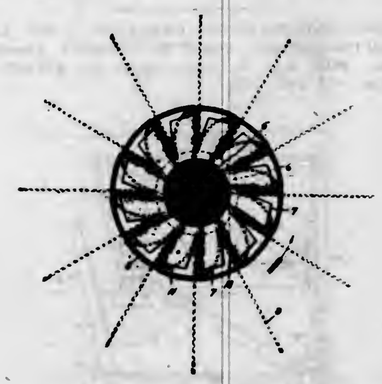


1. A water closet bowl having a hole in a wall there of to give access to the interior through said wall, a sleeve fixed in said hole, said sleeve having at its inner end an outwardly-facing seat, a closure for the outer end of said sleeve, means for detachably securing said closure in place, and a stopper supported by said closure and engaging said seat.

1,426,951. SHADE HOLDER FOR THREADED ELECTRIC-LAMP SOCKETS. GEORGE A. BOOMER, Waterbury, Conn., assignor to The Plume & Atwood Mfg. Co., Waterbury, Conn., a Corporation. Filed Feb. 16, 1920. Serial No. 359,149. 2 Claims. (Cl. 240—11.)

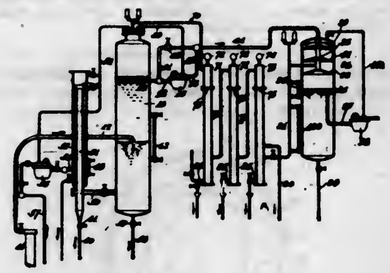
1. In a shade-holder for use with threaded lamp-sockets, the combination with an inside shade-supporting member adapted to fit on the inside of a lamp-shade, and comprising an outwardly flaring shade-supporting flange, an upstanding threaded collar adapted to be screwed upon the threaded end of a lamp-socket, and an inwardly projecting positioning-member interposed between the said flange and collar for direct engagement with the lower turn of the threads upon the lamp-socket, of a shade-binding member comprising a threaded collar adapted to be screwed upon the outside of the upstanding threaded collar of the said shade-supporting member and provided with means for engaging the outer surface of the shade.

1,426,952. PROCESS FOR THE PRODUCTION OF OXIDES OF NITROGEN FROM AMMONIA BY CATALYTIC OXIDATION. CARL BOSCH, Ludwigshafen-on-the Rhine, Germany, assignor, by mesne assignments, to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Bavaria, Germany, a Corporation of the Grand Duchy of Baden. Filed July 9, 1920. Serial No. 395,148. 4 Claims. (Cl. 23—1.)



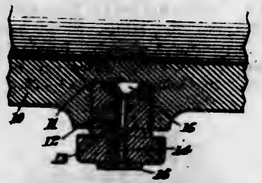
1. In the manufacture of oxides of nitrogen from ammonia by catalytic oxidation, the steps consisting in first preheating the gas mixture containing ammonia and oxygen with the aid of the drawn-off reaction gases and completing its heating on the way to the contact-mass by arranging a spacious room in front of the contact-mass enabling the gas mixture to be exposed to the heat radiated from the said contact-mass on a way of not less than about half a metre, the gas mixture coming in this room into contact only with materials which have no essential catalytic influence on it.

1,426,953. MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mulhausen, France. Filed Sept. 10, 1920. Serial No. 409,440. 3 Claims. (Cl. 18—54.)



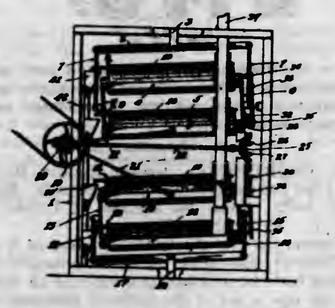
1. The process of producing very fine viscose threads of 6—1 deniers fineness or less, which comprises forcing the viscose into a precipitant bath consisting of an acid to which a polyatomic alcohol has been added, the concentration of the acid being proportional to the fineness of the thread desired, so that the concentration is increased in accordance with the fineness of the thread to be produced.

1,426,954. IMPELLER FOR CENTRIFUGAL COMPRESSORS AND THE LIKE. ALFRED A. BROOKS, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 2, 1920. Serial No. 407,675. 5 Claims. (Cl. 230—11.)



1. In a centrifugal compressor, the combination of a shaft, a hub thereon, thin, flexible blades carried by said hub, and entrance vanes for directing fluid to be pumped to said blades.

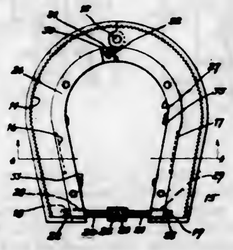
1,426,955. OIL, GAS, AND WATER SEPARATOR. LESTER L. CARTER, San Francisco, Calif. Filed Nov. 7, 1921. Serial No. 513,480. 11 Claims. (Cl. 183—3.)



1. A device for separating gas from a mixture of gas and liquid, which comprises: walls forming a separating chamber, into which the mixture is delivered, and in which the gas is allowed to escape from the liquid; means for withdrawing gas from said chamber and reducing the pressure thereof; a trap into which liquid from said chamber is delivered; means in said trap for preventing gas from blowing therethrough; and means for allowing liquid to escape from said gas trap whenever a definite amount collects therein.

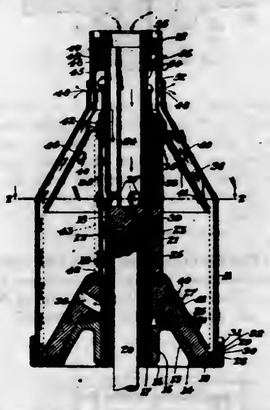
1,426,956. ACID LINE FOR PAPER MILLS. JOHN J. CARR, Saratoga Springs, N. Y., assignor to Baker Manufacturing Corporation, Saratoga Springs, N. Y., a Corporation of New York. Filed Oct. 8, 1920. Serial No. 415,626. 5 Claims. (Cl. 137—77.)

1. In a pipe line, a wall having an opening therein extending partially through the same from the outer side thereof, and a plug fitting said opening and having a longitudinal bore so that when the inner portion of the wall is worn away to the plug the fluid in the line is permitted to flow through the bore to indicate the condition of the line.



1,426,957. APPARATUS FOR SEPARATING SEEDS. CARL J. CHINDBLOOM, Peoria, Ill., assignor to American Milling Co., Peoria, Ill., a Corporation of New Jersey. Filed Oct. 13, 1919. Serial No. 330,457. 5 Claims. (Cl. 130—18.)

1. A separator comprising an endless belt or apron, a roughened conveyer surface thereon comprising a coating



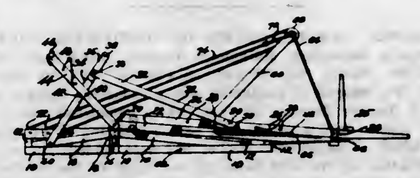
of added granular material and a slope lateral to its direction of movement, means for moving said belt or apron, means to supply a mixture of seeds to be separated to the upper rearward portion of said belt or apron, and means to impart a lateral vibratory motion to said belt or apron during movement.

1,426,958. HORSESHOE. JOSEPH CISEK, Fabyan, Conn. Filed Aug. 26, 1921. Serial No. 495,630. 1 Claim. (Cl. 168—19.)

A horseshoe comprising inner and outer members formed in sections, means for hingedly engaging the sections at the front of the shoe raised frame elements integral with the outer members, the interior of said frame elements being beveled to engage a hoof, projections on the inner beveled sides of said raised elements, spurs fixed in said inner members, bars pivoted in said outer members, said bars respectively being provided with left and right hand threads, and a nut for engaging said bars whereby said members may be clamped to a hoof.

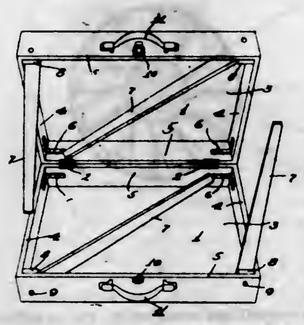
1,426,959. CENTRIFUGAL LIQUID SEPARATOR. THOMAS COLLINS, Bainbridge, N. Y., assignor to The American Separator Company, Bainbridge, N. Y., a Corporation of New York. Filed Feb. 6, 1922. Serial No. 534,427. 20 Claims. (Cl. 233—29.)

10. In a centrifugal liquid separator, a bowl shell, a feed device, a distributing device, and means for securing the distributing device in its longitudinal position through the said bowl shell.



1,426,960. COMMUTATOR. GEORGE E. COOK, Brooklyn, N. Y. Filed June 3, 1920, Serial No. 386,345. Renewed Feb. 25, 1922. Serial No. 539,289. 2 Claims. (Cl. 200—25.)

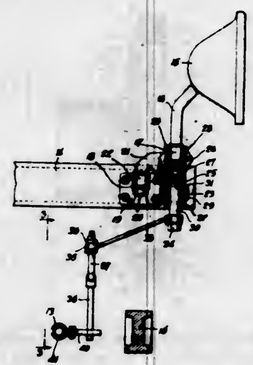
1. A commutator for the ignition system of a multi-cylinder internal combustion engine comprising a casing of insulated material and having a rim and an end wall adjacent the rim, a set of rim contacts embedded in the said casing rim, a set of end wall contacts embedded in the said casing end wall, leads embedded in spaced relation in the said casing and connected at their inner ends with the said contacts, conductors connected with



the outer ends of the said leads, and a revoluble member mounted to turn and provided with two contact members, of which one is adapted to engage the said rim contacts and the other the said end wall contacts.

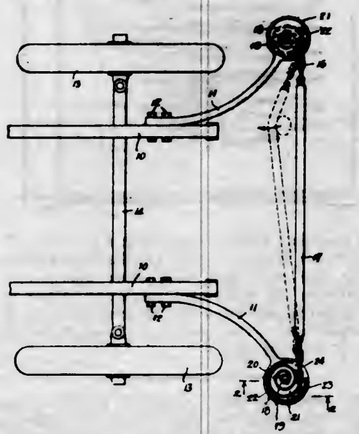
1,426,961. HAYSTACKER. JOSEPH H. COPE, Denver, Colo., assignor to The Windsor Manufacturing Company, Windsor, Colo., a Corporation of Colorado. Filed Feb. 27, 1920. Serial No. 361,833. 42 Claims. (Cl. 214—141.)

26. In a stacker, a frame including a ground timber, a post secured at the side of said timber, a lifting arm lying directly above said timber and pivoted to said post, an extension arm slidable on said lifting arm, means to lift said arms, means to extend said extension arm while the arms are being lifted, said extending means comprising a jointed link having one part pivoted to the extension arm and another part pivoted to the frame, and a stop for limiting the rearward movement of said link.



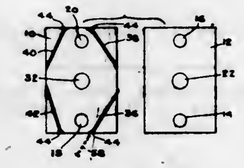
1,426,962. COMBINATION CARRYING CASE AND CAMPING TABLE. ROMAN M. CORPSTEIN, Dubuque, Iowa. Filed May 31, 1921. Serial No. 473,567. 1 Claim. (Cl. 190—12.)

A camping-out table comprising a pair of box-like sections hinged together and supporting legs pivoted to the



outer walls of said sections the pivots of the legs in each section lying in the same vertical plane and being staggered with respect to a horizontal plane whereby one leg of each section may be folded in superimposed relation upon the other leg in each section.

1,426,963. DIRIGIBLE HEADLIGHT. GEORGE W. J. CRABB, Newark, N. J. Filed Sept. 24, 1920. Serial No. 412,476. 1 Claim. (Cl. 240—62.)



In a dirigible lamp construction, the combination with a frame, a bracket fixed thereto and having a socket bore, a lamp having a shank of the same diameter as said socket bore and having a threaded end and a clamping nut mating said threaded end, of an auxiliary bearing bracket having a shank similar in diameter to the lamp shank and hence adapted for direct co-operation with the bracket first mentioned and to be locked by said nut, a combined coupling and bearing bushing having a socket to receive the lamp shank and having a threaded portion to receive the threaded end of the lamp shank, a shank extension threaded into the other end of the coupling in alignment with the lamp shank, and means to rotate the lamp through said extension.

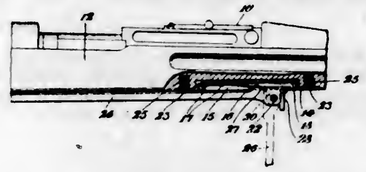
1,426,964. RESILIENT BUMPER. GEORGE W. J. CRABB, East Orange, N. J. Filed Apr. 17, 1922. Serial No. 553,736. 4 Claims. (Cl. 293—55.)

2. In an automobile bumper, the combination of a spring, an impact member of flexible construction and adjustable as to effective length, means to attach one end of the impact member to said spring, and means to anchor the other end of the impact member.

1,426,965. DEVICE FOR HOLDING HYPODERMIC NEEDLES WHILE SHARPENING THE SAME. DAVID CROWTHER, Minneapolis, Minn. Filed June 1, 1920. Serial No. 385,621. 3 Claims. (Cl. 51—217.)

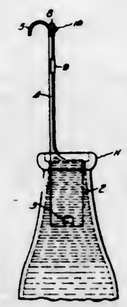
1. A device for holding hypodermic needles while sharpening the same, comprising two clamping members, and means for holding said members with their contiguous faces in contact, one of said faces being provided with a plurality of grooves inclined at different angles and any one of which is adapted to receive the needle which is to be sharpened whereby the length of the sharpening incline of the needle may be varied.

1,426,966. SECONDARY ELECTRIC BATTERY OR ACCUMULATOR. HERBERT DEAN, Clifton Junction, near Manchester, England, assignor to The Electric Storage Battery Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Sept. 30, 1921. Serial No. 504,440. 1 Claim. (Cl. 204—29.)



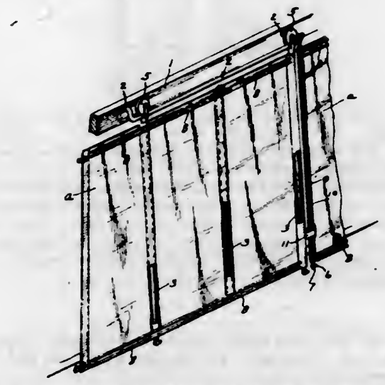
In secondary electric batteries or accumulators having a vent tube, the combination with a chamber arranged around the vent tube and provided with a compartment having a capped opening through the top accumulator wall, of two straight tubes extending into said compartment so that by removing the cap from the said compartment, the said tubes can be readily cleared of any obstruction and one of said tubes opening adjacent the bottom of the chamber and the other extending through the latter into the accumulator, substantially as described.

1,426,967. GUN SUPPORT. MICHAEL DRESCHER, Averill Park, N. Y. Filed Mar. 17, 1922. Serial No. 544,444. 2 Claims. (Cl. 42—94.)



1. A gun support comprising a recessed plate set in the stock of the gun, a support rod having a head presenting

right angular surfaces pivoted between the walls of the recess centrally of the gun, and a spring fixed in the bot-

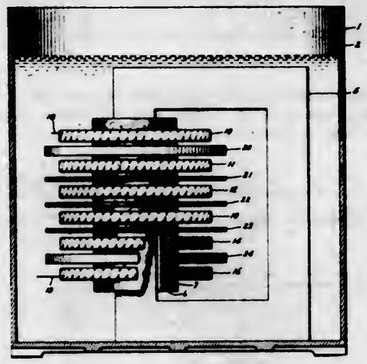


tom of the recess adapted to impinge against either of said surfaces.

1,426,968. CREAM DIPPER. FRANK S. DRIGGS, Southington, Conn. Filed Nov. 1, 1921. Serial No. 512,045. 1 Claim. (Cl. 65—28.)

A cream dipper of the class described comprising a hollow cylindrical body closed at its lower end and having a circumferential port above said closed end and also having an upwardly extending handle which rises from the upper edge portion of the body, and a valve member in the body, comprising resilient wings to frictionally engage the inner surface of the body, for controlling said port, the valve member having an upwardly extending shank slidable against and longitudinally of the handle, the shank being transversely arched, having lateral lugs bent around the edges of the handle, the handle having at its upper end a hook and the shank having a projection on its forward side.

1,426,969. FOLDING CURTAIN FOR AUTOMOBILES. FRANK A. DUNHAM, Owatonna, Minn. Filed Apr. 15, 1921. Serial No. 461,521. 7 Claims. (Cl. 296—139.)

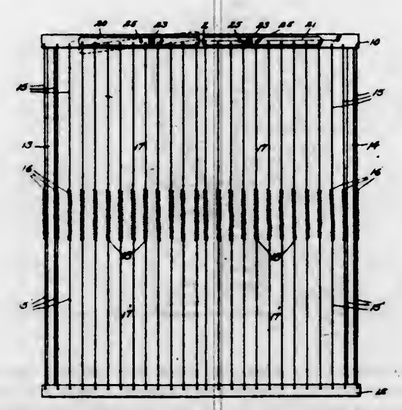


1. A vehicle curtain structure having in combination a member rigidly secured to the vehicle top and extending longitudinally thereof adjacent to the lower edge thereof, a curtain having spaced vertical members secured thereto with a pulley swivelly mounted on the upper end of said members and adapted to be supported by the run on the first mentioned member.

1,426,970. SOUND BOX. HARRY J. DURBOROW, Philadelphia, Pa. Filed Dec. 16, 1920. Serial No. 431,069. 3 Claims. (Cl. 224—27.)

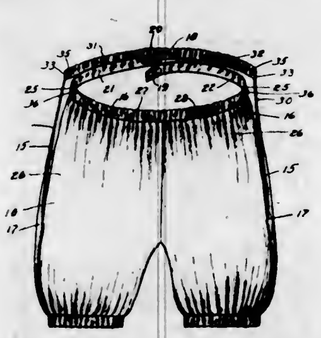
1. A resonating partition for use in a talking machine sound box case including a portion providing a sound outlet passage, said partition being located between the diaphragm and the sound outlet passage of the case, said partition having grooves in one face and sound outlet openings communicating with said grooves, said grooves also being in communication with said sound outlet passage of the case; substantially as described.

1,426,971. ELECTRICAL APPARATUS. GIUSEPPE FACCIOLI, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 11, 1919. Serial No. 282,010. 5 Claims. (Cl. 175—361.)



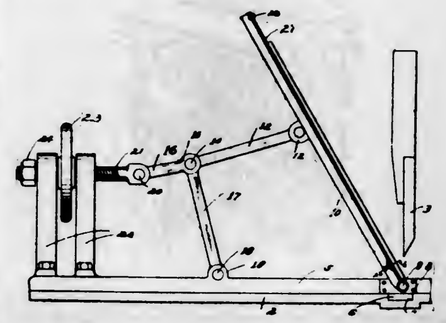
1. An electrical winding comprising a plurality of coils spaced different distances apart, and insulating means for insulating said coils from each other disposed in the spaces between the coils, said insulating means having specific inductive capacities and dimensions selected and proportioned to maintain equal capacitance effects between any pair of adjacent coils.

1,426,972. SPRING BED. OSMA N. FARNHAM, Sanish, N. Dak. Filed June 14, 1922. Serial No. 568,199. 2 Claims. (Cl. 5—67.)



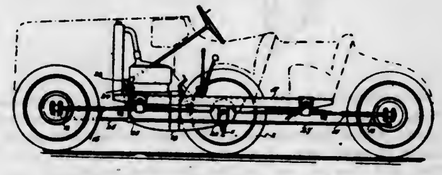
1. In a spring bed, a plurality of end members, side bars connecting said members, pivotally mounted elements

carried by the end members near the central portion thereof, resilient elements connected with the pivoted members between the pivotal points and the central longitudinal



axis of the bed, and means imparting movement to the pivoted members for increasing tension on said resilient elements.

1,426,973. GARMENT. DAVID L. FINE, Dorchester, Mass. Filed Nov. 28, 1917. Serial No. 204,446. 2 Claims. (Cl. 2—143.)

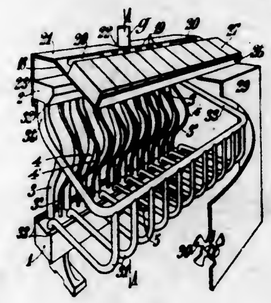


2. In a garment, a body covering divided at each side thereof from the top or waistline to a point below the hips to form a forepart and a drop-flap, said forepart being provided at the waistline thereof with an elastic band having the ends of said band permanently connected to the ends of said forepart with the intermediate section of said forepart slidably supported on said elastic band for effecting a self-gathering feature to said forepart, and said drop-flap being provided at the waistline thereof with an elastic band which is also permanently secured at the ends thereof with the sides of said drop-flap with the intermediate section of said drop-flap slidably supported on said elastic band to provide a self-gathering and self-contracting feature for a waistline of said drop-flap; a pair of straps secured to and extending from each side of said forepart adapted to be joined together to form an encircling member about the waist of the wearer to support the garment in wearing relation with the body; and coacting fastening means provided said forepart and said drop-flap at the upper points of division of same, adapted to temporarily secure said drop-flap in closed relation with said forepart.

1,426,974. BEVELING MACHINE FOR PAPER CUTTERS. WALTER M. FLOTO, Chicago, Ill., assignor to Theresa Floto. Filed Dec. 22, 1919. Serial No. 346,542. 1 Claim. (Cl. 164—58.)

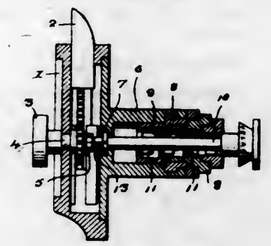
A device of the kind set forth comprising in combination a base, a support pivotally mounted on said base, a knife edge movable in a plane parallel to the axis of the pivot of said support, a bracket on the base behind the support, a threaded rod passing through an aperture in said bracket and connected to the support and a nut on the rod for adjusting the position of the rod relatively to the support and thereby the angle of the support relatively to said plane.

1,426,975. CONNECTION OF MOTOR-VEHICLE WHEELS TO THE VERTICES OF A RHOMBUS. OTTAVIO FUSCALDO, Brescia, Italy. Filed Apr. 13, 1921. Serial No. 461,092. 2 Claims. (Cl. 180—21.)



1. Connecting arrangement for motor vehicle wheels situated at the vertices of a rhombus, comprising an elastic frame built up on each side by a pair of laminated aligned springs pivotally connected with each other and with the axle of the driving wheels carrying the vehicle platform at points corresponding to the intersection of the springs with the centers of the ideal sides of the rhombus at whose vertices the wheels are arranged, and connected to the free ends of arched headers to one end of which is hinged one end of the axle of the guiding wheels, whilst to the other end of the header is secured by means of a screw-nut the other end of the same axle, substantially as described and illustrated and for the purposes set out above.

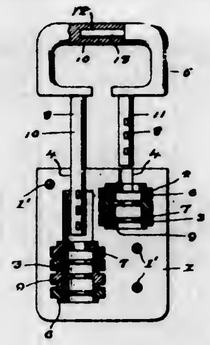
1,426,976. FIREPLACE WATER BACK. GUSTAVE GABET, Paris, France. Filed May 13, 1921. Serial No. 469,269. 3 Claims. (Cl. 126—132.)



1. In a fire-place water back, upper and lower headers, a double row of curved water tubes connected with the headers, the concave curvatures of the tubes being disposed towards the back of the fire-place, the curvature of the tubes forming the outer row being of greater diameter and more accentuated than the curvature of the inner row, a row of water tubes constituting a fire grate

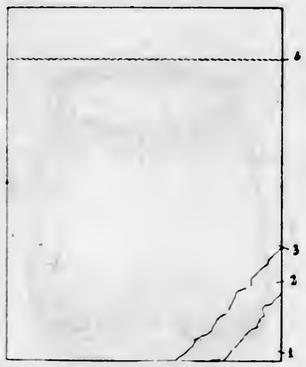
connected with the lower header, a front header connected with the last mentioned row of water tubes and

arranged at a higher level than the lower header, and means connecting the extremities of the front header with the upper header.



1,426,977. COMBINATION OPERATED LOCK. FRANK GAMBINO, Philadelphia, Pa. Filed Nov. 8, 1921. Serial No. 513,772. 1 Claim. (Cl. 70—53.)

In combination with a lock and its bolt, a cylindrical casing disposed at a right angle to said lock and secured thereto, a cup rotatably secured to one end of said casing, a pair of cups, one of which is adapted to rest in the other and one to rest within the first mentioned cup, each cup is provided with a keyhole shaped opening in its bottom and the rounded portion of each opening being adapted to register with each other but spaced therefrom, a key provided with spaced projections intermediate of its ends for engaging said openings when the rectangular portions thereof are in alignment to permit the longitudinal movement of the key and an extension on one end of said key for the purpose specified, and means opposing the cylindrical key casing and secured to the opposite side of the lock for operating said bolt on that side.

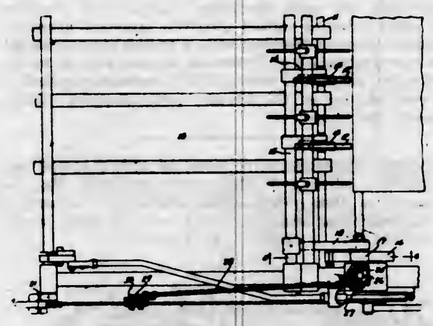


1,426,978. COMBINATION PADLOCK. FRANK GAMBINO, Philadelphia, Pa. Filed Nov. 8, 1921. Serial No. 513,773. 1 Claim. (Cl. 70—113.)

A lock of the class described comprising a casing having a pair of openings therethrough and a corresponding number of transverse bores communicating with said openings, a series of discs disposed in each opening and rotatably arranged one over the other, each disc being provided with a reduced portion on one side and a recess on the opposite side, said reduced portion on the intermediate discs being hollow and adapted to engage the recess of the adjacent disc and provide a space between each disk thereby, said discs being provided with a key hole shaped opening centrally arranged therethrough, a two part shackle, a socket in one part and a projection in the other for engaging the socket, a pair of limbs depending from said shackle and one limb being longer than the other, means for preventing the removal from the case

of the part of the shackle provided with the long limb, a plurality of spaced projections arranged on each limb and adapted to be received in the keyhole shaped opening in said discs for the purpose specified.

1,426,979. DUPLICATING, MANIFOLDING, AND THE LIKE. DAVID GESTETNER, London, England. Filed Feb. 26, 1919. Serial No. 279,423. 4 Claims. (Cl. 41—38.6.)



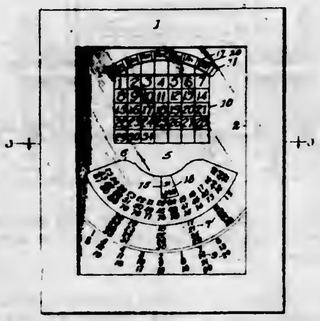
1. An improved sheet for use in the production of stencils by the action of light upon a light sensitive composition consisting of a sheet of porous material, a coating of a composition of the kind specified on the porous material, and a sheet of flexible supporting material in adhesive connection with substantially the entire surface area of the other side of the said coating.

1,426,980. DELIVERY-WHEEL TRIP FOR FEEDERS. PAUL GITZENDANNER, Woodhaven, N. Y., and FRANK J. ALBERT, West New York, N. J. Filed Oct. 7, 1921. Serial No. 506,180. 8 Claims. (Cl. 271—56.)

1. The combination with a sheet feeder for printing presses, folding machines or the like which includes an automatic throw-off mechanism, idler and driven delivery wheels between which the sheets are fed when the wheels are brought into contact with each other, and a mechanism for intermittently disposing said wheels in and out of contact, of means operable by the automatic throwoff

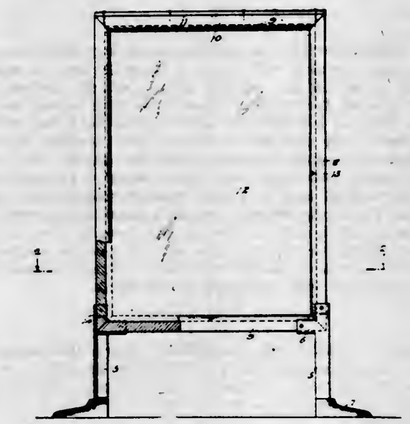
mechanism of the feeder and operatively associated with the intermittent mechanism for maintaining the delivery wheels out of contact whereby upon operation of the automatic throw-off mechanism, said means will serve to

prevent further feeding of the sheets through the momentum of the machine, and a connection between said means and the automatic throw-off mechanism to permit of the re-setting of the automatic throw-off mechanism without rendering the same means inactive.



1,426,981. INSULATOR. WALTER T. GODDARD, Rochester, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 5, 1919. Serial No. 308,810. Renewed Nov. 7, 1921. Serial No. 513,555. 5 Claims. (Cl. 173—318.)

5. In a strain insulator, the combination with a frangible refractory element of silicious material having an annular attaching portion provided with a plurality of eyes disposed in staggered succession and equally spaced about the periphery thereof, and a connecting element, of a plurality of independent inextensible link members extending freely through and engaged in the respective eyes and each having a rocking bearing on the connecting element.

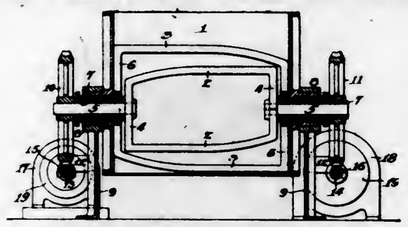


1,426,982. PERPETUAL CALENDAR. GEORGE GOLDSMITH GRUNEWALD, Perrysville, and MARY SWEET, Mifflin, Ohio. Filed Jan. 21, 1922. Serial No. 530,830. 10 Claims. (Cl. 40—113.)

1. In a perpetual calendar, having a fixed data sheet with part year indications thereon, said sheet also bearing successive month dates and having openings formed therein in spaced apart relation to each other, a revolving disk having an annular rim provided thereon and having endorsed thereon the remaining year indications, said disk also having spaced apart openings provided therein, a second disk fitted within the annular rim of the first disk and having notches formed on the rear portion therein to revolve it adjacent to the year disk, said disk also having monthly indications endorsed thereon

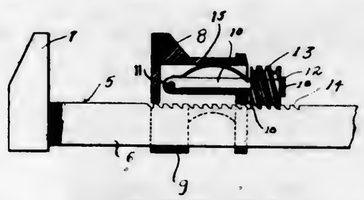
and indications of the days of the week arranged in association with the dates on the fixed data sheet as and for the purpose described.

1,426,983. SIGN. VINCENZO GUARDINO, Brooklyn, N. Y. Filed Mar. 27, 1922. Serial No. 547,094. 1 Claim. (Cl. 40—146.)



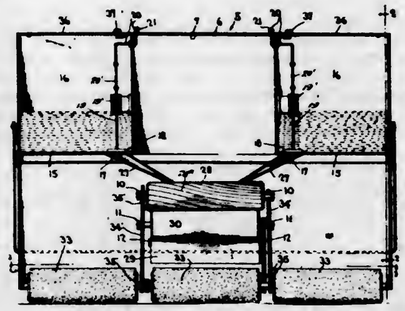
A sign including supporting members, a frame carried by said supporting members and a panel carried by said frame, said supporting members including bodies angularly disposed, foot pieces attached to the bodies, L shaped body portions provided adjacent the upper ends of said bodies, said frame partially resting within said portions, and securing means extending through said L shaped parts and into those portions of the frame extending into the same.

1,426,984. DRIVING MECHANISM FOR MIXING MACHINES. CARL C. GULDBECH, Beacon, N. Y. Filed Jan. 31, 1921. Serial No. 441,363. 6 Claims. (Cl. 259—104.)



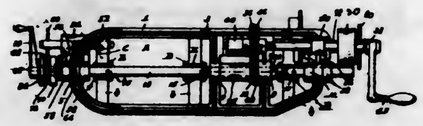
1. The combination, with the bowl of a mixing machine, of a pair of bladed mixing elements disposed within said bowl and rotatable about a common axis, rotatably driven supports for said mixing elements, a motor disposed at one end of the machine for driving one of said mixing elements, gearing interposed between said

motor and the rotatable support for said mixing element, a motor disposed at the opposite end of the machine



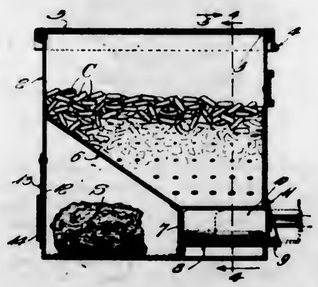
for driving the other mixing element, and gearing interposed between said motor and the support of said second mixing element.

1,426,985. WRENCH. JOHN HARRISON, Malad City, Idaho. Filed Nov. 8, 1918. Serial No. 261,638. 1 Claim. (Cl. 81—158.)



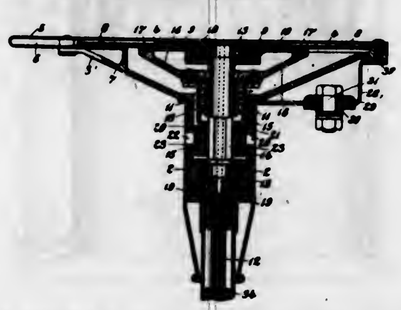
A wrench having a jaw with a shank extending therefrom and provided with teeth, a movable jaw on said shank, a bar on the movable jaw, a spindle having a head integral therewith, a screw element to engage said teeth disposed intermediate said integral head and said bar, said screw element having an axial opening therethrough of greater diameter than the spindle and of less diameter than the integral head, whereby the spindle at its free end may be passed through said opening to journal the screw element thereon against displacement, means to pivot said spindle to said movable jaw, and a leaf spring carried by said movable jaw in contact with the spindle to maintain the screw element normally in engagement with the teeth of the shank.

1,426,986. PAINTING MACHINE. JOHN HASSELBERGER, East Hampton, N. Y. Filed Nov. 21, 1916. Serial No. 132,553. 3 Claims. (Cl. 91—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A painting machine including a wheel supported casing, a plurality of painting receiving compartments carried thereby and having paint discharge openings therein, valves controlling the openings, a common operating means for raising and lowering the valves, a pair of relatively small rotatable paint receiving rolls journaled in the casing and inclined in opposite directions, conduits underlying the paint discharge openings and overlying the paint receiving rolls, a relatively large roll journaled beneath the paint receiving rolls, a funnel beneath the latter, and a plurality of revolvable brushes carried by the casing and adapted to contact with a horizontal surface to be painted, one of the brushes being disposed directly beneath the funnel.

1,426,987. COMBINATION BORING AND FACING MACHINE. WILBUR J. HEMPY, Kansas City, Mo., assignor to Hempy-Cooper Manufacturing Company, a Corporation of Missouri. Filed Dec. 27, 1919. Serial No. 347,791. 5 Claims. (Cl. 77—57.)

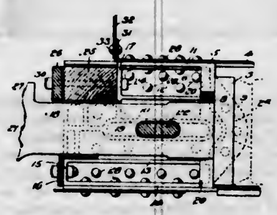


1. In a machine of the character described, a mandrel, means for operably holding said mandrel in the alined bearings of a cylinder block, tools carried by said mandrel to operate on the linings of said bearings, means for driving said mandrel, a rotary feed nut loosely embracing the mandrel and having an internal thread tapered at one end and a space at said tapered end, an element fixed to the mandrel and adapted to be advanced by the internal thread until it enters the space at the tapered end of said thread, and a projection in said space to shift said element back into engagement with the internal thread upon reversal of the feed nut.

1,426,988. BOTTLE-CAP-DISPENSING CONTAINER. LESLIE B. HOOVER, Madisonville, Ky. Filed Feb. 27, 1922. Serial No. 539,526. 1 Claim. (Cl. 211—9.)

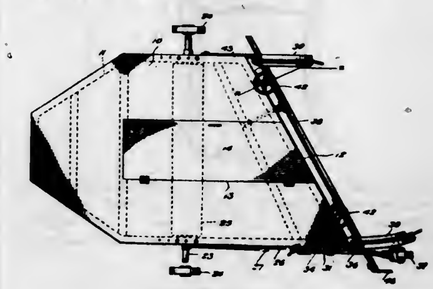
A bottle cap container and dispenser comprising an open top box formed in its front face adjacent its bottom with an opening through which the caps are discharged and formed in one of its other sides with an opening through which a moistening element is designed to be inserted and removed, a pivoted disk closing the last named opening, a stop for limiting the movement of the disk in one direction, a cover for the open top of said stop, a hopper arranged in said casing and having its discharge end disposed above the bottom of the container, said hopper being formed with a plurality of apertures to permit passage of moisture laden air therethrough to moisten the corks of the caps which are placed in the hopper, a shelf arranged in the box and disposed beneath the discharge end of the hopper and extending through the opening in the front wall of the box, a scoop slidable on said shelf, the closed end of said scoop being designed to close the opening in the front side of said box, and a moistening element in the box beneath the hopper for moistening the air therein.

1,426,989. HEDGE AND LIKE TRIMMING APPARATUS. EDWIN RIDGWAY JANES and CHARLES HUBERT ADAMS, Reading, England. Filed Oct. 8, 1920. Serial No. 415,671. 5 Claims. (Cl. 30—11.)



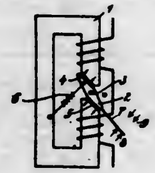
1. A hedge trimming apparatus comprising a casing, a cutter rotatably mounted in said casing, rotary actuating means movable into and out of operative engagement with said cutter, and flexible driving means operatively connected with said actuating means.

1,426,990. LOG-CARRYING BARGE. BERNARD L. JOHNSON, Vancouver, British Columbia, Canada. Filed Aug 8, 1921. Serial No. 490,669. 2 Claims. (Cl. 114—72.)



1. A log carrying vessel having a bow portion for containing the propelling and other machinery and a hull extending aft therefrom, said hull having a flat bottom and wall sides, the bottom having an upward run at the after end toward the load water line, said hull having also a log pocket between the bottom and sides, which pocket is open at the after end, means for submerging the bottom of the log pocket, and means for loading logs in the pocket.

1,426,991. DRAFT RIGGING. BYRON W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1921. Serial No. 495,635. 3 Claims. (Cl. 213—42.)

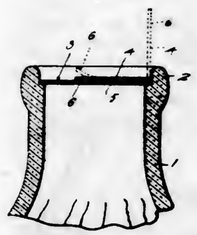


1. In a draft rigging, the combination with the center sills of a car, of cheek plates connected to the end portions thereof, said cheek plates each being provided with a recess formed by intersecting flanges, and a wooden striking block having its end portions positioning in said recess.

1,426,992. ROAD DRAG OR SCRAPER. JOHN KALIVODA, Cuba, Kans. Filed Feb. 5, 1921. Serial No. 442,717. 1 Claim. (Cl. 37—5.)

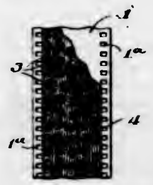
A device of the character described comprising a frame having an inclined forward edge, draft means carried by the frame and projecting forwardly beyond said inclined edge, a bar at the forward inclined edge of the frame, a plurality of upright screws threaded through said bar and provided at their upper ends with hand wheels, said screws having their lower ends formed with ball heads, a scraper blade disposed at said forward edge of the frame, a bar secured to the scraper blade and provided with sockets within which said ball heads are engaged, and upwardly and rearwardly inclined brace bars connected with the last named bar and having a slidable adjustment with respect to the sides of the frame.

1,426,993. CLOSED-CIRCUIT RELAY. PAUL KARDAETZ, Berlin-Reinickendorf, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Dec. 13, 1921. Serial No. 522,116. 4 Claims. (Cl. 175—336.)



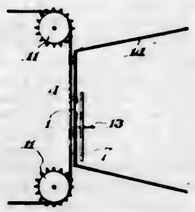
1. A closed circuit relay having poles and an armature designed to have an "on" and "off" position and being pivotally disposed midway between its ends and between said poles and permitting the flux to pass lengthwise through it when in "on" position, means tending to throw said armature into "off" position and adapted to partly remove it from the "on" position when the relay is temporarily de-energized, said armature being wider at its central portion than at its ends, causing the re-energization flux to pass transversely through said portion when the armature is partly removed from the "on" position, to permit said throw-off means to remove it entirely into "off" position.

1,426,994. MILK-BOTTLE CAP. AGNES B. KENDALL, Smith Center, Kans. Filed June 12, 1920. Serial No. 388,518. 1 Claim. (Cl. 215—51.)



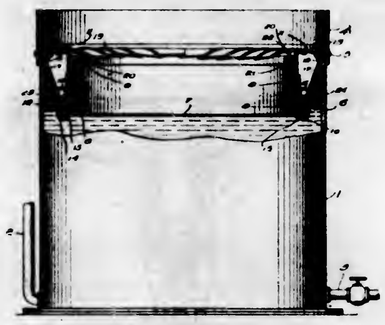
A stopper of the class described having a disk, a tongue integral therewith fastened securely against the exterior of the same from the margin to approximately

the center thereof and having a free end movable relatively to the disk to either lie flat against it or be raised to facilitate gripping, such construction enabling the stopper to be removed by force exerted at approximately



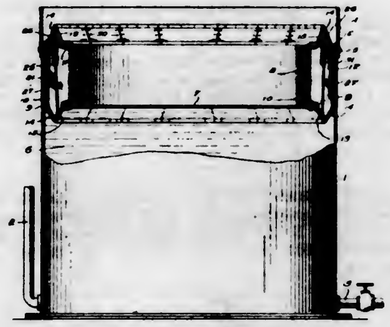
its center and the stopper to be regidified from the periphery inwardly along a radial line so that in the act of removal, such disk will move out of its retaining groove follow such portion to thus function practically as a rigid extractor member.

1,426,995. PROCESS OF PRODUCING MULTICOLORED SCREENS FOR PHOTOGRAPHY. ISIDOR KITSEE, Philadelphia, Pa. Filed Jan. 17, 1919. Serial No. 271,710. 3 Claims. (Cl. 95—81.5.)



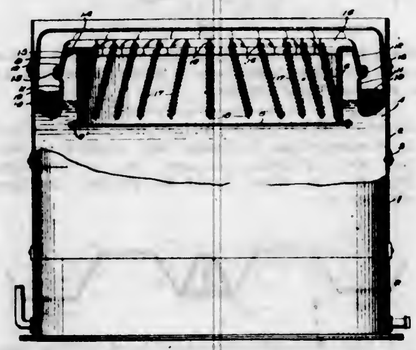
1. The process of producing a multicolored screen integral with a moving picture film which consists in producing figurations on the gelatinous substratum of said film with the aid of a colored alcoholic solution containing a dissolved resin and coloring the interspaces between said figurations with the aid of a dye insoluble in alcohol.

1,426,996. METHOD AND APPARATUS FOR PRODUCING MATRICES AND FOR PRODUCING COLOR SCREENS THEREFROM. ISIDOR KITSEE, Philadelphia, Pa. Filed May 10, 1919, Serial No. 296,157. Renewed Apr. 11, 1922. Serial No. 551,673. 4 Claims. (Cl. 95—81.5.)



1. The method of producing photographically a matrix useful for the production of color screens for moving picture films which consists in continuously moving a properly sensitized film in required relation to a fixed templet with one line of minute transparent figurations, transmitting light through said figurations and intermittently screening the light from said transparent figurations.

1,426,997. DECK FOR OIL TANKS. HARRISON RUSSELL LELAND and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed May 9, 1921. Serial No. 468,058. 4 Claims. (Cl. 220—26.)



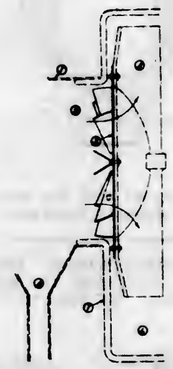
4. The combination with an oil tank, of a floating deck comprising a body portion of less diameter than the diameter of the tank, an upwardly extending rim secured thereto, a plurality overlapping plates hinged to the body portion of the deck and extending upwardly at an angle to contact with the wall of the tank, said plates being provided with extensions engaging the upper end of said rim, and a coil spring secured to each of said plates to normally maintain it in contact with the wall of the tank.

1,426,998. DECK FOR OIL TANKS. HARRISON RUSSELL LELAND and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed May 10, 1921. Serial No. 468,213. 5 Claims. (Cl. 226—26.)

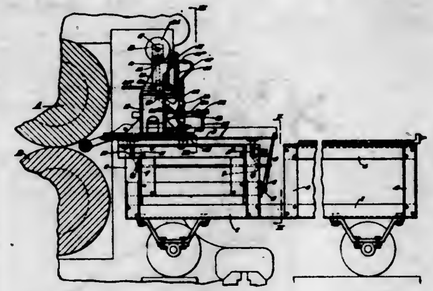
5. In an oil tank, a floating deck comprising a body portion of less diameter than the diameter of the tank, an upwardly extending rim secured thereto, said rim being provided with a flange on its upper end, a series of plates contacting with the wall of the tank and spaced from said rim, links connecting the upper ends of said plates to said flange, links connecting the lower ends of said plates to the body portion of the deck, and springs arranged between said links to normally maintain said plates in engagement with the wall of the tank.

1,426,999. FLOATING DECK FOR OIL TANKS. HARRISON RUSSELL LELAND and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed May 12, 1921. Serial No. 469,021. 6 Claims. (Cl. 220—26.)

6. A floating deck for oil tanks comprising a body portion, an upwardly extending rim secured thereto, said rim being provided with a flange on its upper end, a series of plates arranged circumferentially of the body portion and contacting with the wall of the tank, the lower ends of said plates being extended inwardly and upwardly, a second plate secured to each of said plates and extending upwardly, said second plate being provided with a flange adapted to rest on the flange of the rim to pivotally support said plates, levers secured to said second plates and extending inwardly, and springs secured to said levers to normally maintain said first plates in contact with the wall of the tank.



1,427,000. PEANUT-BLANCHING ROLLER AND METHOD. ALEXANDER LEWINSKI, Chicago, Ill., assignor of one-tenth to William R. Smith, Chicago, Ill. Filed July 20, 1920. Serial No. 397,586. 28 Claims. (Cl. 146—14.)

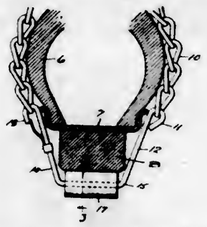


5. Peanut blanching rollers rotated at different speeds each roller being hollow and constructed to individually subject each peanut to a rubbing action pneumatically controlled.

1,427,001. SEPARATING ROTOR. LEVI S. LONGNECKER, Washington, D. C., dedicated, by mesne assignments, to The People of the United States. Filed Mar. 11, 1922. Serial No. 543,074. 7 Claims. (Cl. 183—77.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

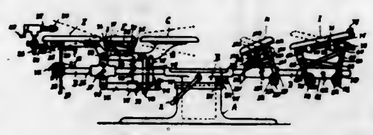
1. In a separator, a conduit, means for creating a stream therethrough of a fluid medium bearing particles to be separated, a rotor mounted in said conduit having apertures for the passage of said fluid medium and having particle-engaging members adjacent said apertures inclined from the plane of rotation of said rotor toward the upstream side of said fluid medium traversing said conduit.

1,427,002. COLD-ROLL FEEDING MECHANISM. EDWIN T. LORIG and HOWARD G. MCILVRIED, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 16, 1921. Serial No. 485,312. 5 Claims. (Cl. 271—30.)



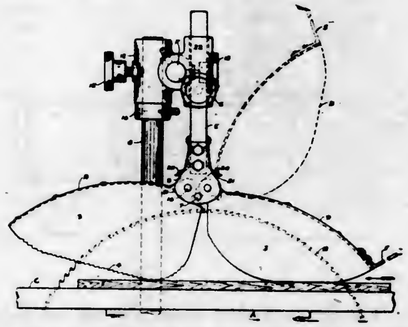
1. In an automatic plate feeder, a lifting arm having means for adhesively engaging and holding a plate, and means for moving said lifting arm vertically and transversely, said means including a guide cam, a cross head in said guide cam, a crank arm pivoted on a pin in said cross head and having one end secured to said lifting arm, means for raising said cross head vertically in said cam guide, and means for rocking said crank arm about said pin.

1,427,003. ANTISKID CHAIN. WALTER H. LUCAS, Jr., West Park, Ohio, assignor to Sarah A. Gibbons, Cleveland, Ohio. Filed Feb. 1, 1922. Serial No. 533,205. 2 Claims. (Cl. 152—14.)



1. An antiskid device for wheels comprising a chain adapted to extend across the wheel tire, and a bail con-

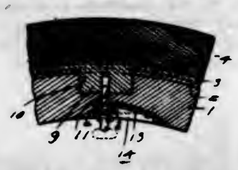
nected to the ends of the chain and extending across within the wheel felloe, said ball being provided with a



roller adapted to contact with the inner surface of the felloe, between the spokes of the wheel.

1,427,004. TREATMENT TABLE. JOHN V. MCMANIS, Kirksville, Mo. Filed May 12, 1917. Serial No. 168,221. 36 Claims. (Cl. 128—73.)

1. A treatment table comprising a base, a main frame supported upon and vertically adjustable relative to the base, a centrally located resiliently supported top section mounted upon said main frame, a pair of independently adjustable top sections in line with and at one side of said resiliently supported top section, and a pair of independently adjustable top sections in line with and at the opposite side of said resiliently supported top section.

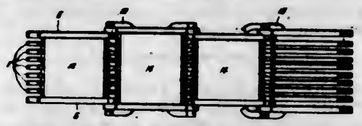


1,427,005. SAW GUARD. JAMES D. MCMICHAEL, Rochester, N. Y. Filed Dec. 26, 1919. Serial No. 347,547. 3 Claims. (Cl. 143—150.)

1. A saw guard formed to substantially cover the saw in its working position and attached to a vertically adjusted support, said support being secured to a horizontal sliding bar and means convenient for sliding the horizontal bar and the saw guard out of the range of the saw when required.

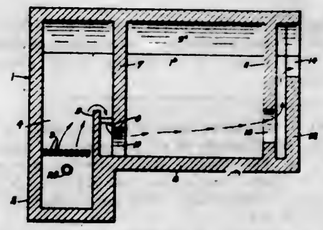
1,427,006. DEMOUNTABLE RIM. ALBERT H. MADARA, Swedesboro, N. J. Filed July 8, 1921. Serial No. 483,212. 1 Claim. (Cl. 301—11.)

A vehicle wheel having recesses in the tread side of its felly, a demountable rim provided with lugs fitting the said recesses, latches mounted in the felly and engaging the lugs, flat springs seated in recesses in the felly and engaging the latches to normally hold them projected, and elongated stops carried by the latches and



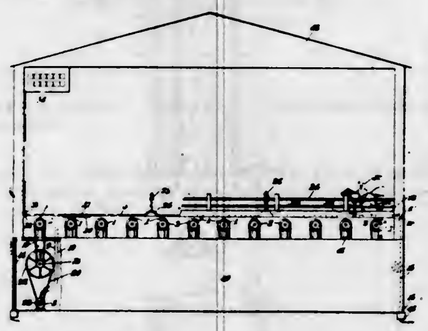
adapted to engage the felly at the sides of the recesses to hold the latches withdrawn to permit the mounting or the dismounting of the rim.

1,427,007. SHEET-METAL BUILDING. FREDERICK JOHN G. MAISENHALDER, Baltimore, Md., assignor to Maryland Metal Building Company, Inc., a Corporation. Filed Dec. 22, 1920. Serial No. 432,504. 2 Claims. (Cl. 189—2.)



1. A joint construction for sheet metal building panels consisting of complemental panels having beads with outwardly extending portions in contact with each other, inwardly extending angularly disposed portions on said beads spaced from the first mentioned portions at the inner end, and a cap to intimately contact with and enclose said beads having inturned flanges insertible beneath the inner edges of the second mentioned portions and in contact with the panels in advance of the first mentioned portions.

1,427,008. METALLIC LINK BELT. SHIGERU MATSUMOTO, Osaka, Japan. Filed Aug. 14, 1920. Serial No. 403,561. 8 Claims. (Cl. .4—64.)



1. A belt composed of a plurality of links, each link comprising a plurality of link members arranged side by side capable of being varied in number to vary the width of the belt, gripping members carried by the link members and traction member carried by the gripping members and lying in facial abutment with the edges of the link members.

1,427,009. PAIR FURNACE. JOHN MILHOLLAND, Leechburg, Pa. Filed Jan. 24, 1922. Serial No. 531,448. 3 Claims. (Cl. 263—40.)

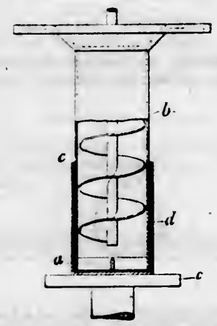
1. In a pair furnace, a casing provided at one end with a fire box, baffles extending across said casing adjacent to each end thereof, the baffle adjacent to the fire box being provided with ports positioned closely adjacent to the bottom of the casing and the baffle remote from the fire box being provided with ports spaced above the bottom of the casing.

1,427,010. STEEPLECHASE DEVICE. LAMBERT O'NEILL, Sr., and LAMBERT O'NEILL, Jr., Richmond, N. Y. Filed July 16, 1920. Serial No. 396,765. 13 Claims. (Cl. 46—56.)

1. In a game of skill a plurality of tracks, a separate dynamo for each track, means for driving each dynamo, a motor driven device on each track normally tending to return to the starting point but adapted to be driven by the dynamo, and means for limiting the speed of a given dynamo upon increasing the speed of its driving means whereby the motor driven device, operating upon the track to which is connected the dynamo having its speed limited, is controlled in its operation independently of the speed at which the other dynamos are operated.

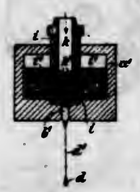
1,427,011. ELECTRIC-BATTERY ELECTROLYTE. LEOCADIO G. ORSOLINO, Manila, P. I. Filed Feb. 7, 1922. Serial No. 534,743. 2 Claims. (Cl. 204—29.)

2. An electrolyte for primary battery cells, consisting of vinegar obtained by fermentation of the sap extracted from palm trees such as the nipa and cocoanut palm species thereof.



1,427,012. WING AND SIMILAR MEMBER OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Jan. 4, 1922. Serial No. 526,888. 3 Claims. (Cl. 244—12.)

1. In aeroplane flying machines; wing structures each comprising a wing-section main wing and a wing-section auxiliary wing extending adjacent the edge of said main wing and in a direction transversely of the line of flight, a plurality of supporting arms fixed to said auxiliary wing and extending therefrom, said main wing having guideways to receive said supporting arms and within which guideways said supporting arms can slide, and



means for communicating sliding movements of adjustment to said auxiliary wing to and from the edge of said main wing and parallel therewith to close or open a slot between said auxiliary wing and said main wing.

1,427,013. FILLING DEVICE. RALPH BERT PARTRIDGE, Birmingham, England, assignor to Southall & Smith Limited, Birmingham, England. Filed Aug. 9, 1921. Serial No. 490,979. 2 Claims. (Cl. 226—23.)

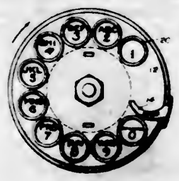
1. In machines of the type specified for packing or measuring powdered material into receptacles, the combination with a delivery nozzle, of a grid through which the material passes before leaving the nozzle, substantially as described.

1,427,014. APPARATUS FOR THE PRODUCTION OF SPUN GLASS. GEDEON VON PAZSICZKY, Hamburg, Germany. Filed Aug. 25, 1921. Serial No. 495,229. 5 Claims. (Cl. 49—17.)

5. An improved apparatus for the production of spun glass comprising in combination a receptacle filled with molten glass having outflow orifices in its bottom plate, a vertical tube in said receptacle having inflow ports, a tube revolvably mounted in said vertical tube having inflow ports adapted to register with said inflow ports of the vertical tube so that a determined quantity of molten glass can flow from the receptacle into the inner revoluble tube, means for exerting a pressure upon the molten glass in said inner tube, and a revolving cylinder under said re-

ceptacle upon whose surface the drops of glass adhere which come out of said orifices and around which the glass threads are wound which are drawn by said drops.

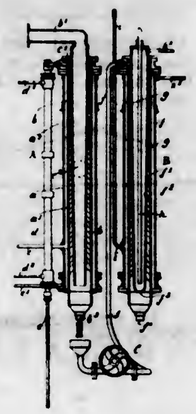
1,427,015. SYSTEM OF AIRCRAFT PROPELLERS, WITH BLADES OF VARIABLE INCIDENCE AND CAMBERING. RAUL PATERAS PESCARA, Barcelona, Spain. Filed Nov. 14, 1919. Serial No. 337,919. 7 Claims. (Cl. 170—163.)



1. A propeller for aircraft comprising blades, a mounting for the blades and means carried by said mounting for varying the angle of incidence and the camber of the blades.

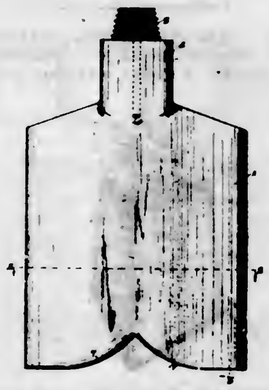
1,427,016. KEY RING. LOUIS EDWARD POLHEMUS, Miami, Ariz. Original application filed July 12, 1921. Serial No. 484,180. Divided and this application filed Nov. 7, 1921. Serial No. 513,431. 4 Claims. (Cl. 24—3.)

1. The combination with a holder, of a key ring having crossed arms and inturned fingers at the ends of the arms, said fingers adapted to abut at their ends to form a holder receiving eye.



1,427,017. FINGER PIECE. JULIUS S. POPPER, New York, N. Y. Filed Jan. 19, 1921. Serial No. 438,438. 7 Claims. (Cl. 179—90.)

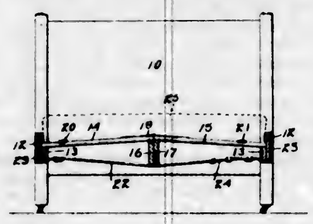
1. In machine switching telephones, a revoluble finger wheel provided with a series of tubular fingerpieces rotatably mounted on the finger wheel.



1,427,018. COOLING APPARATUS. WILLIAM EDWARD PRESCOTT, London, England, assignor to Joseph Baker, Sons and Perkins, Limited, Willesden Junction, London, England. Filed Dec. 7, 1921. Serial No. 520,669. 2 Claims. (Cl. 257—243.)

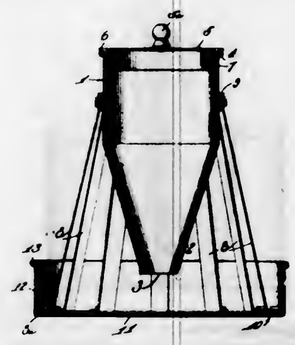
1. A cooling apparatus of the character described comprising an outer jacket, two tubes contained within the jacket and having a spiral passage therebetween, the inner of said tubes being closed at its bottom and the outer being spaced from the jacket, means for admitting the substance under treatment to the spiral passage, means for

admitting a cooling medium to the space between the jacket and outer tube, and means for admitting a cooling medium to the inner tube.



1,427,019. CURVED-WING ROTARY BIT. GEORGE E. PUTNAM, Los Angeles, Calif. Filed Nov. 27, 1920. Serial No. 426,856. 1 Claim. (Cl. 255—61.)

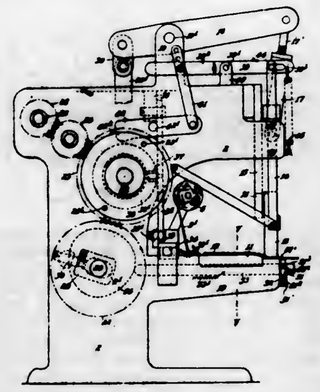
A rotary bit having radially curved wings forming side cutting edges, and cutting ends upon said wings curving downwardly and outwardly from the axis of the bit, and terminating in cutting edges meeting the side cutting edges at substantially right angles.



1,427,020. BED BOTTOM. JOE ROOKS, Andersonville, Ga. Filed Nov. 21, 1921. Serial No. 516,659. 4 Claims. (Cl. 5—25.)

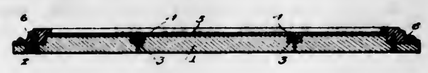
4. A bed bottom comprising a pair of opposed series of slats at the opposite sides of the bed, longitudinal bars supporting the slats of each series at their inner ends, rods extending transversely of the bed for supporting said bars,

and turn buckles for adjusting said rods, substantially as set forth.



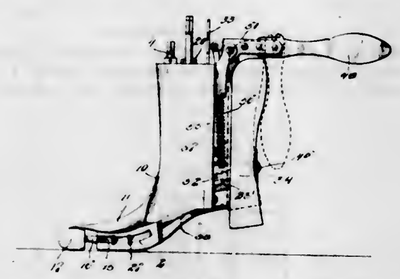
1,427,021. FEED HOPPER FOR POULTRY. WALLACE A. RUDOLPH, Renville, Minn. Filed Apr. 22, 1922. Serial No. 555,967. 1 Claim. (Cl. 119—53.)

A hopper of the class described comprising a substantially cylindrical feed container having a funnel-like lower portion, a feed receiver positioned below said container, said receiver being in the form of a tray having an upstanding circumferential flange, the discharge end of the funnel-like portion, of said container projecting into the receiver below the top thereof, a container encircling band, combined guards and supporting braces secured at one end to said band, a flat ring connecting their other ends adapted to lie on the bottom of said receiver, said braces diverging and forming guards to prevent the poultry from getting into the tray.



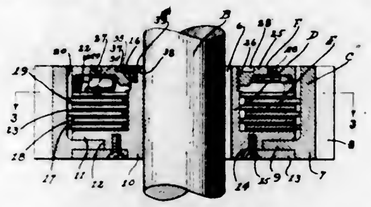
1,427,022. DARNING MACHINE. WALTER E. SAWTELL, London, England. Filed July 26, 1920. Serial No. 399,112. 5 Claims. (Cl. 66—3.)

1. An apparatus for repairing knit material comprising a row of alined spaced bearded needles mounted for descending and rising movement, means for imparting movement to said needles to cause them to first descend through the material to be repaired and then to pass upwardly through it, a yarn carrier movable to and fro transversely of and in the rear of the row of needles for spreading yarn behind the needle and below said material, a series of independently operated reciprocating sinkers for pushing the spread yarn forwardly between and against the needles when in the lowered position and for looping the yarn about the needles, means for closing the beards of the needles to cause said beards to engage the yarn for drawing said loops through said material during the rising movement of the needles, means for reciprocating said sinkers, means for imparting a step-by-step movement to said material in a direction rearwardly of and relatively to the row of needles, means for holding said material against



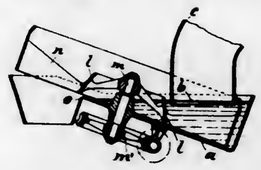
movement during the descending and rising movements of said needles, and means for actuating said several mechanisms.

1,427,023. STOVE BOARD. JOHN SCHEFFER, Newark, N. J. Filed June 22, 1920. Serial No. 390,784. 2 Claims. (Cl. 126—278.)



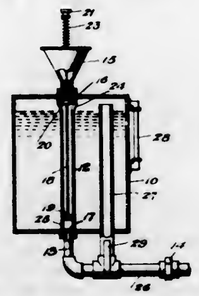
1. A stove board of the class described comprising a base board having its edges rabbeted and grooves formed in its upper face, reinforcing strips arranged within said grooves, a metal plate arranged on said board, an ornamental frame having a portion engaging the rabbeted part of the board and an edge engaging the edge of the plate.

1,427,024. EXPANSIBLE SHOE LAST. CARL SCHEVITZ, Jacksonville, Fla. Filed Aug. 29, 1921. Serial No. 496,352. 8 Claims. (Cl. 12—128.3.)



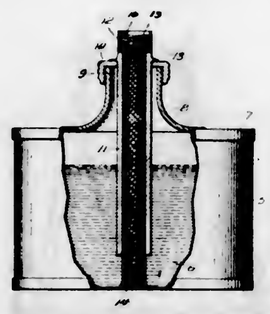
1. A shoe last of the class described comprising a main frame, a heel frame slidably connected with the main frame, manually operated means for adjusting the heel frame and means permitting the heel frame to be adjusted vertically to suit shoes with high and low heels, such means consisting of a supporting member for the heel frame and a screw and slot connection between the same and heel frame.

1,427,025. SAFETY FRICTION GEAR. CHARLES A. SCHLAFLY, New Philadelphia, Ohio. Filed Jan. 30, 1922. Serial No. 532,693. 3 Claims. (Cl. 74—29.)



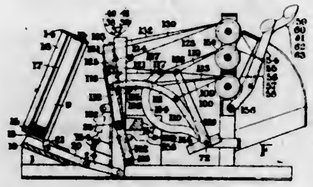
1. A power transmitting driving element comprising a hub, a rim, means for preventing lateral movement of the hub and rim in relation to one another, a set of friction plates disposed between the hub and rim and slidably carried by the hub and in driving contact therewith, a second set of plates interposed between the first mentioned plates and arranged between the hub and rim and slidably carried by the rim and in driving contact therewith, fiber gripping discs disposed between the sets of friction plates, an adjusting ring associated with the hub and rim, and springs carried by one of the friction plates and engaging the adjusting ring for urging the friction plates into frictional contact with said frictional gripping discs.

1,427,026. ROTARY APPARATUS FOR REMOVING MATERIAL TO BE DUMPED FROM FURNACES. GEORG SCHWABACH, Charlottenburg, near Berlin, Germany. Original application filed Oct. 7, 1916. Serial No. 124,405. Divided and this application filed Sept. 2, 1921. Serial No. 498,039. 3 Claims. (Cl. 214—18.)



1. In apparatus for removing material to be dumped into heaps from furnace installations, the combination with a discharge pipe for the material, of a tank containing water sealing the end of the discharge pipe, and rotary bladed conveyor means mounted in the tank for removing therefrom material discharged through said pipe.

1,427,027. AUTOMATIC FEED. RICHARD S. SILVIS and THEODORE EVERS, Rock Island, Ill. Filed Apr. 2, 1920. Serial No. 370,874. 1 Claim. (Cl. 137—21.)

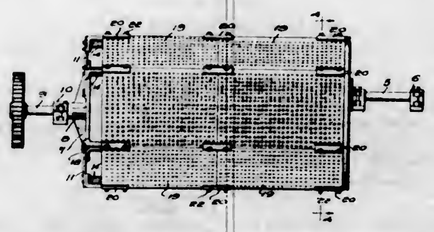


The combination with a liquid receptacle, of a supply tank, a pipe extending vertically therethrough provided with a plurality of openings adjacent the top and bottom of said tank and having a reduced lower end providing a valve seat, a funnel shaped member secured to the upper end of said pipe and providing a valve seat, a valve stem extending longitudinally through said pipe and extending above said funnel shaped member, spaced valves carried by said stem adapted to alternately engage said valve seats, a cross member carried by said funnel shaped member, a handle secured to the upper end of said stem, a coil spring surrounding said stem and exerting a pressure between said handle and said cross member, a pipe connected to said receptacle and connected to the reduced end of the pipe extending through said tank, a pipe connected to the last mentioned pipe, extending through said tank adjacent to the first mentioned pipe and terminating short of the top of said tank, a relatively short pipe extending from the point of connection of the pipes aforesaid and communicating with the atmosphere, and a gauge connected to one side of said tank.

1,427,028. HEATER. LUCIUS H. SOLOMON, Tiffin, Ohio. Filed Mar. 23, 1921. Serial No. 454,733. 1 Claim. (Cl. 158—94.)

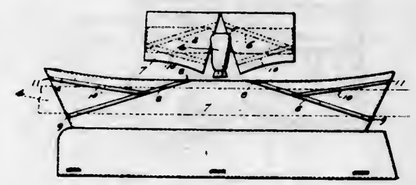
The combination with an oil reservoir having a frusto conical neck, provided with external threads, a centrally perforated cap detachably engaged on the threaded neck, a wick tube removably fitted in the perforation in the cap and having its bore enlarged at the outer end to provide internal seats, an asbestos pad filling the enlarged bore and resting on the seat, a wick in the tube and contacting at its outer end with the pad, and a flange exteriorly on the tube and engaged upon the cap to hold the tube vertically suspended in the reservoir.

1,427,029. MONEY-DELIVERING APPARATUS. JAMES FREDERICK SOUTHGATE and WALTER CAREY, Chelmsford, England. Filed May 12, 1922. Serial No. 560,305. 7 Claims. (Cl. 133—4.)



1. A coin delivery machine comprising in combination, a row of coin chutes, each having a reciprocatory coin ejector at the base thereof, a row of substantially upright ejector levers behind the coin chutes, each lever being operatively connected to one of said coin ejectors, a row of key levers pivotally mounted adjacent said ejector levers, a number of pivoted yokes for actuating some of said ejector levers, some of said yokes engaging said levers below the pivot and others of said yokes engaging said levers above the pivots, means connecting some of said key levers to said yokes, and means connecting the remainder of said key levers directly to some of said ejector levers, substantially as and for the purpose hereinbefore set forth.

1,427,030. STILT. JOSEPH J. STEPHENS, Richmond, Mo., and CLINTON B. HARRIS, Dallas, Tex. Filed Apr. 25, 1921. Serial No. 464,378. 2 Claims. (Cl. 135—53.1.)



2. A stilt comprising, a bar, a foot rest carried thereby, an approximately U-shaped guard secured to the lower end of the bar and having an opening in its bottom, a prong arranged within the opening and projecting outwardly beyond said bottom, and a boot disposed exteriorly of the guard and projecting laterally beyond the same and including a base and upwardly converging sides, said base having an opening to receive the prong which projects outwardly beyond the same, and means for securing the upper ends of said sides to said bar.

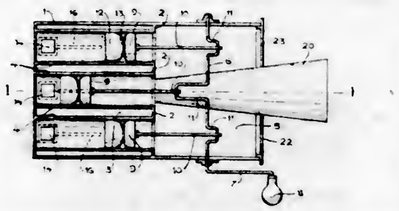
1,427,031. REVOLVING SCREEN. WALTER H. STEPP, Douthat, Okla. Filed Oct. 27, 1921. Serial No. 510,747. 4 Claims. (Cl. 83—56.)

1. A rotary screen comprising a pair of end plates, longitudinal supporting members secured to said end plates, said members being provided with longitudinally extending grooves, fastening elements mounted in said grooves, and perforated plates mounted on said supporting members and retained in position by said fastening elements.

1,427,032. COLLAR. HARRY B. STODDARD, Syracuse, N. Y. Filed Feb. 28, 1920. Serial No. 362,032. 1 Claim. (Cl. 2—71.)

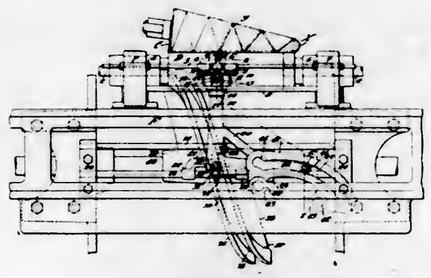
A fold collar having a band section, a folded-over top section, a relatively long diagonally disposed tape attachable at one end to an end of the top section adjacent to the junction with the other section and attachable at its other end to the free longitudinal edge of the top section, a relatively short tape attached to said tape intermediate its ends, the other end of said short tape being attached to the same end of the top section as the long tape, and the band section having button holes for registration within the space confined by said tapes.

1,427,033. CASING SPEAR. CHARLES S. STRAIGHT, Ranger, Tex. Filed Oct. 21, 1920. Serial No. 418,524. 1 Claim. (Cl. 294—96.)



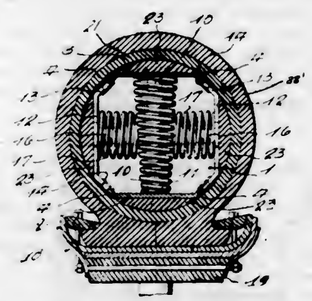
In a casing spear, a body having tapered slipways, said body provided with a pocket and a bore communicating therewith in its lower end, a latch pivotally mounted in the bore, a slip supporting mechanism comprising a head and a stem, said stem slidably mounted in the bore, spring means for normally holding said head in abutment with the lower end of the body and a leaf spring situated upon the lower slipway for engaging the latch so that same will engage the stem for normally holding the head out of engagement with the lower end of the body and a plurality of slips mounted upon the slipways.

1,427,034. SIREN OR FOGHORN. OLOF HJALMAR SVENSSON, Gottenborg, Sweden. Filed June 30, 1921. Serial No. 481,638. 5 Claims. (Cl. 116—139.)



5. In sirens, a casing, a partition wall arranged within the casing and dividing the same into two compartments, a plurality of cylinders arranged in one compartment, pistons arranged in said cylinders, means for actuating said pistons, passageways arranged in said cylinders and adapted to permit air compressed by said pistons to be forced in to the compartment in which the cylinders are arranged, check valves controlling said air passageways, a chamber arranged within one of said compartments

and having an air passageway, a check valve for closing the air passageway leading into said chamber, a vibrating

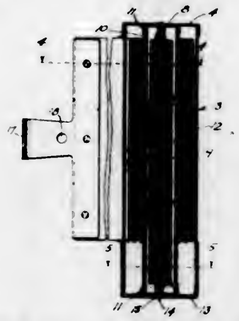


device adapted to be actuated by compressed air within said chamber, and a horn connected to said vibrating device.

1,427,035. TRAVERSE MOTION FOR WINDING MACHINES. GEORGE N. TAYLOR, East Providence, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 13, 1921. Serial No. 507,496. 20 Claims. (Cl. 242—43.)

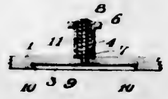
1. In a winding machine, the combination with a rotatable cop-holder, of means for traversing the yarn on the holder, a cam for reciprocating the traverse-means and means intermediate the cam and the traverse-means to effect a differential movement of the latter whereby the yarn is traversed with increasing speed toward one end of the holder and decreasing speed toward the opposite end thereof.

1,427,036. INNER TUBE. JOSEPH H. TAYLOR, Mellen, Wis., assignor of one-third to Milton G. Ross and Milton E. Meredith, both of Mellen, Wis. Filed Oct. 25, 1921. Serial No. 510,265. 6 Claims. (Cl. 152—8.)



3. A cushion inner tube comprising inner and outer bands, pins secured to said bands at spaced intervals, coil springs engaging said bands and receiving the pins in the ends thereof, pivotally connected side plates flexibly connected to the inner and outer bands, pins secured to said side plates, and coil springs bearing against the side plates and receiving the last named pins in the ends thereof.

1,427,037. HYDROGENATING CATALYZER. GUSTAV TEICHNER, Vienna, Austria. Filed Sept. 29, 1920. Serial No. 413,646. 10 Claims. (Cl. 23—28.)



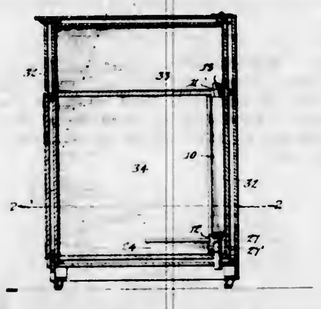
1. The process of preparing a catalyst adapted for hydrogenating organic substances which comprises reducing in a dry state a precipitated non-coherent, loose, amorphous compound of nickel at such a low temperature that cohesion or slagging of the particles, is avoided while leaving the interior of each particle unreduced.

1,427,038. SUN SHIELD FOR AUTOMOBILES. ERNEST W. TOADVINE, Los Angeles, Calif. Filed Nov. 16, 1920. Serial No. 424,419. 2 Claims. (Cl. 296—97.)

2. A shade strip wound upon a roller, a casing inclosing the same, said casing being longitudinally split and provided with a closed end and an open end, a rotatable closure cap upon the open end and having nonrotatable engagement with the roller shaft, and means to prevent relative rotation of the casing and closure cap.

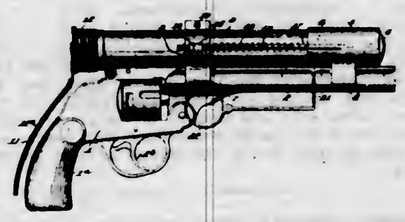
1,427,039. ATTACHMENT FOR RULES. RAYMOND TRANE, Omaha, Nebr., assignor of one-third to Cordelia Boon and one-third to Eustace E. Ashley, both of Omaha, Nebr. Filed Feb. 21, 1922. Serial No. 538,149. 3 Claims. (Cl. 33—107.)

1. The combination with a rule having a grooved under face, of a bar fitting nonrotatably and normally resting in said groove and having downwardly extending prongs at its ends, and means for moving the bar downwardly to move said prongs out of said groove.



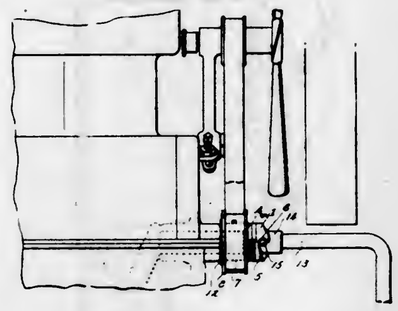
1,427,040. COMBINATION TOILET ARTICLE. ADA WEINER, Everett, Mass. Filed Oct. 20, 1921. Serial No. 509,140. 6 Claims. (Cl. 132—78.5.)

5. An article of the class described comprising a piece of chamois-skin, a cloth covering the outer face of said skin and stitched thereto, a pocket formed at one end of said chamois, a powder-puff stitched around approximately one half of its periphery to the opposite end of said puff, to form a second pocket in which powder may be placed, the powder applying face of said puff contacting the inner face of the chamois-skin to permit the latter to serve as a protector for the puff, a covering for the outer face of said puff, and a transversely disposed hand-strap connected with the article intermediate the ends



thereof, whereby when the powder-puff and end of the chamois to which it is connected is positioned in the first named pocket, a compact and attractive article will be provided for carrying in a person's hand.

1,427,041. ATTACHMENT TO REFRIGERATING APPARATUS. JULIAN WEST and EDWARD C. CAMPBELL, Norfolk, Va. Filed Dec. 20, 1921. Serial No. 523,740. 3 Claims. (Cl. 62—55.)



1. An attachment for a refrigerating apparatus comprising a vertically disposed drip receiver having an intake at the upper side and an outlet at the lower side, a horizontally disposed drip receiver having internal vertical division members dividing the interior into a plurality of compartments side by side with communicating passages at their alternate ends, one of the terminal compartments having an intake and the other terminal compartment having an outlet, an inclined conductor between the outlet of the vertical drip receiver and the intake of the horizontal drip receiver, and an inclined conductor leading from the outlet of the horizontal drip receiver.

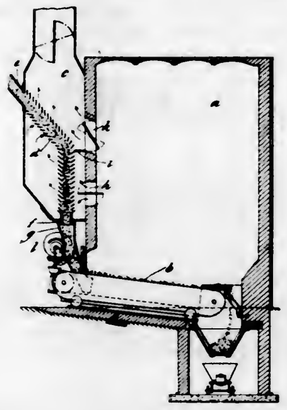
1,427,042. ATTACHMENT FOR FIREARMS. DOUGLAS WETMORE, Portsmouth, Va. Filed July 26, 1921. Serial No. 487,700. 13 Claims. (Cl. 240—2.)

1. The combination of a firearm, an electric lamp on the barrel of the firearm, and means adapted to be actuated by the trigger manipulating hand of a person using the firearm, while engaging the trigger, for decreasing and increasing the area illuminated by the lamp and focusing the beams of light upon a particular portion of said area.

1,427,043. CRANK-SHAFT-ADJUSTING MEANS. HOWZE L. WHITLEY, Bryan, Tex. Filed July 7, 1921. Serial No. 483,041. 4 Claims. (Cl. 64—49.)

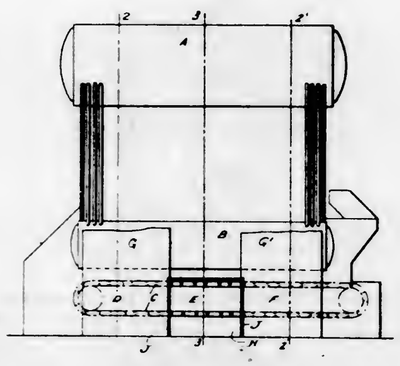
1. A crank shaft adjusting means, comprising an element secured to the shaft and exteriorly threaded, a fan pulley threaded upon said element, and a thrust washer carried by the fan pulley to engage an adjacent part of the engine in the adjustment of the fan pulley on said element.

1,427,044. PASTRY LIFTER. WILLIAM G. WILSON, West Brighton, N. Y. Filed Apr. 22, 1921. Serial No. 463,489. 4 Claims. (Cl. 294—99.)



1. A pastry lifter and handling device comprising a member formed of a single length of springy material bent between its ends to form a coil, the material being extended from said coil to provide relatively diverging branches, said branches being disconnected relatively except through said coil, each of said branches having a coil, the coils of said branches arranged in the same horizontal line and respectively disposed beyond the vertical center of the first said coil, and having their axes parallel to the axes of the first said coil, and jaw-like extensions of the material continued from said second named coils.

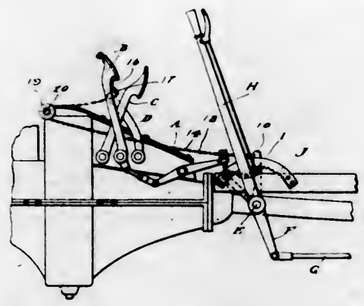
1,427,045. DRYING FUEL SUPPLIED TO FURNACES OR THE LIKE. WILFRED R. WOOD, London, England. Filed Mar. 25, 1919. Serial No. 285,016. 1 Claim. (Cl. 110—29.)



The process for heating fuel by the waste gases of a boiler furnace in a chute down which the fuel falls on to the grate of the furnace, which consists in passing the waste gases over and through the fuel in the chute,

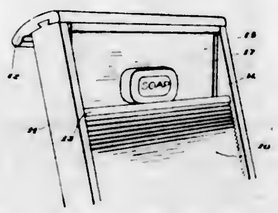
and in so proportioning the waste gases passing over or through the chute that the temperature to which the fuel is heated is not high enough to distil the fuel but

exceeds that necessary to dry the fuel, the water vapour produced either escaping upwards through the fuel or being carried away with the waste gases.



1,427,046. METHOD OF OPERATING FURNACES. HAROLD E. YARROW, Glasgow, Scotland. Filed Apr. 6, 1920. Serial No. 371,744. 1 Claim. (Cl. 110—40.)

A method of operating a furnace, which consists in moving the fire bed progressively therethrough, in heating air and supplying the same to the end portions of the fire bed from beneath, and in supplying cold air to the central portion of the fire bed from beneath.

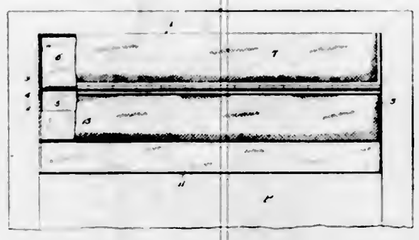


1,427,047. BRAKE-ACTUATING DEVICE. EMANUEL ZANNETTI, Gloversville, N. Y. Filed Aug. 16, 1921. Serial No. 492,720. 3 Claims. (Cl. 74—39.)

1. The combination with the emergency brake setting shaft of a Ford automobile and with the foot brake pedal, of a clamping device adapted to be secured upon the crank shaft of the emergency brake apparatus and including an extending arm, a supporting member secured upon the transmission cover and carrying a pulley,

and a flexible member connected with said arm, trained over said pulley and connected with the brake pedal.

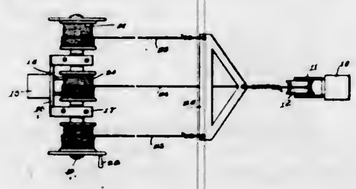
1,427,048. WASHBOARD. WILLIAM EDGAR ABBOTT, Bend, Oreg., assignor, by direct and mesne assignments, to Abbott Incorporated, Bend, Oreg., a Corporation of Oregon. Filed July 21, 1919, Serial No. 312,219. Renewed Jan. 27, 1922. Serial No. 532,256. 2 Claims. (Cl. 68—29.)



2. A washboard having a tilting panel co-operating in forming a soap box and reinforcing strips embracing the ends of the panel and having return portions forming drainage gutters and pivoting means for the panel, as and for the purposes set forth.

1,427,049. METHODS OF MANUFACTURING ARSENATE OF LEAD. AUSTIN O. ALLEN, Merchantville, N. J., assignor to John Lucas & Co. Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 29, 1921. Serial No. 481,208. 4 Claims. (Cl. 23—13.)

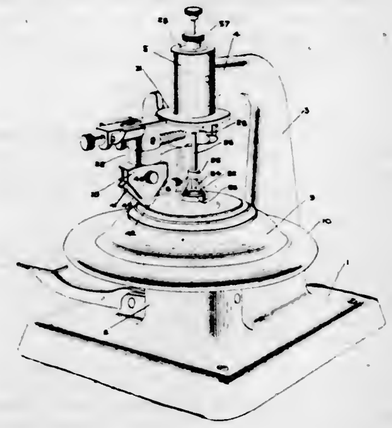
1. The method of manufacturing acid arsenate of lead, which consists in precipitating the arsenate of lead from a basic solution of the lead salts of acetic acid and nitric acid obtained by mixing 70% acetic acid, 40° Baumé nitric acid, and litharge in the proportions by weight of 10 to 1 to 39 respectively, with arsenic acid of approximately 65° to 70° Baumé or 58% to 63% As_2O_5.



1,427,050. FLYTRAP. STENGRIM ALARTH, Osakis, Minn. Filed Mar. 26, 1921. Serial No. 455,760. 2 Claims. (Cl. 43—119.)

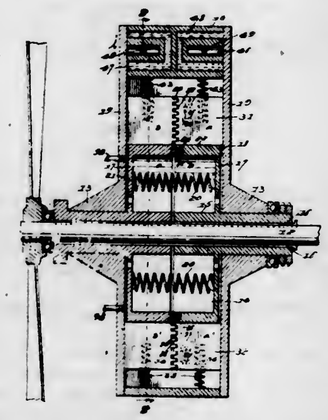
1. A fly trap comprising a reception and an impounding chamber with passages between them, and an entrance chamber hingedly and detachably connected communicating with said reception chamber, fly piloting

means leading to said entrance, and a fly attractor and trapper mounted in said impounding chamber.



1,427,051. CLOTHESLINE. WILLIAM O. ALTMAN, Westline, Pa. Filed Sept. 13, 1920. Serial No. 409,769. 1 Claim. (Cl. 242—100.)

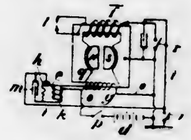
In a clothes line supporting device, a winding drum structure comprising a U-shaped bracket adapted to be secured upon the face of a vertical support and formed with attaching lugs, said bracket including laterally spaced horizontally extending arms carrying bearings, a shaft journally supported by said bearings in horizontal position and projecting beyond both ends of the frame, a drum on said shaft between said arms, drums secured upon the ends of said shaft outwardly of said arms, and a handle on one of said last named drums, all of said drums being of the same diameter and all being provided with retaining flanges.



1,427,052. GLASS CUTTER. ARTHUR A. ARNOLD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 30, 1917. Serial No. 204,636. 17 Claims. (Cl. 33—28.)

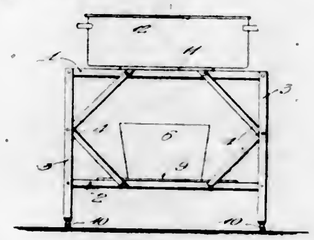
1. A device of the class described including a stationary base, a rotatable member supported by the base, a non-rotatable lens support carried by the rotatable member, means on the base engaging the lens support for holding it against rotation, means for clamping a lens in fixed position upon the support, a standard supported upon the rotatable member, an arm extending outwardly therefrom, a former supported above the lens support, a cutter rotatably supported upon the outer end of said arm, a second arm carried by the standard for engagement with the former to retain the same in its operative position, and a guide member carried by the first arm for

engagement with the former whereby the cutter will travel over the lens support in a path outlined by the former.



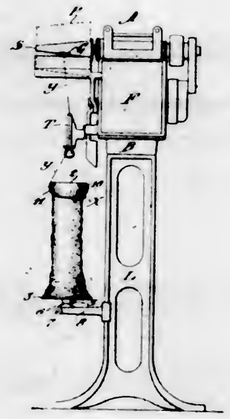
1,427,053. INTERNAL-COMBUSTION ROTARY ENGINE. EARL E. BIDWELL, Frederick, Okla., assignor of forty-five one-hundredths to Price Quesenberry, Frederick, Okla. Filed May 1, 1920. Serial No. 378,316. 7 Claims. (Cl. 123—16.)

1. A rotary internal combustion engine comprising a rotor casing having a combustion chamber formed with an inlet and outlet port leading into the rotor casing, an abutment blade disposed between the inlet and outlet ports and urged centrally, the rotor casing being formed with a fuel inlet port and a fuel outlet port and with an inwardly urged abutment blade disposed between the two ports, a rotor disposed within the casing having outwardly urged piston blades, the rotor casing on each side of the abutment blades being formed to cause the inward movement of the piston blades on the casing and permit their outward movement after the blades have passed the abutments, valves disposed on each side of the combustion chamber and controlling inlet and outlet through



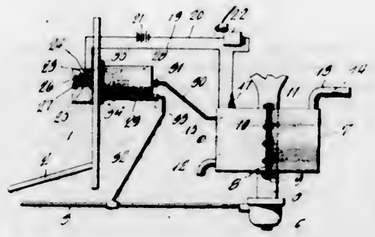
said inlet and outlet ports thereof, said valves having sliding movement into or out of their port closing position, means operated by the rotor for shifting said valves, and including a cam against which the inlet valve abuts, and means for urging the inlet valve outward, and a cam against which the outer end of the outlet valve abuts, said valve being urged outward by the explosion in the explosion chamber.

1,427,054. ELECTRICAL STARTING AND IGNITING APPARATUS. JAKOB BOHLI, Obach, Solothurn, Switzerland, assignor to The Firm Scintilla, Solothurn, Switzerland. Filed July 6, 1921. Serial No. 482,802. 2 Claims. (Cl. 123—148.)



1. Apparatus for igniting internal combustion engines including a storage battery, a buzzer furnished with a tongue and a magneto ignition dynamo having a primary and a secondary winding, the tongue of the buzzer serving to make and break by means of a pair of contacts, a circuit including said battery, said buzzer, and the primary winding of said magneto, a constant magnetic field and an alternating field energized by said magneto, the said fields being arranged to coact with the tongue of the buzzer in such a manner that current flows in the said circuit only when the alternating field is in the same direction as the field generated by the current in said circuit.

1,427,055. CHARCOAL FURNACE. BESSIE BRANTLEY, Topeka, Kans. Filed Aug. 29, 1918. Serial No. 251,896. Renewed Jan. 23, 1922. Serial No. 531,312. 1 Claim. (Cl. 126—345.)

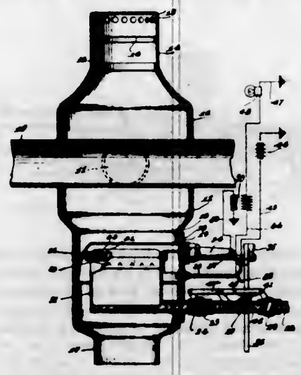


In apparatus of the character described, an upstanding frame, an upper retaining frame embodying longitudinal and transverse angle irons, a carriage mounted within the upper retaining frame to move longitudinally therein and prevented thereby from moving longitudinally out of said retaining frame, said carriage serving to support the receptacle to be heated, upper and lower sets of angle irons arranged within and extending transversely of the upstanding frame and secured thereto, a vertically adjustable support frame embodying longitudinal angle irons having their flanges near their ends bent downwardly to form stops, said vertically adjustable frame being adapted to be arranged upon either upper or lower sets of transverse angle irons and being adapted to be adjusted thereon transversely of the upstanding frame, and a plate adapted to be arranged within the longitudinal angle irons of the vertically adjustable frame and to be held against longitudinal displacement therein by said stops, said plate serving to support a charcoal furnace or the like

1,427,056. YARN-RECLAIMING DEVICE. ALBERT R. HAENS, Chicago, Ill., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 4, 1921. Serial No. 512,856. 10 Claims. (Cl. 28—17.)

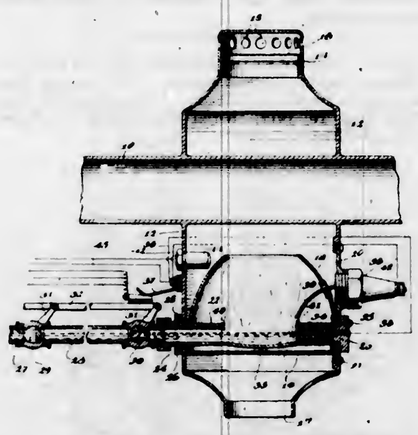
1. A device for unraveling yarn or thread from articles of fabric consisting in a holder for receiving the articles in loose arrangement thereon, said holder provided with means for distending the fabric along its edge to open its mesh whereby to assist in freeing the yarn therefrom during the unraveling process.

1,427,057. MANIFOLD AERO HEATER. ARCHIE G. BRIDGFORD and SIDNEY B. BOLTON, Aledo, Ill.; said Bolton assignor to said Bridgford. Filed Apr. 29, 1921. Serial No. 465,583. 6 Claims. (Cl. 123—180.)



1. A device of the character described comprising a casing adapted to fit about a portion of a manifold, a heating device in the casing, and means for injecting a stream of combustible fluid through said heating means and against the manifold pipe lying within the casing.

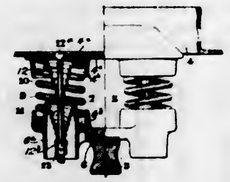
1,427,058. MANIFOLD HEATER FOR INTERNAL-COMBUSTION ENGINES. ARCHIE G. BRIDGFORD and SIDNEY B. BOLTON, Aledo, Ill.; said Bolton assignor to said Bridgford. Filed Nov. 9, 1921. Serial No. 514,023. 6 Claims. (Cl. 123—180.)



1. In a manifold heater, a casing adapted to embrace a manifold, a burner in the bottom of the casing, a perforated cap closing the upper end of the casing and having a screened partition therein, means for initially

lighting the burner, fuel supply means leading to the burner, and a manual control connected to the fuel

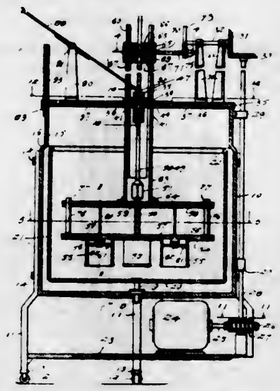
supply means and to said initial igniting means for alternately energizing the initial means and cutting off the supply of fuel, substantially as described.



1,427,059. MANIFOLD HEATER FOR INTERNAL-COMBUSTION ENGINES. ARCHIE G. BRIDGFORD and SIDNEY B. BOLTON, Aledo, Ill.; said Bolton assignor to said Bridgford. Filed Dec. 27, 1921. Serial No. 525,106. 7 Claims. (Cl. 123—180.)

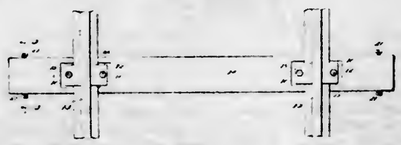
1. In a manifold heater, a casing for enclosing the manifold and having openings in its top and bottom, and at one end, a cover plate for said end, a burner tube mounted on said cover plate adapted to project into the casing for heating fuel therein, and igniting means carried by the cover plate arranged to project over the burner tube for igniting vapor produced by heating fuel.

1,427,060. ELASTIC SUSPENSION FOR VEHICLES AND OTHER BODIES IN MOTION. FERNAND LOUIS BROUSSOUSE and PAUL JULES LEBOUCHER, Paris, France. Filed Feb. 17, 1920. Serial No. 359,287. 4 Claims. (Cl. 267—60.)



1. In a suspension device, the combination with a frame, of a stirrup supported at its center below the frame and having an apertured tubular member at each end, and a spring device between the frame and each end of the stirrup each spring device including two volute springs, the coils of which are of different heights, one spring being arranged with its base in engagement with the frame and its apex in engagement with the tubular

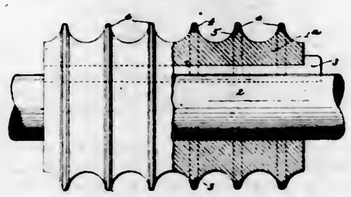
member of the stirrup and the other in the said tubular member with its base in engagement therewith, and a bolt carried by the frame and extending through the springs and the tubular member and provided with a nut on its lower end



---

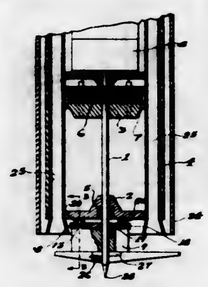
1,427,061. WASHING MACHINE. FRANK D. BROWN, Burkburnett, Tex. Filed Nov. 22, 1920. Serial No. 425,785. 12 Claims. (Cl. 68—19.)

1. A washing machine comprising a tank, an inner receptacle within said tank, an agitating mechanism within said inner receptacle, said agitating mechanism including upper and lower discs, a supporting rod for said lower disc, said lower disc being adjustable with respect to said upper disc, means for imparting vertically reciprocating and horizontal oscillating movement to said upper disc and connections between said discs to cause oscillation of said lower disc with said upper disc.



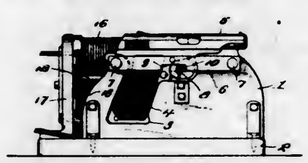
1,427,062. CROSSTIE. CHARLIE L. CAIN, Blackford, Ky., assignor of one-fourth to William D. Crowell, Marion, Ky. Filed Mar. 7, 1922. Serial No. 541,705. 2 Claims. (Cl. 238—282.)

1. In combination with a metallic tie having an opening in the upper wall thereof, of a casing insertible in each end of the tie and arranged beneath said opening, rail clamps with headed bolts, the upper wall of said



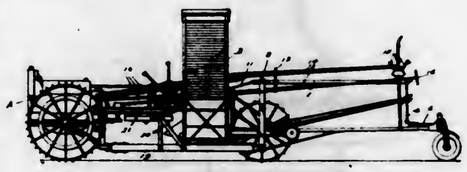
casing having oppositely disposed keyhole slots for the reception of said bolts, and means for adjusting said casing longitudinally of the tie for the purpose specified.

1,427,063. ROLL FOR ROLLING MILLS. FERDINAND MORA CANDA, New York, N. Y. Filed Dec. 1, 1919. Serial No. 341,786. 1 Claim. (Cl. 80—58.)



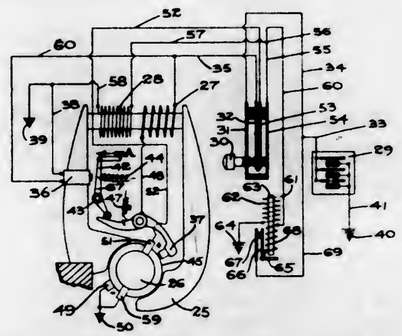
A rigid rolling mill roll, comprising a roll body having a series of contiguous grooves or troughs, and rings of harder steel shrunk thereon to constitute the ridges which separate the grooves, said ridge rings having their sides conform to the slope of the adjacent grooves to thereby form continuations thereof.

1,427,064. DRILL BIT. RALPH CAVERLY, Chicago, Ill. Filed Nov. 6, 1920. Serial No. 422,288. 8 Claims. (Cl. 255—76.)



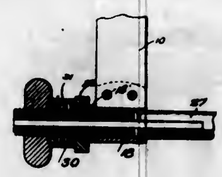
1. In a drill bit, a supporting spider, a plurality of cutters pivotally carried by said spider, means connecting said cutters to cause simultaneous movement of the cutters, and a drive shaft connected to said supporting spider.

1,427,065. BANK PROTECTIVE APPARATUS. WILLIAM FRANK CERVENKA, Traverse City, Mich. Filed Feb. 5, 1920. Serial No. 356,452. 2 Claims. (Cl. 42—1.)



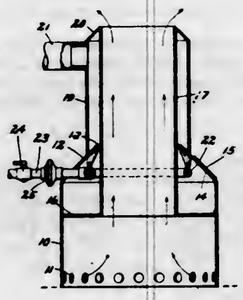
1. A device of the character described comprising a supporting block having a base, said block having a recess therein and a grooved upper edge, a gun having its barrel resting in the groove and its handle resting in the recess, a removable bar carried by the block for holding the gun in place, a bracket on the block, and actuating lever pivoted thereto and engaging the trigger of the gun.

1,427,066. TRACTOR HITCH. MILO O. CHAFFEE, Sanford, Kans. Filed July 27, 1920. Serial No. 399,221. 1 Claim. (Cl. 180—14.)



The combination with a header and a tractor connected thereto at the front end thereof, an upright frame having portions thereof secured to the axle of the header, brace rods adapted to brace said frame, said upright frame being of substantially U-shape to receive a portion of the bull wheel of the header, a bracket located on the operater's platform of the header and a slotted beam connected to the upper part of the bracket, the other end of the beam passing through a socket formed on the top of the U-frame, a brace rod having one end engaging a hole formed in the end of said beam adjacent the slot and the lower end of said brace rod suitably secured to a part of the header frame, controlling rods connected to the steering mechanism and guides formed on the beam for supporting said rods, hand levers connected to said rods and said levers being connected with a part of said bracket, an angle frame connnecting the tractor to the front of the header frame and an upright frame carried by said angle frame, bars connecting said upright frame with the tractor.

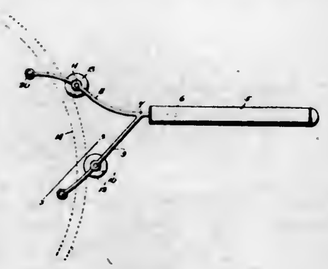
1,427,067. ENGINE-STARTING SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 19, 1917. Serial No. 192,202. 4 Claims. (Cl. 290—31.)



1. In an engine starting device, the combination with an engine, of a starting device therefor including a dynamo-electric-machine operable as a motor for starting purposes and having a pair of commutator brushes, one of which is normally in raised position; a reduction gearing interposed between the dynamo-electric-machine and the engine; and electro-magnetic means under control of the operator for initially connecting up the reduction gearing, so that the electric machine operating as a motor will drive the engine at a reduced speed, and for actuating said normally raised commutator brush to close the circuit connection, whereby the electric machine will operate as a motor for starting purposes.

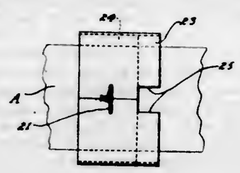
1,427,068. HACK SAW FRAME. THOMAS CLAFFEY, New Britain, Conn. Filed Nov. 6, 1920. Serial No. 422,318. 1 Claim. (Cl. 145—34.)

In a device of the class described, a plurality of frame elements, and means for mounting a handle and one end of a blade on one of said elements of the frame, means for mounting the other end of the blade on the remaining frame element, said means last named including a rotatably mounted bar having a longitudinal slot therein, a bracket carried by one of the frame elements and apertured for receiving the bar, one end of the bracket being notched, a washer including a projection engaging the notch and including an inwardly projecting key engaging the slot in the bar, said bar being threaded at one end, a sleeve internally threaded and engaging the threaded portion of the bar, the inner end of the sleeve being adapted for engagement with the washer for clamping the latter, and a spring enclosed by said sleeve, bearing against the washer, and surrounding the bar at a point adjacent to the washer.



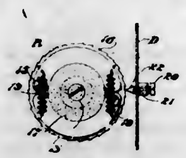
1,427,069. GAS STOVE. ALTON E. COAN, Los Angeles, Calif. Filed Feb. 14, 1921. Serial No. 444,698. 2 Claims. (Cl. 126—90.)

1. In a gas heater, a substantially cylindrical upright member through which air is adapted to pass, a substantially air tight burner chamber surrounding the lower portion of said cylindrical member, a burner ring within said air tight chamber, a substantially air tight heating chamber surrounding the upper portion of said cylindrical member and in such manner as to provide a narrow annular opening between the burner chamber and the heating chamber, a gas supply pipe connected to the burner ring, and means in the pipe for supplying air to the burner ring.



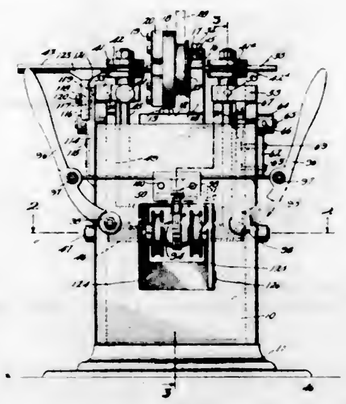
1,427,070. HOOP GUIDE. JOHN COLE, St. Louis, Mo. Filed Aug. 20, 1921. Serial No. 493,869. 1 Claim. (Cl. 46—38.)

A hoop manipulating device or guide comprising a handle, a double yoke member secured to the handle, the ends of each of said yoke members terminating in eyes, a pin and an idler or roller carried by each of the said yokes and secured within the eyes, curved arms also attached to said pin, eyes formed on the ends of said



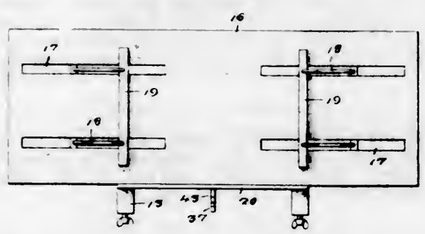
curved arms and removable pins within the ends of said curved arms for maintaining a hoop in rolling position.

1,427,071. VEHICLE SPRING LUBRICATOR. ANDREW J. COMPTON, Trenton, N. J. Filed Nov. 20, 1920. Serial No. 425,421. 3 Claims. (Cl. 184—1.)



1. A lubricating device for vehicle springs comprising a strip of sheet metal, a strip of absorbent material secured thereon, the assembled strips being adapted to be bent about a vehicle spring in conforming engagement and the absorbent material being adapted for saturation by a lubricant, one edge of the absorbent strip being spaced from the edge of the metallic strip whereby to define a channel, the ends of the metallic strip being cut away to define an opening leading into said channel.

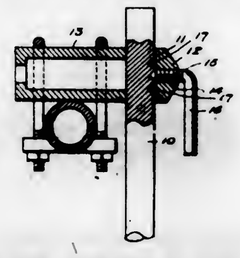
1,427,072. AUTOMOBILE HORN. CHARLES N. DALBEY, Wheatland, Calif., assignor of one-half to Clarence J. Dalbey, Wheatland, Calif. Filed Dec. 3, 1921. Serial No. 519,676. 5 Claims. (Cl. 116—59.)



3. A vibrating horn comprising a diaphragm, a shaft, a ratchet wheel having operative engagement with the diaphragm for vibrating the latter, said wheel being loosely mounted on said shaft, a speed responsive device for operatively connecting the ratchet wheel with said shaft, a flexible shaft connected to said shaft, a rigid shaft section connected to the flexible shaft, a friction wheel fixed to the rigid section, and a casing for the rigid section adapted to be movably supported to allow of the engagement or disengagement of the friction wheel with respect to a fan belt.

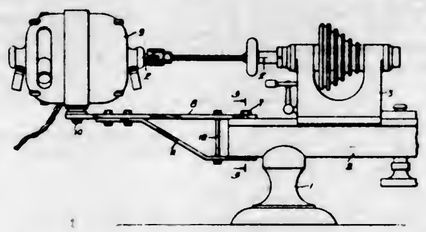
1,427,073. DOWEL-MAKING MACHINE. GEORGE WILLIAM DAVIS, Putney, Vt. Filed Mar. 1, 1920. Serial No. 362,323. 8 Claims. (Cl. 142—32.)

1. In a dowel making machine, a plurality of knives supported substantially radially, means for rotating said knives, means for feeding material in one direction between said knives as they are rotated, said knives acting to form the material into a rod which is circular in cross section, means for withdrawing the material from said knives, resilient means for maintaining the material centrally located with respect to the knives, regardless of its size, and means, whereby a broken dowel may be quickly removed from said knives.



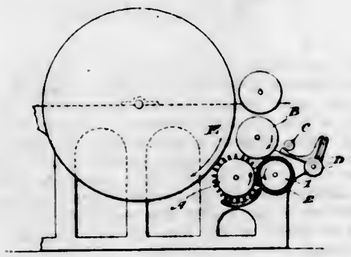
1,427,074. BOOK HOLDER. RALEIGH M. DAVIS, Ponce de Leon, Fla. Filed Dec. 3, 1921. Serial No. 519,675. 3 Claims. (Cl. 45—61.)

3. A book holder embodying a frame, a slotted face plate secured to and spaced from the frame, spring actuated leaf engaging arms extending through the slots of the plate, said arms each comprising a vertically disposed bar and spaced fingers connected to said bar and extending through the slots of the plate, a rock shaft connected to the fingers, oppositely movable slides engageable with the rock shaft, pivoted link and lever connections for each of the slides, an operating lever connected to the link and lever connections for simultaneously operating the slides to move the leaf engaging arms in a direction away from the plate and means for adjusting the arms relatively.



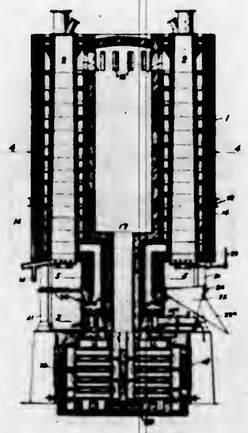
1,427,075. CULTIVATOR FOOT. JOSEPH E. DAWSON, Dodsonville, Tex. Filed May 18, 1920. Serial No. 382,241. 1 Claim. (Cl. 55—94.)

The combination with a cultivator bracket provided with a guide eye, having a threaded opening therein, of a standard slidably mounted in said eye, provided with a longitudinal series of depressions and also having a plurality of auxiliary seats disposed in angular relation to



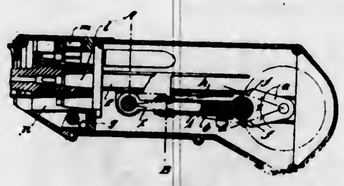
the first mentioned depressions and a cross handle having a reduced threaded end engaging the threaded opening in said eye and adapted for selective engagement with said seats or depressions.

1,427,076. LATHE ATTACHMENT. JAMES V. DILLEY, Detroit, Mich. Filed Apr. 14, 1921. Serial No. 461,250. 6 Claims. (Cl. 82—34.)



1. A lathe bed having a slot therein, a motor, a bracket to support the motor, and an adjusting means on the end of the bracket to engage in the slot and a portion of the bracket engaging beneath the edge of the bed.

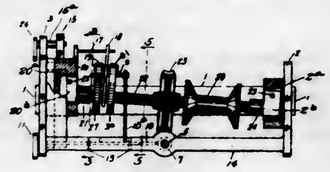
1,427,077. CARDING OR STRAIGHTENING THE FIBER OF COTTON. DANIEL E. MOLLOY, Fall River, Mass., assignor, of one-half to James K. Lanning, Fall River, Mass. Filed Aug. 12, 1920. Serial No. 403,006. 1 Claim. (Cl. 19—105.)



In a carding machine, in combination with the feed table, thereof, a licker in arranged adjacent to the feed table and in front thereof, a stripper roll below the licker in, a rotatable cleaner roll arranged below the table and below the licker in and adjacent to the stripper roll, and means to rotate the cleaner roll at a speed to remove foreign matter from the stripper roll and to maintain the latter clean.

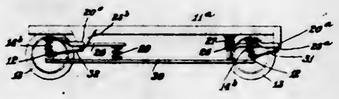
1,427,078. VERTICAL-RETORT GAS-MAKING APPARATUS. ROBERT M. SEARLE, Rochester, N. Y., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 23, 1919. Serial No. 325,631. 4 Claims. (Cl. 48—113.)

4. In a vertical retort gas making apparatus the combination of an annular retort chamber, a ring of straight retorts arranged in the chamber and each provided with vertical partitions extending to the inner and outer walls of said chamber and dividing it into a series of independent retort chambers, a combustion chamber sub-divided into a series of combustion chambers communicating with the chambers of the series of retort chambers, means for regulating combustion in the chambers, and horizontal baffle plates in each of the retort chambers, substantially as described.



1,427,079. CRANK-OPERATING GEAR FOR MOVING THE BREECH IN MACHINE GUNS. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Sept. 1, 1920. Serial No. 407,539. 2 Claims. (Cl. 89—11.)

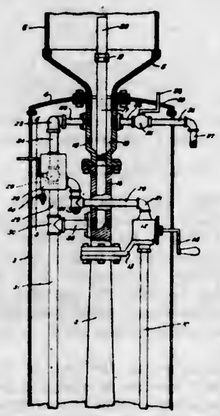
2. In a breech block mechanism for machine guns, a rotating crank, a connecting rod connecting the operating crank with the breech block, divided into two parts, one sliding axially within the other, and a spring holding the two parts extended as far as allowed by the relative positions of the crank and the breech block.



1,427,080. AUTOMOBILE ATTACHMENT. GAETANO LOFORESE, Greenwich, Conn. Filed June 18, 1921. Serial No. 478,687. 6 Claims. (Cl. 254—166.)

1. In combination, a power shaft, a driven shaft, a worm splined on said power shaft having a right hand thread at one end and a left hand thread at the other, a worm wheel on said driven shaft adapted for engagement selectively with the threads of the worm, a tilting bearing supporting one end of the driven shaft, a second tilting bearing supporting the other end of the driven shaft, means to support the second bearing to permit movement of the worm wheel into and out of engagement with the worm, means to move the support of the second bearing

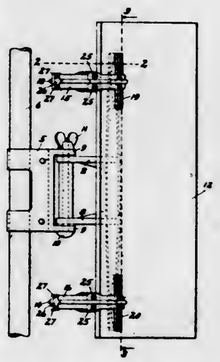
and means to shift the worm along the power shaft whereby to bring its ends selectively into position for engagement by the worm wheel.



1,427,081. VEHICLE SUSPENSION. WILLIAM R. WILLIAMS, Philadelphia, Pa. Original application filed Nov. 7, 1921, Serial No. 513,354. Divided and this application filed May 19, 1922. Serial No. 562,271. 18 Claims. (Cl. 267—20.)

6. A vehicle suspension including, in combination, elastic means transversely disposed upon the vehicle supporting means, a third elastic means positioned adjacent to the same, a rigid member rotatable crosswise of the suspended portion of the vehicle substantially in parallelism therewith, and levers extending from said member into opposing engagement with the said third elastic means and the first named elastic means.

REISSUES.



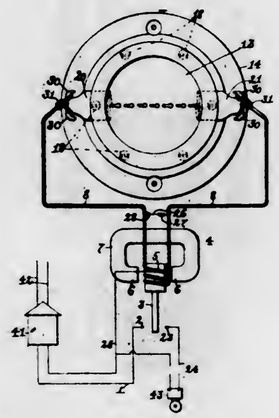
15,432. GASOLINE-DISPENSING DEVICE. EMORY CROUSE, Wichita, Kans., assignor to The Clear Vision Pump Company, a Corporation of Kansas. Filed Feb. 8, 1921. Serial No. 443,451. Original No. 1,304,028, dated May 20, 1919, Serial No. 247,264, filed July 29, 1918. 6 Claims. (Cl. 221—99.)

1. A liquid-dispensing device comprising a container, an overflow conduit extending into and terminating at the

upper portion of said container, a discharge pipe communicating with said container, means for supplying liquid to said supply pipe, and valved means establishing communication between said container and said overflow conduit.

15,433. WINDSHIELD ATTACHMENT. GEORGE GLAUDEL, Los Angeles, Calif., assignor of one-half to George L. Mitchell, Santa Monica, Calif. Filed July 14, 1921. Serial No. 484,779. Original No. 1,346,402, dated July 13, 1920, Serial No. 298,184, filed May 19, 1919. 8 Claims. (Cl. 296—84.)

8. In a wind-deflector for windshields, a wind deflecting plate, a bracket bearing against one side of said plate, a fixed arm on said bracket extending beyond one edge of said plate, a clamping bar engaging the other side of said plate and opposite to said bracket, said clamping bar being pivoted on said fixed arm, and means for moving the inner end of the clamping bar toward said bracket whereby the said plate may be firmly held between the clamping bar and said bracket.

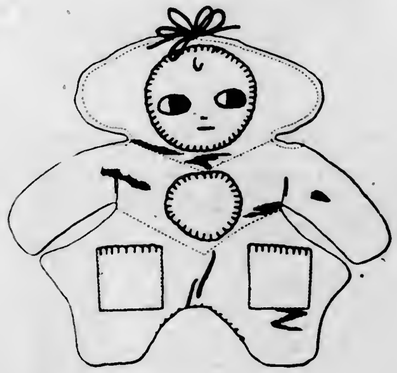


15,434. PROCESS OF MANUFACTURING ACETALDEHYDE. HOWARD W. MATHESON, Montreal, Quebec, Canada. Filed May 5, 1922. Serial No. 558,814. Original No. 1,384,842, dated July 19, 1921, Serial No. 204,008, filed Nov. 26, 1917. 5 Claims. (Cl. 260—139.)

1. A process for the manufacture of acetaldehyde, which comprises passing acetylene through an acid solution of not greater than 6% concentration containing an oxide of mercury, and maintaining a temperature below 66° C. and a pressure below 2 lbs. per sq. in. superatmospheric.

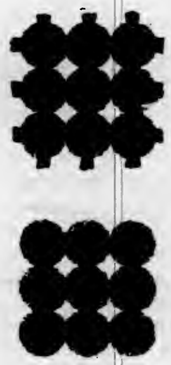
15,435. METHOD OF RECOVERING MANGANESE STEEL. WESLEY G. NICHOLS, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 17, 1921. Serial No. 523,191. Original No. 1,291,656, dated Jan. 14, 1919, Serial No. 237,426, filed May 31, 1918. Continuation of applications Serial Nos. 91,118, filed Apr. 14, 1916, and 152,107, filed Mar. 2, 1917. 9 Claims. (Cl. 75—45.)

1. The improvement in the art of recovering manganese steel, which consists in applying heat to the steel at an initial temperature below the oxidising temperature of manganese, and at successively increasing stages of temperature until the entire mass is gradually brought to the melting point of manganese steel.



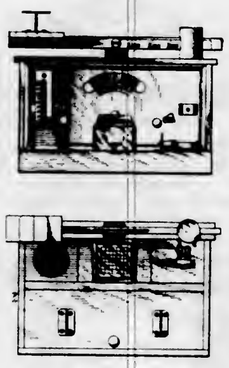
15,436. AUTOMATIC FIRE ALARM. FREDERICK A. SWAN, Cliftondale, Mass. Filed Aug. 25, 1920. Serial No. 405,969. Original No. 1,326,304, dated Dec. 30, 1919, Serial No. 178,121, filed July 2, 1917. 7 Claims. (Cl. 177—358.)

7. In a fire alarm system, the combination with a thermo-electric battery, of a sensitive relay in circuit with said battery, and a permanently closed electric battery shunt connected across the terminals of the relay and of relatively higher resistance than said circuit, for the purpose specified.



DESIGNS.

61,384. QUILTED DOLL. LILLIAN S. AHRENS, New York, N. Y. Filed May 27, 1922. Serial No. 2,439. Term of patent 7 years.

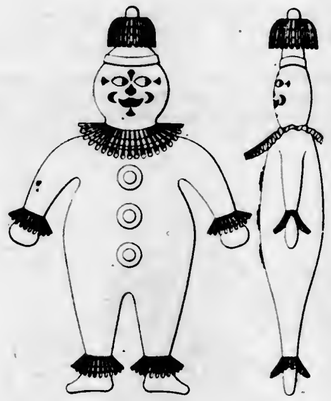


The ornamental design for a quilted doll as shown.

61,385. NETTED FABRIC. HERMAN F. BETKE, Okmulgee, Okla. Filed May 17, 1922. Serial No. 2,285. Term of patent 14 years.

The ornamental design for a netted fabric, as shown.

61,386. COMBINATION INKWELL, CALENDAR, AND DESK RACK. WILLIS H. COLBY, Detroit, Mich. Filed May 9, 1922. Serial No. 2,153. Term of patent 14 years.

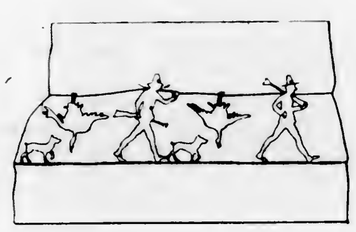


The ornamental design for a combination inkwell, calendar, and desk rack, as shown.

61,387. INFLATABLE DOLL OR SIMILAR ARTICLE. FRANK W. DODGE, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Apr. 1, 1922. Serial No. 1,480. Term of patent 14 years.

The ornamental design for an inflatable doll or similar article, substantially as shown.

61,388. INFLATABLE DOLL OR SIMILAR ARTICLE. FRANK W. DODGE, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed May 22, 1922. Serial No. 2,352. Term of patent 14 years.

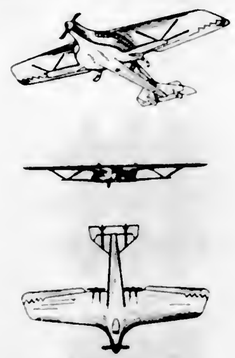


The ornamental design for an inflatable doll or similar article substantially as shown.

61,389. PAPER. CLARA H. HAVEMEYER, Springfield, Mass., assignor to Package Paper and Supply Corporation, a Corporation of Massachusetts. Filed Jan. 20, 1922. Serial No. 282. Term of patent 3½ years.

The ornamental design for paper, as shown.

61,390. PAPER. CLARA H. HAVEMEYER, Springfield, Mass., assignor to Package Paper and Supply Corporation, a Corporation of Massachusetts. Filed Jan. 20, 1922. Serial No. 283. Term of patent 3½ years.

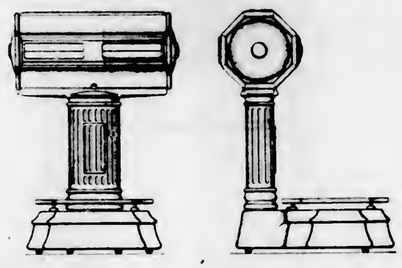


The ornamental design for paper, as shown.

61,391. PAPER. CLARA H. HAVEMEYER, Springfield, Mass., assignor to Package Paper and Supply Corporation, a Corporation of Massachusetts. Filed Jan. 20, 1922. Serial No. 284. Term of patent 3½ years.

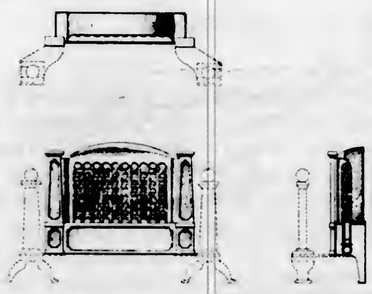
The ornamental design for paper, as shown.

61,392. AVIATOR-OPERATED AIRPLANE. JAMES D. HILL, Scottdale, Pa. Filed Apr. 16, 1921. Serial No. 462,035. Term of patent 14 years.



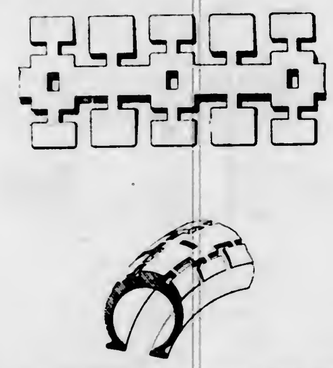
The ornamental design for an aviator operated airplane substantially as shown.

61,393. SMOKER'S STAND. AUGUST JOHNSON, Mankato, Minn. Filed Feb. 6, 1922. Serial No. 556. Term of patent 14 years.



The ornamental design for a smoker's stand, as shown.

61,394. COMPUTING SCALE. GEORGE M. LUDLOW, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1922. Serial No. 165. Term of patent 14 years.



The ornamental design for a computing scale as shown.

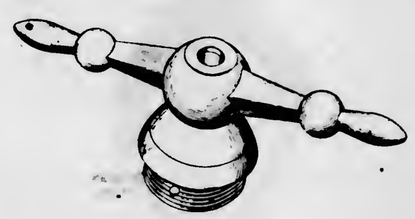
61,395. GAS HEATER. DONALD H. MCCORKLE, Oakland, Calif. Filed Dec. 22, 1920. Serial No. 432,624. Term of patent 3½ years.

The ornamental design for a gas heater as shown.

61,396. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,663. Term of patent 14 years.

The ornamental design for a tire tread substantially as shown.

61,397. FINGER RING. PHILIP PHOEL, New York, N. Y. Filed Apr. 30, 1921. Serial No. 465,837. Term of patent 3½ years.

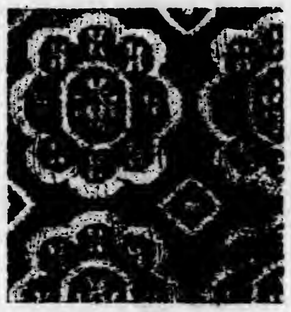


The ornamental design for a finger ring, as shown.

61,398. FINGER RING. PHILIP PHOEL, New York, N. Y. Filed Apr. 30, 1921. Serial No. 465,838. Term of patent 3½ years.

The ornamental design for a finger ring, as shown and described.

61,399. AUTOMOBILE RADIATOR CLOSURE. RICHARD PREISS, Chicago, Ill. Filed Jan. 13, 1922. Serial No. 190½. Term of patent 3½ years.



The ornamental design for an automobile radiator closure as shown.

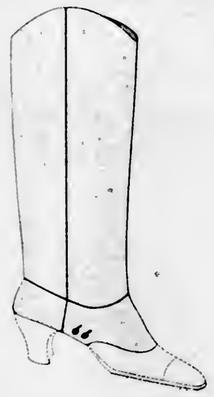
61,400. PAPER WEIGHT. HARRY A. ROSS, Pittsburgh, Pa. Filed Mar. 25, 1922. Serial No. 1,389. Term of patent 3½ years.

The ornamental design for a paperweight, as shown.

61,401. LACE. BARNET SHAPIRO, Sea Gate, N. Y., assignor to Hightstown Mfg. Co., Inc., Hightstown, N. J., a Corporation of New Jersey. Filed Apr. 26, 1922. Serial No. 1,971. Term of patent 14 years.

The ornamental design for lace, as shown.

61,402. FINGER RING OR SIMILAR ARTICLE. CHARLES LINCOLN TROUT, New York, N. Y. Filed June 30, 1920. Serial No. 393,195. Term of patent 14 years.



The ornamental design for a finger ring or similar article as shown.

61,403. RADIATOR-CAP ORNAMENT FOR AUTOMOBILES. JOHN TUOMEY, New York, N. Y. Filed May 28, 1921. Serial No. 473,407. Term of patent 3½ years.

The ornamental design for a radiator cap ornament for automobiles, as shown.

61,404. BOOT TOP. CHARLES TWEEDIE, Jefferson City, Mo. Filed Apr. 3, 1922. Serial No. 1,519. Term of patent 14 years.

The ornamental design for a boot top, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 22, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 98,121. (CLASS 33. GLASSWARE.) POPE CUT GLASS COMPANY INC., New York, N. Y. Filed Sept. 20, 1916.

DIAMONKUT

Particular description of goods.—Cut-Glass Articles.
Claims use since July 15, 1916.

Ser. No. 112,655. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CAPEVERDIAN TRADING COMPANY, East Wareham, Mass. Filed Aug. 10, 1918.

Particular description of goods.—Roasted and Ground Cereals for Use as a Breakfast Food.
Claims use since Jan. 3, 1918.

Ser. No. 123,082. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM FREIHOFER BAKING CO., Wilmington, Del. Filed Nov. 19, 1919.

Freihofer's

No claim is made to the words "Just Right" apart from the mark shown in drawing. Trade-mark consists of the word "Freihofer's," in script, and the words "Tosty Bread" on a red background carried on a blue ribbon.
Particular description of goods.—Bread.
Claims use since Feb. 1, 1919.

Ser. No. 128,263. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE AUD COMPANY, INC., Herndon, Va. Filed Feb. 11, 1920.

No claim is made to the words "Life Saving Suit" and "Trade-Mark Registered" and to the illustration appearing on the mark except as associated with the other features thereof.
Particular description of goods.—Life-Saving Suits.
Claims use since Feb. 5, 1920.

TRADE-MARK REGISTRATIONS GRANTED

[ACT OF MARCH 19, 1920, SEC. 1 (b)].

AUGUST 22, 1922.

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION.

158,152. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STEPHEN H. BROOKS, Cleveland, Ohio. Filed June 17, 1921. Serial No. 149,262.

UNDERWRITERS

Particular description of goods.—Fire-Extinguishing Liquid.
Claims use since May 1, 1919.

158,153. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CAPELL SALT COMPANY, Salt Lake City, Utah. Filed Feb. 23, 1922. Serial No. 159,694.

CAPELL

Particular description of goods.—Salt (Sodium Chloride).
Claims use since Dec. 31, 1916.

158,154. (CLASS 45. BEVERAGES, NONALCOHOLIC.) CLAUSS-BROSKER CO., Elizabeth, N. J. Filed Apr. 25, 1922. Serial No. 162,869.

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverages Sold as Soft Drinks and Sirups for Making the Same.
Claims use since Aug. 3, 1920.

158,155. (CLASS 39. CLOTHING.) THE COMER MANUFACTURING COMPANY, Dayton, Ohio. Filed Sept. 23, 1921. Serial No. 153,240.

COMER

Particular description of goods.—Raincoats, Cravenettes, Gabardines, Bath Robes, and Ladies' Skirts.
Claims use since the fall of 1914.

158,156. (CLASS 39. CLOTHING.) ELLSWORTH & THAYER MFG. CO., Milwaukee, Wis. Filed Oct. 10, 1921. Serial No. 153,926.

KANTRYP

Particular description of goods.—Leather or Fabric Gloves.
Claims use since 1905.

158,157. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. G. FETTEROLF COMPANY, Philadelphia, Pa. Filed Apr. 26, 1922. Serial No. 162,922.

Fetterolf Quality Wilton

Particular description of goods.—Wool Rugs and Carpets.
Claims use since May 1, 1914.

158,158. (CLASS 32. FURNITURE AND UPHOLSTERY.) LOUIS R. GANS, Brooklyn, N. Y. Filed Mar. 10, 1922. Serial No. 160,495.

"PAY CASH—PAY LESS"
HOWARD

Particular description of goods.—Certain Named Household and Porch Furniture.
Claims use since Jan. 2, 1920.

158,159. (CLASS 45. BEVERAGES, NONALCOHOLIC.) FRANK HARWELL, Atlanta, Ga. Filed Aug. 30, 1921. Serial No. 152,368.

ORANGE COLA

Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as a Soft Drink.
Claims use since April, 1921.

158,160. (CLASS 39. CLOTHING.) HILLMAN & ISRAEL, New York, N. Y. Filed Dec. 14, 1921. Serial No. 156,685.

Stunning

Particular description of goods.—Ladies' Sweaters.
Claims use since May, 1921.

158,161. (CLASS 32. FURNITURE AND UPHOLSTERY.) OTTAWA CUSHION CO., Ottawa, Ill. Filed June 3, 1922. Serial No. 164,940.

"Pretty Soft"

Particular description of goods.—Porch-Swing Cushions and Pads, Chair Cushions and Pads, Piano-Bench Pads, Boat and Canoe Cushions, Church-Pew Cushions, Tumble Mats, Gymnasium Mats, Auto Seat Cushions and Back Cushions.
Claims use since Apr. 2, 1920.

158,162. (CLASS 39. CLOTHING.) PACIFIC KNITTING MILLS, Los Angeles, Calif. Filed Oct. 3, 1921. Serial No. 153,690.

BEAUTY
Ribstitch

Particular description of goods.—Men's, Women's, and Children's Bathing Suits and Sweater Coats.
Claims use since Sept. 9, 1920.

SPRING

Particular description of goods.—Bed Springs.
Claims use since 1919.

158,165. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE PERFECTION MATTRESS & SPRING CO., Birmingham, Ala. Filed Feb. 2, 1922. Serial No. 158,798.

Particular description of goods.—Mattresses.
Claims use since 1919.

158,166. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TURNER, HALSEY CO., New York, N. Y. Filed June 20, 1922. Serial No. 165,774.

995 FRANKLIN

No 1

Particular description of goods.—Bleached Cotton Duck.
Claims use since April, 1908.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

EX PARTE ELLIS, JEFFERY, AND MADDOCKS.

Decided August 10, 1922.

1. EXAMINATION OF APPLICATIONS—CASES MADE SPECIAL—SHOWING REQUIRED.

Where an applicant delays filing his application in this country more than the twelve months permitted by the International Convention, his application will be made "special" only upon a sworn showing that the foreign patent will issue by a certain date and that the foreign Patent Office will not postpone its issuance beyond that date.

2. SAME—SAME—SAME.

The mere showing that the British patent will not issue until March 25, 1923, is not a sufficient compliance with the rule. It must be shown that the British office will not give a further extension.

ON PETITION.

SEED-SOWING MACHINE.

Mr. David P. Wolhaupter for the applicants.

ROBERTSON, *Commissioner:*

Applicant petitions that their application be advanced in the order of examination under rule 63(*f*), which rule relates to the examination of applications filed in this country more than twelve months after filing in a foreign country. (289 O. G., 237.)

For several years past the work of this Office has been increasing at an unprecedented rate. It has received during the past twelve months over 88,000 mechanical applications, 17,000 trade-mark applications, and several thousand design and reissue applications, over 111,000 in all. It is beyond the capacity of the Office to handle this volume of business, and hence eight of the forty-nine examining divisions have fallen over a year behind in making official actions. It is manifestly unfair for one application to be taken out of its place and shoved ahead of thousands of others filed many months before it. Therefore, applications of American citizens are made "special" *only* upon the most rigid *sworn* showing. Nevertheless before rule 63 (*f*) was amended foreign applicants could neglect to file their American applications during the twelve months allowed after filing at home, and then have their applications in this country made special as a matter of course, with the result that thousands of applications of American citizens would be shoved out of turn in order that the applications of foreign citizens might be acted upon expeditiously. If this happened only in a few cases a year, it could be tolerated; but since there are a great many of these cases, and since the work of some of the Examiners is blocked by these delayed foreign applications (heretofore made special as a matter of course), the Office has been compelled to establish the rule that in case the foreign applicant delays filing his case more than the twelve months permitted by the International Convention his case can be made "special" only upon a *sworn* showing that the foreign patent will issue by a certain date and that the foreign Patent Office will not postpone its issuance beyond that date. This may seem a hardship to the foreign applicant, and also involve him in some expense, but American applicants must undergo similar hardship and expense in preparing affidavits to make the special showing required in order to have their cases given advanced action. If the foreign applicant elects to delay filing for more than the twelve months allowed, he should not complain if this Office declines to penalize its own citizens by delaying action on their cases to attend to the demands of foreigners.

This Office has information that in some countries the delay in issuing the patent may be easily accomplished. For example, it is stated that in Great Britain arrangements can be made at the proper time whereby the issuance of the patent may be delayed as much as 25 months upon the payment of a fine. Delays in the United States Patent Office may be easily obtained, and if there are any countries where the rules are so hard and fast that delays are forbidden it may be that such foreign Patent Office may have to change its rules so as to make it possible for their citizens to obtain delay of the issuance in the home country to thereby protect their interests in this country.

The present petition shows that the foreign patent will not issue until March 25, 1923. This is not sufficient compliance with the rule. It must also be shown that the British office will not give a further extension. There is sufficient time for applicants' attorney to write or cable for this verified showing, and the petition is therefore denied without prejudice to its renewal upon the filing of the required sworn statement.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Third Circuit.

STASO LAMINATED SLATE CO. *v.* STOWELL MFG. CO.

Decided February 28, 1922; rehearing denied May 10, 1922.

[280 Fed. Rep., 107.]

1. PATENTS—COMMERCIAL SUCCESS NOT ALWAYS INDICATIVE OF INVENTION.
   Commercial success, though often indicative of invention, is not always so, as it may be due to other causes.
2. SAME—NO. 1,007,146, FOR PREPARED ROOFING, HELD ANTICIPATED.
   The Schroder patent, No. 1,007,146, for a prepared roofing with a protective coating of crushed slate applied by rolling, *Held* invalid, because anticipated.

APPEAL from the District Court of the United States for the District of New Jersey; Charles F. Lynch, judge.

Suit by the Staso Laminated Slate Company against the Stowell Manufacturing Company. From a decree for defendant, plaintiff appeals. Affirmed.

Mr. Charles Neave and *Mr. Charles C. Gillson* for the appellant.

Mr. J. Edgar Bull and *Mr. George F. Scull* for the appellee.

Before WOOLLEY and DAVIS, Circuit Judges, and THOMPSON, District Judge.

DAVIS, *Cir. J.:*

This is an appeal from the district court, holding Patent No. 1,007,146, issued to Edward J. Schroder, October 31, 1911, and owned by the complainant, invalid. The patent is for a prepared roofing, which consists of a body portion having a coating of adhesive waterproofing material, such as asphalt, and an outer protective coating of crushed slate. The alleged novelty in this patent is twofold: Material and method of application—crushed slate, applied by rolling in contact with an adhesive coating of asphalt. Ground slate had been used in the John's patent (1872) No. 125,574. Crushed slate is superior to other kinds of slate and material, it is claimed, because slate laminates when crushed and the laminæ when rolled and pressed together match and overlap one another so as completely to cover the asphalt coating and give a smooth surface and uniform color which cannot be obtained with a gravel, sand or other crystalline covering. This result cannot be secured, it is contended, by the use of ground or powdered slate because it has no laminæ to match and overlap one another.

[1] The enterprise of the patentee and his assignee was commercially successful. The roofing has been applied in large quantities, both in the form of sheets or roll roofing and shingles. Commercial success is often indicative of invention, but it is not always so for it may be due to other causes. The disclosures of the patent, however, seem patentable and the patent is valid unless anticipated.

[2] The defendant in its answer alleges that the patent is invalid because Edward J. Schroder was not the original and first inventor; that A. C. Hall was the inventor of substantially the construction described and claimed in the patent which had been in public use or on sale in the United States more than two years before the application for the Schroder patent.

The defendant refers to the roofing called "slateoid," manufactured by the Trinidad Asphalt Manufacturing Company of St. Louis. This word was registered as a trade-mark by the company July 27, 1906. It appears by undisputed evidence that Mr. A. C. Hall was employed by the Staso Mills, or Staso Milling Company, of Boston, Mass., as its superintendent from March, 1906, until some time in 1913. That company in March, 1906, was manufacturing slate dust which was used in making paint and linoleum. This dust had to be screened, and it occurred to Hall that the larger screenings would make a good material for roofing. He sent samples to various roof manufacturers, among whom was the Trinidad Asphalt Manufacturing Company. It approved the material and ordered two carloads.

The factory of the Staso Company was thereupon equipped for crushing slate ordered by the Trinidad Company. Eight carloads were shipped to that company. The Staso Company called the material "torpedo slate." The Trinidad Company made and sent samples of "slateoid" to the Staso Company, and these samples were, Hall testified, like the material manufactured by the complainant and submitted to him at the trial. By original records the Trinidad Company showed that it manufactured and sold 9,394 squares of "slateoid" before September 9, 1908, which was two years before the application for the Schroder patent. A "square" is 100 square feet. This was enough, according to the uncontradicted testimony, to cover 1,657 average-sized houses.

On March 21, 1907, Frank W. Torpening, secretary and treasurer of the Trinidad Company, filed an application for a patent on the "slateoid" roofing made by that company. In his specification he said:

> After the bond layers have been applied to the body sheet I apply to the bond layer which is to be at the upper side of the roofing sheet when in use, for instance, the bond layer 2, a surfacing 4 of crushed slate which is embedded into the bond layer and packed firmly therein by a rolling operation.

Claim 2 contains:

> A roofing sheet comprising a pliable body, a nonhardening bond applied to said body, and a layer of crushed slate embedded in said compound, substantially as set forth.

This application was rejected by the Patent Office on the ground that the substitution of crushed slate for other material did not constitute invention. We have in this application, filed three and one-half years before the Schroder application, the identical material, crushed slate, applied in identically the same way, by rolling. These facts are undisputed and seem to be undisputable.

Complainant disposes of the Trinidad Roofing by saying that it was only an experiment and a complete failure; that its manufacture was abandoned, and therefore it should not be held as an anticipation. We think that these conclusions are not a reasonable interpretation of the evidence. Substantially the same roofing was successfully manufactured, out of the same material, by the same method as described in the Schroder patent, more than two years before his application. We agree with the conclusion of the learned judge of the district court that the patent was anticipated and is invalid.

The decree of that court is accordingly affirmed.

PATENT SUITS.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN.
First Assistant Commissioner.

Patents Nos. 1,427,062 to 1,427,765.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 301—No. 5. TUESDAY, AUGUST 29, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

PATENT No. 1,381,195.

On July 25, 1922, a decision was rendered that Harry H. Ide was not the first inventor of the subject matter covered by claims 1, 2, 3, 4, 5, and 26 of his Patent No. 1,381,195, subject, "Telephone system," and no appeal having been taken within the time allowed such decision has become final.

PATENT No. 1,339,071.

On July 17, 1922, a decision was rendered that Charles H. Shipman was not the first inventor of the subject matter covered by claims 2 and 3 of his Patent No. 1,339,071, subject, "Operating means for direction indicators," and no appeal having been taken within the time allowed such decision has become final.

Rule 194.

All payments of money required for Office fees must be made in specie, Treasury notes, national-bank notes, post-office money orders, or certified checks. Money orders and checks should be made payable to the "Commissioner of Patents." Money sent by mail to the Patent Office will be at the risk of the sender. Letters containing money should be registered. In no case should money be sent with models.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Patent Office Publications.

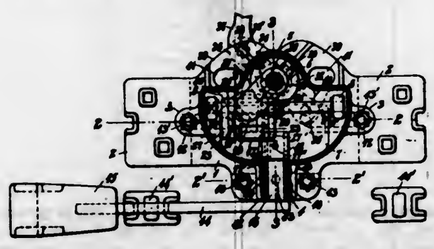
The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Index—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Section of OFFICIAL GAZETTE:	
Weekly edition—Annual subscription	2.50
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1912, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28, 29, and 30, (now out of print,) published since 1912, each	.10

Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly held for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should NOT be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Condition of Applications Under Examination at Close of Business August 19, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 68,385; Trade-Mark division, 8,064. Oldest new case, May 19, oldest amended, Apr. 18, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application awaiting office action. New.	Oldest amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Dec. 24	*Feb. 7	978
126	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics: Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants, and Flowers.	Aug. 26	July 21	1,865
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 9	*Aug. 19	979
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Oct. 15	*June 10	1,413
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Oct. 31	Oct. 14	1,174
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Nov. 3	*Mar. 15	1,401
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes	Nov. 19	Dec. 3	2,244
133	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet-Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	*May 16	*July 1	924
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	July 1	*June 25	1,115
285	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land Vehicles—Bodies and Tops; Land Vehicles—Dumping; Land Vehicles, Wheel Substitutes; Motor Vehicles.	*Jan. 27	*May 18	1,091
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	*Feb. 28	*Mar. 7	781
122	12. PIERCE, F. P., Machine Elements	*Feb. 3	*May 8	1,146
329	13. NIXON, O. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	July 18	*June 2	1,611
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	July 25	*Apr. 14	1,214
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Oct. 3	Sept. 28	1,745
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	Aug. 29	Aug. 18	2,430
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Sept. 26	*Mar. 13	1,417
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices; Steam and Vacuum Pumps.	July 14	July 1	2,421
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Aug. 17	*Jan. 13	1,188
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	*Mar. 14	*Mar. 9	1,510
212	21. THURBER, W. L., Continuous-Strip Feeding; Textiles; Textiles, Braiding, Netting, or Lace Making; Textiles, Cloth Finishing; Textiles, Fiber Preparation; Textiles, Knitting; Textiles, Spinning; Textiles, Twisting or Twining; Textiles, Weaving; Winding and Reeling.	Oct. 22	*Apr. 13	907
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making.	Dec. 19	*Apr. 11	658
217	23. GROESBECK, W. D., Acoustics; Coin Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Aug. 4	Nov. 25	794
144	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Oct. 8	*Mar. 30	1,243
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	*May 3	*May 2	488
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	Oct. 8	*Jan. 24	1,083
214	27. ANDERSON, L. S., Abrading; Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	Oct. 7	Apr. 19	2,051
225	28. BENSON, A. R., Internal-Combustion Engines	Nov. 28	Oct. 14	1,644
147	29. MORRIS, B. N., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	Nov. 25	*June 8	646
152	30. SULLIVAN, M. E., Illuminating Burners; Illumination; Liquid and Gaseous Fuel Burners; Typewriting Machines.	*Feb. 6	*May 22	1,460
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Aug. 29	Nov. 1	2,046
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Oct. 10	*Apr. 24	975
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Dec. 27	*Mar. 1	915
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	*Apr. 15	*Apr. 15	567
52	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	*Mar. 30	*Apr. 26	1,059
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	*Feb. 21	*Feb. 17	1,833
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	Oct. 4	Oct. 26	1,861
378	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stationery; Stoneworking; Wells.	Oct. 27	Oct. 24	1,781
220	39. COWLES, A. W., Fluid-Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	June 6	June 21	2,141
273	40. OBERLIN, J. J., Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Sept. 1	Dec. 10	2,535
125	41. BROWN, J. T., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	*Mar. 10	*Apr. 1	880
114	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling; Electric Lamps	Oct. 5	Aug. 8	1,967
382	43. HOPKINS, F. M., Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire Extinguishers; Sewerage; Surgery; Liquid Separation or Purification.	Oct. 12	Oct. 4	1,171
253	44. SHAFFER, C. H., Air Guns, Catapults, and Targets; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Refrigeration; Ships.	Oct. 14	Oct. 13	1,413
379	45. GILES, A. H., Journal Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	*Jan. 5	*Feb. 11	1,297
332	46. WOLCOTT, C. L., Curtains, Shades, and Screens; Educational Appliances; Fire Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Oct. 26	Dec. 5	1,272
261	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems.	Nov. 1	*Mar. 15	1,189
118	48. ROEPKE, O. B., Electricity Conductors; Electricity, General Applications	May 19	Apr. 18	2,843
	49.	June 9	July 6	1,049

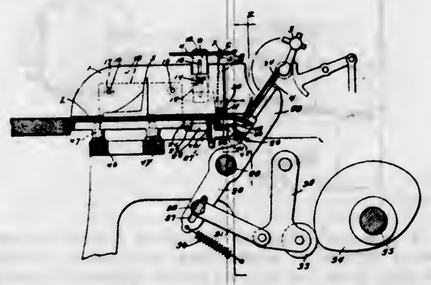
PATENTS



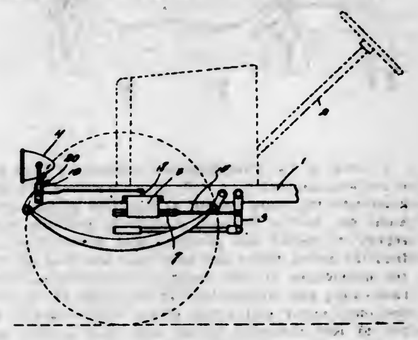
GRANTED AUGUST 29, 1922.

1,427,082. SWITCH STAND. FRANK C. ANDERSON, Cincinnati, Ohio. Filed June 10, 1922. Serial No. 567,386. 23 Claims. (Cl. 246—411.)

1. In a switch-stand, mechanism comprising a lever and a crank coaxially connected in radial alinement, a rack above and engaged by said crank, an intermediate crank operatively related to said rack thereabove, a direct switch-throwing crank coaxially connected with said intermediate crank, and means operatively supporting said mechanism.

1,427,083. DELIVERY MECHANISM FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 5, 1919. Serial No. 342,673. 15 Claims. (Cl. 271—87.)

1. A delivery mechanism for envelope-making machines comprising a receiving table, a pusher for delivering the envelopes upon the table, means to operate the pusher, and an envelope retaining stop arranged to be operated directly by said pusher.

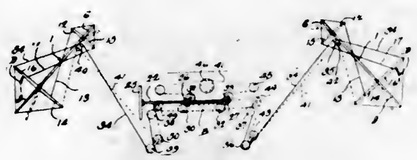


1,427,084. BRAKE. PER AUGUST ANDERSON, New York, N. Y. Filed Oct. 24, 1919. Serial No. 332,938. 2 Claims. (Cl. 188—77.)

1. A bracket for supporting a brake-band in operative position, comprising a substantially flat bracket member provided with a plurality of apertures extending therethrough for the accommodation of bolts whereby said bracket is fastened in place, and a brake-band member extending transversely from said bracket-member and having an integral connection with a fractional part of one edge of the latter, said brake-band member having a curved form corresponding approximately to the curve of the brake-band which it is intended to support and being slotted to receive resilient devices whereby the

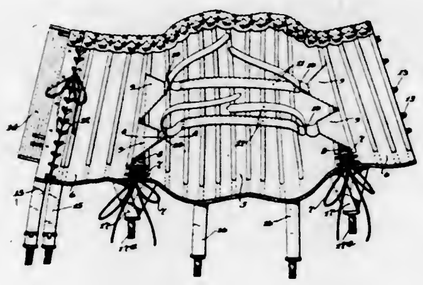
brake-band is mounted upon said brake-band member, the latter being further provided with an aperture for the accommodation of a strop-screw whereby the resilient action of the resilient devices is arrested.

1,427,085. AUTOMOBILE HEADLIGHT. JOSÉ ANTONIO AYALA, Caracas, Venezuela. Filed June 6, 1921. Serial No. 475,367. 5 Claims. (Cl. 240—62.)



1. In combination with a motor vehicle and its steering mechanism, a centrally arranged headlight thereon, means for moving the same about a vertical axis when the steering mechanism is actuated, such means including means for compensating for the different degrees of movement of the front wheels turning towards the right and left.

1,427,086. AIRPLANE. MILTON F. BABCOCK, Buffalo, N. Y. Filed July 7, 1919. Serial No. 309,030. 3 Claims. (Cl. 244—29.)



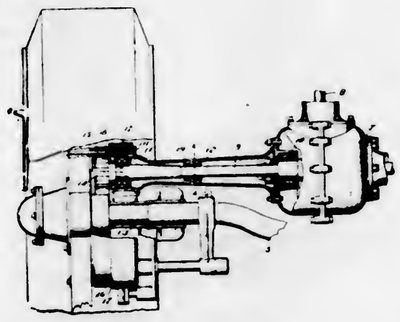
1. In an airplane, an aerofoil comprising an intermediate portion and front and rear marginal portions, box ribs carried by said intermediate portion in spaced

relation to each other, hinges carried by said box ribs and connected to said front and rear marginal portions for hingedly connecting said portions to the intermediate portion of the aerofoil, arms carried by said front and rear marginal portions and projecting above and below the same, and connecting wires connecting the downwardly extending arms of said front and rear marginal

portions to the upwardly extending arms of the opposite portions, whereby said marginal portions may be moved synchronously in the same direction, controlling means operatively connected to certain of said arms and arranged whereby said marginal portions may be synchronously operated to provide uniform curvature throughout the span of the aerofoil.

1,427,087. CORSET WITH ABDOMINAL SUPPORT. EMMA BOOBAR, Minneapolis, Minn. Filed Dec. 24, 1919. Serial No. 347,158. 5 Claims. (Cl. 2—73.)

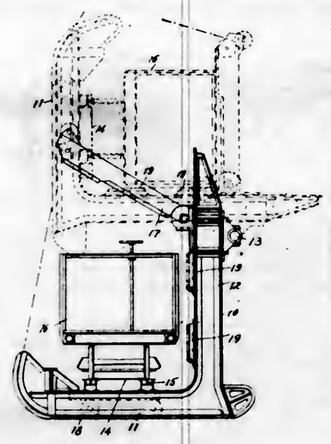
1. A corset of the kind described comprising back and front sections connected at their upper portions but with gaps between the edges thereof at the sides of the corset adjacent the bottom thereof, said front sections being separately connected and provided with a lacing at the front of the corset, upper and lower tabs attached directly to the side edges of said front sections and spanning said side gaps and overlapping the side edges of the back section, and upper and lower straps intermediately attached to and extended across said back section and adjustably connected to said tabs.



1,427,088. REVERSIBLE WINDOW. FRANK WM. BOWLER, Chicago, Ill. Filed Aug. 2, 1920. Serial No. 400,759. 4 Claims. (Cl. 20—42.)

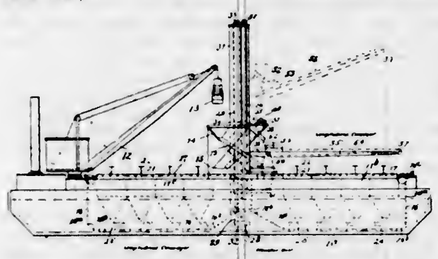
1. A window construction comprising a stationary frame, a pair of sash carrying casings mounted therein for sliding movement, each in its vertical plane, glass holding sashes pivotally mounted in said sash carrying casings, a dummy sash arranged for sliding movement in a vertical plane between said sash carrying casings, a second dummy sash arranged for sliding movement in a vertical plane contiguous to the outer of said sash carrying casings, said dummy sashes being slidable independently of the sash-carrying frames and being formed to extend inwardly beyond the inner edges of said sash

carrying casings, whereby the window is weatherproofed and the revolvable sashes are prevented from being revolved when the dummy sashes are in certain positions.



1,427,089. AXLE FOR MOTOR VEHICLES. ROBERT J. BURROWS, Buchanan, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed Feb. 27, 1920. Serial No. 361,851. 4 Claims. (Cl. 74—7.)

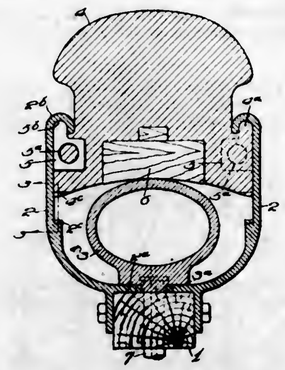
4. A motor vehicle axle comprising a dead axle member, a differential housing, jack shafts having bearings at their inner end portions in said differential housing, rigid members connected with said differential housing and supported at their outer ends by said dead axle member, tubular intermediate bearings for said jack shafts carried by said members, bearings for said jack shafts carried by the outer end portions of said members, and pinions carried by said jack shafts outside of the latter bearings.



1,427,090. CAR BLOCKING FOR CAR-DUMPER CRADLES. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 19, 1919. Serial No. 283,631. 4 Claims. (Cl. 214—52.)

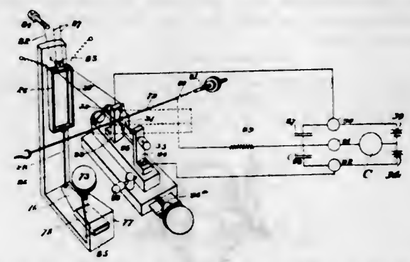
1. In a car dumper, a tilting cradle adapted to be turned about an axis to dump the contents of a car, and comprising a bottom portion on which the car is adapted to be run, and an upright side portion which supports the car during a portion of the tilting movement, the side of the cradle having a plurality of detachable car-blocking units spaced over the face of the same,

each unit comprising an oval-shaped frame secured to the cradle and containing yieldable thrust-resisting material.



1,427,091. FUELING BARGE. ARTHUR F. CASE, Cleveland, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,832. 12 Claims. (Cl. 214—12.)

1. A fueling barge having a series of storage hoppers, a conveyor having a portion extending over the hoppers so that it may deliver fuel thereto, and having a portion extending beneath the hoppers so that it may carry fuel therefrom, means for supplying the fuel to the upper part of said conveyor so that it may be delivered to the hoppers, and means for receiving the fuel from the lower part of said conveyor and delivering the same to a boat to be fueled comprising a cross conveyor to which the fuel is delivered by the first-named conveyor, and an elevator for receiving the fuel from the cross conveyor.



1,427,092. VEHICLE-WHEEL TIRE. MELVILLE CLARK, Chicago, Ill.; Elizabeth B. Clark, executrix of said Melville Clark, deceased, assignor, by mesne assignments, of one-half to William Annan Taylor, Chicago, Ill., and one-half to Charles S. Burton, Oak Park, Ill. Filed Feb. 27, 1918, Serial No. 219,378. Renewed Feb. 10, 1922. Serial No. 535,612. 2 Claims. (Cl. 152—10.)

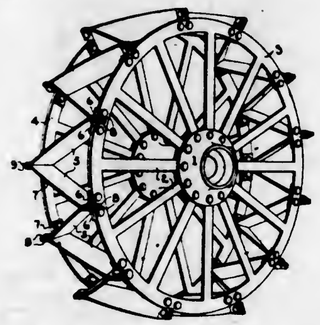
2. A vehicle wheel tire comprising in combination with lateral guards secured at opposite sides of the felly; a cushioning tread member positioned between the guards and extending from guard to guard, the guard and the tread member having interlocking circumferentially-extending tongue-and-groove features of which those of the guard are exterior to those of the tread for retaining the tread between the guards against radial escape; the tread member being free to creep about the wheel axis between the guards relatively thereto, the guards and their interlocking features being closely fitted to the tread member to frictionally resist and retard such relative creeping movement; the guards having each an inwardly-projecting annular shoulder facing outwardly from the axis, and a tread member having at each side an

inwardly-facing annular shoulder for seating on the shoulder of the guards when the tread is forced radially inward under said load at a certain distance, said shoulders of the guard and tread member respectively, being corrugated for engaging one with the other, to resist the creeping movement of the tread about the felly; a pneumatic tube or air spring enclosed by the guards and the tread member, and forming an inner seat and track for the creeping movement of said tread member, and means for securing the air spring against creeping around the axis.

1,427,093. MOVING COIL RELAY. KENWRICK CECIL COX, Norfolk Island, South Pacific. Filed Sept. 17, 1917. Serial No. 191,889. 6 Claims. (Cl. 200—110.)

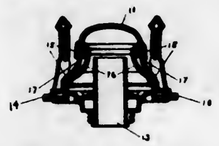
6. In a relay having a movable coil and a movable contact tongue connected therewith, a supporting base mounted beneath said tongue, and a pivoted block having stationary contacts normally in alinement with said contact tongue, mounted on said base and adapted to be swung to one side and thereby move the stationary contacts out of alinement with said contact tongue.

1,427,094. ELECTRIC HEATER. PAUL DANIEL, Boundbrook, N. J. Filed Aug. 27, 1920. Serial No. 406,352. 5 Claims. (Cl. 219—38.)



1. In a heater the combination of a supporting flange having a central opening, a casing extending through the opening, an extension connected to the casing and supported in the flange, a conductor rod in the extension, a

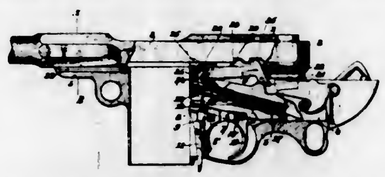
heating coil in the casing in connection with one end of said rod, an electric insulating material in the casing and



extension imbedding said coil and rod and a wire for electric current connected to the rod outside of said extension.

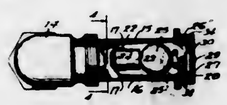
1,427,095. FARM-TRACTOR WHEEL. JOB DE CAMP, Van Wert County, near Grover Hill, Ohio. Filed Oct. 17, 1921. Serial No. 508,225. 4 Claims. (Cl. 301—52.)

1. In a traction wheel, the combination of a hub, a tread portion, and connecting means between the hub and tread portion, said tread portion comprising a pair of spaced annular rings, and diagonally-disposed bars provided with lugs extending outwardly from the ends of said bars, the lugs of adjacent bars being connected together, other lugs located below and extending in opposite directions from the first-mentioned lugs upon opposite sides of the bars and connected with the annular rings, the first-mentioned lugs extending beyond the second-mentioned lugs and supported upon the peripheries of the annular rings.



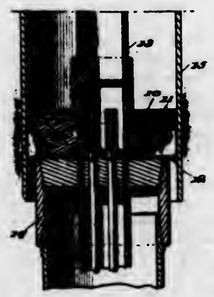
1,427,096. FLAME SPREADER. EDWARD F. DRAKE, Danbury, Conn. Filed Oct. 7, 1921. Serial No. 506,051. 1 Claim. (Cl. 67—72.)

The combination with an oil burner dome, of baffle plates having ears adapted for bendable engagement with the ends of the dome slot and the dome base, said plates being bowed lengthwise, their lower edges slotted, their upper portion perforated at each side and provided with bearing lips.



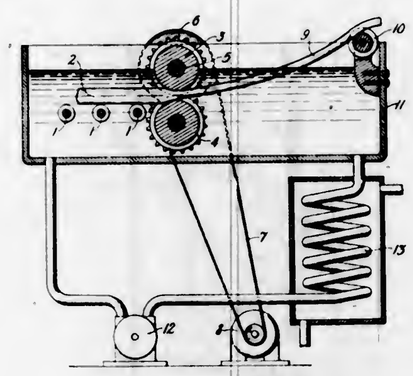
1,427,097. AUTOMATIC PISTOL. FIDEL FEEDERLE, Oberndorf-on-the-Neckar, Germany, assignor to Waffenfabrik Mauser, Aktiengesellschaft, Oberndorf-on-the-Neckar, Germany. Filed June 17, 1921. Serial No. 478,349. 14 Claims. (Cl. 42—4.)

1. In an automatic pistol, a movable barrel, an obturating member adapted to slide in a prolongation of the said barrel, a lock-housing, a removable lock-frame in the said lock-housing, a movable interlocking block in the said frame adapted to couple the barrel and the obturating member to each other, a trigger guard, a



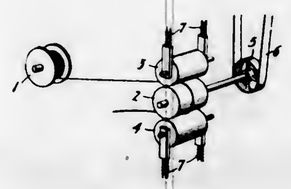
downwardly extending projection on the said lock-frame, and a vertically movable member at the front of the trigger normally engaged with the said downwardly extending projection to secure the lock-frame in the lock-housing.

1,427,098. AUTOMATIC VALVE. EDMOND J. FORTIER, Kankakee, Ill. Filed June 17, 1920, Serial No. 389,654. Renewed Feb. 10, 1922. Serial No. 535,811. 2 Claims. (Cl. 251—121.)



2. In a water system, a waste pipe provided with a trap and a normally closed automatic valve operatively connected with said waste pipe and positioned above the level of said trap, said valve comprising a substantially horizontal casing open at its outer end, a circular valve seat, means for holding said circular valve seat against the outer end of said valve casing, a ball valve disposed within said valve casing and adapted for engagement with said valve seat to close the outer end of said valve casing, and an inclined guide mechanism disposed within said valve casing for normally guiding said ball valve into closed position, whereby said ball valve is normally moved by gravity into closed position and is moved by suction into open position.

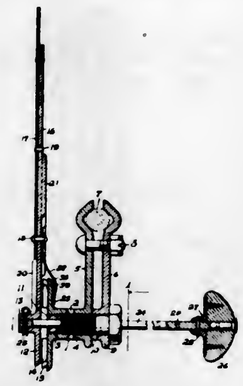
1,427,099. COLLAPSIBLE EXPANSION GASKET. LOUES FRIEDMAN, Muncie, Ind., and DAVID WALLACE, Tulsa, Okla. Original application filed Mar. 27, 1922, Serial No. 546,948. Divided and this application filed Mar. 29, 1922. Serial No. 547,887. 2 Claims. (Cl. 288—1.)



1. A collapsible expansion gasket for disposition within, and ready removal from, well casings, consisting of an annular body formed of soft rubber, having recesses in its outer contact surface adapting it to readily yield when in closely interfitting relation within a well casing.

1,427,100. METHOD OF WORKING METALS. OLIVER C. GILBERT, New York, N. Y. Filed July 1, 1918. Serial No. 242,811. 16 Claims. (Cl. 148—12.)

1. The process of increasing the tensile strength of a mass of non ferrous metal which consists in changing the physical form of the metal by external stresses and in compensating for the heat generated by said stresses simultaneously with said changes in physical form to maintain the metal below the annealing point during such operations.

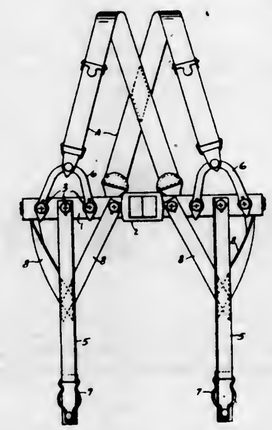


1,427,101. PROCESS FOR WORKING METALS. OLIVER C. GILBERT, New York, N. Y. Filed June 28, 1919. Serial No. 307,466. 2 Claims. (Cl. 80—37.)

2. That process of working tinsel which consists in drawing the material over a drum so as to keep it in a taut and slightly stretched condition while it is in engagement with a path on the surface of the drum, said path consisting of a series of successive circumferential points, and subjecting it, while in such a taut and slightly stretched condition, to the pressure of two idling rollers cooperating with the said drum at two circumferentially spaced points.

1,427,102. AUTOMOBILE DIRECTION SIGNAL. STANLEY D. GOSSARD, Blair, Nebr. Filed Oct. 27, 1921. Serial No. 510,943. 4 Claims. (Cl. 116—51.)

1. An automobile direction signal, comprising a discal semaphore support having a central threaded aperture, an axially-standing flange around said aperture and radial notches through said flange, a tubular attaching screw bolt disposed in said threaded aperture to engage a sub-support disposed between the bolt head and said semaphore support, an operating shaft of greater length than said tubular bolt, and disposed to slide endwise and revolve therein, a radial semaphore arm rigidly mounted on a projecting end of said shaft to releasably seat in any



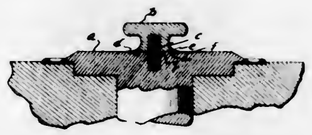
of said radial notches, and a spring connected to yieldingly retain said semaphore arm seated in said notches.

1,427,103. METHOD OF PRODUCING SMALL FORM PIECES, ESPECIALLY BUTTONS, FROM CALCINED GYPSUM, CEMENT, OR THE LIKE. ARTHUR HAENICKE, Berlin-Tempelhof, Germany, assignor to Carl Wilhelm Schulz, Berlin, Germany. Filed July 19, 1920. Serial No. 397,543. 2 Claims. (Cl. 25—155.)

1. The method of producing small form-pieces, especially buttons, from calcined gypsum, cement or the like, which consists in pressing the material in dry condition into an appropriate mold, lifting the still dry form-piece out of the mold and spraying the same with a suitable liquid for the purpose of effecting the setting of the material.

1,427,104. GARMENT SUPPORT. THRASHER HALL, Detroit, Mich. Filed Sept. 26, 1921. Serial No. 503,347. 2 Claims. (Cl. 241—4.)

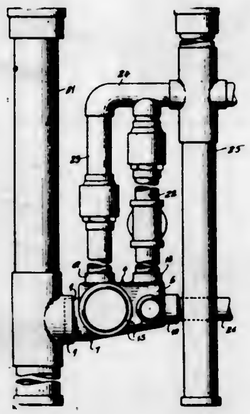
1. A garment support, comprising a belt, a plurality of fasteners circumferentially spaced equidistant upon said belt, shoulder embracing means having tabs detachably engaging certain of said fasteners, and hose supporters



having strips detachably engaging certain of said fasteners astride the tabs of said shoulder embracing means and interchangeable therewith upon said fastenings.

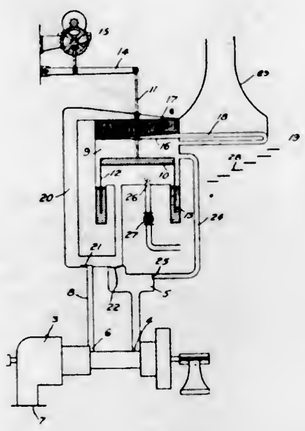
1,427,105. HOSE COUPLING. ALEXANDER H. HANDLAN, Jr., St. Louis, Mo. Filed Oct. 16, 1919. Serial No. 331,238. 1 Claim. (Cl. 284—19.)

A coupling of the character described comprising a section having a valve pocket therein and a valve seat adjoining said pocket, a ball valve in said pocket, the portion of said pocket adjoining said valve seat being relatively small and approximately equal in diameter to the ball valve, said pocket having an enlarged portion permitting flow of fluid around the valve when the latter occupies its open position, guiding ribs in said enlarged portion having their edges flush with the wall of the relatively small portion of the pocket and in continuation thereof, said relatively small portion of the pocket and said guiding ribs forming an elongated guideway for guiding said ball valve in a straight line to and from the valve seat, and a section engageable with the first mentioned section and having a projecting valve-unseating plunger whereby said ball valve is displaced from said relatively small portion of the pocket and held at the guiding ribs in said enlarged portion.



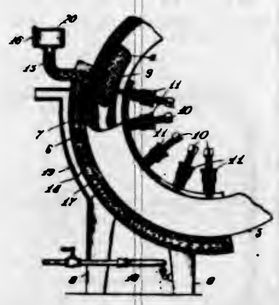
1,427,106. PERMUTATION LOCK. ARTHUR F. JACOBSON, Detroit, Mich. Filed June 10, 1921. Serial No. 476,378. 5 Claims. (Cl. 70—53.)

1. In a permutation lock, a numeral disk provided with a tapped central opening and a knob provided with a tapped central opening at its back, and a threaded fragile stud for holding the knob to the numeral disk.



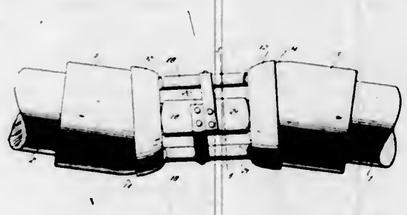
1,427,107. WASTE AND VENT PIPE FITTING. BENJAMIN KAPLAN, New York, N. Y. Filed Dec. 21, 1921. Serial No. 523,967. 3 Claims. (Cl. 4—21.)

1. A waste and vent fitting consisting of an elongated hollow body provided with outlet openings at each end by which pipes are joined to the fitting, the top wall of the fitting being made parallel to the axis of the fitting and the bottom wall being sloped downwardly from one end to the other end, one of the aforesaid end openings being offset from the other opening, the said body provided with



suitable pipe ducts by which connection is established with a vent pipe, and provided with right and left hand pipe ducts by which connection is established with bathtub, water, and sink fixtures.

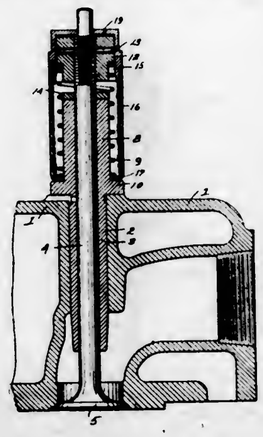
1,427,108. POWER-DEVELOPING APPARATUS. ALEXANDER T. KASLEY, Swissvale, Pa. Filed May 8, 1918. Serial No. 233,330. 10 Claims. (Cl. 60—40.)



1. In combination in a power developing apparatus, a compound engine, means for delivering motive fluid to said engine and means for periodically withdrawing a portion of the motive fluid from the working passages of said engine after it has partially expanded, and means for delivering heat to the fluid so withdrawn and for returning the fluid to the inlet of the engine.

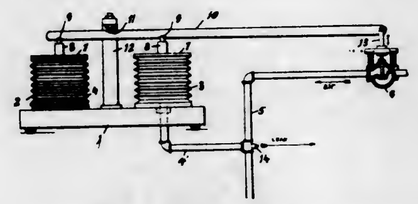
1,427,109. APPARATUS FOR VULCANIZING RUBBER ARTICLES. MAHLON O. KASSON, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 519,833. 5 Claims. (Cl. 18—18.)

1. In a vulcanizing apparatus, the combination of a mold having a chamber open to the atmosphere, a liquid having a boiling point higher than the vulcanization temperature in said chamber, and means for heating said liquid to furnish the heat of vulcanization.



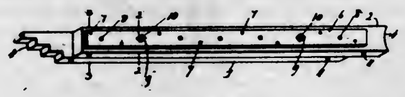
1,427,110. UNIVERSAL COUPLING OR JOINT. JOHN KNIGHT, Boundbrook, N. J., assignor to The John Knight Company, Inc., Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 437,655. 11 Claims. (Cl. 64—91.)

1. A coupling embodying a shaft provided at its end with a plurality of symmetrical cut-out portions, a spindle provided with a combined tooth and ball shaped ends, and a sleeve embracing the shaft and spindle and having an interior of uniform cross section throughout its entire length and said cross section being complementary to the shaft and the spindle ends, and all parts of the spindle ends which are in contact with the interior of the sleeve being curved to permit of articulation between the parts.



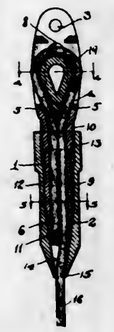
1,427,111. VALVE MECHANISM. HANS L. KNUDSEN, Milwaukee, Wis. Filed Jan. 26, 1918. Serial No. 213,847. 2 Claims. (Cl. 137—139.)

1. A valve mechanism comprising a valve seat, a valve adapted to cooperate therewith, a stem rigidly connected to said valve, an elongated guide surrounding said stem, a relatively stationary cylinder located adjacent the outer end of said stem, a piston operating in said cylinder to cushion the closing movement of said valve, and a cushioning member interposed between said piston and said guide



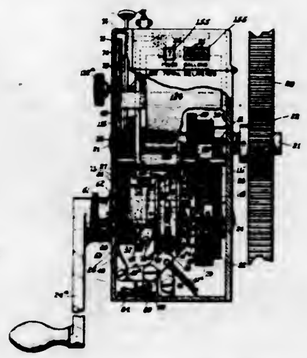
to cushion and limit the motion of said valve in the opening direction.

1,427,112. PRESSURE REGULATOR. ADOLPH W. LISSAUER, North Tarrytown, N. Y., assignor to W. L. Fleisher & Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 10, 1922. Serial No. 542,595. 5 Claims. (Cl. 236—92.)



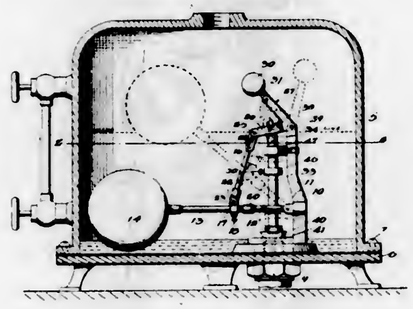
1. An apparatus of the class described, comprising a pair of expansible vessels, disposed to be subjected to the same temperature changes, one of the vessels being adapted to enclose a volatile liquid, a conduit connected to the other vessel, a valve on said conduit, means for permitting a constant leak from said conduit between the second mentioned vessel and the valve, and motion transmission means from the vessels to the valve, substantially as and for the purposes set forth.

1,427,113. BRAKE ADJUSTER FOR AUTOMOBILES, TRUCKS, AND THE LIKE. WILLIAM FRANK MARCH, Philadelphia, Pa. Filed Aug. 11, 1919. Serial No. 316,758. Renewed Jan. 21, 1922. Serial No. 530,999. 2 Claims. (Cl. 33—143.)



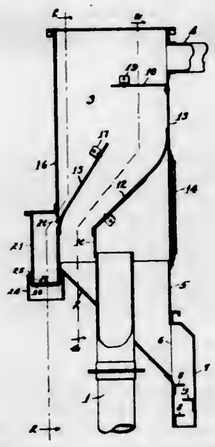
1. As a new article of manufacture a brake band adjuster for automobiles consisting of two members adjustable upon each other one of said members having steps formed upon the end thereof the other member having a curved end.

1,427,114. LOCK-WIRE TURNBUCKLE. WYATT MARTIN, Cleveland, Ohio, assignor of one-half to Cumming Cox. Filed June 17, 1918. Serial No. 240,442. 2 Claims. (Cl. 24—124.)



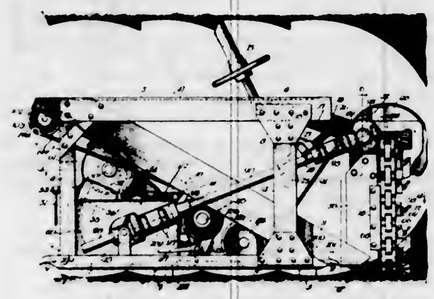
2. In a device of the character described, the combination of a chuck member having a lower split portion provided with two cable receiving apertures, and a slotted upper portion having inclined grooves in communication with such apertures, the exterior of such chuck member being apertured, a bobbin adapted to receive the cable thereabout and being pointed to wedge the cable in such inclined grooves, and a clamping member interiorly threaded and adapted to engage over said lower split threaded portion to clamp said cable in such apertures, said clamping member having a centrally placed aperture adapted to receive the extending portion of said cable and maintain it in alignment with the device.

1,427,115. LIQUID-MEASURING APPARATUS. JOHN F. MILLIGAN, New York, N. Y., assignor to Liquid Measuring Devices Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 17, 1916. Serial No. 84,840. 10 Claims. (Cl. 221—103.)



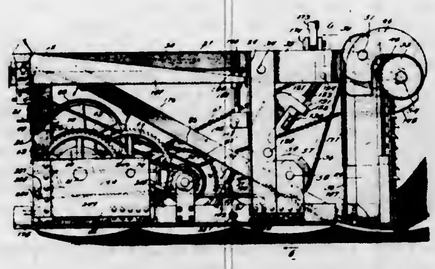
1. A liquid measuring apparatus embodying therein a driven shaft operatively connected with a pump, a driving shaft, independently operative connections between said shafts whereby said driven shaft may be turned in one direction, to cause the pump to deliver liquid and in the opposite direction to restore the pump to normal, manually operative means whereby one of said connections may be set to actuate the pump, and automatically acting means whereby said last named connection may be made inoperative to cause the pump to deliver only a predetermined volume of liquid comprising a measuring wheel, operative connections between said wheel and said driven shaft, a movable member through which said connections may be made operative or inoperative, a cam carried by said measuring wheel adapted to operatively engage said movable member, and means whereby said cam may be adjusted circumferentially of said wheel to vary its operative moment.

1,427,116. STEAM TRAP. GEORGE ANDREW MOLIQUE, Wood River, Ill. Filed May 13, 1921. Serial No. 469,283. 5 Claims. (Cl. 137—103.)



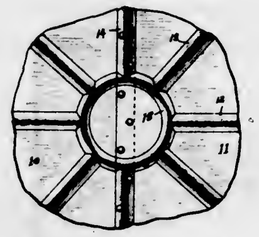
1. A steam trap comprising a standard, a valve having a stem slidably associated with the standard, a float having a pivoted arm, a link adjustably connected to said arm and having its upper end formed with a slot, a bell-crank having a branch provided with a pin slidable in said slot whereby the upward movement of said link engages the lower end of said slot with said pin for operating said bell-crank, a second link connected to said stem and having a slot, a second pin connected to said branch and slidable within said slot, and a weight connected to said bell-crank for elevating the valve.

1,427,117. SEPARATOR. EDWARD J. MOORE and RAYMOND H. MOORE, Cleveland, Ohio, assignors to The W. W. Sly Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 22, 1919. Serial No. 319,084. 11 Claims. (Cl. 83—54.)



3. In a separator, the combination of a casing having an inclined bottom and a discharge opening above the lower end of such bottom, a pipe communicating with said casing above said bottom, means forming about the delivery end of said pipe and with said bottom an open-bottomed chamber above said outlet, means forming within said casing a second chamber communicating at its bottom with the first chamber and extending upwardly therefrom having a discharge outlet, and an outlet from said casing above the second chamber.

1,427,118. MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y. Filed Sept. 30, 1914. Serial No. 864,211. Renewed Oct. 4, 1920. Serial No. 414,556. 227 Claims. (Cl. 262—28.)

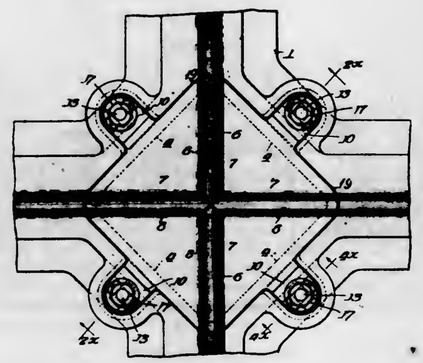


1. The combination with a frame, of cutting mechanism mounted thereon, means for operating said cutting mechanism in a vertical direction to cut a solid core of material from a mine wall, and apparatus comprising flexible means connected to said frame and adapted to be moved into the kerf cut by said cutting mechanism and engage the cut material directly for removing the same rearwardly.

1,427,119. MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y. Filed July 15, 1915, Serial No. 39,986. Renewed Oct. 30, 1920. Serial No. 420,821. 62 Claims. (Cl. 262—28.)

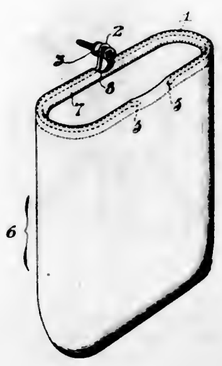
2. The combination with cutting mechanism, of means for operating the same, a frame for said cutting mechanism, a rope frictionally connected to said frame, winding apparatus connected to one end of said rope, a conveyer belt connected to the other end of said rope, and power mechanism connected to the other end of said belt.

1,427,120. REINFORCED STEEL PLATE. ROY A. NELSON, Chicago, Ill. Filed Aug. 11, 1919. Serial No. 316,539. 1 Claim. (Cl. 189—46.)



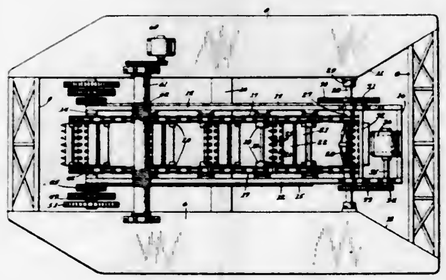
A sheet metal plate formed with an endless corrugation in its central portion with corrugations radiating therefrom to points adjacent the outer edges of said plate, the radiating corrugations being of substantially the same height as the central corrugation.

1,427,121. HEAT TREATMENT OF MANGANESE STEEL. WESLEY G. NICHOLS, Chicago, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 18, 1920. Serial No. 411,250. 5 Claims. (Cl. 148—13.)



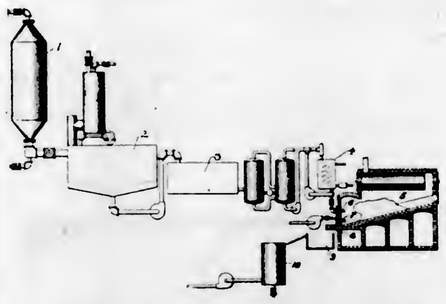
1. An improvement in the art of heat treating manganese steel castings, which consists in subjecting such castings to heat, the maximum temperature of which never exceeds the critical temperature for such castings.

1,427,122. INSERTED-CENTER RAILWAY CROSSING. WESLEY G. NICHOLS, Chicago, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Jan. 25, 1922. Serial No. 531,527. 7 Claims. (Cl. 246—460.)



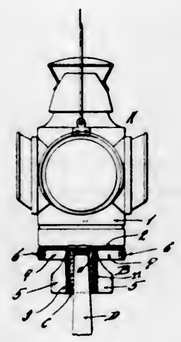
1. In a railway crossing, a frame, a crossing insert mounted in said frame, cushioning means adapted to absorb loads imposed on said insert, and means independent of said cushioning means for floating said insert.

1,427,123. BAG HOLDER. PHILIP W. PULIG, Philadelphia, Pa. Filed Oct. 20, 1921. Serial No. 508,916. 2 Claims. (Cl. 83—26.)



1. A bag holder comprising a single strand of wire bent to form an elongated loop with opposed substantially straight sides and rounded ends, the terminals of the strand terminating in closely spaced relation centrally of one of the straight sides, and an off-set at the other straight side of the holder directly opposite the terminals formed by bending the wire to produce an open sided eyelet, whereby the holder may be enclosed within the interrupted hem around the mouth of a bag by inserting one end in the interrupted portion and working the hem completely around the holder and around the eyelet, the latter being adapted to protrude through the interrupted portion of the hem for suspension upon a peg.

1,427,124. FLUID-CURRENT MOTOR. PAUL REINBERGER, Cleveland, Ohio. Filed Oct. 15, 1921. Serial No. 507,810. 1 Claim. (Cl. 37—11.)



A motor comprising a pair of floats with a passage between, a triangular frame pivoted at its front end in said passage, and chain belts carrying paddles, traveling around said frame, said paddles comprising hinged sections permitting the paddles to fold upon contact with the ground, the outer sections of the paddles being provided with teeth to dig into the bed of a stream.

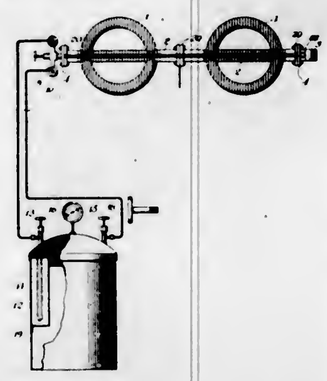
1,427,125. PROCESS OF FIBER LIBERATION. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Feb. 21, 1921. Serial No. 446,574. 8 Claims. (Cl. 92—11.)

1. The process of digesting cellulosic material for the production of cellulose fiber, which comprises cooking the raw material in a sulphurous acid solution of a soluble sulphate.

1,427,126. LAMP AND METHOD OF MAKING BASES THEREFOR. GEORGE H. ROLFES, St. Louis, Mo., assignor to Handlan-Buck Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 7, 1920. Serial No. 415,354. 3 Claims. (Cl. 240—50.)

1. A lamp comprising a body, a base secured to said body, said base being provided with a mold member, a hollow adapter comprising a metal core cast in said mold member, the outer face of said adapter being in direct contact with the walls of said mold member so as to secure the adapter thereto, and said adapter being provided with an opening for the reception of a lamp supporting member.

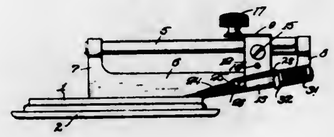
1,427,127. ANTIFOULING METAL FOR PROJECTILES. STANISLAS ROUSSEAU and WILLIAM YOXALL, East Alton, Ill., assignors to Western Cartridge Company, a Corporation of New Jersey. Filed Mar. 7, 1921. Serial No. 450,423. 5 Claims. (Cl. 102—28.)



5. An improved composition of a suitable alloy to be rolled and drawn for bullet jackets and projectile bands of sufficient hardness to prevent disruption in the bore, and a small percentage of a suitable lubricating metal, such as tin, substantially as described and for the purposes set forth.

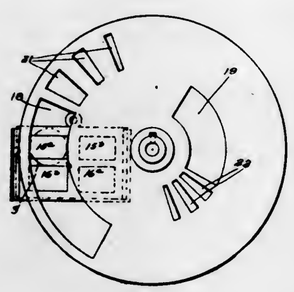
1,427,128. CLOSURE FOR GLASSES FOR PRESERVED FRUITS AND THE LIKE. HEDWIG SCHWIEGER, NÉE KIPP, Hanover, Germany, assignor to Heinrich Geering, Basel, Switzerland. Filed June 24, 1920. Serial No. 391,558. 2 Claims. (Cl. 215—38.)

1. In a closure for glasses for preserved fruits and the like, in combination, a lid having a tapered depression therein with a small orifice in its cup-shaped bottom, a soft-rubber stopper of corresponding formation in said depression having a narrow central slot-opening therein, and an opener for an eventual insertion in the slot-opening of said stopper consisting of an annular handle and a blade-like member having a central bore with a lateral port therein, substantially as and for the purpose set forth.



1,427,129. HYDROCARBON-GAS GENERATOR AND BURNER. HARRY C. SILLETT, Kansas City, Mo. Filed Feb. 27, 1920. Serial No. 361,816. 3 Claims. (Cl. 158—36.)

1. Fuel feeding apparatus, comprising main and auxiliary containers of fuel under fluid pressure, the latter housing a U-tube with a submerged orifice to admit the fuel, and an opening above the surface to admit the pressure fluid; a burner, including communicating conduits and an entrance piece at one end of the conduits curved over into the direction of the top of the conduits, a vaporizing pipe connected to the main container, with means by which it is supported in alinement above the conduit, including an adjustable nozzle directed into said entrance for the discharge thereinto of gas into which fuel oil in the pipe is converted; a pipe leading from the vaporizing pipe to the auxiliary container, and a double valve for controlling the fuel pipes.

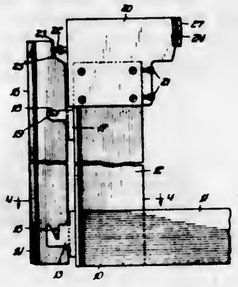


1,427,130. BLADE-SHARPENING MECHANISM. CHARLES A. STRAND, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,012. 6 Claims. (Cl. 51—159.)

1. In a blade-sharpening device of the class described, the combination of a hone, a pivoted supporting member operatively connected with and movable longitudinally with respect to the hone and adapted to be swung in a plane transverse to the direction of relative movement of said supporting member longitudinally of the hone, an inclined bearing on the free end of said pivoted longitudinally movable supporting member and normally inclined with respect to the blade-engaging surface of the hone, a pair of operatively connected inclined invertible blade-clamping jaws having opposed lower blade-engaging margins extending transversely with respect to the hone and the path of relative movement of said pivoted supporting member longitudinally of the hone, and adapted

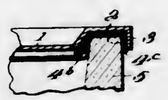
to support an inclined blade between said jaws in transverse relation to and in frictional engagement with the surface of the hone, an inclined axial supporting stem fixed to one of said jaws and extending at an angle with respect to the lower blade-engaging margins of the jaws and mounted in and in freely rotative engagement with said inclined bearing, and operating means on said axial stem and operatively connected with the other one of said jaws, for securing said invertible jaws in clamping engagement with a blade located therebetween.

1,427,131. CINEMATOGRAPH COLOR PROJECTOR. HESTER STEWART and REGINALD KILLICK, London, England. Filed Feb. 15, 1922. Serial No. 536,809. 19 Claims. Cl. 88—164.)



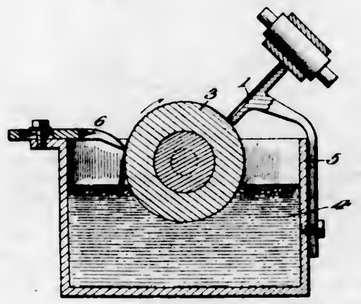
1. An apparatus for color cinematograph projection comprising a projector, means mounted in optical relation to the projector lens for dividing rays of image-bearing light into a plurality of beams, a color filter in the path of each beam, and movable means in operative relation to said projector for gradually interrupting said beams in predetermined alternate succession, said filters being colored to correspond to the color conditions prevailing during the filming of the picture.

1,427,132. PRECISION MEASURING INSTRUMENT. WILLIAM E. SWARTOUT, Chicago, Ill. Filed June 24, 1921. Serial No. 479,998. 13 Claims. (Cl. 33—93.)



1. An instrument having two side edges angularly placed relative to one another, a straight edged member fulcrumed on said instrument adjacent to one of said edges, and measuring means mounted on said instrument

for accurately indicating the angularity between said straight edged member and the other of said edges, said measuring means being provided with a yielding member

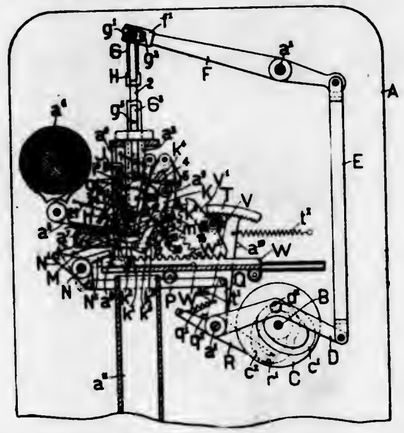


abutting said straight edged member, said measuring means being provided with means for visually indicating said angularity.

1,427,133. HERMETIC SEAL FOR CONTAINERS. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed June 21, 1920. Serial No. 390,501. 9 Claims. (Cl. 215—40.)

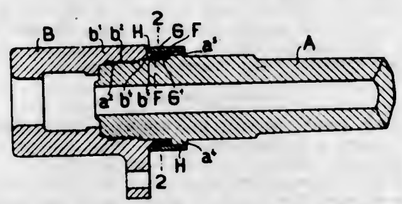
1. A hermetic sealing member for containers consisting of a plastic material having permanent sponge-like cells throughout the inner body portion thereof.

1,427,134. PROCESS OF FORMING SEALING MEMBERS FOR CONTAINERS. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed June 21, 1920. Serial No. 390,502. 3 Claims. (Cl. 113—80.)



1. The process of forming a sealing member for containers consisting in providing a plastic mass including a plastic base and a volatile solvent, shaping said mass to the general form for sealing and subjecting said shaped mass to heat sufficient to cause permanent, visible sponge-like cells to form throughout the entire body portion of the mass and leaving the surface of the mass substantially continuous.

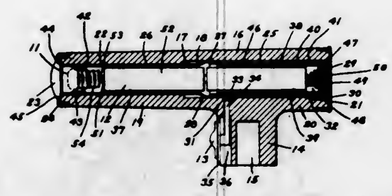
1,427,135. GAME. FRED TENNEY, Doncaster, England. Filed Dec. 22, 1919. Serial No. 346,628. 6 Claims. (Cl. 46—57.)



1. A game apparatus comprising a stationary board, and a rotatable disc mounted on said board and having a concave upper surface, said board having an annular channel concentric with said disc and pockets in the bottom of said channel spaced away from the edge of said disc and adapted to receive a ball thrown off from the surface of said disc.

1,427,136. AUTOMATIC STAMP-DELIVERY MACHINE. HERMANN THUN, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 6, 1920. Serial No. 428,800. 8 Claims. (Cl. 216—33.)

1. In a stamp delivery machine, a driving element, a moistener, two systems of connections interposed between said driving element and said moistener whereby when a letter to be posted has been introduced one of said systems will move said moistener over the adhesive surface of the stamp while the other system keeps said moistener out of the path of the stamp to be issued when a letter is not inserted.



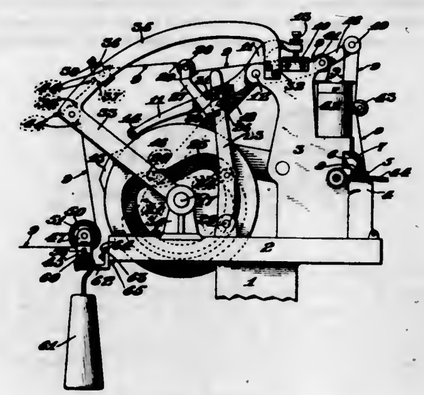
1,427,137. GUN BARREL WITH BREECH PIECE SCREWED ON A-TUBES. JOHN VOLLMER, Essen, Germany. Original application filed Nov. 19, 1920, Serial No. 425,106. Divided and this application filed June 28, 1921. Serial No. 481,028. 4 Claims. (Cl. 89—16.)

1. A gun barrel comprising an A-tube, a breech-piece, said breech-piece being provided with an annular extension,

said A-tube being provided with a collar, said annular extension and collar being opposed and shaped to receive a multiplicity of wedges.

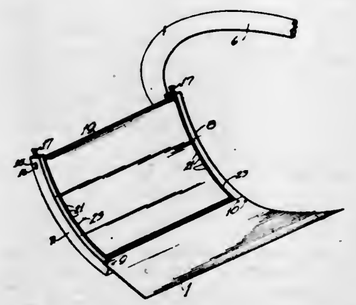
1,427,138. UMBRELLA-HANDLE LIGHTING DEVICE. LUDWIG WALICKI and CHARLES BORER, New Britain, Conn. Filed Nov. 16, 1921. Serial No. 515,660. 3 Claims. (Cl. 240—8.4.)

1. An umbrella-handle lighting device comprising a handle body having a bore that extends therethrough from end to end, a unit housed in said bore and comprising a tubular housing structure, a battery extending along the interior of said structure, a lamp bulb at one end of the said structure, and an inner sleeve opposed to said structure, and an insulating sleeve intermediate said inner sleeve and structure, means connecting said structure and one of the terminals of said bulb, means connecting said inner sleeve with the other terminal of said bulb, and a circuit closing device operative to interconnect said inner sleeve and tubular housing structure.



1,427,139. NECKTIE SUPPORTER. CHARLES R. WHEELER, Greene, N. Y. Filed Mar. 14, 1921. Serial No. 452,033. 5 Claims. (Cl. 2—84.)

1. A necktie holder comprising a horizontally elongated frame including longitudinal bars, said frame having at its ends upwardly and outwardly inclined slots open at their upper ends to receive the band of a tie, means carried by one of the longitudinal bars of said frame for supporting said frame upon a collar button, the other bar of said frame being offset somewhat to the front of said aforementioned bar when the frame is supported upon the collar button, whereby the upper loop of a four-in-hand tie may be carried by said forwardly offset bar in front of said first mentioned bar.

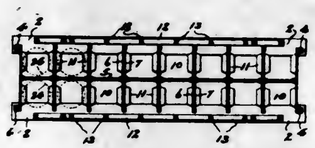


1,427,140. SEWING MACHINE. JOHN L. WHEELER, St. Louis, Mo., assignor to Simplex Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 23, 1917. Serial No. 203,516. 4 Claims. (Cl. 112—59.)

1. In a sewing machine, stitch-forming mechanism, a thread-meshing and take-up mechanism operating in conjunction with said stitch-forming mechanism, a tension device through which the thread passes between the source of thread supply and said thread-measuring mechanism,

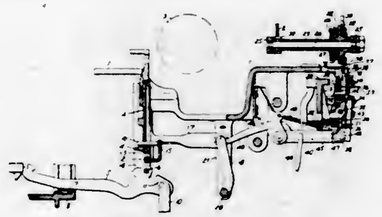
and a pressure device for said tension device including a lever having a weight in a predetermined fixed position thereon.

1,427,141. PLOW. RAY H. WILSON, New Holland, Ill. Filed Mar. 16, 1921. Serial No. 452,833. 1 Claim. (Cl. 97—23.)



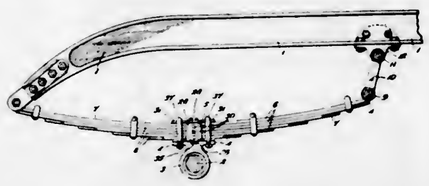
In a plow, a pair of parallel moldboard frame members, each having a rigid connection at its lower end with the upper edge portion of the plow share, said frame members being fashioned with parallel longitudinally extending guide grooves in their inner faces adjacent to the upper edge thereof and with longitudinally extending guide shoulders offset outwardly from their inner faces along the lower edges thereof, a pair of transversely disposed parallel rollers rotatably supported between the frame members adjacent to the upper and lower ends thereof, an endless apron passed around said rollers, and spaced transverse slats secured to the inner side of said apron and arranged with their opposite ends in position to slidably engage the said guide grooves and in sliding contact with the inner faces of said guide shoulders.

1,427,142. RACK. FREDRICK J. WOLFF, Newark, and ARNOLD H. WEGENER, Hoboken, N. J. Filed Jan. 8, 1921. Serial No. 435,803. 1 Claim. (Cl. 211—14.)



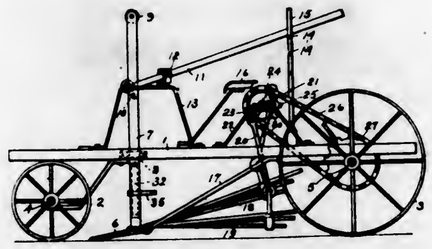
In a device of the kind described, a pair of laterally spaced bottom bars, a pair of laterally spaced top bars, partition members supported between said top and bottom bars to provide a plurality of vertical compartments, a sliding gate member in front of said compartments, said gate member comprising interconnected horizontal bars

and vertical bars, said vertical bars being spaced apart at a distance equivalent to the width of said compartments and disposed when said gate member is closed midway between the sides of said compartments, upwardly projecting brackets secured to the upper horizontal bar of said gate member, said top bars having longitudinal



slots through which said brackets project, rollers journaled in connection with said brackets to ride on said top bars, guide lugs projecting downwardly from the lower horizontal bar of said gate member, said bottom bars having longitudinal slots in which said guide members ride, and means for securing said gate member in closed position.

1,427,143. TYPEWRITING MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 3, 1918. Serial No. 252,377. 15 Claims. (Cl. 197—82.)



1. In the carriage escapement of a typewriting machine, the combination with an escapement rack, of a normally engaged stepping dog, a normally disengaged dog, means for adjusting said disengaged dog to vary the extent of drop, and means for arresting said stepping dog earlier in its stepping motion when said disengaged dog is adjusted for a long drop than when adjusted for a shorter drop or for no drop.

1,427,144. VEHICLE SPRING AND CLIP THEREFOR. GEORGE E. WYNNE, Lenoir, N. C., assignor of twenty per cent to W. B. Lindsay and twenty per cent to W. L. Lenoir, both of Lenoir, N. C. Filed Feb. 1, 1921. Serial No. 441,661. 5 Claims. (Cl. 267—53.)

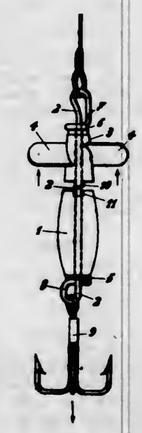
3. A vehicle spring clip comprising a base member provided with a depending boss and with rigid angularly disposed side members each of which is provided with a slot and with a perforation; a top plate member adapted to engage said side members; and means adapted to coact with said perforations and said top member to temporarily hold all of said members in place upon a spring, substantially as described.

1,427,145. POTATO DIGGER. FRANC A. YANTZ, Burlington, Vt. Filed May 25, 1921. Serial No. 472,340. 5 Claims. (Cl. 55—111.)

1. In a potato digger the combination with a frame mounted on wheels and adapted to be drawn over a row of potatoes, of a plow adapted to lift the potatoes, brace rods secured to the plow and pivoted at their rear ends to the frame, screen rods pivoted to the plow and extending rearward therefrom and means for supporting their rear ends, vertical bars secured to the plow and extending upwardly therefrom, a cross bar connecting the vertical bars, a lifting lever pivoted at its forward end to said cross bar and means for locking it to prevent depression of the plow, and means carried by one of the vertical bars for sweeping the potato tops to one side.

4. In a potato digger the combination with a frame mounted on wheels and adapted to be drawn over a row of potatoes, of a plow adapted to lift the potatoes, brace rods secured to the plow and pivoted at their rear ends to the frame, screen rods pivoted at their forward ends to the plow and extending rearward therefrom, vertical bars secured to the plow and extending upward therefrom and means connected with said vertical bars for raising the plow and holding it against depression, and means in rear of the screen rods for delivering the potatoes to one side of the path of movement of the machine.

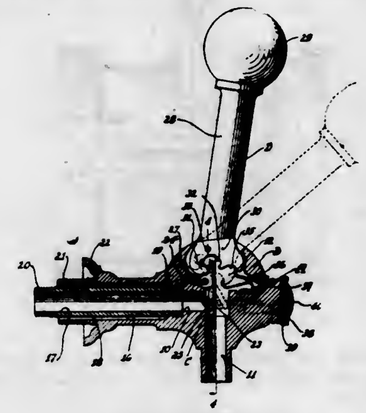
1,427,146. TIRE-PRESSURE METER. ADOLPHUS A. ANDERSON, Hagerman, Tex. Filed Jan. 6, 1922. Serial No. 527,373. 2 Claims. (Cl. 116—34.)



2. In an automatic pressure meter of the character described, the combination of a main tube attached to the valve stem of a pneumatic tire tube, a longitudinally expansible flexible tube within the said main tube, a valve mounted on the movable end of the said expansible tube, means to normally hold the valve in closed position, a rocker arm pivotally mounted and engageable with the stem of the said valve, a spring trip member carried by the said rocker arm, an adjustable nut mounted in the tube and adapted to be longitudinally movable for setting the valve to various pressures, a trip pin carried by the adjustable member, and adapted to engage the rocker arm when excessive pressure occurs, and an annular lip adapted to engage the low pressure trip member when a low pressure occurs, either of the said trip members

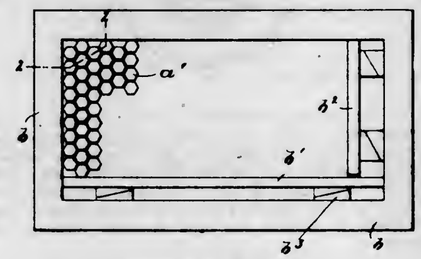
being adapted to operate the rock arm for moving the valve stem to open the said valve, a signal whistle and

means mounted in the body of the whistle to be actuated by the air escaping from the tube for sounding the said whistle.



1,427,147. ARTIFICIAL BAIT. WILHELM BARSCH, Lucerne, Switzerland. Filed Sept. 16, 1919. Serial No. 324,168. 1 Claim. (Cl. 43—47.)

An artificial bait comprising two loose body parts one of which being a head provided with fins and the other being a back part heavier than the head both rotatably mounted on a common wire pin and axially displaceable thereon, the wire pin forming at each end an open eyelet to receive on one end the line, on the other the fish hook, the two body parts being provided one with a tooth the other with a corresponding groove to work substantially as described and for the purpose set forth.

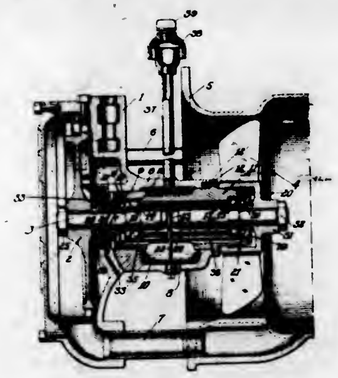


1,427,148. FAUCET FOR SODA FOUNTAINS. FREDERICK W. A. BROCKMILLER, St. Petersburg, Fla. Filed Apr. 22, 1921. Serial No. 463,672. 3 Claims. (Cl. 251—125.)

1. A faucet comprising a body having a valve seat, a flap valve arranged to fit upon the seat including a body having a transversely extending hinged barrel arranged adjacent to its upper end, a pivot pin arranged through the barrel for supporting the valve, an operating member for the valve including a lever, a head formed on the lower end of the lever, a pivot pin extending through

the head for rockably supporting the lever and head, a cam on said head arranged to engage the flap valve above the hinged barrel, and a leaf spring engaging the head on the opposite side thereof from the cam for normally holding the cam in engagement with the flap valve.

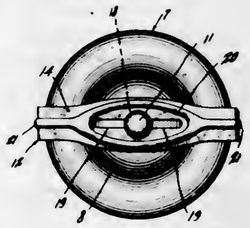
1,427,149. ARTIFICIAL COMB AND THE ART OF PRODUCING THE SAME. WALTER G. COOK, Watertown, Mass. Filed Nov. 17, 1919. Serial No. 338,701. 8 Claims. (Cl. 6—10.)



1. The process of producing artificial honey combs which consists in forming the material selected for the comb into a cellular comb-like structure by molding it between suitable dies and then dis-integrating the die material itself so as to separate the dies from the comb structure without tearing or breaking the cell-walls substantially as described.

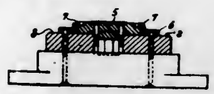
4. A die for forming honey combs comprising opposed members of soluble material compressed to a suitable degree of hardness and cohesion to form a molding agent for producing a comb-like structure out of an interposed body of plastic material.

1,427,150. TURBINE-DRIVEN BLOWER. FRANK H. C. COPPUS, Worcester, Mass., assignor to Coppus Engineering and Equipment Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 2, 1920. Serial No. 400,746. 12 Claims. (Cl. 230—11.)



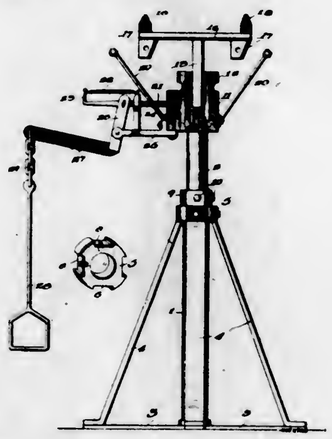
8. In mechanism of the class described, the combination with a shaft provided with a fan and a casing

provided with a reservoir for lubricant, of a sleeve providing bearings for said shaft and insertible, with



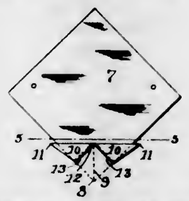
said shaft, into said reservoir, and means for admitting air to said reservoir from beyond the zone of suction of said fan.

1,427,151. JAR CLOSURE. ORIN C. DAVIS, Manistee, Mich. Filed Dec. 1, 1921. Serial No. 519,203. 3 Claims. (Cl. 215—91.)



1. A jar closure comprising a cover having a boss provided with a head; and a yoke journaled and held on the boss beneath the head, the yoke having an opening receiving the boss and of less diameter than the head, the yoke being equipped with a slot communicating with the opening and providing for a distortion of the yoke sufficiently to permit the head to pass through the opening.

1,427,152. METAL CONTAINER AND THE LIKE. ALFRED BERTHOLD ANDREAS FICH, Copenhagen, Denmark. Filed Sept. 20, 1920. Serial No. 411,490. 4 Claims. (Cl. 113—15.)



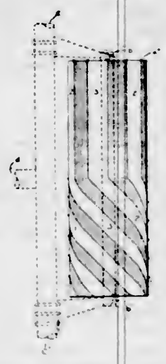
1. An apparatus for producing weakened lines in metal tin plate comprising a die; and an edgewise disposed steel strip inserted in said die, said strip having a working edge rectangular throughout and projecting beyond the pressing face of said die, said rectangular working edge being entirely free from any adjacent members so as to insure that the entire edge will act upon the metal plate worked upon and will exert a compressing action, as distinguished from a displacing action, along the lines to be weakened in said plate.

1,427,153. MOTOR STAND. CHARLES VIGUS FISHER, Muncie, Ind. Filed Mar. 31, 1920. Serial No. 370,209. 3 Claims. (Cl. 29—89.)

1. A device of the character specified comprising a sectional post, the sections being adjustable vertically with respect to each other, means for holding the sections in adjusted position, a block connected with the uppermost section, and a motor supporting bracket adjustably connected with the block, normally active means for holding the bracket in adjusted position with respect to the block, and a treadle for releasing said means.

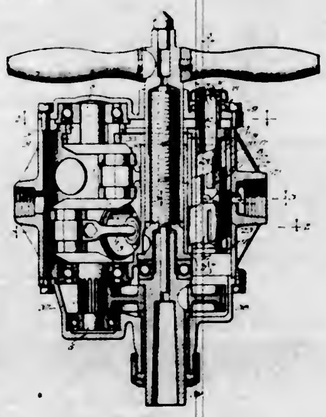
1,427,154. FLEXIBLE SHINGLE. ALBERT ABBE GRISWOLD, Providence, R. I., assignor of one-half to John Francis Chevalier, Brookline, Mass. Filed Feb. 14, 1921. Serial No. 444,970. 4 Claims. (Cl. 108—8.)

1. A flexible shingle having two oppositely disposed turned under fastening flaps with ends which protrude beyond the edges of the shingle, said fastening flaps being adapted to go under the edges of shingles previously laid, for the purpose as described.



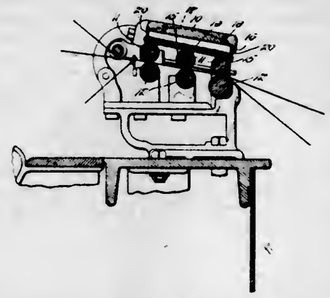
1,427,155. COLLAPSIBLE ARBOR. HIRAM L. HAVEN, Lexington, Mass. Filed July 20, 1921. Serial No. 486,143. 5 Claims. (Cl. 279—7.)

1. An arbor comprising in combination, a casing adapted to be mounted on the live spindle of a lathe; a one-piece work-holding member located within said casing and having a threaded contractible and expansible work-receiving portion projecting beyond the outer end



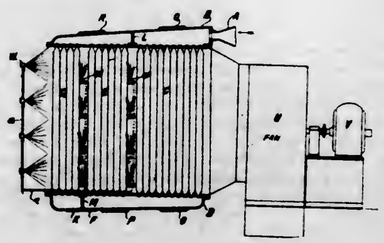
of said casing; a plug mounted within said work-holding member and secured against longitudinal movement with reference to said casing; and means for moving said work-holding member longitudinally in either direction within the casing, said casing, said work-holding member and said plug each being provided with coacting cam faces which serve to contract the work-receiving portion of the work-holding member upon movement of said member in one direction, and to expand said portion upon movement of said member in the opposite direction.

1,427,156. GAME. THOMAS H. JOHNSON, Philadelphia, Pa. Filed Nov. 7, 1919. Serial No. 336,386. 5 Claims. (Cl. 46—59.)



1. In a game, the combination of a rotatable target, a plurality of divisions on said target, distinguishing features on said divisions, said divisions and distinguishing features being positionally changeable with reference to the axis of rotation of said target.

1,427,157. FLUID-PRESSURE MOTOR. WILLIAM H. KELLER, MAX MAXIMILIAN, and ALBERT SCHINKEL, Grand Haven, Mich., assignors to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 15, 1918. Serial No. 228,570. 17 Claims. (Cl. 121—33.)

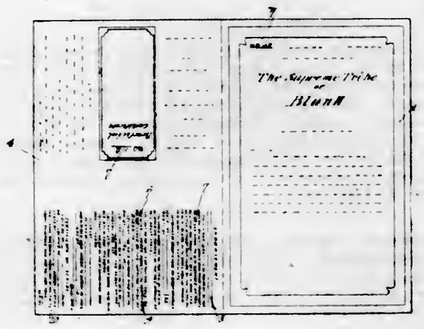


1. A motor having, in combination, two cylinders arranged at an angle to each other, a casing located in the angle between the cylinders, means providing passageways connecting said casing to both of the cylinders, said casing having two diametrically opposite inlet ports, a sleeve extending concentrically within said casing and forming an annular chamber in the casing, said sleeve having two exhaust ports therein, two segmental valve members mounted in said annular chamber, each of said valve members having an inlet port and an exhaust port adapted to register alternately with one of said passageways, the inlet ports of the valve members being arranged to communicate with the respective inlet ports of the casing, and the exhaust ports of the valve members being arranged to communicate with the respective exhaust ports of said sleeve, and means for oscillating said valve members.

1,427,158. TOP-ROLL CLEARER BOARD AND APRON CLIP FOR DRAWING FRAMES. ARTHUR H. LAMBERT and JOSEPH DUBOIS, Biddeford, Me. Filed Mar. 23, 1921. Serial No. 454,738. 5 Claims. (Cl. 19—139.)

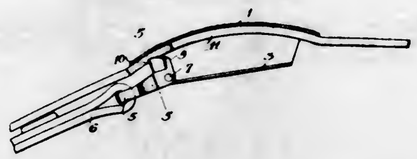
5. A clearer board for the top rolls of drawing frames and aprons mounted upon the under face thereof, the aprons at their forward ends being held spaced a greater distance from the face of the board than at their rear ends and the distance between the forward and rear ends of the aprons being greater than the distance between the forward and rear faces of the forward and rear rolls respectively whereby to cause the apron to extend down over the front roll.

1,427,159. AIR-COOLED OR EVAPORATIVE SURFACE CONDENSER. JAMES MACLEOD, Glasgow, Scotland, assignor of one-half to Hugh Reid, Glasgow, Scotland. Filed Feb. 28, 1921. Serial No. 448,700. 3 Claims. (Cl. 257—39.)



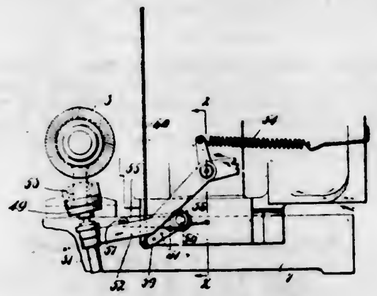
1. A condenser having surface heat-exchanging tubes or elements in groups, the rows of tubes or elements of each group being staggered with relation to the rows of elements of an adjacent group, means for passing a cooling medium successively over the tubes or elements of said groups, and means for spraying evaporative liquid on the elements of the first group traversed by the cooling medium.

1,427,160. HOOK-SWITCH MECHANISM. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 19, 1917. Serial No. 202,739. 7 Claims. (Cl. 179—178.)



6. In a telephone instrument, a support, a hook switch mounted thereon, a switch lever therefor, having a plurality of operative positions and a normal position, a latch for retaining said lever in one of its operative positions, a pin on said support on which said latch is rotatably mounted, said latch including a hook extending vertically from said pin and a member integral with said hook extending in one direction to close a portion of the open side of the hook to provide a constricted entrance to said hook.

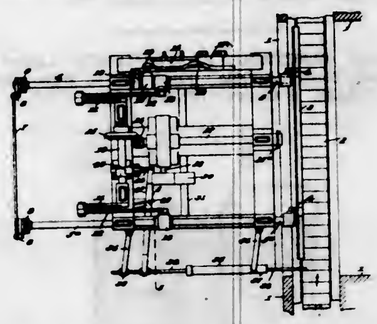
1,427,161. CERTIFICATE. EDWIN MAHLON MASON, Crawfordsville, Ind., assignor to The Supreme Tribe of Ben Hur, Crawfordsville, Ind. Filed Aug. 8, 1918. Serial No. 248,968. 1 Claim. (Cl. 283—54.)



The combination in a single paper, of an insurance certificate having an identifying character and a draft having a duplicate of said character, said draft adapted to be removed from the certificate and presented to a bank for payment like an ordinary draft, there being means for indicating the points along which the draft is to be separated from the certificate, said certificate containing a statement of certain conditions upon which the payment of the insurance is dependent, said conditions including a promise to pay a definite specified portion of the insurance as a death benefit immediately upon the death of the insured and without other proof of death than the affidavit of the beneficiary verified by the certificate of the agent of the payor, the said draft being drawn for the amount of said death benefit and payable upon the death of the insured, there being arranged upon the back of the draft, and within the area to be removed from the certificate, an affidavit and a certificate, said affidavit to be executed by the beneficiary prior to presentation for payment and setting forth that the conditions of the certificate have been complied with, and said certificate to be signed by the agent of the payor prior to presentation of the draft for payment and vouching for the truthfulness of the facts in the certificate.

1,427,162. BELT BUCKLE. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,169. 2 Claims. (Cl. 24—191.)

1. A belt buckle comprising a buckle frame having a clamping surface thereon, and a pivoted clamping member having a rib for cooperation with the clamping surface on the buckle frame, said rib extending in the direction of the axis of rotation of the clamping member and having a surface which gradually increases its distance from the axis of rotation of the clamping member and also gradually shifts about said axis of rotation.



1,427,163. BLADE-SHARPENING MACHINE. WILLIAM E. NICKERSON, Cambridge, Mass., assignor to Gillette Safty Razor Company, Boston, Mass., a Corporation of Delaware. Original application filed Nov. 19, 1917. Serial No. 202,708. Divided and this application filed Oct. 28, 1919. Serial No. 334,081. 5 Claims. (Cl. 51—263.)

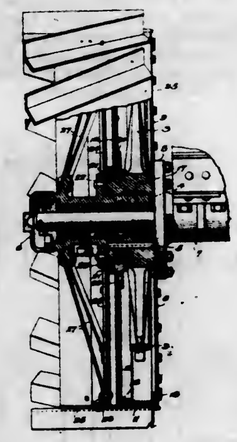
1. Means for applying dressing to a grinding wheel, comprising a stick of dressing paste, a holder to which the stick is secured at one end, and a support in which the holder is detachably mounted for rotation on an axis extending lengthwise of the stick.

1,427,164. LEER FEEDER. RAYMOND W. NIVER, Elmira, N. Y., assignor to Thatcher Manufacturing Company, Elmira, N. Y., a Corporation of New York. Filed Feb. 3, 1922. Serial No. 533,792. 25 Claims. (Cl. 198—24.)

19. In a leer feeder, the combination of a continuously moving carrier adapted to transport articles transversely of the entrance passage of a leer, means movable transversely across the carrier toward and from the leer and adapted to transfer articles from the carrier and longitudinally of said passage when moving toward the leer, a stop preventing articles being positioned in the path of said transfer means while the latter is moving across the carrier toward the leer, said stop being automatically rendered inoperative as soon as the operative member of

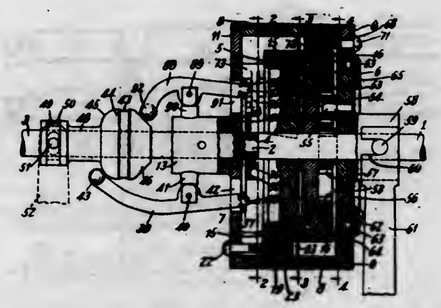
the transfer means has passed over the carrier toward the leer, and means for effecting vertical movement of the operative member of the transfer means during its movement away from the leer.

1,427,165. CLOSURE FOR ENVELOPES OR SIMILAR WRAPPERS. LUIS ARNAVAT OLIVÉ, Barcelona, Spain. Filed Oct. 6, 1919. Serial No. 328,783. 2 Claims. (Cl. 229—78.)



1. A clasp comprising a member having a flexible central arm and a pair of side arms which converge to one end of the central arm, the opposite end of said central arm being widened, said widened end having side flanges and a locking tongue between and spaced from said side flanges, and a second member having attaching means and also having a casing to receive the widened end of the central arm of the first named member and a locking tongue in said casing for engagement with the first named locking tongue.

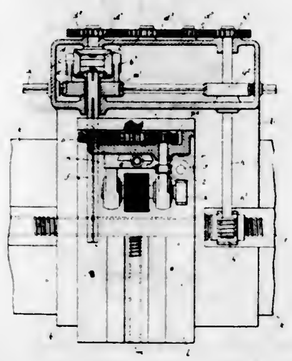
1,427,166. TANK OR STORAGE RECEPTACLE. WILLIAM H. PARTON, Huron, S. Dak., assignor of one-half to Wear-Ever Tank & Paint Co., Huron, S. Dak. Filed Oct. 14, 1920. Serial No. 416,786. 4 Claims. (Cl. 220—5.)



4. In an expansible tank having a foundation, forming the bottom, built of hard mineral material in the ground, a central post placed firmly in the ground and extending upwardly through said bottom to the top of the tank, a cylindrical wall around the edge of said bottom, said wall comprising a plurality of corrugated sheet metal sections having overlapping edges provided with elongated holes and bolts engaging in said holes to draw the edges together, a packing of porous material being inserted between the edges of said sections and between said bottom and post on the one hand and said bottom and the sides on the other hand.

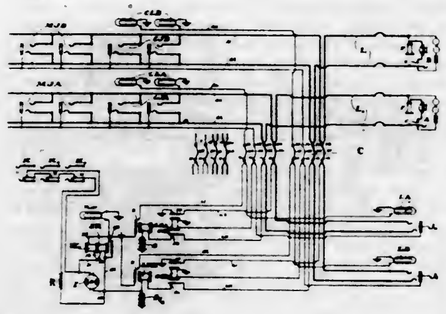
1,427,167. TRACTION WHEEL. HUGH PARTRIDGE, Jacksonville, Fla., assignor to Partridge Tractor Company, Inc., Jacksonville, Fla., a Corporation of Florida. Filed Feb. 7, 1920. Serial No. 356,870. 3 Claims. (Cl. 74—7.)

1. The combination with a traction wheel having a hub and a relatively wide rim, a toothed gear wheel keyed to the hub and a pinion meshing with said gear wheel, of a guard concentric to said traction wheel and arranged wholly within the space bounded by the inner surface of the rim of the traction wheel and the planes of the opposite edges of said rim, said guard enclosing said gear wheel and pinion and comprising peripherally connected inner and outer plates, the inner plate having openings to accommodate said hub and pinion and the outer plate having an opening to accommodate said hub.



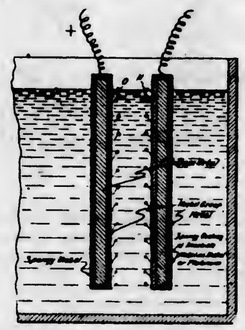
1,427,168. REVERSIBLE CLUTCH. RUDOLPH PINDER, Medford, Mass. Filed Nov. 23, 1920. Serial No. 426,080. 11 Claims. (Cl. 74—59.)

1. A clutch member having, in combination, a pair of shafts, a pair of clutch members mounted upon one of said



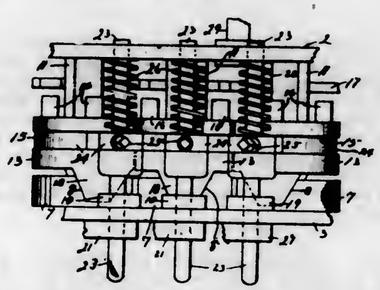
shafts, one of said clutch members being fast to said shaft and the othed clutch member being loose thereon, means interposed between said last named clutch member and said shaft adapted to rotate said clutch member in a reverse direction upon said shaft, an outer clutch member fast to the other of said shafts and comprising a casing surrounding said first and second named clutch members, a pair of clutch rings, one of said clutch rings being located between said first and second named clutch members and the outer clutch member, means to hold one end of each of said clutch rings in fixed relation to said outer clutch member and means to cause said clutch rings to frictionally engage the clutch member located therein.

1,427,169. MILLING SCREW THREADS. GEORGE RICHARDS and LESLIE NEWMAN BURT, London, and JAMES EDWARD FREEBORN, Walthamstow, England. Original application filed Apr. 8, 1920, Serial No. 372,315. Divided and this application filed Feb. 1, 1921. Serial No. 441,666. 3 Claims. (Cl. 10—154.)



3. In a screw-thread milling machine wherein a cutter of the "hob" type is employed, the combination, with a saddle-traversing worm-shaft, of a cutter-spindle driving shaft, the two shafts being coupled together by way of a differential speed-gear.

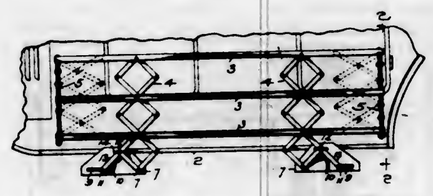
1,427,170. TELEPHONE-EXCHANGE SYSTEM. FRANK M. SLOUGH, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 5, 1917. Serial No. 205,599. 12 Claims. (Cl. 179—54.)



5. In a telephone system, the combination with a plurality of multiply connected switchboard lamps, of a resistance unit and a source of current in the common circuit thereof, an intermittent shunt for the said resistance unit, and a manual switch for varying the quantitative value of the said resistance unit.

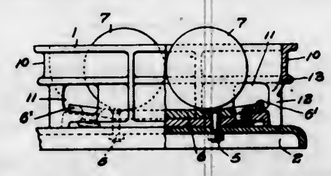
1,427,171. ELECTROLYTIC APPARATUS. ALBERT W. SMITH, Cleveland, Ohio. Filed Nov. 8, 1920. Serial No. 422,638. 8 Claims. (Cl. 204—4.)

1. Apparatus for the electrolytic decomposition of water comprising, in combination, a pair of electrodes consisting of metals from the nickel group in the periodic table having their faces covered by spongy coatings of metals unaffected by the electrolyte.



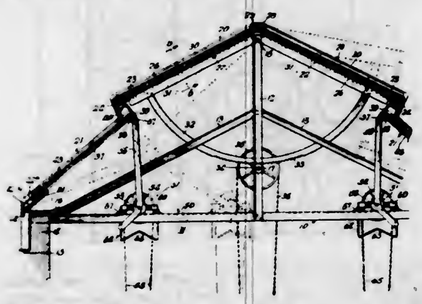
1,427,172. LACE-BRAIDING MACHINE. EDWIN LEROY SMITH, Philadelphia, Pa., assignor to Oscar Branch, Philad lphia, Pa. Filed July 1, 1921. Serial No. 481,761. 4 Claims. (Cl. 96—12.)

4. In a device of the character stated, a bottom plate, a locking block having oppositely disposed V shaped notches and a central recess, a fixed post the lower end of which is threaded and adapted to pass through the locking block and the bottom plate, a collar formed integral with said post adjacent its lower end, said collar registering with the recess in the locking block, and a nut on the threaded end of said post for securely fastening the latter and the locking block upon the bottom plate.



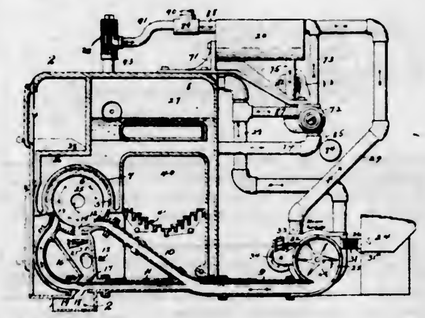
1,427,173. LUGGAGE RACK. FRANK M. STOLL, Denver, Colo. Filed Dec. 15, 1920. Serial No. 430,916. 5 Claims. (Cl. 224—29.)

3. A collapsible luggage rack comprising in combination with the running board of an automobile, brackets extending below the edge thereof, lazy tong uprights movably connected to the brackets, parallel rails pivotally connected to the uprights and spaced to fall upon each



other when said uprights are in a folded condition, and means on the brackets engaging with the uprights for locking the latter in their extended position.

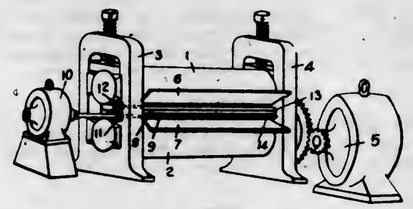
1,427,174. ROLLER SIDE BEARING. ARNOLD STUCKI, Pittsburgh, Pa. Filed June 23, 1921. Serial No. 479,777. 3 Claims. (Cl. 64—64.)



1. A side bearing for lower bolsters of railway cars, comprising a housing having its bottom forming a bearing surface transverse to the bolster and provided with side and end walls or barriers, said bearing surface being inclined upwardly at its ends and level intermediate its ends, and a pair of free rolls in said housing and resting on said bearing surface and normally arranged to rest upon the level intermediate portion of the bearing surface.

1,427,175. VENTILATING SKYLIGHT. JOSEPH SYLVAN, Cicero, Ill. Filed Dec. 17, 1921. Serial No. 523,019. 15 Claims. (Cl. 108—16.)

4. A ventilating skylight comprising in combination with a frame structure, including frame bars, upper and lower panel sections on said frame structure, means providing a hinged connection between the bottom margin of said lower panel section and said frame structure about which said lower panel section may be swung, an operating device mounted on and capable of being moved along one of said frame bars, and means connecting said operating device with the inner margin of said lower panel section.



1,427,176. STEAM GENERATOR. JOHN TAYLOR, Pocatello, Idaho. Filed Mar. 20, 1920. Serial No. 367,384. 6 Claims. (Cl. 110—28.)

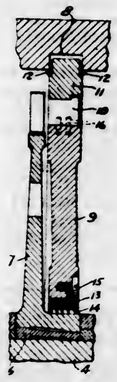
1. The combination with a furnace and boiler of a fuel feeding means operated by boiler pressure and means operable upon increase of boiler pressure beyond a predetermined point to admit boiler pressure to the exhaust line of the pressure operated fuel feeding means to retard the same.

5. In a device of the character described the combination of a circular fine fuel burning combustion chamber and water spaces some of which constitute a water jacket for said combustion chamber, a second combustion chamber lying at one side of the first named combustion chamber, and provided with grates for coal or wood, and a cinder trap in the rear of the first named combustion chamber and communicating with the last named combustion chamber there being a port formed in the rear wall of the first named combustion chamber and communicating with said cinder trap.

1,427,177. MACHINE FOR SEPARATING STICKERS ON THE OPENING FLOORS OF TIN MILLS. JOSEPH CARL TIMBERLAKE, Wheeling, W. Va. Filed Jan. 24, 1921. Serial No. 439,640. 5 Claims. (Cl. 29—17.)

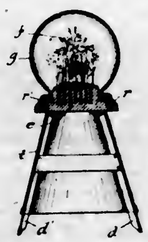
5. A sheet separating apparatus comprising frame members, pulling rollers extending between said frame members and supported thereby, said rolls being spaced apart to afford a passage between them, revolving shafts extending between said frame member at one side of said rolls and approximately opposite said passage, beaters carried by said shafts for interposition between partially separated sheets of a pack to complete the separation of the sheets as they are drawn between the rolls, and guides, between which the beaters are positioned, extending between said frame members and supported thereby.

1,427,178. PROPELLER. WALLACE RUPERT TURNBULL, Rothesay, New Brunswick, Canada. Filed Mar. 13, 1919. Serial No. 282,255. 7 Claims. (Cl. 170—163.)



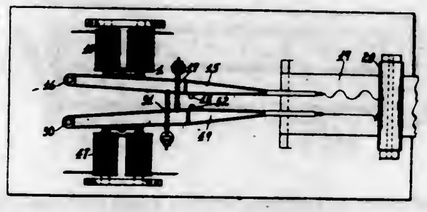
1. A propeller comprising a hub, tapered spindles carried by the hub, the said spindles being in radial align-

ment, blades rotatably mounted on the spindle and having radial recesses in which the spindles are mounted, means on the outer ends of the spindles for preventing endwise



displacement of the blades, anti-friction means between the blade and the last said means for reducing friction, an arcuate rack, and means coacting with the rack for rotating the blades to alter the pitch of the propeller.

1,427,179. DIAPHRAGM FOR STEAM TURBINES. CARL R. WALLER, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed Jan. 3, 1921, Serial No. 434,416. Renewed July 3, 1922. Serial No. 572,679. 5 Claims. (Cl. 253—78.)

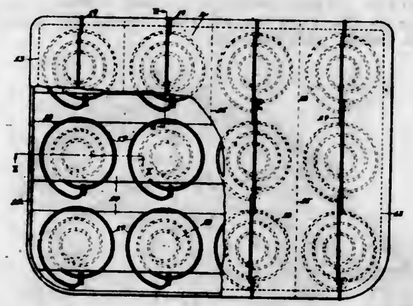


1. A turbine having a casing with a groove for a diaphragm, a diaphragm having an annular seat on each side thereof, and a non-corrodible metallic liner mounted on each seat, each liner engaging one of said seats.

1,427,180. PERPETUAL-FLOWER URN. ISAAC T. WELCH, Council Bluffs, Iowa. Filed Dec. 16, 1921. Serial No. 522,961. 3 Claims. (Cl. 47—18.)

1. In a memorial urn; a transparent, truncated globe; a flange on said globe; a parted, flanged ring encircling the neck of said globe over the flange of said globe; a base engaging said ring against the flange of said globe; and artificial flowers or other decorative work attached to said base and extending into the said truncated globe.

1,427,181. SOUNDING APPARATUS. LESTER L. WESTLING, Alameda, Calif. Filed July 19, 1920. Serial No. 397,460. 2 Claims. (Cl. 181—0.5.)

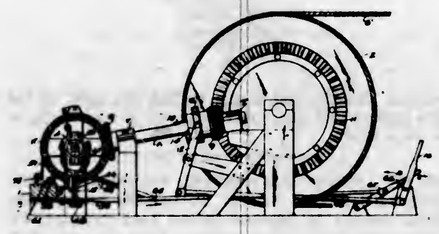


1. A sounding apparatus including a vibrating body whose period of vibration is known, means for transmitting sound through a sound medium, through which medium the speed of sound is known, means for recording the vibrations of said vibrating body, and means for recording the sound of said sound transmitter and the echo of said sound through said medium from a reflecting surface.

1,427,182. PHARMACEUTICAL COMPOUND. HERMANN WEYLAND, HANS HAHL, and RUDOLF BERENDES, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Aug. 8, 1921. Serial No. 490,698. 1 Claim. (Cl. 167—9.)

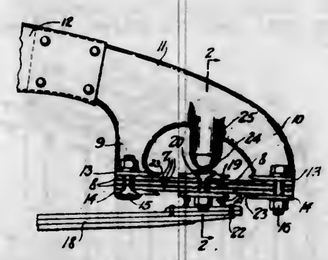
The herein-described new pharmaceutical compound being a condensation product obtained from toluene, sulfur and aluminium chlorid; being a yellowish oil boiling at from 150 to 230° C. under a pressure of 3 mm. containing from 23 to 25 per cent sulfur; and being a valuable remedy against scabies, substantially as described.

1,427,183. SPRING SEAT. ABE WILK, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 13, 1918. Serial No. 228,351. 12 Claims. (Cl. 155—25.)



1. In a device of the class described, the combination of springs and a fabric covering for said springs, strips of fabric stitched at intervals to said first fabric forming receptacles, closed at their two ends and opened at their sides to receive the end coils of the springs, said coils being inserted through the open sides of the receptacles when the covering is assembled on the springs.

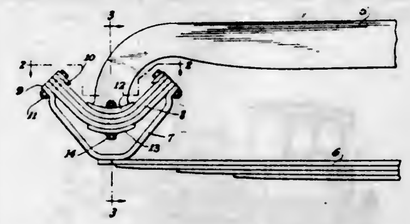
1,427,184. CLUTCH AND BRAKE CONTROL MECHANISM. JACOB E. WINTERS, Taft, Calif. Filed Apr. 20, 1920. Serial No. 375,353. 2 Claims. (Cl. 192—17.)



1. A brake and clutch mechanism comprising a shaft, a driving gear loosely mounted on said shaft, a second

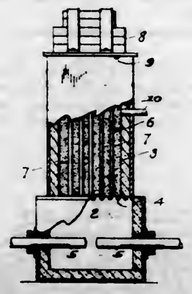
shaft having mounted on one end a pinion gear engaging the driving gear and on the other end a slidably mounted pinion gear adapted to engage and disengage a master gear fastened to a band wheel and rotatably supported by a shaft, a drum fixed on the first mentioned shaft, and clutch friction bands, each extending contiguous with either half of the periphery of said drum and covering part of the width of the drum, one end of each band being connected to either portion of a U-shaped member and the other end of each band being connected similarly to a second diametrically opposed U-shaped

member, said U-shaped members having a shank rotatably journaled in the driving gear, a collar slidably mounted on the first mentioned shaft and having means for rotating said shank, said collar having an actuating lever, a brake friction band extending contiguous with the periphery of the remaining portion of the drum, one end of the brake band being anchored to a fixed element and the other end being fixed to a rocker arm fastened to said element, and the slidably mounted pinion gear having actuating means for engaging and disengaging said master gear.



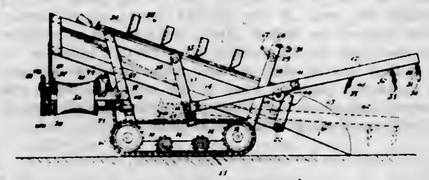
1,427,185. SPRING SUSPENSION. HARVEY W. BELL, Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed July 10, 1920. Serial No. 395,266. 12 Claims. (Cl. 267—54.)

1. The combination with the supporting members of a vehicle body, of a coupling between said two members and comprising a flexible link rigidly secured and fixedly held at its opposite ends to one of said members and a connection between the other member and the intermediate portion of the flexible link between the rigidly held ends thereof.



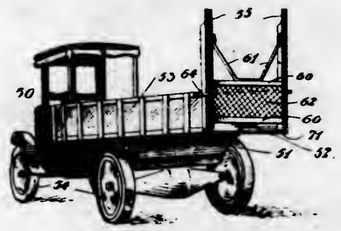
1,427,186. SPRING CONNECTION. HARVEY W. BELL, Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed Feb. 4, 1921. Serial No. 442,437. 8 Claims. (Cl. 267—52.)

1. The combination with two relatively movable parts of a vehicle, of a yoke secured at its intermediate portion to one of said members, a bowed flexible link rigidly secured at its opposite ends to the arms of the yoke and



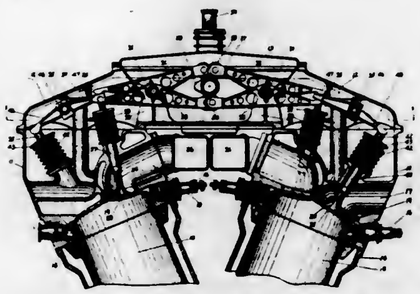
means for rigidly securing the other member to the body of said bowed link.

1,427,187. PROCESS OF REDUCING TUNGSTIC OXIDE TO TUNGSTEN METAL. WARREN F. BLEECKER, Boulder, Colo., assignor to The Tungsten Products Company, Boulder, Colo., a Corporation of Colorado. Filed July 8, 1920. Serial No. 394,630. 3 Claims. (Cl. 75—17.)



1. The herein described method of reducing tungstic oxides to metallic tungsten consisting in applying heat interiorly of a mass of tungstic oxides in the presence of a suitable reducing agent, said mass having artificially produced voids or passages for the circulation of gases.

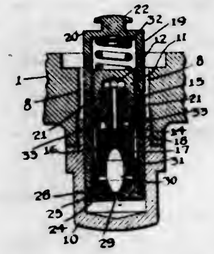
1,427,188. STREET-CLEANING APPARATUS. HERBERT A. BOLDT, Buffalo, N. Y. Filed July 10, 1920. Serial No. 395,188. 5 Claims. (Cl. 198—10.)



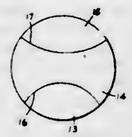
1. A street cleaning apparatus comprising a frame, an endless belt elevator, a scoop pivoted to said frame in front of said elevator, a crank journaled on said frame, a vertically oscillating lever pivoted centrally to said crank, a link pivoted at opposite ends to the rear end of said oscillating lever and to the said frame, and a shovel plate connected to the front end of said oscillating lever and positioned at all times in substantially the same angular position.

1,427,189. LOADING AND UNLOADING APPARATUS FOR TRUCKS. VICTOR L. J. BOURGEOIS, Montreal, Quebec, Canada, assignor of one half to Nazaire Dubois, Montreal, Quebec, Canada. Filed Dec. 4, 1920. Serial No. 428,352. 35 Claims. (Cl. 214—85.)

1. The combination with a truck, including channeled members at the rear portion thereof, of a frame hinged to the rear of said truck, and foldable from operative to inoperative position within said channeled members attached to the truck, latches for locking the frame within the said channeled members, and a strip attached to one of the foldable portions of the frame, forming an end gate for said truck.



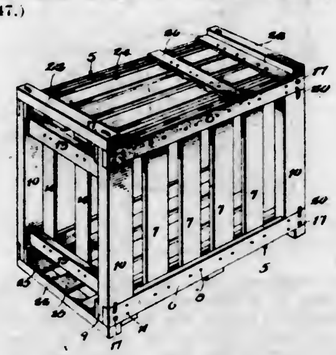
1,427,190. LUBRICATING SYSTEM. GARNET C. BROWN, Dayton, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 27, 1919. Serial No. 279,574. 5 Claims. (Cl. 184—6.)



4. In a lubricating system for engines, a plurality of substantially parallel hollow shafts, a conduit extending across one end of the engine and having ports located adjacent the ends of the parallel shafts, ports formed in the ends of the hollow shafts and adapted to register with the ports in the conduit for admitting lubricant to the hollow shafts, said conduit being positioned above the horizontal plane of some of the safts and below the horizontal plane of the other shafts, and an oil supply pipe communicating with the conduit.

1,427,191. PRESSURE REGULATOR. WORTHY C. BUCKNAM, Jersey City, N. J., assignor, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1919. Serial No. 342,633. 7 Claims. (Cl. 50—23.)

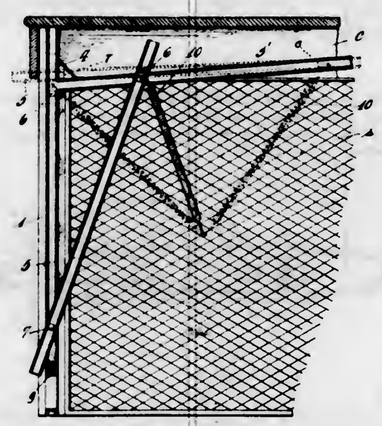
1. A pressure-regulator having a body, a diaphragm, an inlet nozzle projecting away from the diaphragm, and a movable seat cooperative with the nozzle, a bridge in the body on the middle of which the nozzle is supported, and a stirrup comprising a bifurcated body having interrupted screwthreads on the ends of its limbs, a detachable end member having screw-threads to engage said interrupted threads, and means to lock the ends of the limbs against springing away from the screw-threads on the end member.



1,427,192. TRIFOCAL LENS AND PROCESS OF MAKING THE SAME. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Oct. 24, 1921. Serial No. 509,069. 10 Claims. (Cl. 88—54.)

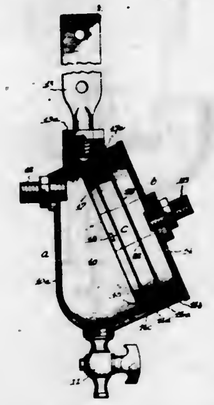
1. A trifocal lens formed of a single piece of glass having a near vision portion, a distance portion, and a near-distance portion intermediate said near vision and distance portions, with the lines of joinder of said portions being curved in directions opposite to each other, substantially as set forth.

1,427,193. CRATE. JESSE COBB, Laredo, Tex. Filed July 27, 1921. Serial No. 487,840. 5 Claims. (Cl. 217—47.)



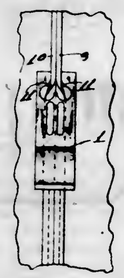
1. A crate having side walls, end walls arranged between and inwardly of the ends of the side walls, U-shaped pivot pins having branches extending through said end walls and having connecting portions extending through the end portions of the side walls, said pivot pins also being provided with branches flatly engaging the outer sides of the side walls, and cross beams arranged at the ends of said side walls and projecting beyond the longitudinal edges of the same to form rests.

1,427,194. NUT LOCK. ROBERT L. COCHRANE, Chicago, Ill., assignor to National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Continuation of application Serial No. 464,076, filed Apr. 26, 1921. This application filed Nov. 29, 1921. Serial No. 518,627. 3 Claims. (Cl. 151—36.)



1. A spring lock washer having in plan the shape of a split ring, the ends of the washer being deflected in opposite directions with the body portion intermediate such ends formed into a series of interconnected synergetic curves, the crests of said curves and one end of the body being in one plane on one side of the medial horizontal plane of the washer and the crests of the curves and the end of the washer on the opposite side of said medial plane being likewise in one plane, the planes being all parallel.

1,427,195. GATE FOR COVERED VEHICLES. ALVIN DAVID DALY, Tucson, Ariz. Filed Jan. 7, 1922. Serial No. 527,698. 1 Claim. (Cl. 296—45.)



The combination with a vehicle body cover having a way therein, posts upon the opposite sides of said way, a gate for said way, of vertical channeled strips secured to the inner sides of said posts, substantially horizontally extending channeled strips formed integral with and communicating with the upper portions of said vertical strips, said vertical strips each having an opening therein at points slightly above the connection to the horizontal strips, oppositely disposed pivot pins arranged on the upper and lower ends of the several sides of said gate and adapted to be received in the channels of said vertical and longitudinal strips, rubber stops closing the lower ends of the channels of said vertical strips and adapted to retain said gate in a vertical position within the vehicle body cover way, the pivot pins upon the lower end of said gate being adapted to be inserted within the openings in the vertical strips and rest upon the upper walls of the horizontal strips for retaining the gate in its open position, a coil spring connected to said gate and adapted to apply pressure thereto when the gate is in its open or closed position, substantially as and for the purpose specified.

1,427,196. MEANS FOR FILTERING GASOLINE. HUGH A. DEEKS, Moose Jaw, Saskatchewan, Canada. Filed Jan. 31, 1920. Serial No. 355,492. 7 Claims. (Cl. 210—165.)

1. In means for filtering gasoline, a casing having an end-wall adapted to extend in an approximately vertical plane and having its opposite end open with the plane of the open end inclined to such end wall, and with the direction of increase in distance between such planes extending toward the bottom of the casing, and a removable unit mounted within and closing such open end, said end wall and said unit respectively carrying the inlet and outlet for gasoline, said unit carrying successive filter media between such inlet and outlet with the several media extending in spaced-apart planes substantially parallel to the plane of the casing open end.

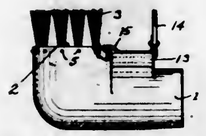
1,427,197. SEAM-GUIDING PRESSER FOOT. GEORGE F. EGAN, Chicago, Ill. Filed June 14, 1920. Serial No. 388,775. 3 Claims. (Cl. 112—235.)

1. A seam guiding presser foot comprising a member having needle slots, a guideway, the walls of which are bevelled at their upper inner ends, apertures having a portion of their lower walls bevelled communicating with said guideway and a flap spreading nose in the center line of the guideway.

1,427,198. SOUND BOX. ELMER FLETCHER, Chicago, Ill., assignor, by direct and mesne assignments, to Fletcher-Wickes Company, a Corporation of Illinois. Filed Nov. 2, 1917. Serial No. 199,807. 3 Claims. (Cl. 274—27.)

1. In a sound box, the combination of a case having a fixed back-wall provided with a centrally disposed outlet

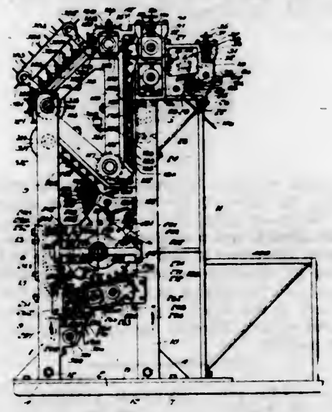
connection, a diaphragm in the box, operating means for the diaphragm, and an intermediate wall integral with the case and spaced from the diaphragm and the back-wall, having its central portion imperforate and a series



of openings adjacent its periphery disposed in entirety outwardly of the outlet connection to prevent direct passage of any sound from the diaphragm into the outlet connection, the diaphragm being insertable and removable through the front of the case.

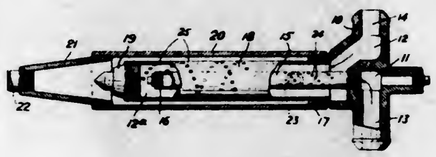
1,427,199. LOTION. ISAAC O. FOOTE, Sidney, Iowa. Filed July 14, 1919. Serial No. 310,563. Renewed Jan. 28, 1922. Serial No. 532,501. 1 Claim. (Cl. 167—9.)

A composition of matter comprising substantially equal parts of water, witch hazel extract and a mixture of equal parts of alcohol and spirits of camphor, together with smaller proportions of resorcin, Epsom salts, salt petre and carbolic acid.



1,427,200. VACUUM-CLEANER NOZZLE. AUGUST C. FRANK, Hayward, Calif. Filed Sept. 29, 1920. Serial No. 413,503. 1 Claim. (Cl. 15—155.)

A vacuum cleaner nozzle comprising a tube having an opening on one side, a series of brushes partially around the side opening, a channel member secured to the nozzle for holding each bunch of bristles and a spring for holding the bristles in the channel members.

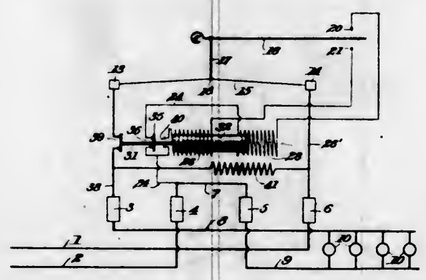


1,427,201. DECORTICATING-MACHINE. HERBERT F. FREULER and CHARLES L. MORRILL, Berkeley, Calif., assignors to Interstate Fibre Company, Ltd., Honolulu, Territory of Hawaii, a Corporation of the Territory of Hawaii. Filed June 4, 1919. Serial No. 301,626. 44 Claims. (Cl. 19—20.)

20. The combination with a machine for removing the cuticle and cutis from fibrous stock, including a pair of feed rollers, of an attachment for said machine comprising a pair of feed rollers arranged in advance of the first mentioned feed rollers, pulp-stripping means interposed

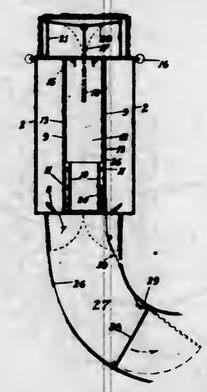
between said first and second feed rollers and over which the stock is drawn, means for splitting the pulp after being stripped from said stock.

1,427,202. LIQUID-FUEL BURNER. RADCLYFFE FURNESS, Jenkintown, and MARTIN G. BITTEL, North Glenside, Pa. Filed Dec. 9, 1920. Serial No. 429,359. 6 Claims. (Cl. 158—73.)



1. A fuel burner having an annular liquid chamber, means for delivering liquid fuel under pressure thereto, a fluid supply within the liquid chamber for injecting fluid under pressure into the liquid fuel stream within the liquid chamber to foam the liquid, an annular mixing chamber surrounding the liquid fuel chamber and concentric therewith, means for supplying under pressure an atomizing fluid to the mixing chamber, and means for causing jets of foam to be directed into the mixing chamber into the path of the fluid moving therethrough.

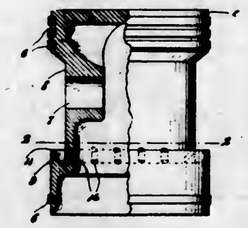
1,427,203. CURRENT-LIMITING DEVICE. BENJAMIN E. GETCHELL, Greensburg, Pa., assignor to Railway and Industrial Engineering Company, Greensburg, Pa., a Corporation of Pennsylvania. Filed Aug. 25, 1917. Serial No. 188,256. 2 Claims. (Cl. 177—347.)



1. In a current-limiting device, the combination with a main circuit, of a thermal elements responsive to current flowing in said circuit, said element consisting of a "hot wire" fixed at its ends, a switch member to which the middle of the hot wire is mechanically and electrically connected, a pair of contacts arranged to be engaged by said switch member, means in the main circuit including a switch for increasing the resistance of the circuit and

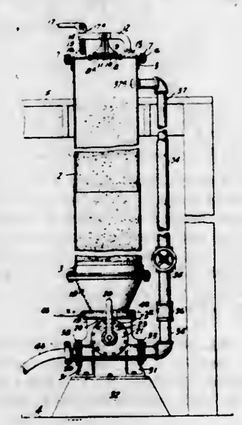
auxiliary circuits connected with said contacts and including each said switch member and a portion of said hot wire, one of said auxiliary circuits including means

for opening the said main circuit switch and the other auxiliary circuit including means for closing the said main circuit switch.



1,427,204. FLYTRAP FOR USE WITH LIVE STOCK. JOHN W. GIBBONS, Merced Falls, Calif., assignor of one-half to Timothy Carlon, La Grange, Calif. Filed Nov. 5, 1920. Serial No. 421,857. 4 Claims. (Cl. 119—156.)

1. A fly trap for live stock comprising a shed through which the stock passes, a fly-trapping enclosure on top of the shed arranged to receive the flies from the shed therein, doors at the entrance end of the shed normally open to allow the stock to pass into the shed, a platform in the shed onto which the animal steps and arranged to move automatically from the entrance to the exit end of the shed with the weight of the animal thereon, and means actuated by the movement of the platform for automatically closing said doors.

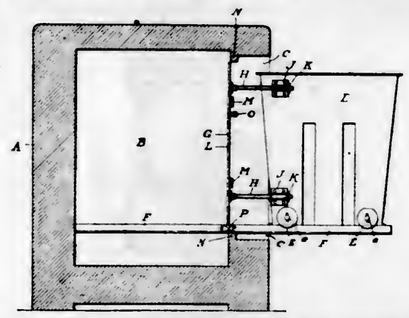


1,427,205. PISTON. HUGO B. GRANT, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,564. 5 Claims. (Cl. 74—108.)

1. A piston of the type described comprising a hollow body provided with wrist-pin bearings, and having in its outer surface an annular depression completely encircling the same circumferentially, and located in the plane of the wrist-pin bearings, an encircling oil-retaining groove at

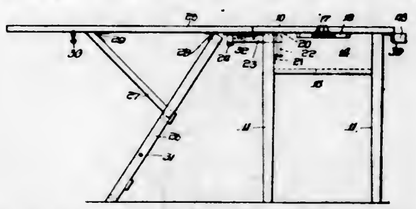
the bottom of the depression opening thereinto, and means for maintaining a constant oil level in the groove.

1,427,206. SAND-BLAST APPARATUS. JOHN E. GREEN, Johnstown, Pa. Filed Oct. 9, 1916. Serial No. 124,648. 4 Claims. (Cl. 51—12.)



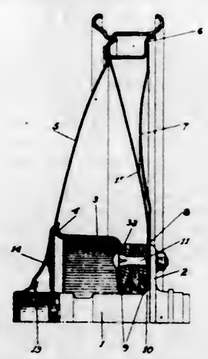
4. A sand blast apparatus comprising in combination, a sand hopper having an outlet, a valve body having a chamber into which said outlet discharges, a sliding gate for shutting off the hopper outlet from said chamber, said valve body having a hollow interior, means connecting the interior of said valve body and said hopper with a source of fluid pressure, a discharge conduit in communication with the interior of said valve body, a rotatable valve mounted in said valve body for controlling the flow of sand from said chamber, and means for rotating said valve to discharge accumulations of sand within said valve body.

1,427,207. REFRIGERATOR. GUSTAV J. GRUENDLER, Clayton, Mo. Filed Nov. 9, 1921. Serial No. 514,005. 7 Claims. (Cl. 62—66.)



1. In a refrigerator having an ice chamber therein with an opening in the wall thereof, an ice container adapted to be moved into or out of said chamber through said opening, a shield adapted to be carried by said container, means slidably mounted on said container for carrying said shield whereby the distance separating said shield

and said container may be increased or decreased, and said shield arranged to engage the sides of said opening

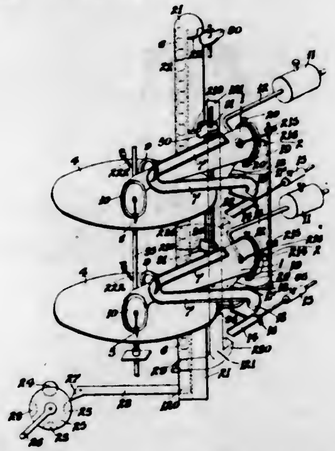


whereby said opening is closed when said container is moved out of said chamber.

1,427,208. COMBINATION TABLE. JOHN L. HAPPY, Chicago, Ill. Filed Oct. 30, 1918. Serial No. 260,245. 4 Claims. (Cl. 68—10.)

2. In a device of the class described, the combination of a table, an ironing board, a pivot secured to said table under its top for supporting said board, a leg for supporting the outer end of said board, whereby said board may be swung under the top of said table when not in use or to extend from said table when in use as desired, and a bracket mounted at one end on said pivot and pivotally connected at its other end to said board.

1,427,209. DISK-WHEEL CONSTRUCTION. GEORGE E. HARVEY, Buffalo, N. Y., assignor to Harvey Rim & Wheel Company, Buffalo, N. Y. Filed Oct. 3, 1921. Serial No. 505,039. 4 Claims. (Cl. 301—63.)

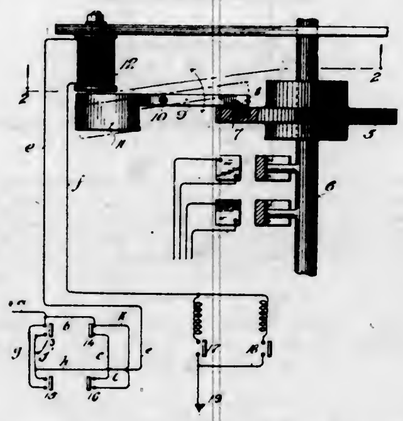


1. A disk wheel structure including inner and outer disks, a shell adapted to fit over a hub, the outer disk being fixed to the rim-edge of the shell but the inner disk being spaced inwardly of the shell, and filler members between the shell and inner disk.

1,427,210. APPARATUS FOR AGITATING FLUID MASSES. BENTON A. HOOK, Escondido, Calif. Filed Mar. 29, 1920. Serial No. 369,649. 1 Claim. (Cl. 259—18.)

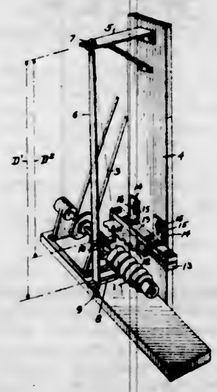
In a cooking apparatus, a kettle, a steam pipe extending into the kettle, a conical tube with its larger end contiguous to the outlet of said pipe, a spider connecting the tube and the pipe to permit ready inflow of the substance in the kettle into the tube when steam is discharged from the pipe, and an elbow attached to the end of the tube for directing the discharge.

1,427,211. GRAMOPHONE AND LIKE SOUND-REPRODUCING INSTRUMENT. JOHN JOFEH, London, England. Filed Jan. 5, 1922. Serial No. 527,262. 10 Claims. (Cl. 274—10.)



2. A sound reproducing instrument having means for lowering the stylus on to its records comprising a ball adapted to roll down a pivoted inclined guide-way fixed on the pivoted tone arm, the guide-way being arranged in such a manner that the ball can roll down it from the delivery to the discharging end, and provided with a stop arranged to arrest the ball at a position where its weight will lower the stylus into operative engagement with the record, mechanism being provided for releasing the stop when the sound box arrives at a predetermined position.

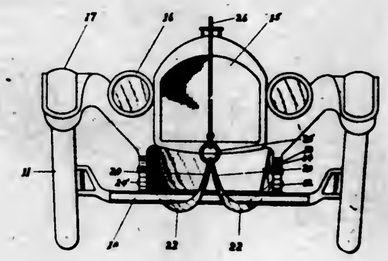
1,427,212. DOOR-CONTROLLED LOCKING MECHANISM FOR VEHICLES. ERNEST KELLER, Woodhaven, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed June 13, 1919. Serial No. 304,031. 8 Claims. (Cl. 180—82.)



1. In a locking mechanism for vehicles, a controller for the propelling power thereof, a lock for said controller

operating when in action to lock said controller in off position, electrical devices for controlling said lock, and switches controlled by the doors on the vehicle, said

switches being arranged in parallel and associated in the circuit of said electrical devices for independently operating the same.

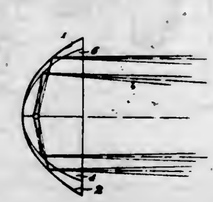


1,427,213. LATHE. JOHN S. LAPP, Le Roy, N. Y., assignor to Lapp Insulator Company, Le Roy, N. Y., a Corporation of New York. Filed Sept. 15, 1919. Serial No. 323,809. 5 Claims. (Cl. 142—7.)

1. The combination with a rotatable work spindle, of a tool holder supported at one end by a universal joint, a cutting tool carried by said holder, a templet and means carried by said holder between said joint and said tool for co-operating with said templet in controlling the movement of said tool.

1,427,214. VEHICLE-LIFTING MEANS. ARTHUR D. LIGHTNER and EDWARD HOLMES, Toledo, Ohio, assignors to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 13, 1918. Serial No. 234,197. 12 Claims. (Cl. 294—82.)

1. A device for lifting automobiles, comprising two members converging at one end to a point and the other end of each member extending under the front axle and engaging the lower edge thereof; hooks on the last

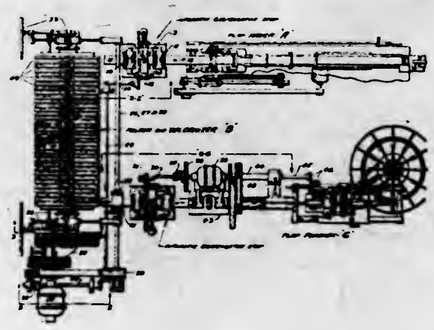


mentioned ends of said members adapted for hooking over the springs of said automobile; and detachable means for connecting the converging ends together.

1,427,215. PROCESS OF MANUFACTURE OF DIALKYLSULPHATES. LEON LILIENFELD, Vienna, Austria. Filed Jan. 10, 1921. Serial No. 436,381. 5 Claims. (Cl. 260—98.)

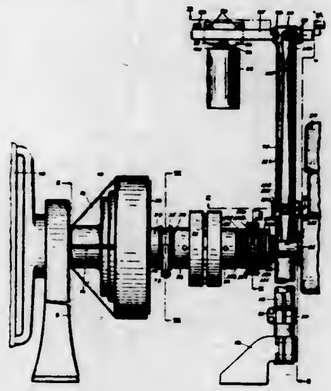
1. A process of producing dialkyl sulfate by means of sulfuric anhydrid which comprises causing sulfuric anhydrid to act upon aliphatic alcohols in the presence of a substance which is active as a dehydrating agent in such mixture, but which will not cause the decomposition of dialkyl sulphate.

1,427,216. REFLECTOR FOR AUTOMOBILE HEADLAMPS. WILLIAM F. LITTLE, Nepperhan Heights, N. Y. Filed Feb. 25, 1922. Serial No. 539,171. 4 Claims. (Cl. 240—41.)



1. A reflector for automobile head lamps comprising hyperbolic sections, one of said sections projecting a central beam of high candle-power, and two of said sections projecting oblique bands of light of less illumination, said bands overlapping each other, merging with a central beam and extending obliquely downward and outward to illuminate the sides of the road, substantially as set forth.

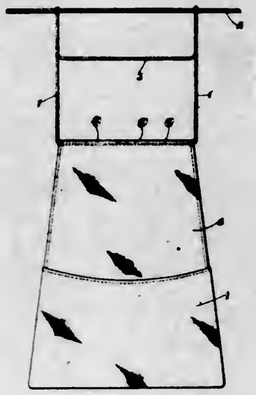
1,427,217. MOLDING MACHINE. ROBERT MCCLENATHEN, Akron, Ohio, assignor to Kelly-Springfield Tire Company, Akron, Ohio, a Corporation of New Jersey. Filed Jan. 31, 1922. Serial No. 533,087. 17 Claims. (Cl. 18—6.)



1. A molding and vulcanizing machine of the character

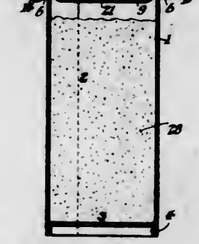
described, comprising revolubly associated vulcaniser drums having alined grooves, endless pressure members

conformable to and coacting with said grooves, and means for exerting selective tension on the pressure members.



1,427,218. ENGINE-TESTING APPARATUS. WILLIAM R. MCCULLA, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 4, 1918. Serial No. 215,415. 43 Claims. (Cl. 265—1.)

5. In an apparatus for testing mechanisms including a shaft, a power testing apparatus, driving connections between said shaft and said apparatus, a member mounted on said shaft and having opposing abutments, a pair of annular bearings mounted on said member between said abutments, a thrust ring interposed between said annular bearings, and means for applying a predetermined thrust to said thrust ring.

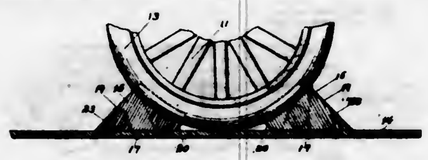


1,427,219. CLOTHESPIN BAG. MARY A. MABON, St. Louis, Mo. Filed Feb. 7, 1921. Serial No. 443,032. 3 Claims. (Cl. 150—1.)

1. A device of the character described, comprising a section of wire bent to form a supporting frame having its upper and lower ends relatively rigid, and including a horizontal bag suspending part at its lower end; and a bag swinging from said suspending part composed of a rear wall in connection with said suspending part extending to the bottom of the bag, and a front wall having its side and bottom edges secured to the side and bottom edges of the rear wall and having its upper end normally spaced from the rear wall by gravity alone

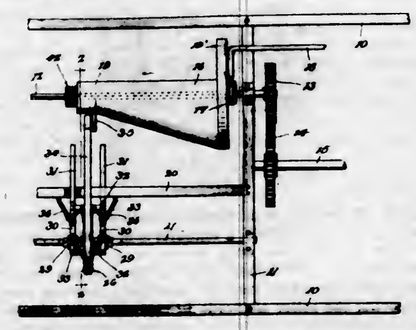
when the device is suspended, and the walls of the bag being freely foldable in any direction throughout their length and width.

1,427,220. MUNITION CASING. VICTOR MAUCK, Norristown, Pa. Filed Feb. 28, 1918. Serial No. 219,674. 2 Claims. (Cl. 220—57.)



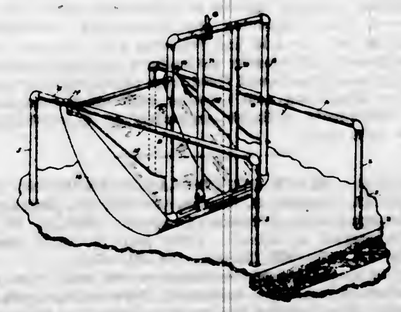
1. In a munition casing, the combination with a tubular shell; of a closure for said shell including a lid, a rigid yoke having arms overhanging said lid, with hooks at their outer ends, one of said arms having a slot extending through it, and its hook pivotally engaged in said slot; all of said hooks being adapted to directly detachably engage said shell.

1,427,221. TANNING HIDES AND SKINS. ERNEST WYNDHAM MURRAY, Sheffield, England, assignor, by mesne assignments, to Pyrotan Leather Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 11, 1919, Serial No. 276,339. Renewed May 16, 1922. Serial No. 561,418. 3 Claims. (Cl. 149—5.)



3. A method of tanning hides and skins which comprises alternately subjecting the hides to agitation in contact with a solution including a soluble aluminum salt and a soluble pyrophosphate, and retaining them in a quiescent condition while still in contact with the solution until the temperature is reduced, and thereby preventing the temperature from exceeding 107° Fahrenheit.

1,427,222. WHEEL BLOCK. JOHN C. MILLER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1918. Serial No. 246,225. 2 Claims. (Cl. 188—32.)



1. A wooden block for blocking a vehicle wheel, said block having a plane surface forming a base for said block, an end face making an acute angle with said base whereby the block may be readily nailed to a flooring, and a third face shaped to conform to and adapted to engage the outer surface of a vehicle tire.

1,427,223. TRANSMISSION. OLIN P. MILLER, Woodland, Ga. Filed Jan. 12, 1922. Serial No. 528,745. 5 Claims. (Cl. 74—14.)

1. In a transmission, a drive shaft, a driven shaft, a ratchet mechanism associated with the driven shaft, a longitudinally tapered driving cam fitted slidably upon the driving shaft and constrained to rotate therewith, said cam being provided at its ends with portions concentric to the driving shaft, and a reciprocatory bar having one end bearing constantly upon the circumferential surface of the cam and at its opposite end co-operating with the ratchet mechanism.

1,427,224. STALL. EDWARD HOPKINS MOFFATT and WILLIAM HENRY MOFFATT, Toronto, Ontario, Canada. Filed Oct. 24, 1921. Serial No. 510,041. 2 Claims. (Cl. 119—27.)

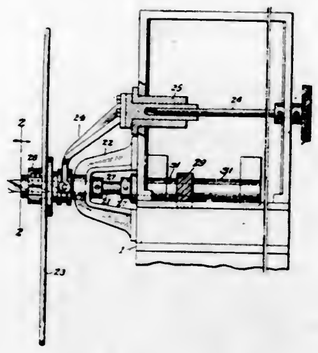
1. A stall comprising side members, a stanchion pivotally supported by said side members and adjustable in longitudinal relation thereto, and a manger secured at one end to the lower end of said stanchion and at its other being provided with lateral extensions slidable along said side members.

1,427,225. RETAINING CAGE FOR MULTIPLE-ROW BALL BEARINGS. FREDERICK E. MUELLER, Mount Vernon, N. Y., assignor to The Norma Company of America, Long Island City, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,376. 6 Claims. (Cl. 64—59.)

6. A retaining cage for double row ball bearings comprising an annular cage body having spaced openings for the protrusion of the balls therethrough and provided with circumferentially continuous side flanges and an intermediate circumferentially continuous flange constituting a separator between the ball rows, each of said flanges being provided with spaced ball receiving depressions to yieldably hold the balls against relative circumferential movement while permitting of their free individual rotation and apertures in said flanges of less diameter than the ball receiving depressions and in concentric relation therewith.

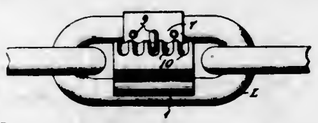
1,427,226. MOLD AND METHOD OF TREATING SAME. HUBERT A. MYERS, Toledo, Ohio, assignor to The Hubert A. Myers Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 30, 1920. Serial No. 406,900. 9 Claims. (Cl. 22—189.)

4. The method of treating molds to prevent pitting of the mold and the casting, which consists in heating the mold and while hot rubbing zinciferous material over the face and into the pores of the casting surface of the mold, the mold being heated.



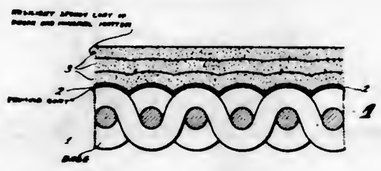
1,427,227. LIQUID-FUEL BURNER. DAVID J. NYSEWANDER, Toledo, Ohio. Filed Sept. 10, 1918. Serial No. 253,479. 1 Claim. (Cl. 158—58.)

In a liquid fuel heater, a member having an annular chamber and a solid core portion, the chamber being connected with the source of fuel supply, a burner so located below the member to cause the flame of the burner to impinge on the solid core portion and connected with the outlet of the chamber of the said member for heating the fuel supply to the said member, a plurality of burners connected at a point intermediate



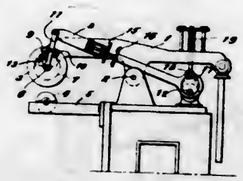
the first named burner and the said member, a short gas pipe closed at one end connected intermediate the first named burner and the chamber and intermediate the chamber and the last named burner and forming a closed chamber communicating with the pipe into connecting the first named burner and the said member with the last named burners.

1,427,228. SHUTTER MECHANISM FOR MOVING-PICTURE MACHINES. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1916, Serial No. 102,071. Renewed Jan. 21, 1922. Serial No. 531,003. 4 Claims. (Cl. 88—19.3.)



1. In a moving picture machine the combination of a casing, a shutter shaft supported therein and projecting beyond the front wall of said casing, a spiral cam on said shutter shaft, a shutter mounted thereon for rotation with the shaft and longitudinal movement thereon and means for effecting longitudinal movement of the shutter comprising a nut supported in said casing for axial movement in parallelism with said shutter, a connection between said nut and said shutter and a screw threaded in said nut projecting through said casing and beyond the rear wall thereof whereby the shutter may be adjusted by the rotation of the screw.

1,427,229. CONVEYER CLEAT. FRANK M. ROBBINS and JOSEPH SHERMAN HARTLEY, Chattanooga, Tenn., assignors to Ross-Meehan Foundries, Chattanooga, Tenn., a Corporation of Tennessee. Filed Jan. 30, 1922. Serial No. 532,746. 11 Claims. (Cl. 198—176.)



1. A conveyer cleat comprising a main section provided with a link receiving surface, a dovetail seat formed on said main section, a member for holding a link on said surface and provided with dovetail surfaces cooperating with said dovetail seat, and means for locking said member to said main section, said means comprising malleable lugs on one of said parts and cooperating recesses on the other of said parts.

1,427,230. INSULATING MATERIAL. FREDERICK SALATHE, Jr., Santa Barbara, Calif. Filed Aug. 9, 1919. Serial No. 316,504. 11 Claims. (Cl. 91—68.)

8. An insulating material, comprising a base, a coating carried by the base, said coating comprising a non-fibrous mineral and a resilient spongy binder, said mineral being greatly in excess of the binder.

1,427,231. ELECTRIC SEAM-WELDING MACHINE. EDMUND SCHRÖDER, Berlin, Germany. Filed Mar. 15, 1920. Serial No. 366,176. 10 Claims. (Cl. 219—6.)

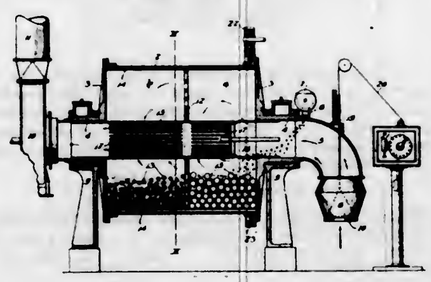
1. In an electric seam welding machine, the combination of a roller electrode, a mandrel shaped electrode, and a circuit for the two, with means for moving the work piece with its overlapped seam edges through between these electrodes and along the mandrel electrode, means for moving the roller electrode in company with the work piece intermittently, means for a return movement of the roller electrode, means for pressing the latter against the seam of the work piece, and means for closing the said circuit on the return movement of the roller electrode, substantially as set forth.

1,427,232. COMPOSITION AND SUBSTANCE FOR USE IN CONCENTRATION OF ORES AND METHOD OF PRODUCING SAME. ALFRED SCHWARZ, Joplin, Mo., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Mar. 6, 1917, Serial No. 152,586. Renewed June 1, 1922. Serial No. 565,128. 3 Claims. (Cl. 252.)

1. The method of producing agents and compositions for use in the concentration of ores, which comprises disintegrating selective agents by extraction first with an aqueous alkali, removing any unextracted constituents, treating with an acid and removing any separated solid constituents, and thereby obtaining a solution containing soluble constituents and freed from constituents insoluble in the alkali and acid together with other components or constituents utilizable separately or in combination with each other.

1,427,233. SHAFT CUTTING AND CENTERING MACHINE. ALBERT H. SEGLER, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1919. Serial No. 311,757. 134 Claims. (Cl. 29—27.)

1. In a machine of the character set forth, the combination of means for supporting the work, a device for cutting off an end of the work, a device for forming a center-hole therein, means operating automatically for actuating said devices in succession to effect the cutting

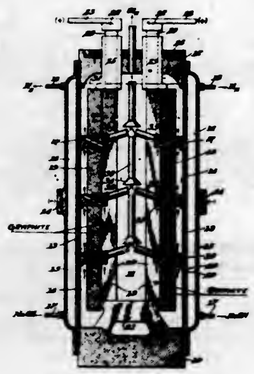


off of the end of the work and the forming of a center-hole therein and means operating automatically to discontinue the movement of said devices after each successive operation thereof.

50. In a machine of the character set forth, the combination of work-holding means constructed and arranged to support the work therein with the ends of the work accessible for operation thereon at the opposite ends of said work-holding means, and comprising a pair of members relatively movable toward and away from each other and having rotatable parts at which the work is engaged, means for rotating said rotatable parts in any position of the relative adjustment of said members, and means located at opposite ends of said work-holding means for operating on the ends of the work.

100. In combination, a reciprocable member, a second, threaded, rotatable member having threaded engagement with said first-named member, a third member arranged in alined condition with said second member and rotatable therewith, said members being relatively movable longitudinally, means controlled by the position of said third member operating when in one position to effect rotation of said second member in one direction and when in another position to effect rotation of the latter in the opposite direction, and means operated by said first-named member for effecting the shifting of said third member to effect reversal of said second member.

1,427,234. PULVERIZING MILL. DANIEL V. SHERBAN, Canton, Ohio. Filed Dec. 23, 1921. Serial No. 524,524. 5 Claims. (Cl. 83—9.)



1. A grinding mill consisting of a rotatable drum provided with grinding balls and a central axially arranged suction screen having a continuous uninterrupted receiving cavity from one end to the other.

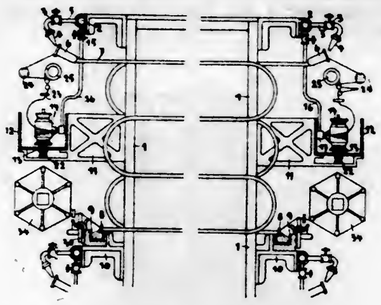
1,427,235. CONCENTRATION OF ORES. GUY E. SHERIDAN and GEORGE G. GRISWOLD, Jr., Butte, Mont. Filed Jan. 10, 1922. Serial No. 528,277. 6 Claims. (Cl. 83—85.)

1. The process of concentrating by flotation an ore containing sulfides of iron together with one or more other metallic sulfides which comprises treating the ore with a cyanide and an alkaline salt and subjecting the so treated ore to a flotation operation in which the flotation of the iron sulfide is in large part inhibited.

1,427,236. ELECTROLYTIC METHOD AND APPARATUS. JOSEPH J. SHERWOOD, St. Louis, Mo., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,568. 8 Claims. (Cl. 204—58.)

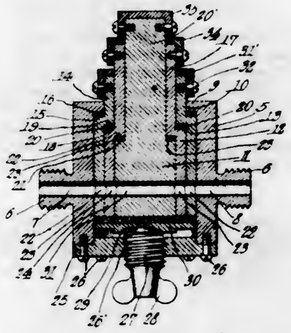
1. The hereindescribed electrolytic method comprising electrolysing a solution yielding a gaseous product, diverting the evolved gas from the active electrode face at a point or points intermediate the top and bottom thereof; and simultaneously supplying fresh electrolyte directly to the active electrode face intermediate the top and bottom thereof, whereby interference of the inflowing electrolyte with the diversion of the gas is avoided.

1,427,237. PROCESS OF SETTING TACKS IN PORCELAIN TEETH. IZUMI SHIKUSAWA, Chigusa Machi, Japan. Filed July 27, 1918. Serial No. 247,079. 2 Claims. (Cl. 32—9.)



1. The process of making an artificial tooth provided with anchoring tacks projecting from its rear face, which consist in first molding the body of the tooth in a double mold with an inclosed core of material destroyable by the heat used in baking the tooth, to leave a transverse elongated slot in the back of the tooth having an intermediately located enlargement, a plurality of headed tacks in the slot introduced through the enlargement, and locating the headed ends of the tacks at opposite ends of the slot, and then anchoring the tacks in the tooth by material susceptible to solidification.

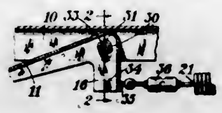
1,427,238. DEVICE FOR THROWING WASHING AND REELING SPOOLED ARTIFICIAL SILK. RUDOLF SINKWITZ, Copits, Germany, assignor to Wilhelm Kaufmann, Dresden-A, Saxony, Germany. Filed Jan. 30, 1922. Serial No. 532,830. 5 Claims. (Cl. 117—2.)



1. An improved device for throwing, washing and reeling spooled artificial silk comprising in combination a twisting spindle, a spool upon said spindle upon which the artificial thread is wound, a long washing conduit through which the thread is assisted, on being drawn therethrough, by the flow of the washing liquid, so as to

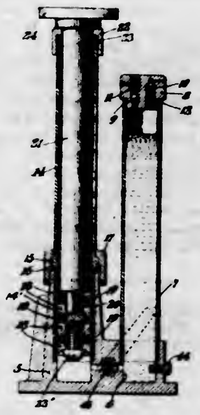
relieve tension on the thread, means for guiding the thread from the spool to the inlet orifice of said washing con-

duit, and a reel at the end of said washing conduit upon which the thread is wound.



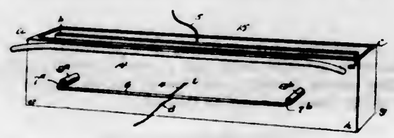
1,427,239. COMBINATION VALVE DEVICE. HARRY O. SPENCER, Cincinnati, Ohio. Filed Nov. 30, 1921. Serial No. 518,978. 2 Claims. (Cl. 251—6.)

1. A combination valve device comprising, a casing having inlet and outlet openings, said casing being provided at one end with an inwardly extending flange forming a main opening and a shoulder, a tubular valve rotatively mounted within the casing and having openings adapted to register with the inlet and outlet openings, said tubular valve being provided at one end with a reduced tubular extension extending through the main opening and forming a shoulder arranged beneath the first named shoulder, packing disposed between said shoulders, a valve rotatable within the tubular valve and having an opening adapted to register with the openings of the tubular valve, said valve having a reduced portion extending through the tubular extension of the tubular valve and having a shoulder arranged beneath the interior shoulder of the tubular valve, packing disposed between the last named shoulders, means for indicating a combination whereby the valves may be shifted to a position to bring all of the openings into registration, a follower plate arranged beneath said valves, a packing plate arranged between the follower plate and valves, and adjustable means to move the follower plate toward the valves.



1,427,240. SPRING SUSPENSION OF VEHICLES. JOSEPH REGINALD MONTAGUE STANFIELD, Cardiff, Wales, assignor of one-half to John Fifield Adye, Brentwood, Dinas Powis, Wales. Filed Jan. 5, 1922. Serial No. 527,147. 4 Claims. (Cl. 280—104.)

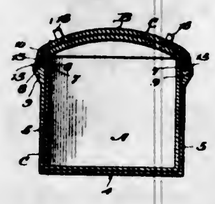
1. A spring-suspension for vehicle frames comprising in combination a plurality of wheel-carrying levers mounted each to swing in a vertical plane and disposed lengthwise of the frame, a plurality of springs each having one end connected to the free end of one of said levers, and an anchorage comprising an equalizing member jour-



nalled in the frame and disposed transversely of the longitudinal direction of the frame between its ends, which equalizing member carries radial arms terminating one at each side of the frame and anchored to the free ends of the springs.

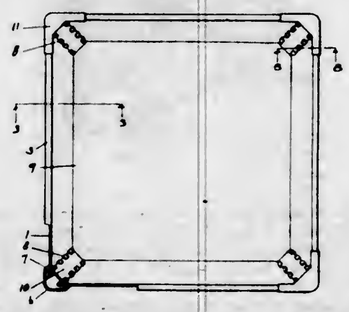
1,427,241. JACK. FREDERICK R. SUNDERMAN, Newburgh, N. Y., assignor to Sunderman Corporation, Newburgh, N. Y., a Corporation of New York. Filed Feb. 25, 1920. Serial No. 361,290. 4 Claims. (Cl. 138—9.)

1. A jack having in combination a base member, an oil reservoir, a jack cylinder seated on said base member and provided with a circumferential boss, a nut and lead packing for holding the cylinder tightly seated on said base and a pump for forcing oil from the reservoir to said cylinder through said base.



1,427,242. SAFETY DEVICE FOR MOTOR VEHICLES. MORRIS SWARTZMAN, Brooklyn, N. Y. Filed Sept. 28, 1921. Serial No. 503,819. 1 Claim. (Cl. 293—34.)

A device of the character described, comprising a four-walled frame with two holes in one rectangle or wall and two other holes similarly placed in the opposite rectangle or wall, a plate fitting into the frame said plate having holes corresponding to and placed similarly to the holes of the frame, two short rods held together by a long rod said short rods running through the holes of the frame and plate thereby supporting the plate, two hollow tubes enclosing and supporting said short rods, two curved metal strips on the frame covering up the protruding



ends of said short rods, means for pulling the short rods out of the holes, means for allowing the short rods to spring back into the holes, and means for pulling up the plate from the ground to its normal position.

1,427,243. BURIAL VAULT. CLARANCE W. THOMPSON and WILLIAM J. QUIGLEY, Wilmington, Del., assignors to Riverview Cemetery Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 15, 1921. Serial No. 492,614. 2 Claims. (Cl. 72—7.)

1. A vault comprising a bottom, a wall substantially perpendicular thereto having a groove in its upper edge and having an outer surface declining outwardly immediately below said groove, an abutment on the outside of said wall below said groove, and a cover having a protuberance arranged to be received by said groove and a depending flange arranged to abut said abutment at its end and to abut said outer surface on its inner side, said inner side of the flange being at a greater distance from said outer surface in its lower than in its upper portion.

1,427,244. METAL RECEPTACLE. FRED W. TOBEY, Grand Rapids, Mich. Filed June 27, 1921. Serial No. 480,810. 8 Claims. (Cl. 220—80.)

1. In a receptacle, the combination of the side walls provided with inturned flanges at their lower edges and with outwardly projecting beads at their upper edges, said side walls having a series of slots adjacent their vertical edges, angled corner uprights having inturned flanges on their vertical edges provided with the tongues engaging the slots of said side walls, a bottom resting on the bottom flanges of said side walls, bottom and side wall locking strips disposed behind said tongues to retain the side walls thereon, the tongues being folded upon said strips, and channeled corner irons embracing the upper ends of said corner uprights and locking strips and clamped upon the beads of adjacent side walls.

1,427,245. NONREFILLABLE CONTAINER. AURELE VERMEULEN, Los Angeles, Calif. Filed Oct. 13, 1920. Serial No. 416,639. 4 Claims. (Cl. 215—7.)

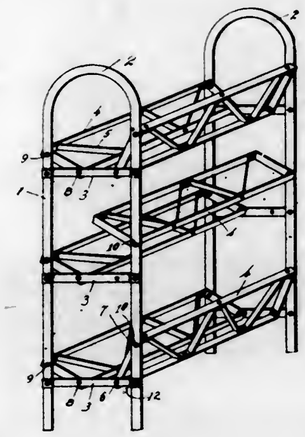
1. A container formed with an enlargement surrounding the orifice portion thereof; there being means adapted to close the orifice of said container; a sealing device having a portion thereof embedded in said enlargement and pro-

jecting from the under surface of said enlargement and over the means adapted to close the orifice.

1,427,246. EXPANDED WOOD LATH. JOHN A. WALLER, Highland Park, Ill. Filed Nov. 22, 1919. Serial No. 340,031. 2 Claims. (Cl. 72—116.)

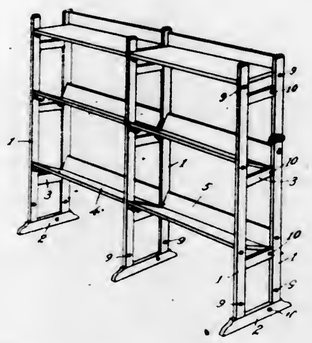
1. A wood lath consisting of a board having therein two series of parallel saw cuts, one series arranged angularly relative to the other series and joined at their proximate ends by a connective rib, said saw-cuts expanded to form strips of lath, and transverse spacers for holding said strips of lath spaced apart having integral grip portions engaged with portions of said board.

1,427,247. RACK. EDWARD B. WESTON, Dayton, Ohio, assignor to The Weston Paper and Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 17, 1920. Serial No. 352,089. 4 Claims. (Cl. 211—14.)



3. In a rack comprising single side standards and a single top cross bar, the combination with the top bar, of a shelf member for mounting on said bar, said shelf having ears depending therefrom, and interspaced to straddle said bar, and a bolt for removably mounting said shelf on said bar.

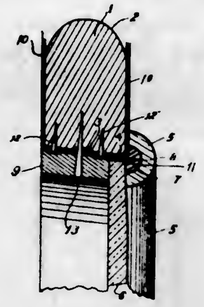
1,427,248. DISPLAY RACK. EDWARD B. WESTON, Dayton, Ohio. Filed Apr. 22, 1922. Serial No. 556,067. 3 Claims. (Cl. 211—14.)



1. In a display rack, metallic end standards with horizontal cross braces to brace and strengthen the standards,

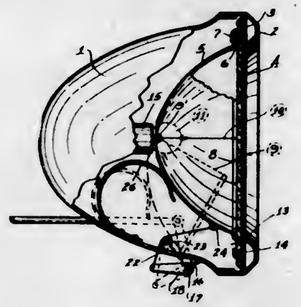
and a pair of similar rectangular metallic frames for each shelf section with similarly spaced bolt holes for each cross brace and similarly spaced bolt holes for the end standards, located above the points of attachment

of the cross braces, whereby the shelf members may be secured at a substantial angle to each other to hold the packages displayed in tilted position and all shelves may be interchanged.



1,427,249. DISPLAY RACK. EDWARD B. WESTON, Dayton, Ohio. Filed Apr. 22, 1922. Serial No. 556,069. 6 Claims. (Cl. 211—14.)

1. In a display rack, the combination of side standards provided with bolt openings triangularly arranged, a series of shelves comprising a main supporting section and a back section, and means for securing same together in angular relation, with means for securing the main shelves in the standards in horizontal or angled position, as desired.

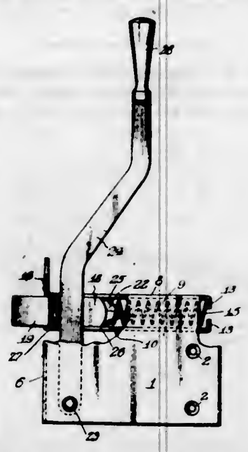


1,427,250. METAL-FACED AUTOMOBILE CURTAIN LIGHT. GEORGE WHOMES and FRANCIS H. WHOMES, Los Angeles, Calif. Filed Oct. 27, 1920. Serial No. 419,893. 5 Claims. (Cl. 296—145.)

2. In a curtain light, a finish ring having an annular concavity, a compressible gasket in said concavity, and a stay fixed to the ring and projecting from said concavity

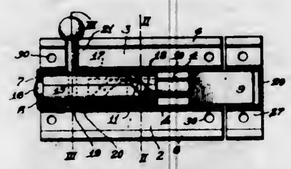
for the purpose of attaching the ring to the frame for holding a pane.

1,427,251. LIGHT-PROJECTION REGULATING MEANS. ARTHUR CHARLES WOOD, Mansfield, Ohio, assignor, by mesne assignments, to The Mansfield Lamp and Manufacturing Company. Filed Jan. 7, 1921. Serial No. 435,719. 3 Claims. (Cl. 240—44.)



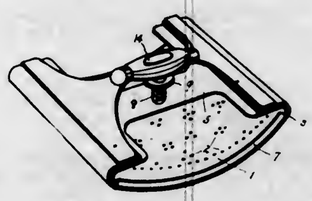
1. In a lamp for motor cars, a parabolic casing, a ring surrounding said parabolic casing and secured thereto, a reflector divided at its horizontal axis having its upper portion fixedly secured to the ring and having its lower portion hingedly connected to the rear end of the upper portion at its horizontal axis, and adapted to be tilted rearwardly from its normal position, yielding means secured to the casing and adapted to press against the hinged portion of the reflector maintaining it in normal position to form a complete reflector, as and for the purpose described.

1,427,252. DOOR-LATCH DEVICE. WILLIAM H. APPLEBY, Windsor, Ontario, Canada. Filed Jan. 19, 1920. Serial No. 352,520. 1 Claim. (Cl. 292—173.)



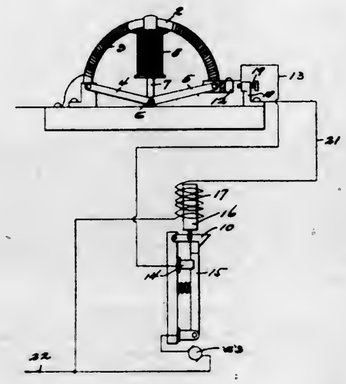
A door latch device made from a blank cut to provide a side wall, an end wall, a lug, and walls which are bent to form a housing longitudinally of the upper edge of said side wall, said housing walls having bent portions affording an end abutment, said housing walls having lever slots, a lever extending through the lever slots against said side wall, a spring in said housing against the end abutment thereof, a latch slidable in said housing and having a notch through which said lever extends, said latch having a conical end extending into an end

of said spring, a handle spindle extending through said side wall and adapted for oscillating said lever to shift



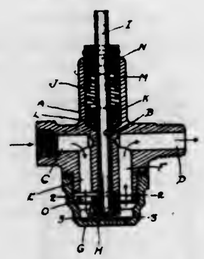
said latch in said housing, and a handle on each end of the spindle so that the latch may be operated from either side of the door.

1,427,253. BOLT FASTENER. WILLIAM H. APPLEBY, Toronto, Ontario, Canada. Filed Mar. 5, 1921. Serial No. 450,071. 4 Claims. (Cl. 292—140.)



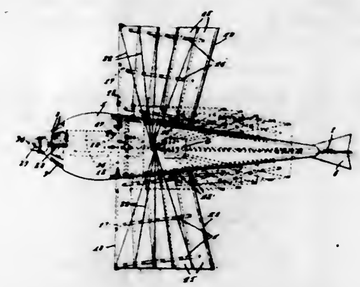
1. A bolt fastener comprising a housing having a transverse slot, a bolt having a shank in said housing, with said bolt of such configuration as to prevent its rotation in said housing, a barrel in said housing receiving said bolt shank and adapted to reciprocate said bolt shank when said barrel is turned, and means extending through the slot of said housing to facilitate turning said barrel.

1,427,254. LETTER-REPRODUCING DEVICE. JOHN PHIL. BANNIGAN, Utica, N. Y., assignor of two-thirds to Frederick B. Adams and David J. Goldstein, both of Utica, N. Y. Filed Aug. 6, 1920. Serial No. 401,684. 6 Claims. (Cl. 101—125.)



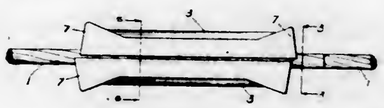
1. In a letter reproducing device, a frame having a circular base, an absorbent cloth and stencil adapted to cover said base, means for permitting the passage of ink through said frame to said cloth, the free ends of said frame being bent to form a horizontal plane, a floating plate, a handle disposed in longitudinal position relative said frame, and having brackets with plane surfaces, and a bolt for forcing the ends of said plate against the ends of said frame, whereby to clamp the ends of said cloth and stencil in place between the floating plate and the plane surfaces of the brackets.

1,427,255. ELECTRIC-CIRCUIT-PROTECTING DEVICE. SYDNEY NORTON BARUCH, San Francisco, Calif. Filed Nov. 11, 1919. Serial No. 337,346. 19 Claims. (Cl. 175—294.)



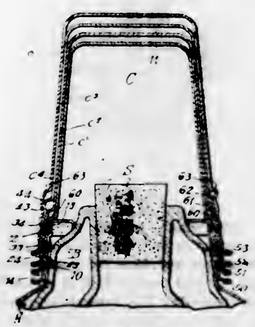
1. A protective device for an electric circuit comprising a switch having a stationary and a movable element, a thermal responsive device having a part free to move, an electromagnetically responsive device having a portion free to move, said part and said portion being attached to said movable element.

1,427,256. VALVE. FREDERICK C. BLANCHARD, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 25, 1920. Serial No. 419,216. 5 Claims. (Cl. 251—84.)



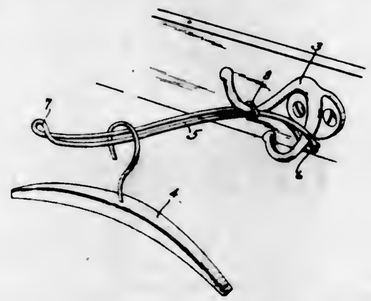
1. A valve comprising a casing having inlet and outlet passages communicating with a common chamber, a rotary disk having an aperture for registration with one of said passages, a seat for said disk comprising an annular portion surrounding the passage controlled thereby, and annularly spaced bearings for holding the disk in the plane of said seat, a stem for revolving said disk passing out from said casing, and means for resiliently holding said disk to its seat.

1,427,257. HYDROAEROPLANE. JENKIN W. BOWEN, STANLEY M. HART, and JOHN E. BOWEN, Pueblo, Colo. Filed Jan. 3, 1922. Serial No. 526,627. 6 Claims. (Cl. 244—2.)



1. The combination with a body adapted to be sealed and having longitudinal channels in the sides thereof, of a series of lapping wing sections at each side of the body, each section of each series being pivotally mounted within the adjacent channel, connections between the sections of each series, means operated from within the body for simultaneously swinging all of said sections backwardly and inwardly thereby to fold them against the sides of the body and within the channels.

1,427,258. WIRE OR CABLE COUPLING. FRANK L. BURNS and FREDERICK J. TESSIN, Three Rivers, Mich. Filed Apr. 3, 1922. Serial No. 548,915. 3 Claims. (Cl. 24—136.)

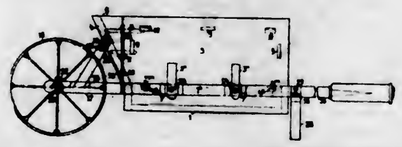


1. A rod or wire coupling comprising a pair of coacting coupling members, each having an inwardly tapered dovetailed rib at one end and an alined inwardly tapered dovetailed slot at the other end, the slot of one member being adapted to receive the rib of the coacting coupling member and each having a longitudinal wire clamping channel at the sides of its rib and groove.

1,427,259. BOTTLE CAP. FREDERICK A. BURTON, New York, N. Y. Filed Jan. 27, 1922. Serial No. 532,176. 3 Claims. (Cl. 215—13.)

1. A cap for thermos bottles which comprises a number of cup members adapted to telescope on each other and having interlocking screwthreaded portions, said screwthreaded portions being enlarged or offset from the walls of the cups to prevent interference of the screwthreads with the surfaces of the cups.

1,427,260. SUPPLEMENTAL CLOTHES HANGER. MILDRED H. CATLIN, Minneapolis, Minn. Filed Apr. 1, 1922. Serial No. 548,833. 2 Claims. (Cl. 45—13.)

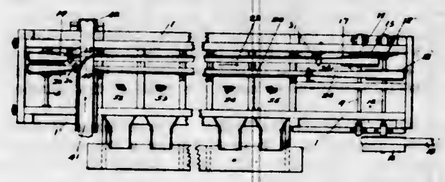


1. A supplemental clothes hanger adapted for application to an ordinary clothes hook and, when applied, forming an approximately horizontal outward extension therefrom, said hanger being made of wire bent to form parallel rods with connected downturned inner and connected upturned outer ends, and a short cross bar connecting said rods and adapted to rest on the top of a closet hook when the downturned inner end thereof is placed against the lower portion of said hook.

1,427,261. REMOVABLE HEEL. HENRY J. CHAMPAGNE, Pittsfield, Mass. Filed Oct. 19, 1920. Serial No. 418,094. 2 Claims. (Cl. 36—36.)

1. A detachable heel for shoes or boots comprising a member adapted to be secured against a lift and provided with an external flange having screw threads thereon, a detachable heel member having a circular flange embedded and interlocked thereto for screw threaded engagement with the first flange, each of said members being provided with registering flanges having screw threads therein and a screw plug threaded in said registering flanges, the threads of said registering flanges being of different direction than the threads of the first flanges.

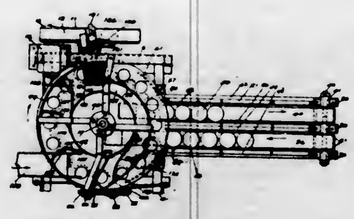
1,427,262. WHEELBARROW. JOSEPH CHARRIOT, Paris, France. Filed Dec. 5, 1918. Serial No. 265,367. 2 Claims. (Cl. 280—52.)



1. A wheel-barrow comprising a box-like body, with a detachable end section, a detachable wheel, detachable

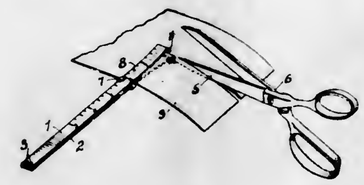
fork members and detachable combined handles and legs all adapted when detached to be enclosed within the box like body and detachable side portions adapted to form a lid or closure for the box like body.

1,427,263. PAPER FELT. ALBERT L. CLAPP and CHESTER B. CLAPP, Danvers, Mass. Filed Sept. 18, 1920, Serial No. 411,072. Renewed Jan. 28, 1922. Serial No. 532,502. 3 Claims. (Cl. 92—39.)



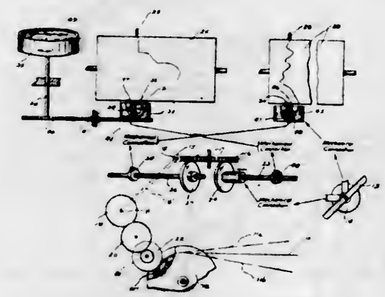
1. A compressible resilient soft felt suitable for gun wads, capable of compression to about 90% of its bulk by a pressure of about 10 pounds to the square inch, and comprising wool or cowhair, paper stock, and cotton fibers in homogeneous admixture and felted relation.

1,427,264. GRADER. CHARLES J. CLEAR, Vancouver, Wash. Filed Nov. 11, 1919. Serial No. 337,298. 10 Claims. (Cl. 130—32.)



1. In a machine for grading articles by size, the combination with driving mechanism, of a pair of flat, endless belts having cooperative longitudinally divergent and transversely downwardly convergent working faces, and means disposed against the back of each belt so as wholly to support its working face in true cooperative relationship to the other belt.

1,427,265. FILLING MACHINE. CHARLES J. CLEAR, Vancouver, Wash. Filed Nov. 11, 1919. Serial No. 337,299. 6 Claims. (Cl. 226—96.)

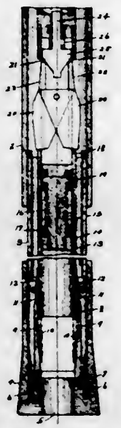


1. In a filling machine, the combination of means for delivering containers in regular order, a track for receiving the containers from said delivery means, means for moving the containers in regular order over said track, a movable table above said track having a series of filling openings, said container moving means being adapted to move the containers with each container constantly in registry with a filling opening until it has been filled, and a stationary fill-distributing frame above said table, said frame having a plurality of compartments having communicating openings, and means for directing any surplus fill from the final compartment to fill openings approaching the first compartment of the series without removing material from the table.

1,427,266. GAUGE FOR MARKING AND CUTTING STRIPS. LILLIAN M. DABNEY, Rosedale, Kans. Filed May 12, 1921. Serial No. 468,842. 2 Claims. (Cl. 33—186.)

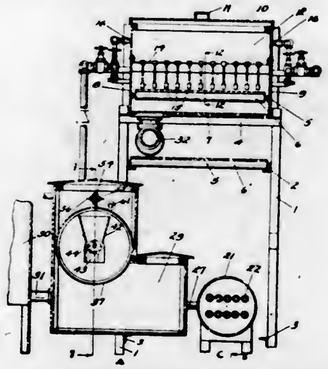
1. In a gauge of the kind described, two parallel members fastened together at one end, one member adjacent to its free end having a transverse groove, the other member at its free end having an inwardly extending transverse flange adapted to enter said groove, and a gauge member engaging and slidable longitudinally on said members, substantially as set forth.

1,427,267. TOPOGRAPHIC RECORDER. DIMITRI SENSAUD DE LAVAUD, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,445. 21 Claims. (Cl. 234—8.)



1. In a surveying instrument the combination comprising means for measuring distance traversed, means for measuring the azimuth, means for measuring the vertical angle, means for automatically making simultaneously a plurality of records of said measurements at given points of a course, and operating means for the recording means including a reel, a cable wound on the reel and adapted to have its free end attached to an object fixed in the field to be surveyed, and operative connections between the reel and the recording means.

1,427,268. CORE-TAKING DEVICE. REDUS D. DODDS, Houston, Tex. Filed Sept. 18, 1920. Serial No. 411,059. 4 Claims. (Cl. 255—72.)

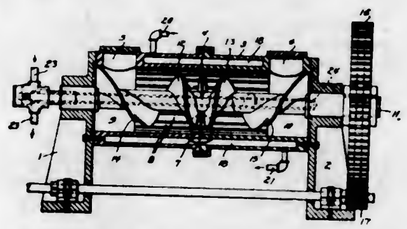


1. A sample taking device, including a tubular stem, a core-forming bit attached thereto provided with a central passageway, a core barrel within the stem, releasable means anchoring said barrel within said stem, separate core-engaging dogs depending from the barrel, said dogs being internally toothed, and aligned with said passageway, through which the core formed by said bit passes into said stem, and means for contracting said core-en-

gaging dogs, and holding the same against the core during the withdrawal of the barrel from said stem, said core en-

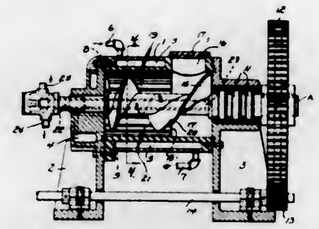
gaging dogs and barrel being rotatable relative to the anchoring means.

1,427,269. LYEING SECTION OF PEELING MACHINES. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919. Serial No. 273,596. 10 Claims. (Cl. 146—14.)



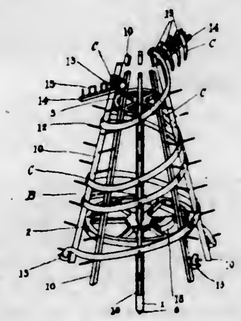
9. In a lye or disintegrating means, the combination with a suitable casing, a nozzle spray extending into and secured to said casing comprising a cylindrical bore with axial jet outlet directed into the casing, and a nipple connected to deliver the solution tangentially to the cylindrical bore, coacting as specified.

1,427,270. PEELING APPARATUS AND PROCESS. SAMUEL J. DUNKLEY, Kalamazoo, Mich., assignor to Dunkley Company, Kalamazoo, Mich., a Corporation of Michigan. Filed Jan. 28, 1919, Serial No. 273,595. Renewed Feb. 6, 1922. Serial No. 534,593. 25 Claims. (Cl. 146—14.)



20. The process of peeling peaches or similar fruit consisting in subjecting the surface to the action of a highly heated mist from a lye solution, and spraying the said fruit when the peel thereon has become disintegrated, as specified.

1,427,271. MIXING MACHINE. ERNST EGER, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed May 13, 1921. Serial No. 469,118. 6 Claims. (Cl. 18—2.)



1. A mixing machine for compounding plastics having in combination, a chamber substantially circular in cross section throughout, means whereby it may be charged and discharged, and a rotor in said chamber, said rotor having blades coiled oppositely about its axis for working the material in contrary axial directions adjacent the rotor and in opposite directions adjacent the walls of the chamber.

1,427,272. MIXING MACHINE. ERNST EGER, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed May 13, 1921. Serial No. 469,119. 22 Claims. (Cl. 18—2.)

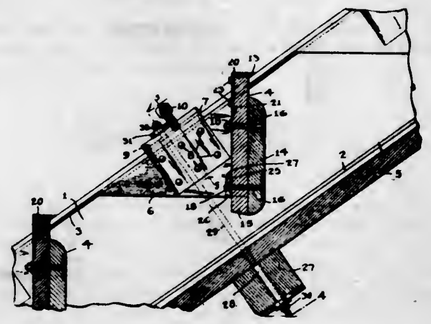
1. A machine for mixing plastic materials having in combination, a container and means movable within the container for working material in a substantial oval orbit lengthwise the container.

1,427,273. HOSE DRAINING AND DRYING REEL. EDWARD P. ENDLICH, Cumberland, Wis. Filed Apr. 25, 1921. Serial No. 464,334. 4 Claims. (Cl. 242—86.)

3. A rotary hose reel for carrying a plurality of hose having end couplings, comprising a conic reel, an arm extending laterally at the top of the reel, means carried by said arm in engagement with the couplings of said hose for removably attaching the hose to the arm, and hose supporting pins extending from the surface of the reel, said pins arranged to describe a plurality of interspaced spirals for the purpose set forth.

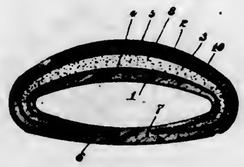
1,427,274. PORTABLE STANCHION. JOHN F. EVERS, Denison, Iowa. Filed Apr. 27, 1921. Serial No. 464,800. 1 Claim. (Cl. 119—99.)

A stanchion of the character described embodying a pair of end frames, means for connecting said frames to each other, a rack carried by the top of one of said frames, a second rack carried by the side portion of said frame, a lever pivoted to said frame and provided with means for engagement with the upper rack, a lever pivoted to the opposite frame and provided with means for engagement with the second mentioned rack, a pulley carried by the connecting means of the frames, a pulley carried by the second mentioned lever, and a cable engaged with said pulleys one end of said cable being secured to an animal's head, the opposite end of said cable being secured to a support, said cable being tightened upon movement of the second mentioned lever.



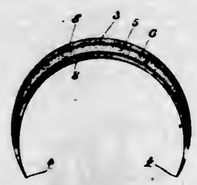
1,427,275. AUTOMOBILE BUMPER. ROLLIE B. FAGBOL, Oakland, Calif. Original application filed Nov. 12, 1917, Serial No. 201,474. Divided and this application filed Mar. 31, 1921. Serial No. 457,324. 18 Claims. (Cl. 293—55.)

4. A vehicle bumper, comprising an impact member adapted to extend across the frame of the vehicle, and characterized by having its terminal end portions looped rearwardly and means secured to said impact member intermediate the looped portions for supporting said member on the vehicle.



1,427,276. STAIR CONSTRUCTION. HERMAN L. FIELDBLET and JOHN ROBERT O'DONNELL, New York, N. Y. Filed Feb. 1, 1921, Serial No. 441,646. Renewed July 17, 1922. Serial No. 575,758. 17 Claims. (Cl. 25—118.)

1. In concrete stair construction, the combination of strings having inwardly disposed flanges, said strings constituting part of the form-work and eventually entering into the permanent construction, riser-forms support-

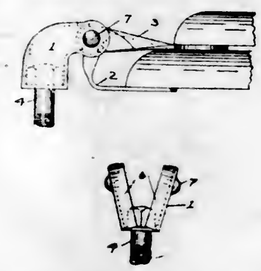


ed by and between said strings, and a floor-form also supported thereby.

1,427,277. SELF-HEALING TUBE. EDWARD FETTER, Baltimore, Md. Filed Dec. 31, 1921. Serial No. 526,229. 2 Claims. (Cl. 152—13.)

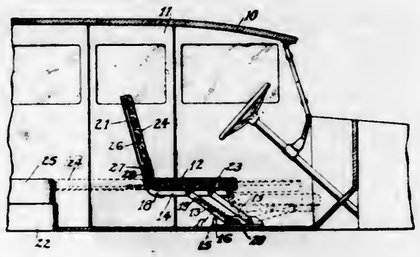
1. A pneumatic tube composed of elastic rubber having a pocket in the wall thereof, a stratum of raw unvulcanized rubber lining the pocket and a puncture sealing composition in said pocket.

1,427,278. SELF-HEALING TUBE. EDWARD FETTER, Baltimore, Md. Filed Feb. 9, 1922. Serial No. 535,195. 4 Claims. (Cl. 152—13.)



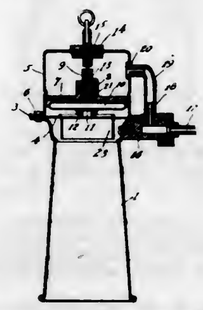
2. A puncture healing cover for the treads of inner tubes of pneumatic tires consisting of a sack shaped to cover the tread and puncture healing plastic material in the sack.

1,427,279. HINGE. VICTOR FILONOWICZ, Saginaw, Mich. Filed Dec. 14, 1921. Serial No. 522,386. 2 Claims. (Cl. 4—18.)



1. In a hinge of the class described, a base-member formed of a single piece of metal comprising an apertured bottom portion and oppositely flanged substantially

L-shaped wings bent up from said bottom, the edges of said flanges secured together, a bolt received in the



aperture of said bottom, the head of said bolt engaged by the sides and flanges of said wings, and leaf hinges pivoted to the outer ends of said wings.

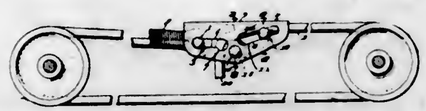
1,427,280. AUTOMOBILE SEAT. FRANK GAHM, Streator, Ill. Filed Nov. 30, 1921. Serial No. 518,899. 2 Claims. (Cl. 155—15.)

1. In an automobile or other vehicle, a rear seat, a front seat comprising an underframe and a hinged back normally in upright position but adapted to be swung forwardly or rearwardly to horizontal position, cushions for said underframe, back and rear seat, said back having two hinges, one located below the upper level of the front cushion and permitting rearward swinging of the back to horizontal position and the other located above the upper level of said cushion and permitting the back to swing forwardly to horizontal position, and means for securing the back in either upright or rearward position, the cushions on said seats and back forming a cot in said latter position.

1,427,281. PNEUMATIC HORN. WALTER A. GARRATT, Covington, Ky. Filed Aug. 31, 1921. Serial No. 497,201. 6 Claims. (Cl. 116—138.)

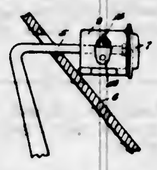
5. In a sounding device, the combination of a resilient diaphragm, a bellows device made up of disk members secured together at the edges, an air conduit communicating with the inside of the said bellows, a valve for one of the disks of the bellows device, said valve adapted to seat against the resilient diaphragm, and means for creating a partial vacuum within the bellows device through the air conduit whereby the bellows device will contract, the valve will be unseated, the vacuum destroyed and the valve will return to its seat.

1,427,282. VENTILATED FIRE DOOR. WAINWRIGHT B. GERVAIS, Oak Park, Ill., assignor to Variety Fire Door Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1921. Serial No. 512,467. 5 Claims. (Cl. 189—46.)



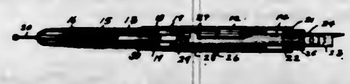
1. In a hollow metallic fire door, the provision of upper and lower perforate enclosing members, the perforations in the upper member being upwardly embossed to form a dam around each of the perforations.

1,427,283. METHOD OF WORKING QUICK-CURING COMPOUNDS. WILLIS A. GIBBONS, New York, N. Y., assignor to American Rubber Company, a Corporation of Massachusetts. Filed Mar. 31, 1921. Serial No. 457,501. 3 Claims. (Cl. 18—53.)



1. That method of compounding or mechanically manipulating vulcanizable rubber compositions containing accelerating substances which either or both shorten the duration of cure or lessen the temperature required, which consists in, maintaining the rubber softened to prevent substantial vulcanization while mechanically working the composition.

1,427,284. ROPE OR CABLE CONNECTOR AND GRIP. LEOPOLD C. GIERYNSKI and CASIMIR BOHDANOVICZ, New Britain, Conn. Filed Mar. 1, 1922. Serial No. 540,263. 5 Claims. (Cl. 24—136.)



1. A coupling and gripping device comprising a U-formed body, to one end of which one end of a rope or cable is permanently attached, said body at its other end having cammed slots inclined relatively to one wall of the body, a clinching or gripping member movably mounted in said slots, and adapted to clamp the other end of said rope between it and said wall of the body, a pulley journaled in the side walls of the body and over which one end of the rope engages, when pulling the rope to cause the gripping members to clamp against the rope.

1,427,285. CLUTCH-PEDAL LOCK. AUGUST K. GOEHRING, Clay Township, St. Joseph County, Ind. Filed Oct. 8, 1919. Serial No. 329,288. 1 Claim. (Cl. 70—128.)

The combination with the shank of a lever extending through an aperture in an inclined member disposed at an acute angle to the shank and extending downwardly and outwardly, said shank being provided with a right angularly disposed foot engaging tread, of a lever lock for said lever, said lock comprising two substantially rectangular shaped plates formed from spring material and hingedly connected together at their lower edges, and adapted to frictionally hold the shank, a staple carried by one of said rectangular shaped members and extending through an aperture in the other member and adapted to receive a lock, said rectangular shaped members being vertically disposed, and having their hinged points horizontally disposed, one end of the hinged side of the plates engaging the pedal, the other end of the hinged side engaging the inclined member and the upper outer corners of the plates engaging the tread of the lever.

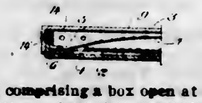
1,427,286. DENTAL HANDPIECE. ROBERT E. GRAVES, Houston, Tex. Filed July 26, 1921. Serial No. 487,003. 6 Claims. (Cl. 32—15.)

1. A dental hand piece including an outer sleeve, an inner sleeve fitted into one end of the outer sleeve, and having a limited lengthwise movement relative thereto, a shaft in the inner sleeve, one end of which has a flared socket, a chuck formed to fit into said socket, a collar connected to the chuck and moveable lengthwise, on the shaft, and actuating means carried by the inner sleeve and on opposite sides of said collar whereby the chuck may be moved in either direction in the socket by a corresponding movement of the inner sleeve, and a locking device carried by one sleeve and arranged to be engaged with the other sleeve to lock them against relative lengthwise movement.

1,427,287. RAIL JOINT. LOUIS GASOSKO, Auburn, N. Y. Filed May 12, 1922. Serial No. 560,336. 3 Claims. (Cl. 238—251.)

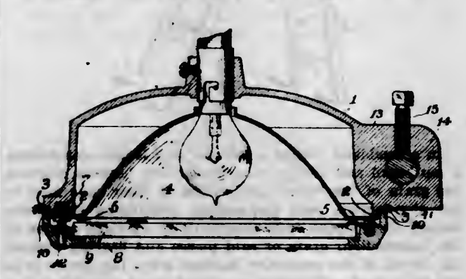
1. A rail joint of the class described, comprising two fish plates adapted to engage opposite sides of the webs of two adjoining perforated rail ends, bolts passed through one of said fish plates, dove-tailed ends on said bolts adapted to be passed through the perforations in said rail ends into engagement with sockets in the second of said fish plates, said sockets communicating with upper recesses, means slidably held in these recesses for engaging the dove-tailed ends of said bolts by engagement with the rail head when said second fish plate is hammered home, and means for locking said second fish plate automatically to the rail head and the flange upon the engagement of said bolts and said sliding means.

1,427,288. PAINT PACKAGE. JOHN W. HASBURG, Chicago, Ill. Filed June 10, 1921. Serial No. 476,405. 2 Claims. (Cl. 206—46.)



1. A package comprising a box open at the top, a palette lying in the bottom of the box, a cover for said palette comprising a member flat at the margins and raised in the center, said cover having at its edges flanges projecting above the top of the box when said palette and cover are assembled in the box, and a lid for said box adapted to engage with and rest upon said flanges.

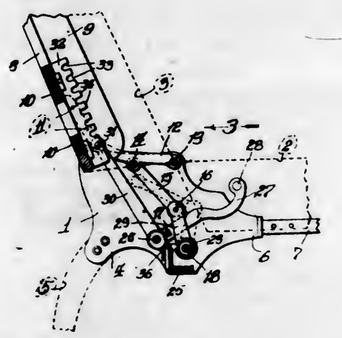
1,427,289. PAINT PACKAGE. JOHN W. HASBURG, Chicago, Ill. Filed June 10, 1921. Serial No. 476,406. 1 Claim. (Cl. 206—46.)



A package comprising a box open at the top, a palette lying in the bottom of the box, a cover for said palette comprising a member having flat marginal portions and a raised central portion, a follower overlying the flat marginal portions of said cover and having flanges projecting upwardly beyond the upper edge of the box, and a lid telescoped upon the box and bearing against said flanges.

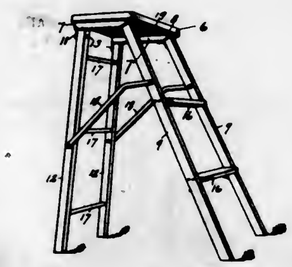
1,427,290. PAINT PACKAGE. JOHN W. HASBURG, Chicago, Ill. Filed June 10, 1921. Serial No. 476,407. 3 Claims. (Cl. 206—46.)

1. A package comprising a box open at the top, a palette lying in the bottom of the box; covering means for the palette including a shallow transparent dome-like central part, a part resting on the marginal portions of the palette, and upwardly-directed flanges or walls secured to the inner face of the sides of the box; and a lid for said box.



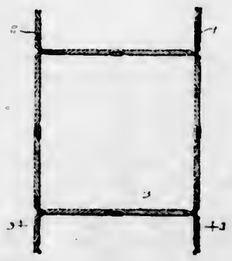
1,427,291. LAMP. ELLSWORTH A. HAWTHORNE, Bridgeport, Conn. Filed Apr. 28, 1922. Serial No. 557,087. 2 Claims. (Cl. 240—41.)

1. In a lamp of the character described, a body portion having a flat rim which merges into an angular seat, said



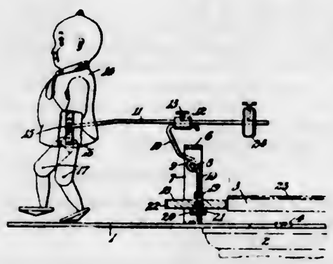
rim having formed in its face a plurality of threaded sockets, a reflector having a straight peripheral flange adapted to seat against the face of the rim and provided with elongated perforations which register with said sockets, bushings exteriorly and interiorly threaded and having flanged heads, said bushings driven into said sockets with said heads impinged against the reflector flange, and a closure having a glazing and secured to the lamp body by screws driven into said bushings, said closure having at its periphery an angular lip seating firmly against the surfaces of said seat with a gasket therebetween.

1,427,292. ATTACHMENT FOR RECLINING CHAIRS. JOHN J. HOGAN, St. Louis, Mo. Filed Sept. 17, 1921. Serial No. 501,350. 4 Claims. (Cl. 155—152.)



1. In a reclining chair, a back rest therefor, a pair of oppositely disposed members angularly extended from said back rest, each of said members being pivoted to the chair, a link connected to each of said members, a lever connected to each of said links, and resilient means cooperable with each of said levers.

1,427,293. FOLDING STEPLADDER STOOL. JOHN F. HOLLIDAY, Washington, Ind., assignor to Hincher Manufacturing Company, Washington, Ind., a Corporation of Indiana. Filed June 1, 1921. Serial No. 474,145. 1 Claim. (Cl. 228—2.)

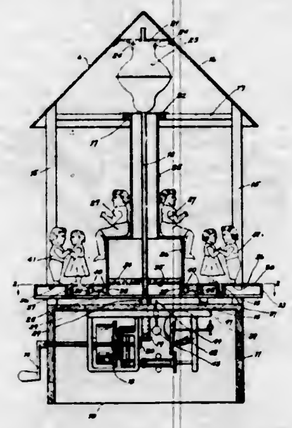


In a combined folding stool and step ladder, comprising a top board and step section, under-side battens crossing the grain of the board and beveled at their ends next to the step-section, said step-section comprising side-pieces having their upper ends substantially at right angles to the longitudinal grain of said pieces and bearing against the bevels of the respective battens when the device is in use as a stool and ladder, a pair of legs having their upper ends substantially at right angles to the longitudinal grain of the legs, leaf hinges connecting the side pieces and legs with the respective battens, a leaf of each leg hinge being between the end of the leg and batten when the device is in operative position with the joint of the hinge at the end of the batten and approximately under the rear edge of the top board, steps connecting said side-pieces, and braces pivotally connecting the side-pieces and legs.

1,427,294. ROOF LADDER. HORACE W. HUGHES, Houlton, Me. Filed Jan. 18, 1922. Serial No. 530,024. 3 Claims. (Cl. 228—40.)

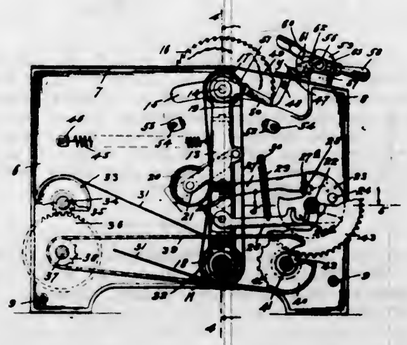
1. A wire ladder comprising side members, a plurality of substantially looped wire members disposed on and extending between said side members, and having portions thereof extending along said side members, portions of adjacent pairs of said looped members being twisted upon each other to form rungs, and the portions of the said looped members extending along the side members being twisted thereon.

1,427,295. MECHANICAL TOY. PERCY THOMAS JACKSON and GEORGE FREDERICK PICKETT, Bexley Heath, England. Filed Mar. 11, 1922. Serial No. 543,070. 10 Claims. (Cl. 46—40.)



1. A mechanical toy comprising in combination a platform, means for securing said platform to a sound reproducing instrument, a support carried by said platform, a tilting carrier pivotally mounted in said support, an articulated figure pivotally supported on said carrier, and a carrier-actuating rotating member mounted on said carrier and adapted to swing successively into and out of engagement with a rotating part of said instrument other than the record and transmit motion to said carrier and figure.

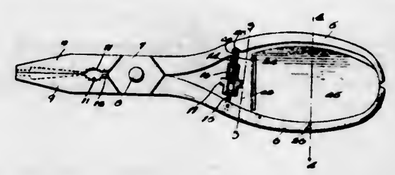
1,427,296. MECHANICAL TOY. WOJCIECH JAKUBIEC, Garfield, N. J. Filed Oct. 25, 1921. Serial No. 510,312. 2 Claims. (Cl. 46—27.)



1. A toy comprising a structure having a motor containing base, roof supporting posts fixed on said base,

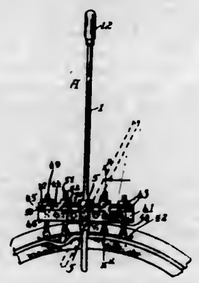
brace bars connecting said posts, a hollow column depending from the braces, an enlarged cylindrical base at the bottom of said column, forming a seat on which figural objects are mounted, a central shaft extending into the base, a hollow annular platform fixed to the shaft, bevel

gears, mounted in the platform, on a vertical axis, figural objects secured to the gears, a bevel drive gear secured adjacent the lower end of said column, and gear trains communicating motion between said bevel gears, and said drive gear.



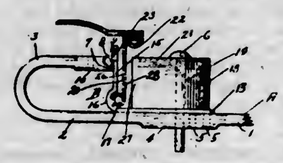
1,427,297. LUMBER CUT-OFF MACHINE. CHARLES JOHNSON, Minneapolis, Minn. Filed May 14, 1921. Serial No. 469,731. 8 Claims. (Cl. 143—46.)

1. In a machine of the kind described, the combination with a saw and a vibratory support therefor, of means for vibrating said support and saw comprising reversely acting driving dogs connected to said support, and a crank-equipped shaft alternately operative on said dogs to oscillate said saw support.



1,427,298. PLIERS. HARRY H. JONES, Holland, Oreg. Filed Mar. 11, 1921. Serial No. 451,595. 3 Claims. (Cl. 294—36.)

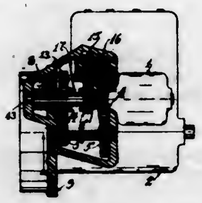
1. A tool comprising a pair of handles having their forward portions pivotally connected and formed with jaws, a link pivotally connected to one of said handles, a coupling connected to said link, a second link connected to said coupling and having a transversely extending pin, one of said handles being formed with sockets to



receive the ends of said transversely extending pin, whereby the second named link is detachably connected to the handles having the sockets.

1,427,299. FENDER RIM AND WIRED-EDGE TOOL AND THE LIKE. HOMER R. KENNEDY, Los Angeles, Calif., assignor to Gussie M. Kennedy, Los Angeles, Calif. Filed Mar. 4, 1920. Serial No. 363,196. 15 Claims. (Cl. 81—15.)

1. In a device of the character described, the combination of means for engaging the wired edge of a fender, and means for engaging the top surface of the fender cooperating with said first named means, whereby by a manual operation of the device kinks are removed and the metal re-crimped about the wire of the wired edge and indentations removed from the surface of the fender; said first named means including a lever arm having an edge-gripping returned end portion, and said second named means including a pressure block.



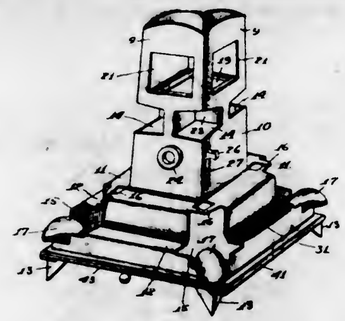
1,427,300. FENDER RIM AND WIRED-EDGE TOOL AND THE LIKE. HOMER R. KENNEDY, Los Angeles, Calif., assignor to Gussie M. Kennedy, Los Angeles, Calif. Original application filed Mar. 4, 1920, Serial No. 363,196. Divided and this application filed Feb. 14, 1921. Serial No. 444,700. 6 Claims. (Cl. 81—15.)

6. A sheet metal tool, comprising a lever arm, a rim die and a pressure block adjustably held to said lever arm, and between which rim die and pressure block a

fender rim may be disposed, said rim die including two arms bent at angles, there being a slot in said rim die whereby adjustment of the rim die with relation to the lever arm may be effected.

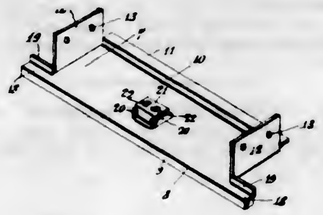
1,427,301. GEARING FOR ENGINE STARTING AND LIGHTING GENERATORS. AUSTEN J. KLONECK, New York, N. Y. Filed May 16, 1917. Serial No. 168,981. 5 Claims. (Cl. 290—31.)

1. A device of the character set forth, comprising an engine, a gear connected with said engine, a dynamo electric machine adapted for operation as a generator or as a motor, a shaft in connection with said dynamo electric machine, a gear mounted thereon and movable in an axial direction, means for occasioning a sliding of said second mentioned gear comprising spiral shaped teeth on said first and second mentioned gears, said two mentioned gears engaging with one another for driving said dynamo electric machine as a generator, and speed reduction gearing arranged between said engine gear and said dynamo electric machine adapted for an automatic engagement by means of the sidewards sliding operation of said spiral teeth of said meationed gears when the dynamo electric machine operates as a motor.



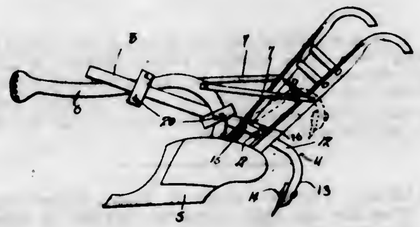
1,427,302. TIRE FOR VEHICLES. AUSTEN J. KLONECK, New York, N. Y. Filed June 9, 1917. Serial No. 173,824. 6 Claims. (Cl. 152—1.)

1. A tire for vehicles including a plurality of layers of fabric and rubber composition forming a tubular opening therein, said tire comprising means at the base for attaching the same upon a wheel, a plurality of layers of rubber cemented fibre attached upon the traction part of said first mentioned layers, wire fabric attached around said first mentioned layers, and layers of fabric and rubber attached to the sides of the first and second mentioned layers adapted for connecting said first and second mentioned layers.



1,427,303. SMOKER'S UTENSIL. SIGMUND F. KOHN, New York, N. Y. Filed May 19, 1920. Serial No. 382,665. 10 Claims. (Cl. 131—61.)

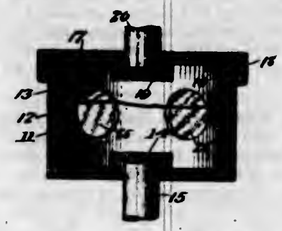
10. A smoker's utensil side blank constructed so as to be bent transversely intermediate its ends to form one side of the comparatively wide base of the utensil and the corresponding side of the comparatively narrow body thereof, said blank having partially severed portions



adapted to be bent at an angle with respect to said blank, said blank being further provided with projections and perforations along certain edges.

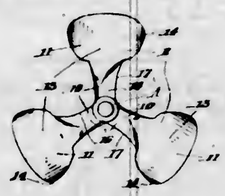
1,427,304. WEATHERPROOF WINDOW SILL. ATLAS C. LANGFORD, Jackson, Tenn. Filed Sept. 23, 1919. Serial No. 325,615. 1 Claim. (Cl. 189—75.)

In combination with a window frame, a sill comprising a metallic plate extending the full width of the frame and inclined to the horizontal, an elevated marginal flange bent from the inner longitudinal edge of the plate to overlap the inner sill of the frame, flanges bent upwardly from each end of the plate adapted to extend within the jamb of the frame, and means securely fastening the flanges to the latter.



1,427,305. SUBSOILER ATTACHMENT FOR PLOWS. JOSEPH PLEASANT LITTLE, Statesville, N. C. Filed June 16, 1919. Serial No. 304,565. 1 Claim. (Cl. 97—32.)

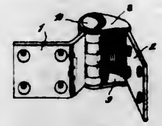
A sub-soiler attachment for plows, comprising a bar bent upon itself intermediate its ends to form side arms



which are in contact with each other, the arms of the bar being provided with a plurality of apertures, and being offset laterally, the arms carrying a pivot element, the double-armed construction of the bar serving to reinforce the bar at the place where it is offset laterally and at the place where the apertures are formed, and serving, also, to afford an increased bearing for the pivot element; a U-shaped standard comprising legs between which the arms of the bar are received, the legs being mounted to swing for adjustment on the pivot element; a removable securing device carried by the legs of the standard and so located as to be mounted in any of the apertures in the arms; a share carried by the standard; a combined spacing and suspension means disposed between the legs of the standard and separating the legs sufficiently to prevent them from binding on the arms of the bar; and means for securing the bar to the beam of a plow.

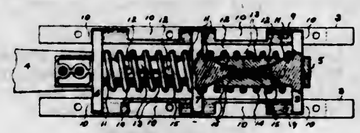
1,427,306. CARBURETOR FLOAT. JOSEPH O. LUTHY, San Antonio, Tex. Filed Feb. 5, 1920. Serial No. 356,488. 5 Claims. (Cl. 137—104.)

3. A float comprising a cup-shaped body portion having a core of fibrous material provided with openings at or about the water level when the float is in operative position in the tank, an imperforate coating of celluloid on said body portion, a cover secured to the body portion, and valve stem sections secured in the body and cover portions.



1,427,307. PROPELLER. ROY C. MACKENNEY, St. John, New Brunswick, Canada. Filed Nov. 25, 1918. Serial No. 264,050. 1 Claim. (Cl. 173—159.)

A propeller blade comprising an inner and outer part, the inner part being set with a helical twist at 25 to 30 per cent less pitch than the outer part pitch basis, the driving side of the outer part being flat and at right angles to the axis of the hub of the propeller, thereby causing the pitch to expand as it nears the top of the blade, and the front face of the blade being convex and tapering off to a sharp cutting edge.



1,427,308. AUTOMOBILE DOOR HINGE. HENRY J. MASTENBROOK, Lakewood, Ohio, assignor to The Coach Builders Hardware Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1919. Serial No. 343,838. 3 Claims. (Cl. 16—135.)

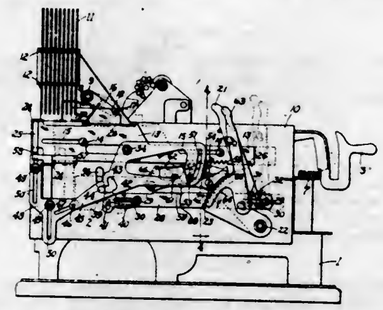
2. A hinge of the class described comprising an inner and an outer plate, the outer end portion of the latter plate being turned about a given axis through a number of degrees and terminating thereheyond in knuckles that are concealed by such portion, the inner plate terminating in knuckles interengaging with those of the former plate, top and bottom plates carried by the outer end of one of the former plates and between which the corresponding por-

tion of the other plate is adapted to repose when the hinge is in closed position, said plates having apertures in axial alignment with the knuckles of the plates, and a pintle extending through said apertures and knuckles.

1,427,309. FRICTIONAL-DRAFT GEAR FOR RAILROAD CARS. ALONZO C. MATHER, Chicago, Ill. Filed Mar. 19, 1921. Serial No. 453,781. 1 Claim. (Cl. 213—64.)

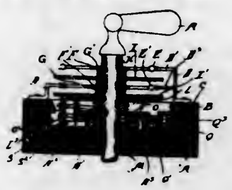
The combination in a friction draft device of a pair of oppositely disposed followers, a pair of wedges one of which is associated with each of said followers, a pair of laterally movable oppositely positioned wedge blocks each having oppositely directed wedge faces engaging the wedge faces of the follower wedges, and a coil spring expanding between the opposing faces of the followers surrounding the wedge blocks and in frictional contact with their outer surfaces.

1,427,310. HOISTING APPARATUS. GEORGE F. MEYERS, New York, N. Y. Filed Sept. 10, 1920. Serial No. 409,373. 12 Claims. (Cl. 254—86.)



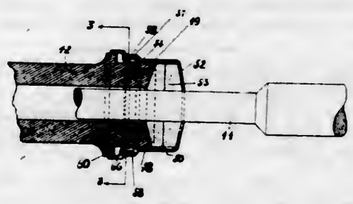
1. An automobile hoisting apparatus comprising a carrying frame, lifting members mounted on said frame adjacent opposite ends thereof for rocking movement in a vertical plane, a drive shaft mounted on the frame in position to be engaged and operated by the automobile drive wheels, and operative connections between said shaft and the lifting members for rocking the latter in a direction to raise the carrying frame and supported automobile.

1,427,311. CASH-REGISTERS TAB-ACTUATING MECHANISM. FREDERICK EDWARD MILLER, St. Louis, Mo., assignor to St. Louis Cash Register Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 2, 1920. Serial No. 400,595. 12 Claims. (Cl. 235—23.)



1. In a machine of the class described, a plurality of indicating tabs, lifting means adapted to be positioned beneath any one of said tabs, an operating handle adapted to raise said lifting means, means for locking said handle against movement and means for releasing said locking means simultaneously with the positioning of the lifting means.

8. In a machine of the class described, indicating tabs, registering mechanism including a pinion, a gear segment for actuating said pinion, a tab raising element, a member



adapted to position said segment and element, a selective handle for setting said member, and an operating handle for positively actuating said element and segment.

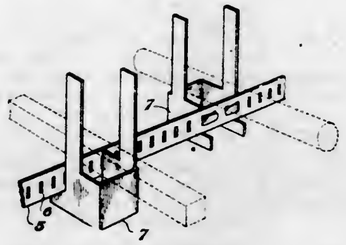
1,427,312. ELECTRIC SWITCH. ROBERT H. MILLER, Detroit, Mich., assignor to Detroit Stove Works, Detroit, Mich., a Corporation of Michigan. Filed May 12, 1917. Serial No. 168,155. 3 Claims. (Cl. 200—66.)

1. In an electric switch, the combination with a base, of a stem rotatively carried by said base, a plurality of contacts rotatable about the axis of said stem, corresponding stationary contacts carried by said base and successively engageable by the rotative contacts, a plate stationary upon the base having stops thereon corresponding to the stationary contacts, mechanism selectively engageable with said stops for holding the rotative contacts in their various positions, said mechanism being releasable by said stem, a spring for actuating a snap movement of a rotative contact in either direction stressed by initial rotation of the stem prior to releasing of the locking mechanism, and a pin rotatively actuable by the stem engaging in a slot of the stop-carrying plate to limit rotation of the stem in either direction.

1,427,313. LOCKING NUT. ALFRED B. MORSE, South Easton, Mass. Filed May 6, 1921. Serial No. 467,239. 4 Claims. (Cl. 151—2.)

1. An improved locking device comprising a rotatable multi-recessed socket, a spring ring stationary with respect thereto and provided with a portion adapted to be engaged by one of said recesses.

1,427,314. AIRCRAFT. GEORGE FRANCIS MYERS, New York, N. Y., assignor to Myers Aircraft Corporation, a Corporation of Delaware. Original application filed July 9, 1909, Serial No. 506,817. Divided and this application filed Dec. 6, 1916. Serial No. 135,339. 9 Claims. (Cl. 244—14.)

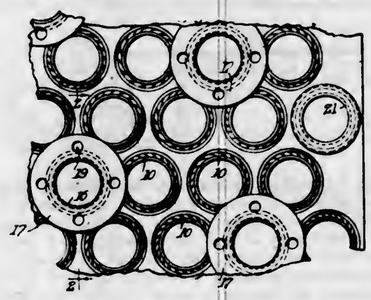


1. In an aeroplane, the combination of aero sustaining surfaces, a main body or car carried thereby, said car being of elongated, cylindrical form and extending in the direction of travel and having a tapered rear end, a motor and air propeller for driving the machine at sustaining speed through the air, and a radiator for said motor mounted on the car and closely embracing a closed portion of the exterior thereof, said radiator and car thereby presenting a substantially continuous uninterrupted surface in the fore and aft direction for the purpose set forth.

1,427,315. METHOD OF FORMING AN ARTICLE OF SHEET METAL. WILLIAM H. NEEDHAM, Worcester, Mass., assignor to Boston Pressed Metal Company, Worcester, Mass., a Corporation of Maine. Filed Sept. 10, 1919. Serial No. 322,807. 2 Claims. (Cl. 113—51.)

1. The method of forming an article from sheet metal, which consists in taking a sheet metal blank, drawing the same to the form of an open cup, successively reducing the cylindrical diameter of the cup, adjacent the open end only, and finally forcing the reduced portion axially against the bottom of the cup and simultaneously shaping the latter to form a ball-seat.

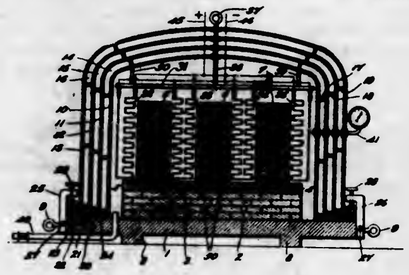
1,427,316. BAR SPACER. CHESTER J. O'BRIEN, Chicago, Ill. Filed June 3, 1920. Serial No. 386,211. 13 Claims. (Cl. 72—122.)



1. In a concrete reinforcing bar spacer, an upright strip with spaced perforations therein, and means engaging the perforations disposed alternately and entirely on opposite sides of the strip and resting on edge for supporting it in an upright position with the lower edge of the strip at a distance above the bottom of the concrete form.

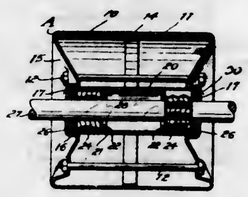
1,427,317. AIR-LIFT SYSTEM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 19, 1919. Serial No. 283,592. 8 Claims. (Cl. 103—84.)

1. In an air lift pump, in combination, an elbowed riser having a restriction at the elbow outlet, and a pump member extending longitudinally thereof through said restriction.



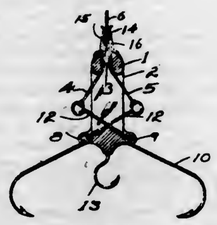
1,427,318. CONDENSER. FRANK E. PAYNE, Chicago, Ill. Filed Nov. 28, 1921. Serial No. 518,151. 5 Claims. (Cl. 285—46.)

4. A condenser having a tube sheet with a large number of openings therethrough, tubes the ends of which are received within said openings, the outer ends of said openings being screw-threaded, metallic packing pressed between said tube ends and said screw threads to engage the latter and resist movement as the tube expands and contracts, and a plurality of ferrules screwed into certain of said openings, and each having a portion which restricts outward movement of the tube in the same opening and having an extension overlying the ends of all the adjacent tubes to restrict outward movement of the latter, whereby a smaller number of ferrules is required than the number of tubes.



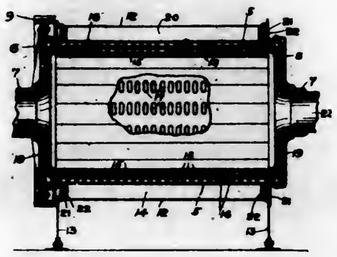
1,427,319. APPARATUS FOR ANNEALING THIN STEEL SHEETS. SAMUEL PEACOCK, Wheeling, W. Va., assignor, by mesne assignments, to Wheeling Steel & Iron Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Nov. 9, 1920. Serial No. 422,814. 2 Claims. (Cl. 148—16.)

1. In an apparatus for annealing thin sheets of steel, the combination of a metal base plate; a mass of refractory non-heat conducting material carried by said base plate; means for supporting said steel sheets in packs on said mass; a heat insulating cover comprising a plurality of metal members spaced apart and provided with air spaces between them; enclosing said mass and packs of sheets; means to form an airtight joint between said base plate and said cover; means to exhaust the air from



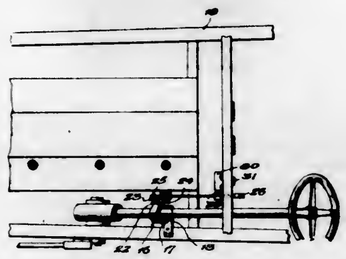
around said packs; and electric heating means for heating said packs to an annealing temperature, substantially as described.

1,427,320. WHEEL. WILLIAM E. PHILIPS, Cleveland, Ohio, assignor to The Stearns Conveyor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1921. Serial No. 457,847. 22 Claims. (Cl. 301—5.)



1. A hollow wheel comprising connected sheet metal members, each member having a disk-like web and an outwardly extending cupped portion formed at the hub, said cupped portions having their peripheral walls extending for some distance parallel with the axis of the wheel and a sleeve seated in the two cupped portions and contacting with the inner periphery thereof.

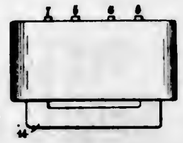
1,427,321. TRAP FOR FISH. HENRY PODOLSKY, San Francisco, Calif. Filed Mar. 24, 1921. Serial No. 455,081. 1 Claim. (Cl. 43—89.)



A trap for fish comprising a weighted hook, pivoted hooks carried thereby, means to cause the pivoted hooks to stand normally away from the weighted hook, a line connecting the upper portion of the pivoted hooks with the main fishing line, spring retaining means to hold the pivoted hooks extended from the weighted hook and in a fixed position with respect to the main line when swinging freely or adapted to release the pivoted hooks and allow them to swing toward each other when a fish engages the weighted hook.

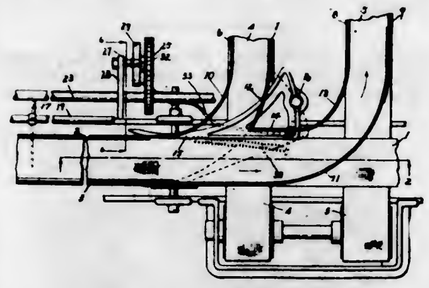
1,427,322. DRY-PULVERIZING APPARATUS. RALPH E. H. POMEROY, Canton, Ohio. Filed June 30, 1920. Serial No. 393,147. 25 Claims. (Cl. 83—9.)

1. A pulverizing apparatus, comprising a rotatable casing having air inlet openings in its periphery, and a feeding inlet for the material an outlet for the air and pulverized material, mechanism for rotating said casing, and means for producing a current of air inward through said openings and outward through said outlet for carrying off the pulverized material.



1,427,323. LOCK FOR AUTOMOBILES. WILLIAM S. PORTLOCK, Sr., Norfolk, Va. Filed Nov. 30, 1920. Serial No. 427,378. 3 Claims. (Cl. 70—90.)

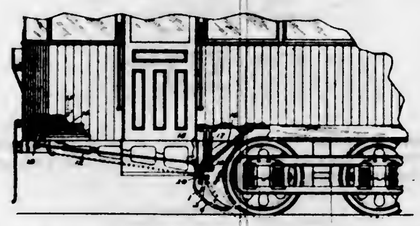
1. The combination with a vehicle steering mechanism comprising a rotatable post of an angularly shaped split nut fixedly secured to said post, a contractible spring-metal band encircling said nut having one end held in fixed position and the other end free, said band being normally expanded to permit rotation of said post, a bell-crank lever having one arm connected to the free end of said band, a reciprocable operating rod operable from the driver's seat and connected to the other end of said lever, a lock, and means on the operating rod adapted to be engaged by the lock bolt to hold the operating rod in fixed position when it is moved to cause the band to bind the post, said band self-releasing said post when the lock bolt is thrown to release said rod.



1,427,324. PROCESS FOR MANUFACTURING ELECTRIC TRANSFORMERS OF SMALL POWER. CHARLES MARIE EDOUARD PRIESTLEY, Paris, France, assignor to Société Vedovelli Priestley & Co., Paris, France. Filed Feb. 11, 1913. Serial No. 747,672. 1 Claim. (Cl. 175—21.)

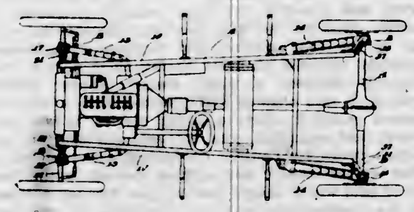
A process of manufacturing electromagnets consisting in disposing the coils, terminals and core of the magnet within a mold, with the core and terminals projecting partly beyond the interior surface of the mold, injecting molten insulating material into the mold under pressure, so as to completely fill the interior thereof and thereby surround the coils and the portions of the core and terminals within said interior; and maintaining the pressure

on the injected material during solidification, whereby said coils, core and terminals are mechanically joined together by the solidified mass.



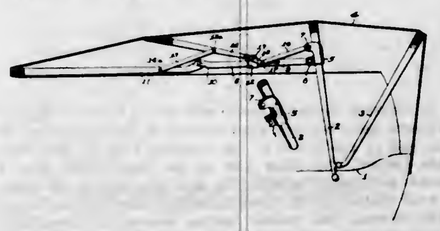
1,427,325. CONVEYER. BAUNNIE W. QUICK, Battle Creek, Mich., assignor to Johnson Automatic Sealer Co., Ltd., Battle Creek, Mich. Filed Nov. 22, 1919. Serial No. 339,908. 6 Claims. (Cl. 198—81.)

1. In a structure of the class described, the combination of a main conveyer comprising a bottom belt and coacting side members, a pair of receiving conveyers disposed transversely of said main conveyer and comprising bottom belts and coacting side members, the upper reaches of the receiving conveyer belts being disposed below and transversely of the upper reach of the main conveyer belt, there being curved guide members extending from the side members of the main conveyer to the outer side members of the receiving conveyers, the front ends of the inner side members of said receiving conveyers being curved forwardly, a switch member pivotally mounted between said receiving conveyers to swing across the main conveyer to guide the articles on to the first receiving conveyer or to swing across and close the first receiving conveyer, a stop member mounted on a rock shaft at the side of the main conveyer to swing across the same in advance of said switch, a cam shaft provided with a cam for actuating said rock shaft, a switch actuating lever, a switch actuating cam, driving connections therefor to said stop member actuating cam shaft, a link support to be actuated by said switch actuating cam connected to said switch actuating lever, a link connecting said switch actuating lever to said switch, and a spring acting on said switch to yieldingly hold it in one position.



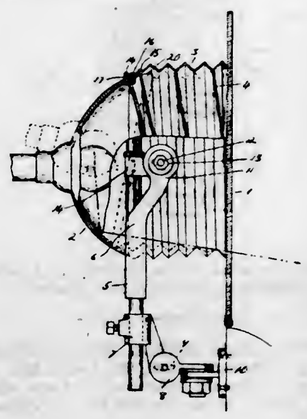
1,427,326. BRAKE MECHANISM. WILLIAM FRANCIS RAFFERTY, Toronto, Ontario, Canada. Filed Sept. 29, 1920. Serial No 413,633. 1 Claim. (Cl. 188—36.)

In brake mechanism, brake members comprising wedge shaped blocks, substantially arch shape in longitudinal section, said blocks being provided on their under sides with rail gripping studs and rail flanges and on their top sides being provided with wheel flange grooves, rods rigidly connecting the enlarged top ends of said brake members, a yoke secured to said rods, a rod pivoted centrally of said yoke and extending into the car, an operating lever pivoted to said rod and adapted on operation to move said brake members to and from their operative positions, vertically slotted brackets supported above said brakes, slotted links carried by said brake members and slidable in said brackets for guiding said



brake members in movement to and from their operative positions, the slots in adjacent ends of said brackets and said links having lateral extensions and a spring secured to the connections between said brakes and to the car body and exerting upward and rearward pressure on said brakes.

1,427,327. SHOCK ABSORBER. RAYMOND RAGSDALE, Porterville, Calif. Filed Mar. 8, 1920. Serial No. 363,955. 4 Claims. (Cl. 267—29.)



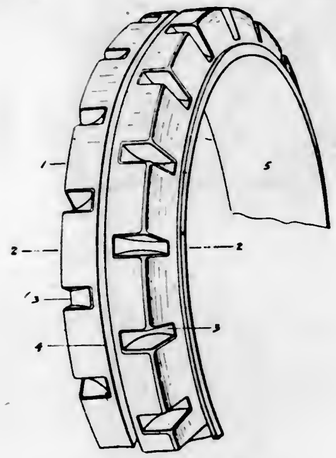
2. The combination with a vehicle chassis including a frame, front and rear axles, and leaf springs connecting the axles with the frame, of a shock absorber for the chassis including coil springs arranged in direct alignment with the axles at the point of attachment of the leaf springs thereto, brackets secured to the springs, an axle, coil springs secured to the brackets, laterally extending supporting arms secured to the vehicle frame and receiving the upper terminals of the coil springs, and bolts extending through the frame, and the attaching brackets and supporting arms.

1,427,328. VEHICLE TOP. EDGAR A. RATHBUN, Pontiac, Mich. Filed Jan. 31, 1921. Serial No. 441,235. 5 Claims. (Cl. 296—116.)

5. In a vehicle top framework, an articulation of bows, side arms and members permitting of the framework being raised and lowered, wherein a bow is pivotally mounted on a side arm, a connecting member having an end slidably supported adjacent the pivot of the bow, and a locking member pivotally connected to the bow and to said connecting member with the locking member so disposed that said bow may hold said connecting member against sliding relative to said side arm.

1,427,329. SPOTLIGHT. EDWARD W. REIBER, Adrian, Mich., assignor to The Reiber-Kolz Company, Adrian, Mich., a Corporation of Michigan. Filed Nov. 1, 1920. Serial No. 420,900. Renewed Jan. 20, 1922. Serial No. 530,729. 7 Claims. (Cl. 240—7.)

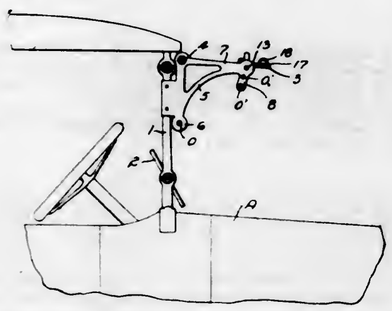
1. The combination with a transparent member, of a projector facing said member and movable relative thereto, a guard for enclosing the light rays from said projector to said transparent member, and a support for said projector having a universal pivotal connection arranged forward of said projector.



1,427,330. MANUFACTURE OF HOLLOW ARTIFICIAL TEXTILE ARTICLES. JULES ROUSSET, Nogent-sur-Marne, France. Filed May 8, 1922. Serial No. 559,491. 4 Claims. (Cl. 18—54.)

1. In the manufacture of hollow, artificial textile articles, the steps of incorporating in a spinnable viscous solution a substance which will give off gas bubbles in the articles after the latter have left the spinning head; and then spinning the resultant solution to form the articles.

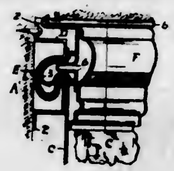
1,427,331. RESILIENT VEHICLE TIRE. FREDERICK W. SHERWOOD, Brooklyn, N. Y., assignor to Kelly-Springfield Tire Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 21, 1920. Serial No. 432,306. 7 Claims. (Cl. 152—1.)



2. A resilient unitary tire structure formed on a metallic rim and having a transversely flat traction surface of greater width than its radial depth, a median channel of substantial depth in the tread adapted to divide the surface thereof into counterpart resilient members whereby lateral resiliency is obtained and whereby the resilient media of the opposed tread elements under lateral displacement in the zone of road contact will tend to constrict the channel, a plurality of traction notches in the opposite edges of the tire in spaced and

staggered relation with complementary opposed notches, said notches being in open intersection with the traction

surface and the sides of the structure and terminating short of intersection with the central channel.

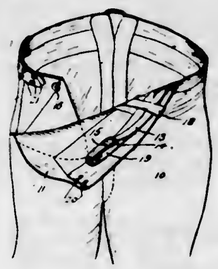


1,427,332. SUN SHIELD FOR AUTOMOBILES. WILLIAM F. SPRENGNETHER, St. Louis, Mo., assignor of one-half to Richard Pirkenson, St. Louis, Mo. Filed May 20, 1921. Serial No. 471,210. 2 Claims. (Cl. 296—95.)

2. A sun-shield for automobiles provided with brackets mounted on both sides at the front of the automobile, a shield pivotally mounted between said brackets, spring-controlled rods mounted on the shield and projecting outwardly from the ends thereof, said rods being adapted to enter openings in the brackets for holding the shield in position, means interposed between the rods for holding them against movement, and a lock for said holding means.

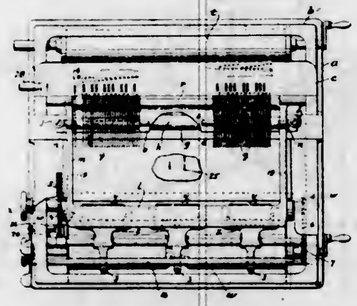
1,427,333. MEANS FOR HANGING WALL COVERINGS. JOHN D. STEPHENS, Pittsburgh, Pa. Filed Aug. 4, 1919, Serial No. 315,061. Renewed Jan. 28, 1922. Serial No. 532,504. 7 Claims. (Cl. 20—74.)

1. Means for hanging flexible wall coverings, comprising a molding adapted to be secured to the wall and provided with a longitudinally extending recess adapted to receive the edge of the wall covering, and a plurality of locking members provided with rearwardly bellied resilient portions adapted to be sprung into said molding



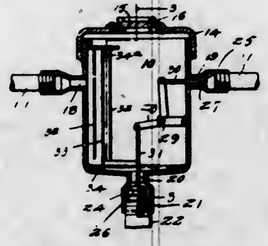
recess to enable the wall covering to be stretched and secured in place by the insertion of said locking members at intervals along said molding.

1,427,334. BOOKMARKER. GEORGE W. STONE, Moberly, Mo. Filed Mar. 29, 1922. Serial No. 547,942. 2 Claims. (Cl. 116—119.)



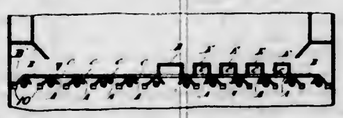
2. A line guide and place marker comprising an elongated body member adapted to rest on a sheet, downwardly and inwardly extending flanges carried by the opposite edges of the body member adjacent the outer edge of the body member and forming wedge shaped oppositely disposed channels having their narrow ends outwardly disposed, a wedge shaped member slidably mounted in said channel and provided with a centrally disposed enlarged aperture, a lug carried by the body member and extending into the enlarged aperture and forming means for limiting the inward movement of the wedge shaped member and a flange carried by the inner face of said wedge shaped member and forming a clamping jaw cooperating with the underface of the body member.

1,427,335. TROUSERS-SUPPORTING DEVICE. LUDWIG T. STRUCK, Washington, D. C. Filed July 20, 1921. Serial No. 486,033. 1 Claim. (Cl. 2—143.)



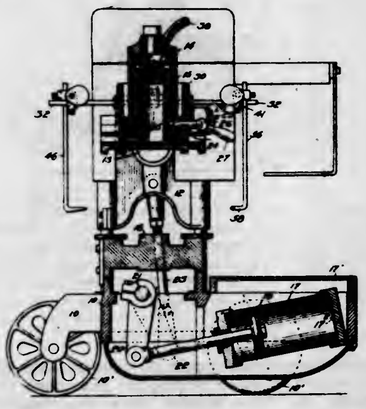
A trousers having a front wall which is free from the trousers body on one side thereof, a band attached at one end to the inside of the trousers body on the other side thereof, the other end of the band being free, a buckle adjustably mounted on said free end of the band, a hook carried by the trousers body on the first-mentioned side thereof, the buckle having means for detachable engagement thereof with the hook, and a separable connection between the free end of the fall and the first-mentioned side of the trousers body.

1,427,336. MACHINE FOR MAKING PERFORATED MUSIC ROLLS. ALBERT SUEHY, Jr., and ERNEST W. HOPPER, Philadelphia, Pa. Filed Jan. 6, 1921. Serial No. 435,405. 17 Claims. (Cl. 164—111.)



1. A machine for making perforated music rolls comprising a series of punches corresponding to the notes of a piano, punch actuating means, and a series of selectors corresponding to the punches adapted to be positioned manually to effect an operative connection between the punches and the punch actuating means, those selectors corresponding to the black keys of the piano keyboard and those corresponding to the white keys being differentiated from each other by differences in their length.

1,427,337. GAS RECLAIMER. HALDER E. TRACY, Middletown, Ohio. Filed May 2, 1921. Serial No. 466,349. 6 Claims. (Cl. 123—119.)



2. An oil reclaimer for explosion engines having a reservoir provided with inlet and outlet ports for communication respectively with a crank case and a suction line exposed to sub-atmospheric pressure, a drain port for communication with the crank case to permit reclaimed oil to return to said crank case, a baffle arranged in the reservoir between said inlet and outlet ports for intercepting oil spray, and connected valves for respectively controlling said outlet port and drain port and respectively movable from and toward their seats by sub-atmospheric pressure in the suction line.

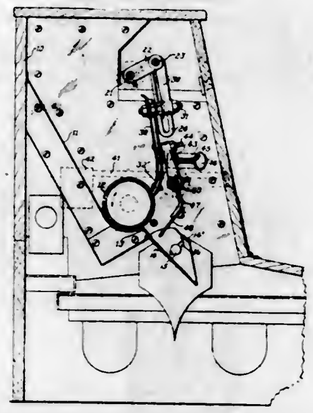
1,427,338. ROTARY FURNACE GRATE. LÉON TRÉFOIS, Brussels, Belgium. Filed Mar. 4, 1920. Serial No. 363,329. 3 Claims. (Cl. 126—182.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A rotary furnace grate comprising a plurality of concentric perforated grate rings, said rings being provided with downwardly projecting means for discharging ashes therefrom, mechanism for rotating adjacent rings in opposite directions relatively to each other, and an auxiliary grate over each perforation in said grate rings and movable with its respective grate ring in a circular path through the under surface of the fire bed, said auxiliary grate comprising a foraminous casing having an end opening which faces the direction of rotation thereof.

1,427,339. MOLDING MACHINE. HENRY TSCHERNING, Freeport, Ill., assignor to Arcade Manufacturing Company, Freeport, Ill., a Corporation of Illinois. Filed Feb. 7, 1921. Serial No. 443,057. 8 Claims. (Cl. 22—32.)

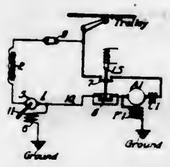
4. The combination with a flask-supporting inverting head of a molding machine, of transverse shafts mounted in the head to move bodily in parallel vertical planes, flask engaging members carried by said shafts, respectively, and means for manually raising and lowering said shafts with respect to the head.

1,427,340. SELF-LUBRICATING LEAF SPRING. WILLIAM H. WOODMAN, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,589. 5 Claims. (Cl. 267—50.)



1. A self-lubricating spring comprising a plurality of superimposed spring-leaves and layers of fibrous material impregnated with a hardened phenolic condensation product containing a lubricant disposed between the leaves.

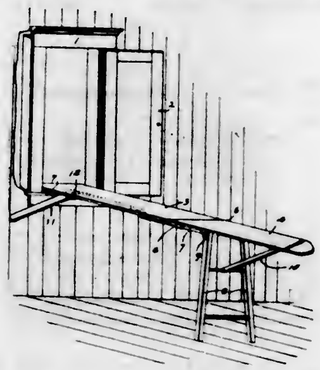
1,427,341. FEEDER. LESLIE I. ZIEGLER, Indianapolis, Ind., assignor to Nordyke & Marmon Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 12, 1920. Serial No. 403,105. 4 Claims. (Cl. 83—44.)



1. A feeder comprising an inclined hopper wall, a rotatable drum arranged in conjunction with the lower part of said wall, a gage plate associated with said drum

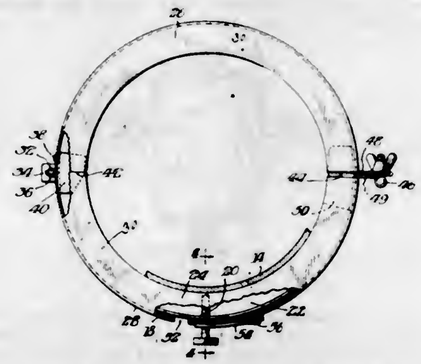
in opposition to the hopper wall and provided with a lower edge lying at a greater angle to the roller than the upper part of the gage plate, means for pivotally suspending said gage plate, means for vertically adjusting the suspension means, a rock shaft arranged materially

below the suspension means, a pressure arm carried by the rock shaft and engaging the gage plate to urge it toward the roller, yielding means for holding said pressure arm in contact with the gage plate, and a baffle plate suspended in the line of delivery from the roller.



1,427,342. SYSTEM OF CONTROL. BASCUM O. AUSTIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1919. Serial No. 328,847. 21 Claims. (Cl. 172—179.)

2. In a system of control, the combination with a main dynamo-electric machine, of a controlling device therefor, a switch for effecting certain main-machine connections, an auxiliary dynamo-electric machine for actuating said device, and means governed by said switch for regulating the operation of said auxiliary machine.

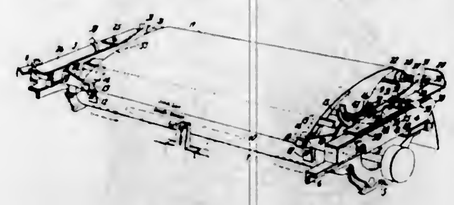


1,427,343. CABINET IRONING BOARD. WILLIAM P. BALLARD and WILLIS D. PERRY, Imbler, Oreg. Filed Aug. 11, 1921. Serial No. 491,484. 3 Claims. (Cl. 68—10.)

1. An ironing board comprising inner and outer sections having their abutting ends beveled and disposed so that the beveled end of the outer section underlaps the beveled end of the inner section, a reinforcing plate secured to the under side of the inner secton and overlapping the

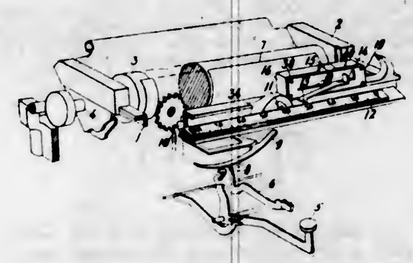
joint formed between the two sections, and links pivotally connecting the outer section to said reinforcing plate.

1,427,344. WEATHER-PROTECTING RING FOR STREET LAMPS. WILLIAM G. BARCLAY, Chicago, Ill., assignor to Erick Blaine Thelin, Chicago, Ill. Filed Mar. 20, 1920. Serial No. 367,526. 1 Claim. (Cl. 240—115.)



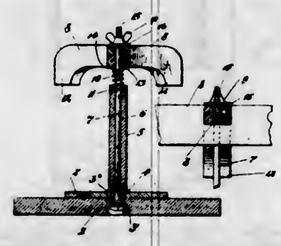
A protecting ring for globes of street lamps comprising two abutting segments, each segment having two separate walls only at right angles to each other, one of said parts being an inwardly turned horizontal top flange and the other a downwardly turned vertical flange, a hinge between two opposite segment ends permitting horizontal swinging of one segment with reference to the other, a fastening device for the other two segment ends and means in the side flanges of the segments for detachably securing the device to the globe fastenings.

1,427,345. TYPEWRITING MACHINE. HARRY BATES, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1919. Serial No. 279,121. 12 Claims. (Cl. 197—180.)



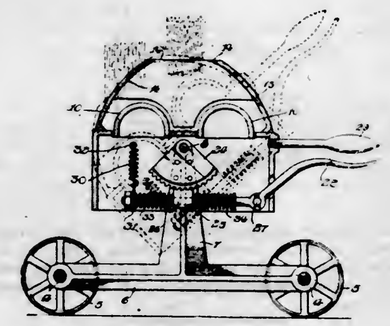
1. In a front-strike typewriting machine, the combination with a traveling carriage and a revoluble platen therein, of a flexible device adapted to screen the part of a work-sheet above the printing point on the platen, and so positioned as to permit the typist seated at the machine to read the written line at the printing point, a

mounting for said device pivoted at the rear of the carriage, a spring normally tending to swing the device clear of the carriage on its mounting to ineffective position,



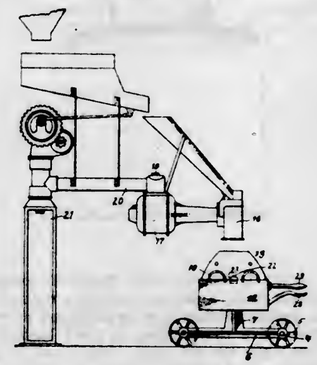
and detaining means adapted to hold the device against said spring in either of two screening positions to permit the typist to have a more or a less extended view of the written work-sheet.

1,427,346. TYPEWRITING MACHINE. HARRY BATES, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 16, 1919. Serial No. 331,037. 8 Claims. (Cl. 197—190.)



1. In a typewriting machine, the combination with a traveling platen carriage and a scale, of a pointer on the carriage adapted to indicate letter-spaces on the scale, a second pointer on the carriage adapted to indicate letter-spaces on the scale, a spring normally tending to draw said second pointer along the carriage, and an escapement device adapted to permit the second pointer to be drawn along.

1,427,347. CAN HOLDING AND SEALING DEVICE. JOHN BAUDER, Cincinnati, Ohio. Filed Sept. 20, 1921. Serial No. 502,084. 5 Claims. (Cl. 53—1.)



1. In a device of the character described, a base, an upwardly extending hollow post attached thereto, a rod extending through said hollow post, a spring around said rod at the top of the post, arms, said arms resting upon the top of said spring, the rod passing therethrough and means for exerting pressure upon the spring by forcing said arms downwardly.

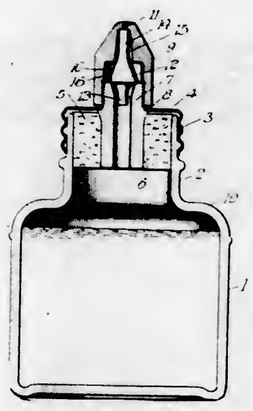
1,427,348. MOLDING APPARATUS FOR FOUNDING. ELMER O. BEARDSLEY, Chicago, and WALTER F. PIPER, Oak Park, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1921. Serial No. 486,545. 14 Claims. (Cl. 22—36.)

1. In apparatus for making moulds, the combination of a support, a flask on said support and means for sustaining the flask so the flask may be tilted relatively to a constant direction of projected sand so that such sand will be projected into the flask at different angles and will be packed in undercut or otherwise inaccessible spaces in the flask.

1,427,349 METHOD OF FILLING MOLDS FOR FOUNDING. ELMER O. BEARDSLEY, Chicago, and WALTER F. PIPER, Oak Park, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1921. Serial No. 486,546. 4 Claims. (Cl. 22—197.)

1. That improvement in making molds which consists in projecting sand in a constant direction, and tilting a flask into different positions relatively to the line of projection and projecting the sand directly into undercut and otherwise inaccessible spaces in the flask.

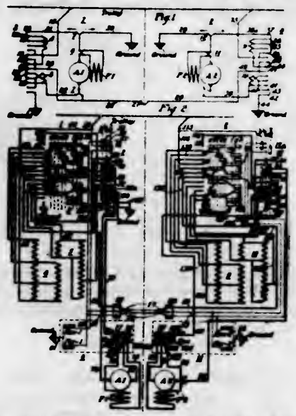
1,427,350. RADIOTELEGRAPHIC COUPLING. JOSEPH BETHENOD, Paris, France. Filed Sept. 2, 1919. Serial No. 321,259. 1 Claim. (Cl. 250—17.)



A radio-telegraphic station comprising, in combination, a high frequency alternator in which the armature winding is divided into several sections not comprising between their ends any direct electric connection, each of

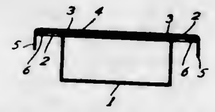
these sections being connected directly to one of the primary windings of a complex of transformers magnetically independent of each other, the central point of each section of the alternator and the central point

of each primary winding being earthed and the secondary windings of these transformers being connected in a suitable manner to the transmitting antenna, the number of the transformers being equal to that of the sections of the armature.



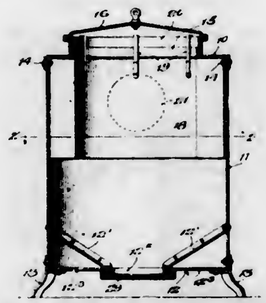
1,427,351. CONTAINER FOR MERCURY. WALTER H. BOWMAN, Chicago, Ill., assignor to Goldsmith Bros. Smelting & Refining Co., Chicago, Ill., a Corporation of West Virginia. Filed Feb. 1, 1922. Serial No. 533,271. 2 Claims. (Cl. 215—74.)

1. A receptacle of the class described comprising an open-mouthed body, a stopper having a central aperture, a tubular element fitting said aperture and provided with a shoulder above the stopper, a cover having threaded engagement with the receptacle and arranged to engage the shouder on said tubular element, a hollow cap having threaded engagement with the upper end of said tubular element, said cap being provided with a perforation, and a valve in said cap adapted to seat at both the said perforation in the cap and at the end of said tubular element.



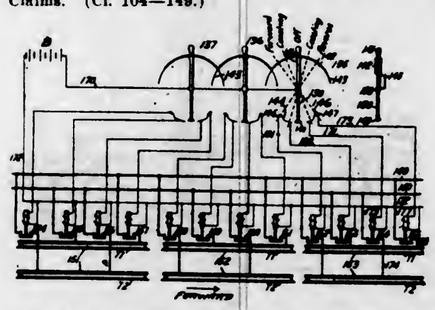
1,427,352. SYSTEM OF CONTROL. WILLIAM G. BROOKS, Chicago, Ill., and LYNN G. RILEY, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 341,017. 8 Claims. (Cl. 172—179.)

1. A system of train-control for a plurality of vehicles comprising a driving motor on each vehicle, and means for effecting series-parallel operation and reversal of said motors, said means embodying a single train-line



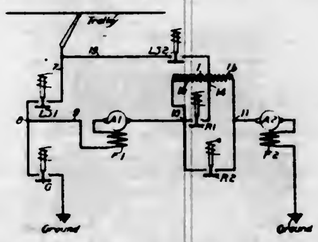
conductor carrying motor current and a plurality of relatively small-capacity conductors.

1,427,353. BAG LOCK. WILLIAM L. CALIGAN, Waterbury, Conn., assignor to Robert N. Bassett Company, Inc., Derby, Conn., a Corporation of Connecticut. Filed Apr. 11, 1922. Serial No. 551,733. 2 Claims. (Cl. 70—2.)



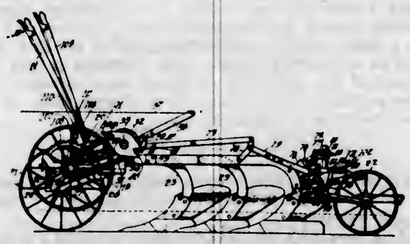
1. In a bag lock the combination of a lock having a top plate, a face plate enclosing said top plate and having adjacent to its ends, lugs formed integral therewith and bent over so as to engage the lower face of said top plate and hold it in position, and additional lugs adapted to secure the combined lock casing and face plate to a bag frame.

1,427,354. STOVE. RONALD ELISON CAMPBELL, Columbia, S. C. Filed Jan. 10, 1920. Serial No. 350,586. 3 Claims. (Cl. 126—65.)



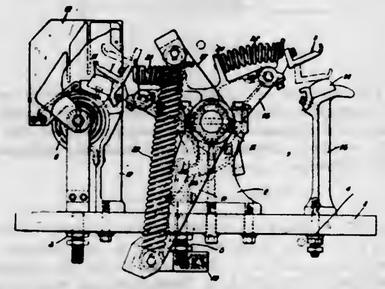
1. In a stove of the class described, in combination, a combustion chamber elongated in horizontal cross section, such chamber having an opening in its top for the introduction of fuel and a longitudinal central slot or opening in its bottom for the removal of ashes, two flat fuel supporting plates extending longitudinally of said chamber one on each side of said opening and inclined downwardly toward the same, and an elongated sliding door for controlling the passage of ashes through said opening.

1,427,355. SYSTEM OF CONTROL. ANDREW H. CANDEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 13, 1917. Serial No. 196,411. 23 Claims. (Cl. 104—149.)



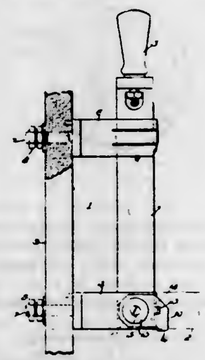
1. In a system of control, the combination with a plurality of independent distribution-circuit sections, of a plurality of switching devices corresponding to the respective sections for reversing the polarity thereof individually, and means for preventing the relative reversal of polarity of predetermined sets of sections.

1,427,356. SYSTEM OF CONTROL. ANDREW H. CANDEE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1919. Serial No. 328,842. 7 Claims. (Cl. 172—179.)



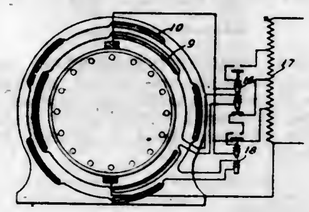
1. In a system of control, the combination with a plurality of dynamo-electric machines and an accelerating resistor, of means comprising five switches for effecting series-parallel operation of the machines including unequal exclusions of resistor sections during series operation and equal distribution of the resistor in the motor circuits for parallel operation.

1,427,357. PLOW. ROBERT C. CAUGHEY, Dixon, Ill., assignor, by mesne assignments, to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed July 31, 1915, Serial No. 42,965. Renewed Nov. 12, 1921. Serial No. 514,824. 8 Claims. (Cl. 97—55.)



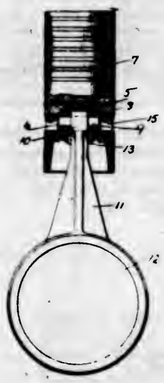
1. In a power lift plow, the combination of a multiple beam plow frame, a forward and downward projecting toggle crank rotatably mounted in said frame, a ground wheel journaled on the swinging end of said crank, a member rotatably mounted on said crank on an axis parallel with and spaced apart from the crank axis and the wheel axis, driving means connecting said wheel and member and including a clutch mounted on and swinging with said crank for effecting successive, intermittent, unidirectional rotary movements of said member, and means operated by said member for swinging it and rotating said crank in said frame to effect relative vertical movement of said wheel and the front end of said frame.

1,427,358. CIRCUIT INTERRUPTER. GEORGE L. CHRISTMAN, Swissvale, and JOHN B. MACNEILL, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,223. 6 Claims. (Cl. 200—2.)



1. A switch comprising stationary contact members, a movable operating member and asynchronously movable co-operating contact members for said stationary contact members movably mounted on said operating member to permit the engagement of one of said movable contact members with its co-operating stationary contact member before the disengagement of another of said movable contact members from its co-operating stationary contact member.

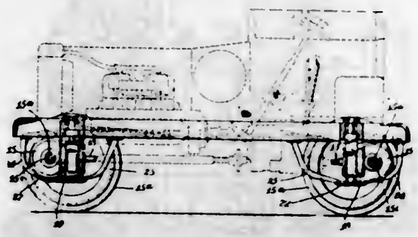
1,427,359. KNIFE-BLADE SWITCH. GEORGE L. CHRISTMAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 30, 1920. Serial No. 355,047. 8 Claims. (Cl. 200—169.)



3. In a knife-blade switch, the combination with a knife-blade member and a pivot terminal member therefor, of a member secured to said terminal member and having a stirrup portion extending across the path of the blade member to position the latter.

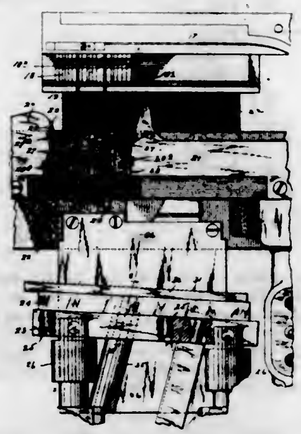
1,427,360. SINGLE-PHASE DYNAMO-ELECTRIC MACHINE OF THE INDUCTION TYPE. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,447. 6 Claims. (Cl. 172—274.)

2. The method of accelerating an induction motor which comprises actuating the accelerating switching apparatus in accordance with the development of the forwardly rotating components of the harmonic components of the fundamental primary field.



1,427,361. KNUCKLE-JOINT CONNECTION. FREDERICK F. COUCH, New Brunswick, N. J., assignor, by mesne assignments, to Brunswick-Kroeschell Company, New Brunswick, N. J., a Corporation of New Jersey. Filed July 6, 1921. Serial No. 482,649. 5 Claims. (Cl. 74—108.)

1. A knuckle joint connection for pistons and rods comprising a cylindrical knuckle loosely received in a transverse bore in the piston, and a pin passed through one end of the rod and received in a bore formed in the knuckle at right angles to the longitudinal axis of the knuckle.

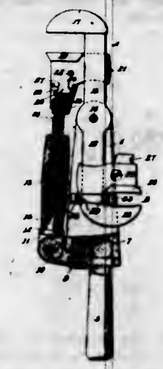


1,427,362. AXLE MOUNTING FOR VEHICLES. FRED H. COZZENS, New York, N. Y. Filed July 22, 1920. Serial No. 398,194. 3 Claims. (Cl. 180—50.)

1. In a vehicle, in combination, a vehicle frame, an axle, an upper thrust bearing on the upper side of the axle, a kingpin fitted to the thrust bearing and connecting the same to the frame, a lower thrust bearing on the underside of the axle, a riding shoe below the lower thrust

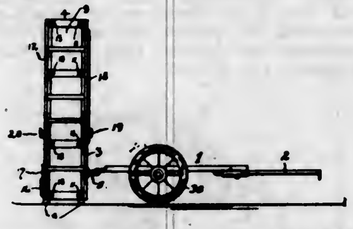
bearing, means carried by the vehicle frame to support the riding shoe, and a kingpin connecting the lower thrust bearing and the riding shoe.

1,427,363. MEANS FOR CASTING ITALIC TYPE. GEORGE L. CURLE, Minneapolis, Minn. Filed Apr. 7, 1920. Serial No. 371,999. 4 Claims. (Cl. 199—50.)



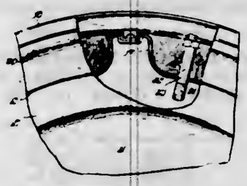
1. In a linotype machine, the combination with a mold, of vise jaws associated with the mold and having matrix engaging faces that are oblique to the mold, and a space band justification bar having a supplemental shifting section formed with serrated driving surfaces that are at a right angle to the oblique faces of the said jaws, and an oblique bar shifting guide operative on said supplemental bar section to cause the same to move on a line parallel to the oblique faces of said jaws, in the line justifying action.

1,427,364. WRENCH. JOHN DOBRZANSKI, Mollenawer, Pa. Filed Mar. 8, 1922. Serial No. 542,088. 6 Claims. (Cl. 81—53.)



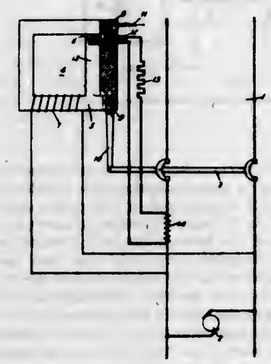
1. A wrench of the class described including a supporting structure, a pair of oppositely extending rigidly connected wrench units revolubly mounted on said supporting structure and each including a shank having a slidable

adjustable inner jaw and a rigid outer jaw, a single adjusting means carried by said supporting structure, and



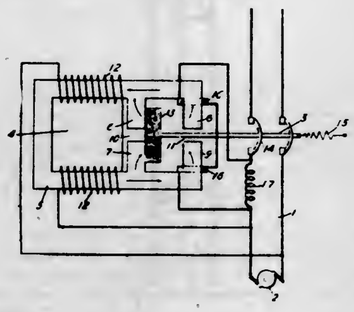
means to operatively connect either one of said adjustable inner jaws to said adjusting means.

1,427,365. VEHICLE TRAILER. ELIZABETH J. DOUGLAS, Crete, Nebr. Filed Aug. 8, 1921. Serial No. 490,452. 2 Claims. (Cl. 296—23.)



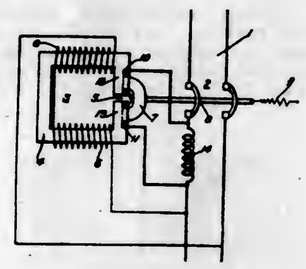
1. In combination, a chassis provided with wheels, a box including a bottom, an end plate provided with shoes and rigidly mounted upon the bottom, a pair of side plates, and a cover, said box being mounted between its ends upon and normally supported by the chassis and adapted to have a swinging movement to an upright position to dispose the shoes of its end-plate upon the ground, the side-plates having such a connection with the bottom that they may be swung into line with the bottom, and said cover having such a connection with one of the side-plates that it may be swung into line with the pair of side-plates and said bottom.

1,427,366. DISK WHEEL. GEORGE H. FORSYTH, Chicago, Ill. Original application filed Nov. 26, 1918, Serial No. 264,253. Divided and this application filed Feb. 21, 1921. Serial No. 446,862. 3 Claims. (Cl. 301—63.)



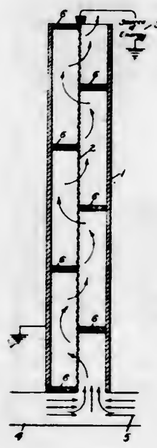
3. The combination of a wheel having a disk body, a felly, a tire-carrying rim, and a tire having a valve stem, the disk body having formed therein a depression spaced from the felly and extending across the median plane of the wheel and including the valve stem axis, that part of the disk body forming the upper wall of the depression apertured and the valve stem extending therethrough into the pocket to render the same accessible.

1,427,367. CIRCUIT INTERRUPTER. CHARLES LE G. FORTESCUE, Pittsburgh, and FREDERIC C. HANKER, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,554. 22 Claims. (Cl. 175—294.)



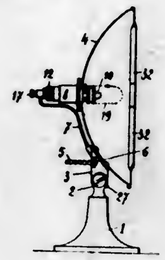
12. In an electric circuit, the combination with a circuit interrupter, of an electromagnet comprising a core member and an armature member, means for energising the core member and means disposed around the armature member for deflecting the magnetic flux therefrom in anticipation of a sudden overload on the circuit.

1,427,368. CIRCUIT INTERRUPTER. CHARLES LE G. FORTESCUE and JOHN B. MACNEILL, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,555. 17 Claims. (Cl. 175—294.)



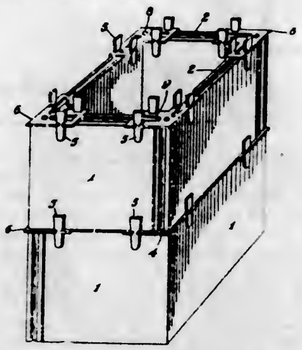
1. In a circuit interrupter, the combination with a movable contact member, of an actuating electromagnet therefor comprising a core member having two magnetic paths, a shunt winding for energising the core member, an armature for normally completing the circuit of one magnetic path, and a controlling winding associated with the other path for so energising the same as to shift the flux thereto and permit the armature to complete the circuit thereof.

1,427,369. CIRCUIT INTERRUPTER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,579. 7 Claims. (Cl. 175—294.)



1. In an electric circuit, the combination with an interrupter, of a magnetizable core member having an air gap therein, a potential winding for energizing the core member, an armature directly connected to the movable member of the interrupter and adapted to normally complete the magnetic circuit of the core member, and a winding connected to the circuit and so disposed around portions of the core member, circumferentially of those portions of its surface which are engaged by the armature, as to deflect the magnetic flux of the core member through the air gap to permit the interrupter to be opened quickly, under predetermined conditions.

1,427,370. APARATUS FOR ELECTRICAL PRECIPITATION. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,349. 6 Claims. (Cl. 183—7.)

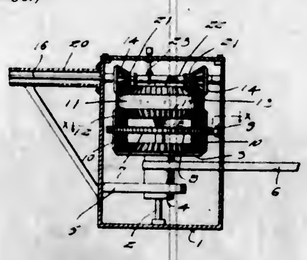


1. In a device for electrically precipitating suspended particles from fluid streams, an electrode formed as a treating chamber, a foraminous ionizing electrode positioned therein, and stream-directing means comprising a plurality of baffles so arranged that the fluid stream is brought into ionizing relation with the ionizing electrode several times during its passage through the treating chamber.

1,427,371. RADIATOR FOR GAS HEATING BY INCANDESCENCE. ANDRÉ GARBARINI, Courbevoie, Seine, France. Filed Apr. 22, 1922. Serial No. 556,111. 6 Claims. (Cl. 126—92.)

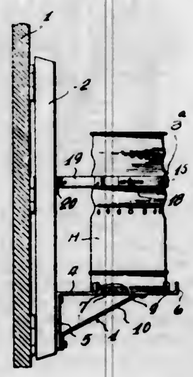
1. A radiator for gas heating by incandescence comprising: a parabolic mirror; a device to carry this mirror; a gas mantle of the inverted type disposed at the focus of the parabolic mirror; a burner with refractory nozzle fixed at the middle of the mirror; lugs on the said refractory nozzle; claws on the mantle holding ring to engage the said lugs; elastic means to hold the claws exactly flatwise against the lugs of the nozzle.

1,427,372. FIREPROOF WALL. WILLIAM GERAERDTS, New York, N. Y. Substitute for abandoned application Serial No. 221,596, filed Mar. 11, 1918. This application filed Oct. 18, 1921. Serial No. 508,458. 2 Claims. (Cl. 72—103.)



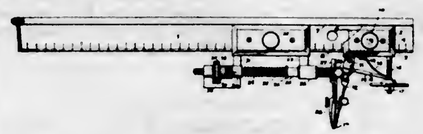
1. A device for joining partition blocks and like structural members, consisting in an anchor member adapted to be inserted between such structural members and to project beyond the surfaces thereof and having raised portions to space the structural members apart and having openings in its parts which project beyond the surfaces of the structural members, and clamping members adapted to be held in said openings and to bear against the surfaces of the adjacent structural members.

1,427,373. MULTIPLE SOUND-RECORD TABLET. CHARLES H. GILL, Chicago, Ill. Filed Dec. 10, 1919. Serial No. 343,945. 4 Claims. (Cl. 274—42.)



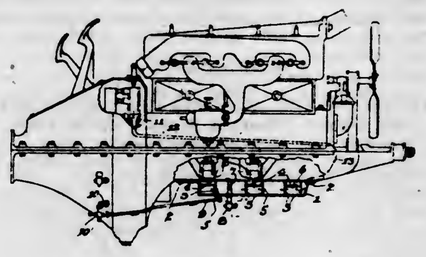
2. In a multiple sound record tablet, the combination of a central supporting disk, a central and internally threaded opening through said supporting disk, two separate record carrying disks provided with central openings through them, circular depressions in said record carrying disks surrounding said openings through said disks, circular plates adapted to fit into said depressions and threaded collars upon each of said plates adapted to secure one of said record carrying disks upon each side of the said central supporting disk.

1,427,374. GEARING. ERNEST GLASS, Reading, Pa. Filed Aug. 8, 1921. Serial No. 490,622. 4 Claims. (Cl. 74—54.)



1. In gearing of the character specified, a drive shaft, means for imparting an intermittent reverse rotary movement to the drive shaft, a gear wheel rotatable with the drive shaft, a rotary member in axial line with the drive shaft, a ratchet clutch between the rotary member and drive shaft, a gear element having toothed engagement with said rotary member and gear wheel, a rotary support for the gear element loosely mounted in axial line with the rotary member and gear wheel and a ratchet connection for holding said support stationary on the rotation of the drive shaft in one direction and during the slipping action of the clutch connection between the said rotary member and drive shaft.

1,427,375. HEATER SUPPORT. RANSOM E. GOVE, Fond du Lac, Wis. Filed Oct. 3, 1921. Serial No. 504,932. 1 Claim. (Cl. 248—20.)



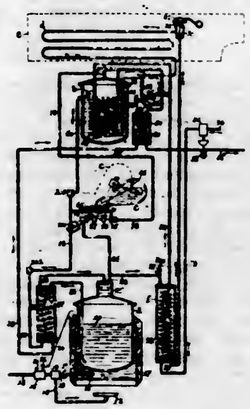
A supporting bracket for car heaters comprising a pair of parallel horizontal bars bent downwardly at their rear ends for attachment to a support, the front ends of said bars being bent upwardly to form heater folding fingers, and a pair of crossed bars whose end portions extend outwardly across said horizontal bars, said crossed bars being secured to said horizontal bars and having their ends bent upwardly to form additional heater holding fingers.

1,427,376. TRAMMEL POINT. HENRY S. GRACE, San Francisco, Calif., assignor to J. J. McDonald, San Francisco, Calif. Filed Nov. 17, 1920. Serial No. 424,651. 2 Claims. (Cl. 33—159.)

1. In a beam compass, the combination of a beam, a stationary point carried thereby, a movable point, and means for regulating the distance of the second point from the first point, which means comprises a holder slidable upon the beam, bearings carried by the holder, a bar movable longitudinally in the bearings and having one end portion thereof formed angular in cross section, one of said bearings being of angular form to receive the angular portion so as to prevent turning of said bar, said bar being provided with screw threads at its other end portion, an adjusting nut turned on the screw threaded portion of the bar, means for preventing longitudinal movement of the nut, said bar where angular being graduated on one face, every one-thirty-second of an inch, on another face every one-sixteenth of an inch, and on another face, one-sixty-fourth of an inch, said screw-threaded portion having forty screw threads to the inch and a cylindrical portion on the nut on which there are twenty-five graduations.

1,427,377. OIL PAN. GLENN F. GRAVES, Centralia, Kans. Filed Aug. 8, 1921. Serial No. 490,794. 4 Claims. (Cl. 184—13.)

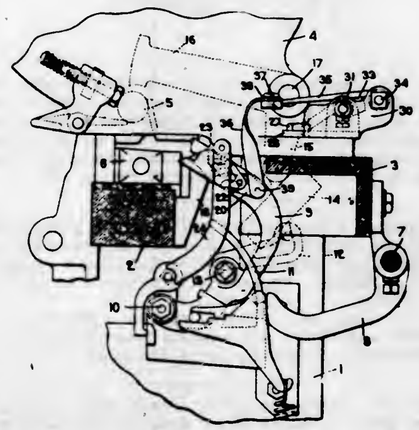
1. The combination of an oil pan having a plurality of transverse partitions arranged in pairs, elevated arcuate floors arranged between and supported by said adjacent pairs of partitions, and a drain pipe having its open mouth level with the top of said partitions, said partitions and floors having openings to permit passage of oil.



1,427,378. COMPOSITION OF MATTER PRODUCED FROM CORNCOBS. PAUL GRUBER and HARRISON C. BASHIOUM, Pittsburgh, Pa.; said Bashioum assignor to said Gruber. Filed Oct. 18, 1920. Serial No. 417,710. 11 Claims. (Cl. 106—36.)

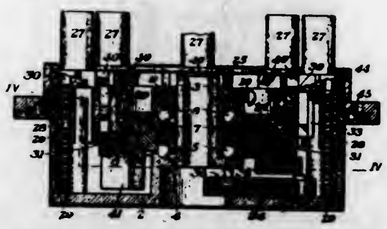
1. A composition of matter used as a substitute for lumber comprising a pulp produced from corncobs, and a casein binder, pressed into shape and dried.

1,427,379. REFRIGERATING APPARATUS. CHARLES W. HAPGOOD, Boston, Mass. Filed Nov. 22, 1916. Serial No. 132,889. 14 Claims. (Cl. 62—5.)



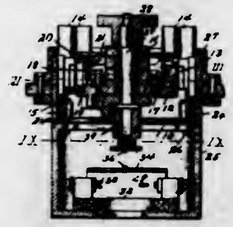
1. In a refrigerating system, in combination, a generator, an absorber separate from said generator, an ex-

pansion chamber between said generator and absorber and connected therewith for the flow of refrigerant from the generator to the absorber through said expansion chamber, and an expansion valve governing the flow of refrigerant to the expansion chamber and responsive to temperature changes in the refrigerated space means for connecting said generator with said absorber for the flow of weak liquor from said generator to said absorber, a vessel connected with absorber and with said generator for the in-



termittent flow of strong liquor from the absorber to the said vessel and from said vessel to said generator, means for controlling said intermittent flow of strong liquor, means for connecting said vessel with said absorber and generator for the passage of fluid pressure from said generator to said vessel and from said vessel to said absorber, and equalizing valves controlling said fluid pressure and arranged to have either of said valves closed before the other is opened.

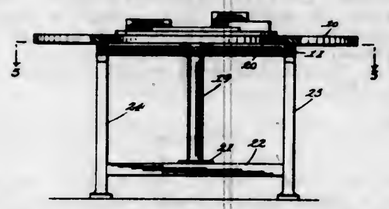
1,427,380. FILLING CLAMPING AND PARTING MEANS FOR LOOMS. HENRY J. HEDLER, Occum, Conn., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 16, 1921. Serial No. 485,383. 6 Claims. (Cl. 139—85.)



1. An automatic filling replenishing loom comprising a frame, a lay, a magazine for the supply of fresh filling carriers, means for transferring a fresh filling carrier from the magazine to the lay, a support movable toward and from the lay, filling clamping and parting means mounted on the support, an actuator movably mounted on the frame and moved by or through the operation of the transferring means, and a flexible connector extending between and attached to the actuator and the filling clamping and parting means to effect the operation of the latter upon the operation of the transferring means.

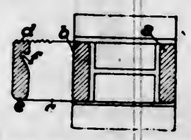
1,427,381. PERMUTATION MECHANISM. JESSE B. HELLER, Wilkinsburg, Pa., assignor, by mesne assignments, to National Motor Control Co., a Corporation of Delaware. Filed June 2, 1919. Serial No. 301,319. 11 Claims. (Cl. 70—54.)

1. Permutation mechanism, comprising a driven member, actuating members, co-operative devices between the actuating members and the driven member for moving the driven member step by step to its operative position when actuated in proper order, and means for moving the driven member backward step by step when any one of said actuating devices is moved out of order, substantially as described.



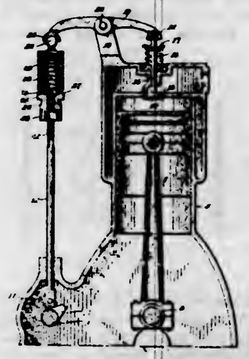
1,427,382. PERMUTATION LOCK. JESSE B. HELLER, Lakewood, Ohio, assignor to National Motor Control Co., a Corporation of Delaware. Filed Feb. 28, 1920. Serial No. 362,167. 6 Claims. (Cl. 70—54.)

1. A permutation lock, comprising a spindle, a combination wheel on the spindle, a return wheel, means for moving the combination wheel step-by-step from zero when operated in a prearranged order and for operating the trip wheel, actuating connections between the trip wheel and combination wheel, a latch device for the spindle, and means actuated by the combination wheel when moved a predetermined distance from zero to release said latch, substantially as described.



1,427,383. TABLE. ALBERT HEMSHEWSKI, Coal Valley, Ill., assignor of one-fifth to Egnaty Shumilo, Neffs, Ohio. Filed Sept. 15, 1920. Serial No. 410,354. 1 Claim. (Cl. 45—26.)

A table of the character described comprising a round top plate having a central opening, a square support for said top plate, cross-braces connecting the sides of said square support, a central supporting ring, a bearing carrying said ring and provided with an opening formed at the inner meeting ends of said braces, an auxiliary table plate, a leg secured to the underside of said auxiliary table plate, legs for said square support, lower braces for said legs adapted to have the lower end of said leg of the

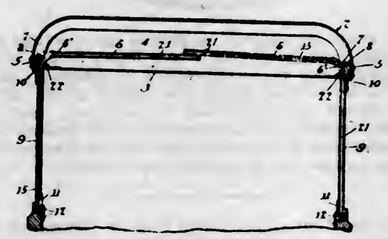


auxiliary table journaled therein, said auxiliary table adapted to carry dishes and to be gripped by hand at its periphery projecting above the top plate for rotating said auxiliary table and the dishes thereon for bringing any of said dishes in front of a person at the round top plate.

1,427,384. WALL-CLIMBING DEVICE. CARL HENNEKING, Magdeburg, Germany. Filed Oct. 30, 1920. Serial No. 420,805. 2 Claims. (Cl. 228—46.)

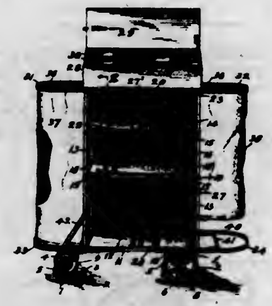
1. A wall-climbing device consisting of a building stone formed of stoneware and having a U-shaped front portion of rectangular cross-section integral therewith and adapted to project from the wall thereby to provide a foot rest and handle.

1,427,385. VALVE-OPERATING MECHANISM. HARRY W. HERMAN, Cleveland, Ohio. Filed Mar. 2, 1920, Serial No. 362,765. Renewed Feb. 16, 1922. Serial No. 537,122. 6 Claims. (Cl. 123—90.)



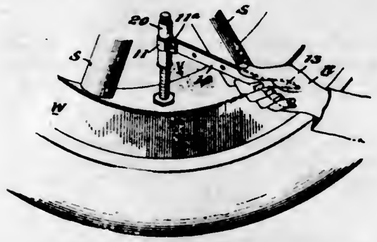
1. In a valve operating mechanism for engines, a slidably mounted push rod, an operating cam for said push rod, a pivotally mounted operating lever, a spring seated valve having a slidably mounted stem pivotally associated with one end of said operating lever, an inverted cup pivotally associated with the other end of said operating lever, a sleeve adjustable longitudinally on one end of said push rod and snugly slidably telescoped into said cup, and a compression spring within said sleeve yieldingly maintaining constant contact between the push rod and its said operating cam.

1,427,386. PROCESS FOR THE TREATMENT OF WASTE SULPHURIC ACID. SIEGFRIED HILPERT, Bonn-on-the-Rhine, Germany, assignor to Himself and Deutsch Luxemburgische Bergwerks-Und Hütten Aktiengesellschaft, Bochum, Germany. Filed July 9, 1921. Serial No. 483,605. 3 Claims. (Cl. 260—7.)



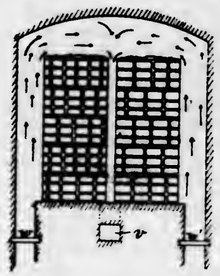
1. Process for the recovery of resinous products from the waste occurring in the purification of the light oils of coal tar by sulphuric acid consisting in dissolving the resinous constituents in an aromatic hydrocarbon.

1,427,387. VEHICLE. JAMES ENSLEY HIXSON, Los Angeles, Calif., assignor to Martin A. Leach, Los Angeles, Calif. Filed Mar. 3, 1919. Serial No. 280,506. 3 Claims. (Cl. 296—140.)



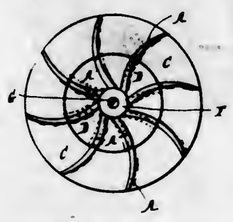
1. In a vehicle, the combination of a body, a top frame for the body, guides in the top fastened at their outer ends to the side members of the frame and extending crosswise thereof, the outer end portions of the guides being curved downwardly adjacent the frame side members, other guides alined with the curved ends of the first named guides and secured at their upper ends to the frame side members and at their lower ends to the body, rods extending beneath the first guides parallel with the side members of the frame and secured to said members and spaced therefrom, a lining fastened at its side margins to the rods and at its end margins to the end members of the frame, and curtains shiftable between the guides and through the spaces between the frame side members and rods.

1,427,388. SERVICE WAGON. WILLIAM V. HOLLEY, New York, N. Y., assignor to New York Bath Manufacturing Co., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,587. 3 Claims. (Cl. 280—50.)



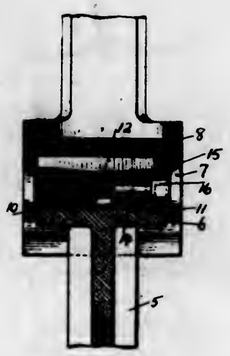
1. A service wagon having a wheeled box like frame and extension frames having curved outer sides secured to the respective ends of the frame and extending in the direction of travel of the wagon, and receptacles removably secured to the extension frames and depending therefrom.

1,427,389. MEANS FOR SUPPORTING AND OPERATING TIRE-PRESSURE GAUGES AND THE LIKE. ELLWOOD J. HORNE, Womelsdorf, Pa. Filed Aug. 20, 1921. Serial No. 494,011. 10 Claims. (Cl. 81—1.)



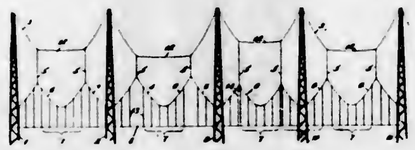
1. Means for manually supporting and operating a tire pressure gauge comprising a body length formed with an adjustable loop at one end thereof for detachably mounting a tire pressure gauge and formed at the opposite end thereof to provide jaws, the said body length providing means for manually applying a tire pressure gauge mounted in said loop end thereof, and the jaws providing means to aline the gauge with a valve stem.

1,427,390. APPARATUS FOR USE IN ANNEALING OR OTHERWISE TREATING METALS. ALFRED HOWGATE, Keighley, England. Filed Feb. 25, 1920. Serial No. 361,172. 4 Claims. (Cl. 266—5.)



1. In the annealing of metals, a pan for the reception of the articles to be treated, detachable framework supported by said pan, and refractory material supported by said detachable framework.

1,427,391. CONSTRUCTION OF ROTARY FAN OR TURBINE WHEEL. STUART OTTO JOHNS, Island Bay, Wellington, New Zealand, assignor to The New Zealand Flusher Company Limited, Wellington, New Zealand. Filed Mar. 7, 1921. Serial No. 450,330. 2 Claims. (Cl. 258—139.)

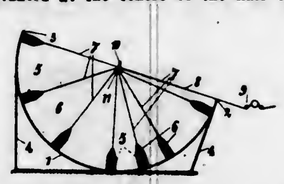


1. A fluid pressure actuated turbine wheel or fan, characterized by having its vanes or blades each made with its length divided into two portions relatively adjustable with respect to the planes of their pressure receiving surfaces, substantially as and for the purposes herein specified.

1,427,392. KNUCKLE-JOINT CONNECTION. WALTER JONES, New Brunswick, N. J., assignor, by mesne assignments, to Brunswick-Kroeschell Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Aug. 10, 1921. Serial No. 491,105. 2 Claims. (Cl. 74—108.)

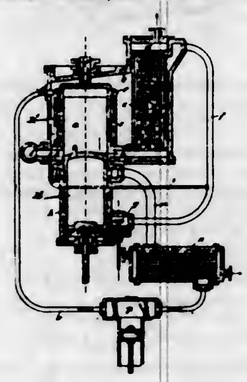
1. A knuckle joint connection for pistons and rods comprising a cylindrical head having a longitudinal slot received within a transverse bore in the piston, said head having tapered holes tapering toward the middle of the head, a cone in each tapered hole, and a screw connecting the cones whereby they may be drawn toward each other to expand the head to take up lost motion between it and the transverse bore in the piston.

1,427,393. CATENARY-SUSPENSION SYSTEM. OSMUND M. JORSTAD, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1920. Serial No. 428,854. 12 Claims. (Cl. 191—41.)



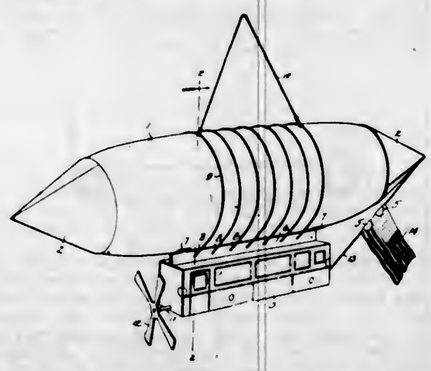
1. A conductor-suspension system comprising a plurality of supporting structures and a messenger cable supported thereby and constructed of a series of undulate sections of substantially identical form but of predetermined lengths to compensate for the distances between said supporting structures.

1,427,394. WARPER'S CREEL. GASTON JOURDAIN, Paris, France. Filed June 1, 1921. Serial No. 474,104. 3 Claims. (Cl. 28—32.)



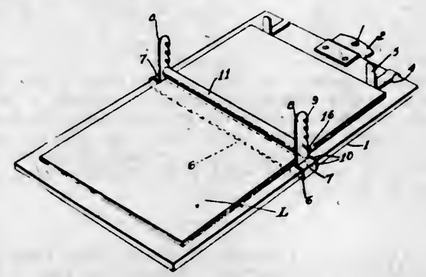
1. A creel for the reception of warp cops and other forms of wound yarn to be warped upon a beam or the like, said creel comprising a semi-cylindrical casing, cop spindles arranged on the inner face thereof, the axes

of the spindles coinciding with radii of the half cylinder, and a comb situated at the centre of the half cylinder



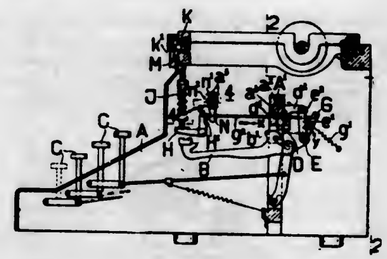
through which all the yarns from the cops or the like must pass to the warping frame.

1,427,395. COMBUSTION MOTOR. ALVIS KASCHTOFSKY, Prague-Smichov, Czecho-Slovakia, assignor of one-half to R. A. Fensl, Harris County, Tex. Filed Oct. 28, 1920. Serial No. 420,221. 4 Claims. (Cl. 60—14.)



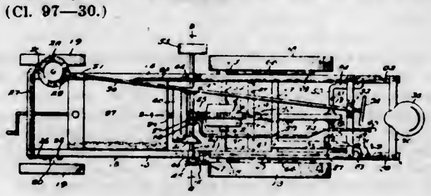
1. A method of utilising the waste heat of internal combustion engines consisting in vaporising the engine fuel prior to its introduction into the engine, utilising the expansive power of the vaporized fuel to drive an expansion engine, condensing the fuel after its passage through the expansion engine, and introducing a portion of said fuel while in its vaporized condition into the internal combustion engine.

1,427,396. TOY AIRSHIP. BOYD B. KEITH, Mansfield, Ohio. Filed Sept. 23, 1920. Serial No. 412,168. Renewed Nov. 25, 1921. Serial No. 517,812. 8 Claims. (Cl. 244—4.)



1. A toy airship, comprising an elongated balloon, cones on the ends of the balloon, an imitation car suspended from the balloon, a cord connecting the balloon and car, and a suspension device connected to the cord.

1,427,397. LETTER FILE. FRED M. KILFOYLE, Storrs, Utah. Filed Mar. 13, 1922. Serial No. 543,396. 3 Claims. (Cl. 129—28.)

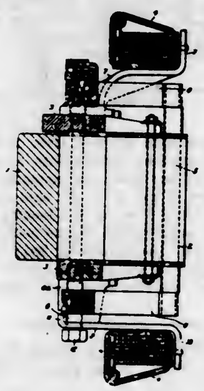


1. A letter file including a board, standards adjustable along the sides of the board, and an eccentrically mounted gripping roll adjustably supported by the standards.

1,427,398. TYPEWRITING MACHINE. KARL AUGUST LEHMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 14, 1921. Serial No. 507,754. 3 Claims. (Cl. 197—112.)

1. In combination with the type lever actuating devices of a typewriting machine, type levers actuated by said devices, a universal bar normally displaced by said type levers on actuation of the latter by said devices, and an independent dual control means for locking said bar and type levers, one of said control means being an automatic margin adjuster and the second of said control means being a manually controlled device for locking at will said bar and type levers whether said first control is actuated or not.

1,427,399. TRACTOR. HANS LINDNER, Woodsboro, Tex. Filed Sept. 15, 1920. Serial No. 410,439. 1 Claim. (Cl. 97—30.)

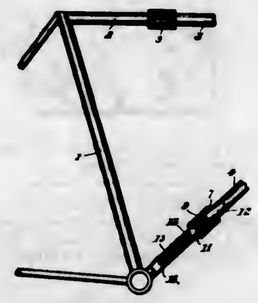


The combination with a wheeled frame, of depending bars connected with the frame and provided at their lower ends with inwardly extending horizontal portions, a lower transverse horizontal bar having its ends arranged beneath the inwardly extending portions and provided at its forward edge with an upstanding flange projecting above said portions, an upper transverse horizontal bar arranged upon said portions in spaced relation to the lower bar, bolts passing through the upper and lower bars and said

inwardly extending portions serving to connect them, an apertured plate adapted for insertion between said upper and lower bars and provided at its rear end with apertured knuckles, a bolt passing through the upper and lower bars and through the aperture in said plate, a coupling sleeve formed U shape in cross section and provided at its forward end with an apertured knuckle positioned between the first named knuckles, a pivot element passing through the apertured knuckles, a plow beam having its forward end arranged within the sleeve and secured therein, a bail pivoted to the frame and connected with the plow beam, and diagonal braces arranged upon opposite sides of the depending bars connected therewith.

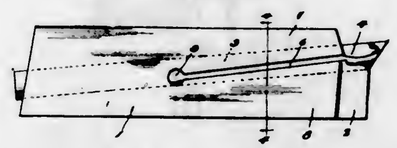
1,427,400. PROCESS OF PRODUCING SALICYL ALDEHYDE. CHAUNCEY C. LOOMIS, New York, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed June 23, 1921. Serial No. 479,811. 3 Claims. (Cl. 260—137.)

1. The process of producing salicyl aldehyde which consists in forming the aldehyde in the presence of an alkali-metal sulfite or bisulfite in such excess as to convert the aldehyde as formed into a sulfite or bisulfite addition product and after the completion of the reaction distilling off the aldehyde from the addition product.



1,427,401. COIL SUPPORT FOR DYNAMO-ELECTRIC MACHINES. WILLIAM K. MCAFEE, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 13, 1917. Serial No. 196,383. 8 Claims. (Cl. 171—252.)

1. In a dynamo-electric machine, the combination with a core member provided with a coil, of a plurality of coil supporting members for said coil, one of said supporting members being formed in two parts and comprises a base portion attached to one side of said core member and a portion disposed intermediate said coil and said core member and adapted to engage said coil at one end and to be fastened to said base portion at the other end.

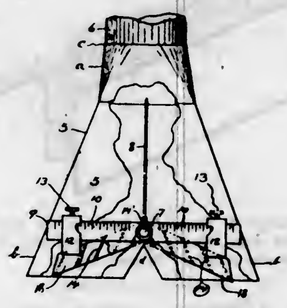


1,427,402. BICYCLE. FRANK A. MALEC, Pawtucket, R. I., assignor of one-half to Wincenty Kochan, Central Falls, R. I. Filed Oct. 3, 1921. Serial No. 506,028. 1 Claim. (Cl. 208—106.)

A bicycle of the type described comprising frame bars formed of connected sections, the connection including a sliding internally threaded sleeve carried by one section adapted for threaded engagement with the end of the other section, the latter section having a tapered socket in the end thereof, a plunger rod having a tapered end

resiliently mounted in the first named section and adapted to be moved into the socket in the other section.

1,427,403. TOOL HOLDER. TREVILLIE O. MARTIN, Jackson, Tenn. Filed Nov. 30, 1920, Serial No. 427,381. Renewed May 12, 1922. Serial No. 560,447. 2 Claims. (Cl. 29—96.)



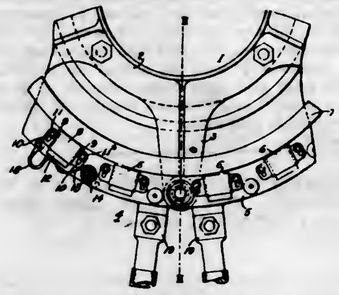
1. A tool holder comprising a shank provided with a tool-receiving socket extending from end to end thereof with its axis inclined with relation to the planes of the upper and under faces of the shank, the said shank being formed with a transverse longitudinally extending slot opening through the opposite walls of the socket, the said slot extending non-parallel to the axis of the socket with its inner end located substantially in the plane of the bottom wall of the socket.

1,427,404. SHEET-METAL VESSEL. VICTOR MAUCK, Norristown, Pa. Filed June 5, 1919. Serial No. 302,019. 7 Claims. (Cl. 220—73.)

1. A sheet metal vessel comprising an outer shell of circular form; a closure for the end of said shell, comprising a plate having a flange fitted to said shell; means limiting the relative position of said shell and closure plate, comprising an inwardly extending annular bead on said shell; a reinforcing ring formed of a split sheet metal tube fitted in said closure plate, and containing sealing means; the edges of said shell and closure plate being closed over said ring, and said sealing means filling the interstices at the joint between said edges and said ring.

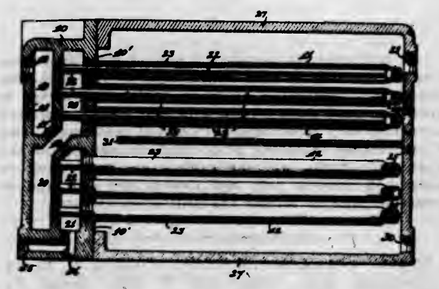
1,427,405. PROPORTIONAL-FEED REGULATOR. LLOYD E. MAXEY, Wichita, Kans. Filed Feb. 14, 1922. Serial No. 536,577. 9 Claims. (Cl. 193—31.)

9. In combination, a housing having an intake leg and two discharge legs, an upright valve plate within the housing and mounted on a horisontal shaft located between the discharge legs, a graduated beam and a retarding device mounted on said shaft, pivotal supports for said shaft, opposed weights adjustable on the arms of said beam, and a stream-receiving and valve-actuating device comprising a hollow frame of greater length than width, centrally mounted on said shaft and valve-plate so as to actuate the latter, and two series of impact-plates fixedly mounted in each arm of said frame, the impact-plates of either series being outwardly and downwardly inclined from a vertical plane passing through the line of the shaft.



1,427,406. TROUSERS SUPPORTER. RAYMOND S. MILLER, Stockton, Calif. Filed July 19, 1921. Serial No. 485,826. 2 Claims. (Cl. 241—7.)

1. A trousers supporter comprising a strip adapted to be fixed to and depend downwardly from the top of the trousers, a strap adapted at its upper end for connection to the shirt of the wearer, and a combined pivotal and releasable connection between the strip and strap adjacent their lower ends.



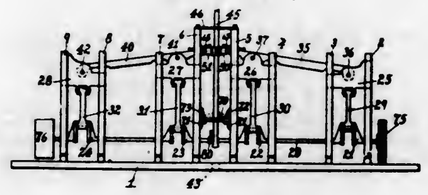
1,427,407. CURRENT-COLLECTING DEVICE. CHESTER B. MILLS, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 26, 1918. Serial No. 264,235. 3 Claims. (Cl. 171—324.)

1. In a current-collecting device, a collector ring, a brush carrier adapted to hold a plurality of brushes in engagement with said ring, and means for longitudinally

adjusting said carrier and said brushes as a unit, and means for radially adjusting said individual brushes.

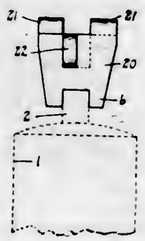
1,427,408. OIL HEATER. BERNARD S. NELSON, New Orleans, La., assignor to A. M. Lockett & Co. Ltd., New Orleans, La., a Corporation of Louisiana. Filed Mar. 22, 1920. Serial No. 367,673. 2 Claims. (Cl. 257—238.)

1. An apparatus for exchanging heat comprising a single piece head having inner and outer walls having threaded apertures therethrough and formed with partition members extending between said walls and having threaded apertures therethrough concentric with each of the apertures in the inner wall of the head, tubes extending from the head consisting of outer pipes each sealed at one end and having their other ends threaded into the apertures in the inner wall of the head, and inner concentric pipes having their inner ends threaded into the apertures in said partition members and their outer ends provided with integrally formed and outwardly projecting ears whereby they will be maintained concentric with the outer tubes throughout their length, and a shell extending over the tubes fastened to the inner wall of the head and provided with inlet and outlet openings.



1,427,409. PENCIL. WALTER R. NOE, New York, N. Y. Filed May 10, 1920. Serial No. 380,021. 1 Claim. (Cl. 120—18.)

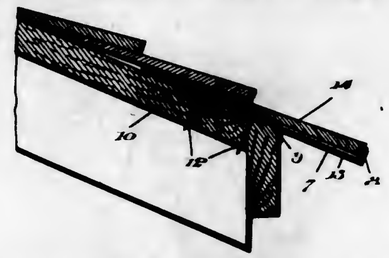
A pencil of the kind described comprising a barrel having a tapering exit end, a plug located in the inlet end of said barrel, an internally screw-threaded tube extending lengthwise of said barrel and having its exit end permanently fixed therein in registry with the exit



end of said barrel, said tube having its inlet end held in said plug and being arranged to contain an active lead, a cap movably fitted upon said barrel to complete the predetermined contour of said pencil, a screw-threaded rod fixed within and extending lengthwise of said cap and arranged to screw into said tube, and a stem forming an axial extension of said rod and of smaller diameter than said tube, said stem being adapted to be moved lengthwise thereof, by the action of said rod, to advance the active lead in said tube.

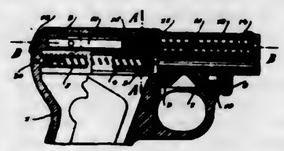
1,427,410. WELL-BORING DEVICE. LEWIS W. NORRIS, Oakland, Calif. Filed Aug. 31, 1920. Serial No. 407,148. 4 Claims. (Cl. 255—6.)

1. A well drill rig including a pair of gripping levers, jaws on the ends of said levers adjacent the drill, two slidably mounted cross heads on which each lever is pivoted, a crank shaft formed with four cranks, a pitman connecting each cross head with one of said cranks, two of said cranks extending at an angle in advance of the other two cranks whereby said levers are swung to cause said jaws to grip and elevate the drill and to cause the jaws to release the drill when elevated.



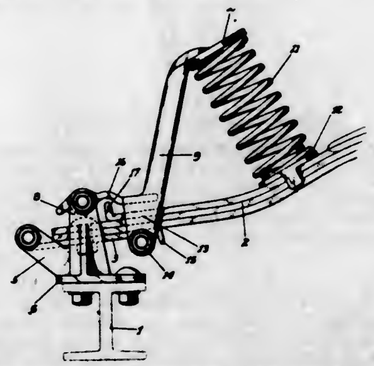
1,427,411. COLLAPSIBLE TUBE. CHARLES H. PAYNE, Cincinnati, Ohio. Filed Apr. 7, 1921. Serial No. 459,248. 2 Claims. (Cl. 91—67.4.)

1. A collapsible tube provided with a narrow wide mouth and a detachable wide thin closure device stamped out of sheet metal for said mouth.



1,427,412. EDGE SUPPORT FOR ROOFS. ORSLOW PETERSEN, Cedar Falls, Iowa. Filed Feb. 24, 1921. Serial No. 447,527. 5 Claims. (Cl. 108—1.)

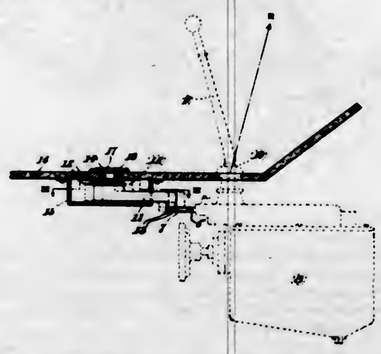
4. An edge support for roofs comprising a strip to extend along an edge of a roof frame with one edge portion overlapping said frame to be secured thereon, and having an upturned flange at its opposite edge for the abutment of the edge of the roofing resting on said strip, said strip having transverse corrugations for stiffening it and providing grooves under the roofing extending across the edge of the roof frame, said strip having



spurs downstruck therefrom between its edges to bear against the edge of the roof frame, and also having drain apertures adjacent to said flange.

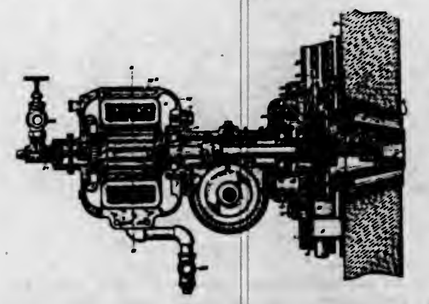
1,427,413. AUTOMATIC PISTOL. NICOLAS PIEPER, Liege, Belgium. Filed July 8, 1919. Serial No. 309,443. 5 Claims. (Cl. 42—3.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)

1. In an automatic pistol, in combination, a stock having a receiver therein for a reciprocable bolt, said receiver having an opening in its forward end for the insertion or withdrawal of the bolt and having longitudinal slots in its side walls, a barrel removably secured to said stock in advance of said receiver, a reciprocable bolt in said receiver, elements movable with said bolt and extending latterly through said longitudinal slots, and a locking member connected to one of said elements and adapted to engage the stock when the barrel is removed to prevent the escape of the bolt from the receiver, said member being manually movable relatively to said bolt and stock, to permit the bolt to be removed from said receiver.



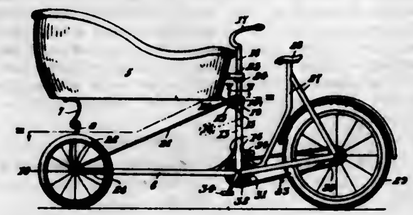
1,427,414. SHOCK ABSORBER. RAYMOND RAGSDALE, Porterville, Calif. Filed Feb. 11, 1922. Serial No. 535,696. 4 Claims. (Cl. 267—17.)

1. A shock absorber comprising a base member adapted to be fixed onto the axle of a vehicle, a plate pivotally



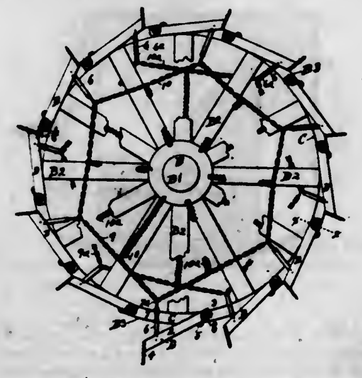
mounted to one end of the base above the axle and projecting in the direction of the vehicle spring, the adjacent end of the latter being adapted to be secured onto the plate, an arm pivoted to the base above the plate and extending thence over said spring, a compression spring between the upper end of said arm and said vehicle spring, and a transverse bearing member attached to the arm intermediate its ends and extending under the plate and on which the free end of the latter rests.

1,427,415. GEAR-SHIFT INDICATOR. ANTHONY RAICH, Kemmerer, Wyo. Filed Dec. 1, 1921. Serial No. 519,238. 6 Claims. (Cl. 116—114.)



4. In combination with the horizontal sliding gear shifting bars of a motor vehicle change speed mechanism, means operatively connected to said rods for visibly indicating the position of the gears, said indicating means comprising a pair of indicator elements each rigidly connected to and movable with one of said rods, said indicator elements including horizontal overlapping plates with indicia thereon, and the uppermost plate having an opening therethrough between its indicia through which the indicia of the lower plate is adapted to be exposed.

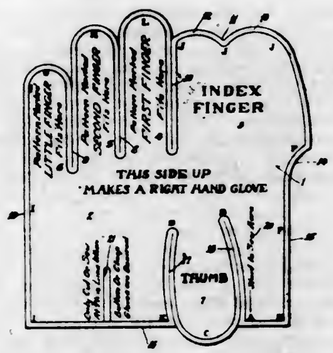
1,427,416. ELECTRIC MOTOR. WILLIAM RUTH RAY, San Francisco, Calif. Original application filed Sept. 25, 1916, Serial No. 122,014. Divided and this application filed Oct. 22, 1919. Serial No. 332,395. Renewed Jan. 18, 1922. Serial No. 530,229. 3 Claims. (Cl. 172—36.)



1. In an electric motor, a housing, said housing being split to permit contraction and expansion of the same, bolts passing through the housing adjacent the split portion to permit contraction and expansion of the housing, a field ring within the housing adapted to be secured by the contraction of the housing, a jacket formed exterior of the housing terminating at the split portion of the housing, and a pair of pipes connected with the jacket terminating points to permit circulation of a cooling medium through the jacket.

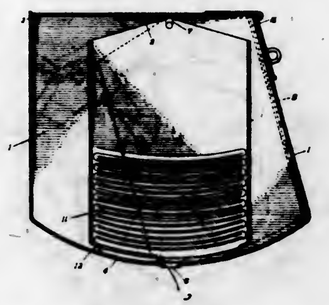
1,427,417. VELOCIPEDE. STEVE RICKEY, Moosehorn, Manitoba, Canada, assignor of one-half to Steve Chorny, Moosehorn, Manitoba, Canada. Filed Sept. 15, 1921. Serial No. 500,731. 1 Claim. (Cl. 208—45.)

A device of the class described comprising a horizontal frame bar with a transverse steering axle centrally pivoted to the forward end thereof upon a vertical axis, a hollow post extending upwardly from said horizontal bar and rigid with the latter substantially midway between the ends of the same, a steering post journaled in said upright tubular post, a body, flexible means between the axle and the body for resiliently supporting the forward end of the latter at a desired elevation above the horizontal frame bar, means interposed between the steering post and the rear end of the body for supporting said rear end of the body at the desired elevation and for permitting free rotation of the steering post, means connecting said steering post with the opposite end portions of the axle for effecting swinging movement of the latter upon rotation of said steering post, a seat, means supporting said seat above the horizontal frame bar rearwardly of the steering post, a supporting wheel situated in the plane of the longitudinal axis of the body and journaled at the rear end of said horizontal frame bar, manually operable means for rotating the rear supporting wheel including pedals actuatable by an occupant of said seat, said means for supporting the rear end of the body including an annular flange upon the steering post, a forked bracket fixed to the rear end of the body and partially embracing the steering post and resting upon said annular shoulder, and a spring attached to the rear end of the body and to the upright tubular post for yieldingly maintaining the forked bracket in engagement with the steering post.



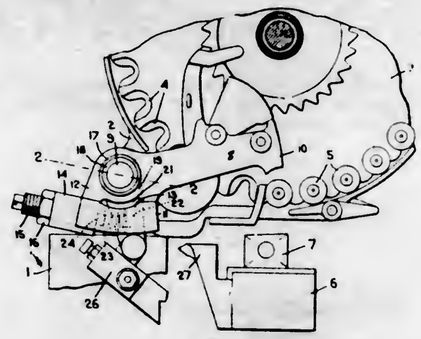
1,427,418. GROUTER FOR TRACTOR WHEELS. JOHN F. ROBERTS, Fresno, Calif. Filed Aug. 17, 1921. Serial No. 492,977. 6 Claims. (Cl. 301—45.)

6. In combination with a traction wheel having a rim, a plurality of pairs of outward projections around said rim equidistant apart, one projection of each pair being on each side of the rim, a plurality of grouters, each grouter constructed with two arms, having hooks at one end and a baffle blade at the other end, said arms being tied



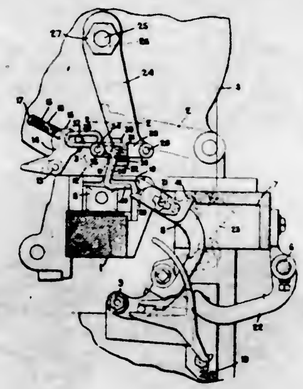
together so that the hooks on the grouter arms can pivotally engage a pair of the projections said arms being rigidly tied together, upright guides attached to the arms adapted to pass on each side of the rim as the grouter swings on said pivotal projections, two endless chains of uniform length attached to the grouters, the alternate grouters being attached to different chains, said chains being of such length that when one grouter is swung from the periphery of the wheel within the fixed limitation, all the other grouters attached to the same chain will be drawn against the periphery of the wheel, substantially as described.

1,427,419. GLOVE PATTERN. WILLIAM ALBERT RUDDELL, Asbury Park, N. J. Filed July 6, 1921. Serial No. 482,813. 5 Claims. (Cl. 33—12.)



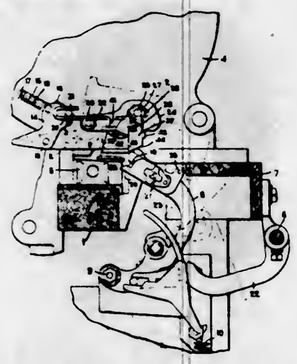
1. A glove pattern comprising a plurality of parts having the marginal contours of the component blank members of the glove which they represent and provided at intervals adjacent their margins with symbols having an established sequence and indicative of the manner in which the members cut by the aid of the pattern parts are to be assembled and their margins progressively united to complete the glove.

1,427,420. TOWEL DISPENSER. FREDERICK L. SARGENT, Burlingame, Calif. Filed Nov. 7, 1921. Serial No. 513,381. 7 Claims. (Cl. 211—29.)



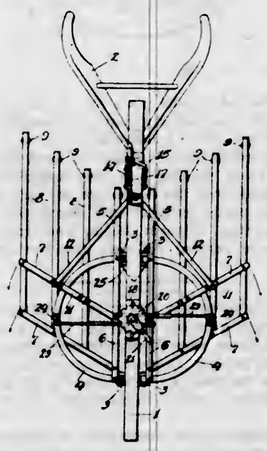
1. A paper towel dispenser comprising a casing having a dispensing slot in the bottom thereof; a towel container pivotally mounted within the casing and arranged to oscillate above said dispensing slot, said container being adapted to receive a plurality of interfolded towels, the free end of the lowermost towel normally extending outwardly through the slot; and means for supporting the towels within the container to permit oscillating movement thereof when said towel is withdrawn through the slot.

1,427,421. TRANSFER MECHANISM FOR LOOMS. ALFRED E. STAFFORD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 24, 1920. Serial No. 360,892. 7 Claims. (Cl. 139—85.)



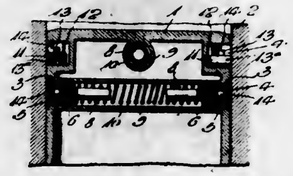
1. An automatic filling replenishing loom comprising a transferrer, means operable by the movement of the lay to positively actuate the same including a compression spring acting to permit said transferrer to yield upon encountering an abnormal obstruction.

1,427,422. FILLING CLAMPING AND PARTING MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 14, 1921. Serial No. 469,509. 4 Claims. (Cl. 139—85.)



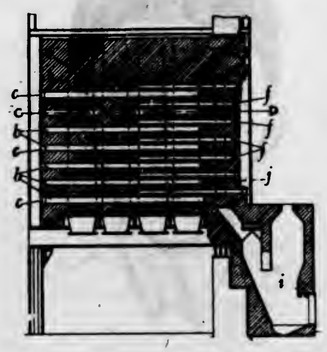
1. An automatic filling replenishing loom comprising a lay, a replenishing magazine for the fresh filling carriers, means for transferring a fresh filling carrier from the magazine to the lay, a filling clamping and parting device movable into position to receive the running filling when the lay is in position for transfer, an actuator actuated by or through the transfer of the fresh filling carrier from the magazine to the lay to actuate the filling clamping and parting device to clamp and part the filling extending from the filling carrier to be abandoned, and a yieldable support for the actuator whereby the actuator may yield upon the occurrence of an abnormal resistance.

1,427,423. FILLING CLAMPING AND PARTING MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 20, 1921. Serial No. 509,078. 4 Claims. (Cl. 139—85.)



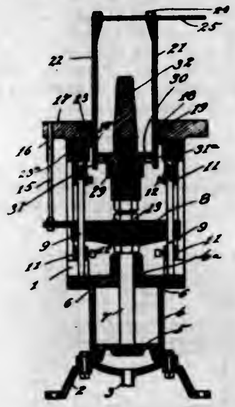
1. An automatic filling replenishing loom comprising a lay, a replenishing magazine for the fresh filling carriers, means for transferring a fresh filling carrier from the magazine to the lay, a filling clamping and parting device movable into a position to receive the running filling when the lay is in position for transfer, the said filling clamping and parting device having an instrumentality to be engaged by an actuator to effect the closing of the clamping and parting device, an actuator, located out of the path of movement of said actuator engaging instrumentality during the positioning movement of said clamping and parting device, actuated by or through the transfer of the fresh filling carrier from the magazine to the lay and having means to engage and actuate said instrumentality to effect the closing of said clamping and parting means, and a gravity switch-cam mounted on said magazine, located in the path of said actuator engaging instrumentality and acting upon said actuator engaging instrumentality to open said clamping and parting means the positioning movement thereof.

1,427,424. CULTIVATOR. DEWITT W. STRICKLAND, Tylertown, Miss. Filed May 27, 1921. Serial No. 473,213. 3 Claims. (Cl. 87—10.)



1. In a cultivator, the combination with a main beam, of arcuate supporting bars hinged to the sides of the beam, gangs of cultivators carried by said bars, arcuate racks pivoted at their outer ends to the said supporting bars and extending upwardly and inwardly over the beam, a housing upon the beam through which the said racks pass, a locking plate fixed upon said housing, a pinion rotatably fitted in the housing and said locking plate between and meshing with said racks, said locking plate having a circular edge concentric with said pinion, an operating lever connected with said pinion, and a latch carried by the lever to engage any one of the notches in the locking plate.

1,427,425. PISTON AND PISTON RING. MICHAEL H. SULLIVAN, Poughkeepsie, N. Y. Filed June 6, 1921. Serial No. 475,543. 9 Claims. (Cl. 74—109.)



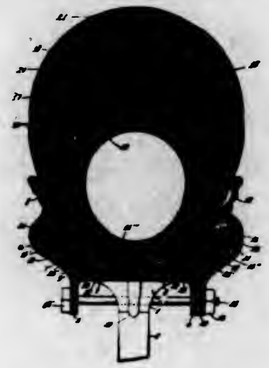
1. The combination with a piston having a ring groove: of a piston ring in said groove diametrically split into two semi-circular relatively movable sections, and a single coiled spring extending diametrically across said piston and acting on the centers of said ring sections to force them into uniform contact with the cylinder wall.

1,427,426. HEATING OR VERTICAL RETORTS FOR THE DISTILLATION OF CARBONACEOUS MATERIALS. WILLIAM WILD, Blackpool, England, assignor of one-half to West's Gas Improvement Company Limited, Manchester, England. Filed June 5, 1920. Serial No. 386,851. 1 Claim. (Cl. 202—9.)

In means for the distillation of carbonaceous materials, in combination, a row of vertical retorts, superposed horizontal combustion chambers disposed around the said retorts for heating the latter, each row of retorts being heated in any one horizontal plane by two chambers arranged at its opposite sides, gas inlets to said chambers at one end of the row of retorts, air supply conduits extending along the whole horizontal length of the combustion chambers to adjacent said gas inlets, further air supply conduits extending along a portion only of the horizontal length of the combustion chambers and each entering one of the latter at a point between its ends, and a waste gas outlet from each combustion chamber at the end thereof opposite to the gas inlet, as set forth.

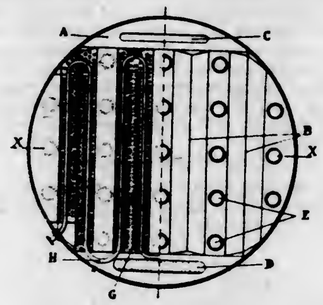
1,427,427. CORE-MAKING MACHINE. FRED ZOLL, Birmingham, Ala. Filed Mar. 18, 1921. Serial No. 453,206. 3 Claims. (Cl. 22—10.)

1. In a machine for making cores, the combination with a driven piston, of a cylindrical element, and a reciprocating element therein, comprising in part a vent plunger or the like, driven by said piston, a closable filling opening in the cylinder element for sand, and means for opening the cylinder element laterally for removal of completed cores, said machines having means for adjustably limiting the stroke of the piston.



1,427,428. EXHIBITING DEVICE. ADELBERT AMES, Jr., Tewksbury, Mass. Filed Oct. 3, 1919. Serial No. 328,086. 10 Claims. (Cl. 40—125.)

1. An exhibiting device comprising an opaque pictorial surface having an opening therein for the transmission of light therethrough, and a fixed opaque element, constituting an apparent continuation of said pictorial surface and having a superficial area less than that of the opening arranged behind and spaced substantially from the plane of said surface to co-act with said opening whereby to obstruct the passage of a portion of the light normally transmitted therethrough.



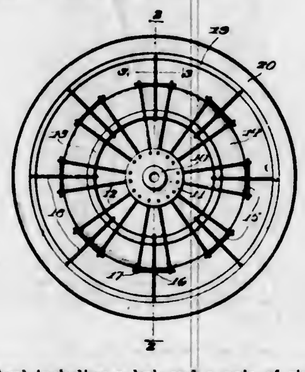
1,427,429. VEHICLE WHEEL. ANDRES BALAGUER, Marianao, Habana, Cuba. Filed May 6, 1919. Serial No. 295,232. 1 Claim. (Cl. 152—10.)

A tire comprising a pneumatic cushion, layers of reinforcing and cushioning material extending therearound, a solid annular cushion of crescent shaped cross-section on the outer periphery of said layers, reinforcing and cushioning layers extending around said pneumatic cushion, said first named layers and said solid cushion, beads,

reinforcing and cushioning layers extending around said beads and also around the second named layers, and a solid annular tread cushion of crescent shaped cross-section on the periphery of the outermost of the third named layers.

1,427,430. DISTILLING AND RECTIFYING COLUMN. EMILE AUGUSTIN BARBET, Paris, France. Filed Sept. 22, 1920. Serial No. 411,924. 4 Claims. (Cl. 195—13.)

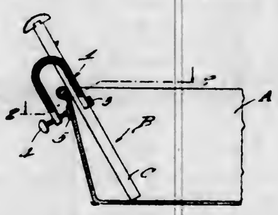
3. An improved column plate for distilling and rectifying apparatus, comprising a plate, a plurality of parallel elevations, extending substantially across the plate, chimneys extending from the plate between said elevations to a point above the level of the elevations, elongated hoods arranged over the chimneys in each of the portions of the plate between said elevations, perforated plates connecting adjacent hoods and resting on the elevations, and cooling coils on the perforated plates.



1,427,431. COMPOUND OF THE ACRIDINE SERIES AND A PROCESS OF MAKING THE SAME. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, Germany, assignor to Leopold Cassella & Co. Gesellschaft mit beschrankter Haftung, a Corporation of Germany. Filed July 14, 1921. Serial No. 484,781. 3 Claims. (Cl. 260—36.)

1. A process for the production of new acridine derivatives by treating 3.6-diamino-10-alyklacridinium compounds with formaldehyde in the presence of diiute mineral acids, at ordinary temperature.

1,427,432. ACRIDINIUM COMPOUNDS AND A PROCESS OF MAKING THE SAME. LOUIS BENDA, Mainkur, near Frankfort-on-the-Main, Germany, assignor to Leopold Cassella & Co. Gesellschaft mit beschrankter Haftung, a Corporation of Germany. Filed July 14, 1921. Serial No. 484,782. 8 Claims. (Cl. 260—36.)

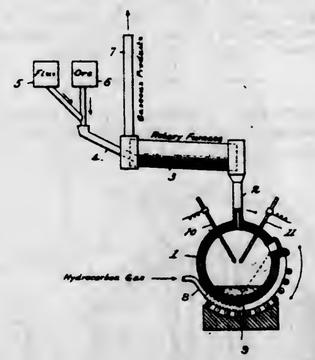


3. As new substance the product obtained by treating the readily soluble salts of 3,6-diamino-10-methylacridinium with tannin in the presence of acid-binding agents, forming a bright orange-yellow colored powder, absolutely tasteless, suitable for lake colors, which in cold water dissolves extremely difficultly, whereas in hot water and alcohol the solubility is somewhat better.

1,427,433. AUTOMOBILE WHEEL. EDGAR A. BERG, Grand Forks, N. Dak. Filed Dec. 22, 1921. Serial No. 524,213. 1 Claim. (Cl. 152—46.)

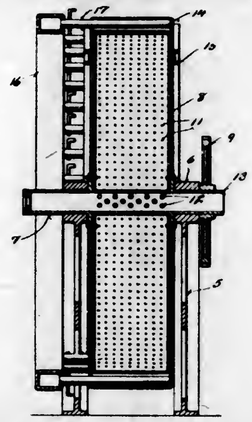
A wheel including a hub and a pair of rims of different diameters disposed concentrically outward of the hub, a pneumatic tire carried on the inner rim, a circular series of peripherally notched plates disposed on the outer tread face of the tire, a series of radial yokes having their bight portions embracing the tire and plates and with their arms engaged in certain of the said notches, and a series of yokes having their bight portions embracing the tire and inner rim, the arms of the first yokes being secured to the hub, the arms of the second yokes being secured to the outer rim.

1,427,434. WASHBOARD CLAMP. FREDERICK CHARLES BOHRI, Los Angeles, Calif. Filed June 16, 1921. Serial No. 478,118. 1 Claim. (Cl. 68—29.)



A wash board clamp comprising a substantially U-shaped yoke, the arms of which are intended to straddle the side of a tub or the like, the inner arm having an integral laterally disposed jaw at its lower end designed to engage one of the side-pieces of the board, the remaining arm having a projection on its lower end extending in the same direction and in parallelism with said jaw, and a binding screw extending through said projection for engagement with the tub.

1,427,435. COMBINED CUP PROTECTOR AND CASING CLEANER FOR PUMP PLUNGERS. JOHN L. BOSTIC, Wainwright, Okla., assignor of one-half to Invader Oil Corporation, Muskogee, Okla. Filed May 19, 1921. Serial No. 470,994. 4 Claims. (Cl. 103—63.)

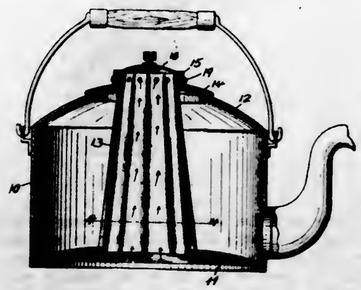


1. A device of the class described comprising a combined coupling and conduit designed to be permanently installed in a pump plunger between the traveling valve cage and cup-carrying tube, and a cleaning device carried by said coupling.

1,427,436. ELECTRIC-FURNACE CONSTRUCTION. WALTER E. F. BRADLEY, Nyack, N. Y. Original application filed July 17, 1918, Serial No. 245,368. Divided and this application filed July 22, 1918, Serial No. 246,123. Renewed Jan. 25, 1922. Serial No. 531,822. 4 Claims. (Cl. 204—64.)

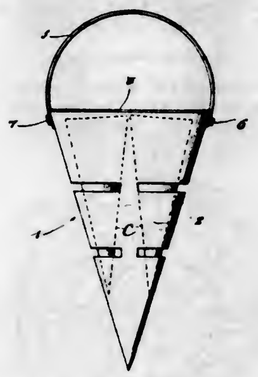
4. An ore reduction apparatus comprising in combination an electric furnace of the tilting type provided with suitable electrodes and having an inlet through which the charge is received and an outlet through which the slag and reduced charge may be poured, a rotary drum furnace having suitable communication with the electric furnace inlet for delivering materials into the furnace and receiving gaseous products therefrom, a carbon tuyère independent of said electrodes and disposed in position to be covered by a molten charge in the electric furnace in the receiving and reducing position, and to be removed therefrom in the pouring position, and means for supplying a reducing gas to said tuyère.

1,427,437. PAPER-DRYING MACHINE. PETER BERUBE, Milwaukee, Wis., assignor of one-half to Alfred A. Jenss, Milwaukee, Wis. Filed Mar. 8, 1921. Serial No. 450,616. 3 Claims. (Cl. 34—48.)



1. A paper drying machine comprising a hollow perforated roller around which the paper passes, a housing enclosing the periphery of said roller, a hot air supply pipe in communication with the interior of said housing for discharging hot air onto the outer surface of the paper as it passes around said roller and a rotatable hollow perforated core on which said roller is carried, whereby the moisture may be drawn from the paper through the perforations in the roller and core while the hot air is discharged onto its outer surface.

1,427,438. ART OF PREPARED MEATS. EMIL O. BRICKMAN, Chicago, Ill., assignor to Illinois Meat Company, a Corporation of Illinois. Filed Aug. 9, 1920. Serial No. 402,317. 6 Claims. (Cl. 99—11.)

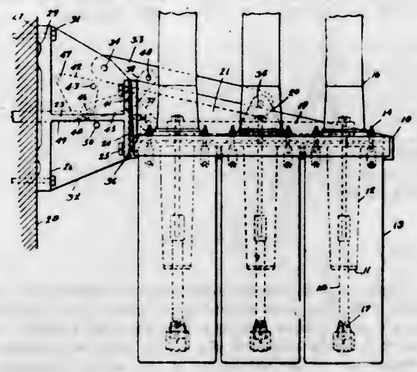


1. A prepared meat comprising a plurality of meat pieces fastened together by sheets of edible cementing material interposed between adjacent surfaces.

1,427,439. KITCHEN UTENSIL. HELEN SELINA BRITTON, Castleton Hill, N. Y. Filed Feb. 23, 1921. Serial No. 447,036. 2 Claims. (Cl. 53—8.)

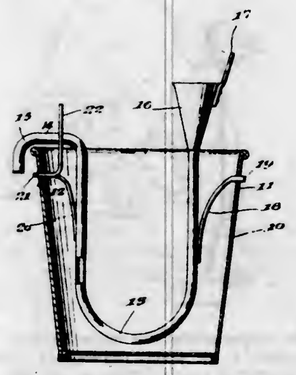
1. A kitchen utensil comprising a container having an opening in its bottom and top walls, a tapering flue having its walls vertically corrugated and its lower end secured to the bottom wall of the container in registration with the opening in said bottom wall, a closure for the opening in the top wall of said container, said closure having an opening to receive the upper end of said flue, said flue and edge of said closure having registering openings, a second closure mounted on said upper end of the flue for rotation thereon and having openings for registration with said first mentioned registering openings, and a pin and slot connection between the second closure and the flue to limit rotation of said second closure.

1,427,440. ICE-CREAM-CONE CARRIER. PETER BROWN, Hampton, Va. Filed Nov. 18, 1920. Serial No. 424,981. 5 Claims. (Cl. 229—6.)



3. An ice cream cone carrier comprising a container provided with a plurality of bowed strips for partially surrounding a cone and holding it in place against the body of the container.

1,427,441. PROCESS OF FIXING SYNTHETICAL NITRIC ACID. MAX BUCHNER, Hanover-Kleefeld, Germany. Filed Apr. 6, 1921. Serial No. 459,205. 10 Claims. (Cl. 23—1.)

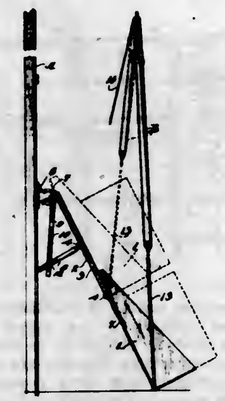


1. Process of fixing synthetic nitric acid, comprising reacting therewith on a sulphide of a metal whose bydroxide is alkaline.

1,427,442. OIL SWITCH. GORDON CAMERON, Wollaston, Mass., assignor to Sears B. Condit, jr., Brookline, Mass. Filed Aug. 2, 1918. Serial No. 247,930. 6 Claims. (Cl. 200—150.)

4. An electric switch having operating mechanism including an operating member arranged for movement in one direction to close the switch and in the opposite direction to open the switch, a second member arranged to be connected with said first member in a plurality of angularly different positions also arranged for connection with an operating rod in a plurality of angularly different positions with respect thereto, whereby to actuate said first member in the same direction to operate the switch from all positions of said operating rod.

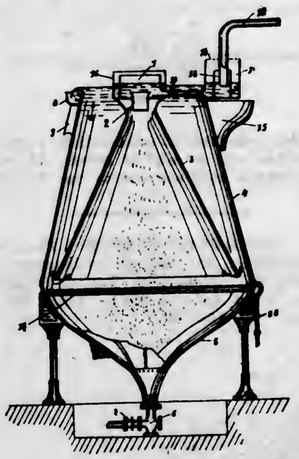
1,427,443. MILK-COOLING DEVICE. DAVID A. COOK, Lamont, Iowa. Filed Apr. 22, 1921. Serial No. 463,670. 2 Claims. (Cl. 257—78.)



2. In a milk cooling device the combination with a receptacle having openings adjacent the upper end, a U-shaped pipe disposed vertically in the receptacle, said pipe being arranged to receive a cooling medium therethrough, a handle carried by the upper end of one of the legs of the pipe, a flexible arm secured to said leg and having a lug journaled in one of said openings, and a second resilient arm carried by the other leg of the pipe and formed with a lug journaled in the other opening whereby the pipe is capable of rocking movement in the liquid in the receptacle, and ready removal from the receptacle upon flexing the last-named arm to release the lug from the opening.

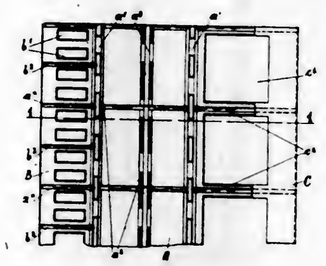
1,427,444. PROCESS FOR PRODUCING MAGNESIUM CARBONATE. CARL CRAMER, Zurzach, Switzerland, assignor to the Firm Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed June 12, 1922. Serial No. 567,739. 8 Claims. (Cl. 23—13.)

1. The process of producing carbonates of magnesium by mutual decomposition of ammonium carbonate with soluble magnesium salts, which comprises submitting the mixture to agitation.



1,427,445. APPARATUS FOR ICING REFRIGERATORS AND ICE BOXES. OSCAR B. CURRAN, Garden City, Mo., assignor of one-fourth to W. G. Merrifield and one-fourth to M. L. Merrifield, both of Garden City, Mo. Filed June 1, 1921. Serial No. 474,094. 7 Claims. (Cl. 214—120.)

1. In loading apparatus for refrigerators, the combination with a support, of a receiving chute the lower end of which is adapted to coact with the ground surface in loading position, connecting means intermediate the upper end of the chute and the wall of the support holding said chute in rigid extension with its body upwardly inclining in alinement with said means, and hoisting means connected with the chute the initial movement of which shifts the chute on to the connecting means and thereafter



tilts the chute and said means to position the bottom of the chute at a downward inclination for discharging its contents.

1,427,446. DECANTATION APPARATUS. JOSEPH DENOËL, Lemberg, Belgium. Filed July 7, 1920. Serial No. 394,534. 1 Claim. (Cl. 210—58.)
